An effect of a similar kind, though less in degree, has been produced by the increased competition in our own market of foreign manufactured or partly manufactured goods, the importation of which appears to grow at a slightly more rapid rate than population, having been £1.97 per head in the year 1870–'74, and £2.35 per head in the period 1880–'84.

They also say that—

The reputation of British workmanship has also suffered in another way by the fraudulent stamping of inferior goods of foreign manufacture with marks indicating British origin. This appears to be principally the case with the hardware goods of Birmingham and Sheffield, which have secured so wide a reputation in the markets of the world. We regret, however, to be obliged to add that the practice of fraudulent marking appears, from the evidence before us, to be not unknown in this country.

The report proceeds—and now I ask attention to this, because it shows the point to which they have come and the prospect for the future, both as respects their industry and as respects their labor:

It is, however, right to point out that while the share of the aggregate wealth produced in the country which now falls to labor is larger than it was twenty years ago, a corresponding diminution has taken place in the share which falls to capital. In other words, that while wages have risen profits have fallen, and that this is obviously a process which can not be continued beyond a certain point. This point has, we think, been very nearly, if not quite, attained already. A time may therefore come when capital will lose all inducement to lend itself to the work of production, and if the employer is driven out of the field the laborers will necessarily suffer with him.

A brilliant prospect for the British manufacturer and the British laborer under the benign influence of free trade after having given it a splendid trial!

Announcing that they have few recommendations to make, the commission say—and there is an undertone of sadness running through it which if England had been less brutal in her treatment of others would be quite affecting:

We think also that the increasing severity of the competition of foreign countries is a matter deserving more serious attention than it has received at the hands of our commercial and industrial class. We can not perhaps hope to maintain to the same extent as heretofore the lead which we formerly held among the manufacturing nations of the world. Various causes contributed to give us a position far in advance of other countries, which we were able to hold for many years, but those causes could not have been expected to operate permanently, and our supremacy is now being assailed on all sides.

It is only being assailed, however, by countries which have grown prosperous under the principles of protection, including some of the colonies of Great Britain.

What a royal tribute to the wisdom and power of protection as an economic principle is given by this royal commission!

"And our supremacy is now being assailed on all sides!" Even by the colonies of Great Britain, which will have none of free trade; by Germany, which adopted the protective system in 1879, and which under its impulse has grown with a rapidity in every department of industry never known to that country before. And the United States, which under the protective policy has outstripped in wealth and growth and industrial progress the world, is one of the factors assailing, and to continue to assail, if the Democratic party does not succeed in forcing the Confederate principle upon the country, the supremacy of Great Britain.

To-day England may still be mistress of the seas, but the testimony taken shows that she is in deadly fear of losing that position; that her ship-building and ship-owning industries are languishing because the protection given by France and other countries to ship-building and ship-owning has brought her a competition difficult to be met. She does not any longer hold the markets of the world. The brutality and selfishness with which she sought to kill the industries of the American colonies, and after the war of 1812 to stifle the industries of America by flooding the country with British-made goods at a loss; the brutality and selfishness and outrage with which she killed, and has kept down, the industrial independence and prosperity of Ireland, have outlived their usefulness, and there has come a day when Great Britain is forced to admit that her "supremacy is assailed on every side," and that she can no longer expect to maintain the position as the leading manufacturing nation which she once possessed.

But for the 3,000 miles of ocean which lie between Great Britain and the United States our fate might have been the fate of Ireland; and underlying the opposition of England to the principles of home rule in Ireland to-day is this old-time dread of commercial and industrial competition, the fear well grounded that if Ireland had her home-rule parliament it would adopt its own commercial system, would quicken into life its dead industries, and rich in raw material and natural resources and in the ingenuity and patriotism of its people, would become a dangerous rival.

It is not long since Baron Bramwell, an eminent English jurist whose name is known to all lawyers, in an article entitled "Has Ireland a grievance?" published in the Forum of August, 1887, and addressed to the American people, "lets the cat out of the bag."

Home rule—

He says—

is a step to the establishment of a separate state in Ireland, with the certainty that other steps will be taken; the establishment of a separate state, with good ports and harbors opposite the entrance to the Clyde, and Glasgow, Liverpool, the Bristol Channel, all the channel ports, and the Thames.

Mark how: England fears the development of Irish industries and the growth of Irish commerce!

I can not forbear to quote from the dissenting report of George Auldjo Jamieson what he says about the free trade of England. After having signed the majority report, he criticises it for omitting to enter upon the subject of the effect of foreign tariffs and the remedy to be found in protection. He says:

I must attribute the comparative reticence and the apparent apathy of the report on this subject to the reluctance of the commission as a body to enter on any inquiry which could tend to a conflict of opinion on the question of free trade; but it seems to me impossible to deal with this matter, which is thrust on our notice very forcibly by the evidence, without grappling to some extent with that question. I think the reluctance to deal with it is due greatly to misconception. Controversy can not touch the axioms which combine to form the principle of free trade. It is the efficiency or the imbecility of the method which applies that principle to the practical business of the country which may be questioned.

If a beneficent principle fails to accomplish beneficent results the fault must lie with those who have to put it into practical operation. That there is some delinquency is apparent from the evidence. Free trade justly credited with every capacity for good comes before us in much of this evidence laden with the broken promises and disappointed hopes due to the extravagant advocacy of its early supporters. It was to convert the world; and after forty years no nation of importance has adopted it, and some have abandoned it. It was to confer great benefits on its votaries, and corresponding evils were to assail those who rejected it. The prosperity we enjoyed was shared while it lasted with other nations, and the ratio of their advance not infrequently outstripped our own; the depression which other nations have suffered we have shared with them, though we alone have had the benefit of free trade.

Enterprise was to be paralyzed and invention stifled where free trade did not prevail; but Germany has rivaled if not excelled us in enterprise; and America has been more prolific of invention than any other nation; and to neither Germany nor America has free trade contributed its stimulus. A system which can confer prosperity on its votaries only when those who abjure it are also prosperous, and which permits depression to assail with strict impartiality those who adopt and those who reject it, appears to me either to have much reason to complain of the method of its application, or to require some further justification than those arguments which prevailed before prophecy was falsified by history.

I think, therefore, that it is much to be regretted that any attempts to reconcile the results of free trade with its beneficent principles, and to reduce it to its proper level as the weapon and not the master of true statesmanship, are so keenly resented by those who are most jealous of its reputation; they seem to have passed into that phase of opinion when inquiry is deemed pernicious, and men allow themselves to become the slaves of doctrine, their zeal for the dogma outweighing alike consideration for its truth and concern for its effects.

No system of human politics or economics can be absolutely true. It can be true only relatively to the circumstances and conditions of the society to which it is applied. What was true in a political sense, *i. e.*, good in the thirteenth century, would be untrue, *i. e.*, inapplicable, in the nineteenth. What in a political sense is true in London would be in a similar sense untrue at Honolulu. No investigation, therefore, could, in my opinion, have been more useful, and none more profitable as bearing on the depression of our national industry than an inquiry whether the circumstances of 1886 are in all respects equally as appropriate as those of 1846 to the adoption and application of free trade as it was then adopted and applied. * * * But it is the first duty which a State owes to its citizens to protect their industries from invasion, and a government which confesses its impotence or professes its reluctance to fulfill that duty abdicates one of its primary functions.

Nor is this all. Mr. Jamieson was not alone of the royal commissioners in his view of the fallibility of free trade as a system adapted now even to England. In another report, signed by Dunraven, W. Farrer Ecroyd, P. Albert Muntz, and Nevile Lubbock, occurs the following significant declaration:

Sir James Brady, inspector of Irish fisheries, remarked, under date September, 1886, "there were over 8,000 tons of salted fish imported into Ireland last year; treble the quantity might and ought to be exported."

This reads like the utterance of an American protectionist.

The report continues—

We have already described the way in which the high protective duties levied by foreign nations, whose industries are almost or quite on a par with our own as regards cheapness of production, constitute in effect a bounty upon their exports of protected articles. So far as this affects their competition with our purchasers in neutral markets we have, of course, no direct remedy in our hands. Of the possibility of applying an effectual though indirect remedy, we shall have hereafter to speak, but as regards their practical subsidized competition in our home market, which is doing so much to destroy the profits of our producers, and to diminish the employment of labor, we have at command an effectual remedy.

The imposition of duties equal to 10 or 15 per cent. upon all manufactures imported from foreign countries would, we believe, sufficiently countervail both the bounty-creating effect of their protective tariff, and the unenviable economy of production obtained through longer hours of labor and less effective inspection and regulation of its conditions. For our aim ought not to be to countervail any natural and legitimate advantage which foreign manufactures may possess, but simply to prevent our industries being placed at an artificial disadvantage by the interference of either home or foreign legislation, and to replace them, as nearly as may be, in the position in which they would have found themselves but for such interference.

Such duties would undoubtedly to a considerable extent keep foreign manufacturers out of our home market and thereby give increased employment to our home industries. But in this country so insufficient is the present employment of the available labor and agencies of production, and so great is the pressure of capital seeking investment and labor seeking employ, that in our opinion neither prices, profits, nor wages could possibly be raised by the operation of such duties above the lowest remunerative level.

* * * * * * *

The measures which we have indicated would counterwork the effect of protection and strengthen the position of our producers directly in the home market, and indirectly, though substantially, in neutral markets. It is of course out of our power to obtain more free access to the protected markets of countries like the United States, France, and Germany themselves. In past years we had little occasion to regret this, or to trouble ourselves about it. Their course of action did not harm us so long as we were able in spite of it to obtain full employment for all our available labor.

That is, as long as the balance of trade was against these countries,

including the United States, and instead of working up their own raw material they were steady customers of Great Britain's manufactured products; but under the influence of protection these countries have become manufacturers instead of so great buyers, and England long since began to feel the change in her situation. Her manufacturers and labor suffer, while the manufacturers and labor of protected countries prosper.

To buy everything in the cheapest market, though not permitted to sell in the dearest, may be the best policy, so long as we can find other fields of equally remunerative employment for the home enterprise and industry which we displace in so doing, but no longer, for from the moment in which the combined effect of protective tariffs abroad and foreign competition at home limits our market, so as to cramp the full and free exercise of our industries, it begins to choke the living fountain of our wealth, our social well-being, and our national strength. We think the evidence is conclusive that during the past ten or twelve years this point has been reached, and that the adoption of a national policy suited to the changed conditions is imperatively demanded.

Dunraven, however, wished it understood that he was not in favor of protection!

Our Democratic friends want free trade in the United States, or what is practically free trade, a tariff for revenue only, while very many in Great Britain are demanding in an essential and potential way protection to her stagnant and decaying interests, and protection as a relief, the efficacy of which it doubts, to the labor which is now suffering in that country.

I wish I might read some extracts on the subject of England's necessity for protection, and the fallacy of free trade, from the little book, "A Forbidden Topic," by Sir Edward Sullivan, but time will not permit on this occasion.

In a recent article in the London Post he makes these suggestive comparisons, which are well worthy of attention:

Under free trade the masses must get poorer, because they get less employment. A well-known statistical work gives a comparison of the material progress of France under protection and England under free trade. If there is any truth in figures it ought to startle us from our free-trade dream.

The comparison is based on the returns of legacy duty:

In 1826 England was 10s. a head richer than France.
In 1850 England was 19s. a head richer than France.
In 1877 England was 5s. a head poorer than France.
France has 57 per cent. of her land under tillage, and it is increasing every year.
The United Kingdom has 30 per cent. of land under tillage, and it is diminishing every year, but the population of England increases much more rapidly than the population of France.
The commerce of England has increased 21 per cent. in ten years.
The commerce of France has increased 39 per cent. in ten years.
The commerce of the United States has increased 68 per cent. in ten years.
The commerce of the world has increased 26 per cent. in ten years.
So much for the blasting effect of free trade.

Certain it is, from what I have shown, that free trade has not for many years been satisfactory in its effect in England, and that there are already signs of revolt among the English people against that system.

While we all of both parties admit the necessity for a reduction in the revenues, and the Republican party stands pledged to a revision of the tariff, this is not a wise time, if one ever shall come, for the American people to follow the Southern Democracy and Northern *doctrinaires* and the importers into the experiment of free trade.

The British diplomatic representatives reported from every nation on the habitable globe to the royal commission the condition of industry and trade, and a glance at their reports shows that with few exceptions the general condition of nations in respect of trade was prosperous, while that of England was depressed. Set against this picture, drawn by the royal commission and the various bodies to whose testimony I have adverted, of England's condition under free trade, the marvelous growth and prosperity, in the face of war and other adverse elements, of the United States under protection, and the object lesson thus afforded is unanswerable in favor of the protective system, and against our trying any experiment to hazard the well-being of labor and the growth and development of our country.

The Democratic party will vainly attempt to convince the people that it is engaged in no free-trade crusade, and that the Mills bill is a protective measure. If there is a people on the earth not liable to be mistaken as to what constitutes free trade it is the English people. They know the article when they see it, and the joyful acclaim with which the merchants of England, burdened with the goods of many years of "systematic overproduction," hailed the advent of Mr. Cleveland's message as a commercial deliverance to them will not be forgotten.

The conspicuous English newspapers promptly welcomed it as free trade, and but for the fact that they soon ascertained that their enthusiastic plaudits excited the suspicion of the American people, and tended to delay "the good time coming," every newspaper in Great Britain would have been working enthusiastically to-day for Cleveland and Thurman and free trade. The prudent Englishmen, doubtless informed from America of its effect, warned English newspapers that it would not do. Therefore there appeared speedily the following in the London Pall-Mall Gazette:

Free-traders would be well advised if they moderated the ecstacy of their jubilation over President Cleveland's message. Every word which they say in its favor will be used as a powerful argument against the adoption of its recommendations.

And later, on this side of the Atlantic, from the Halifax (Nova Scotia) Herald, the following:

There is slight doubt but that we Canadians will have a large sympathy with President Cleveland's candidature, and it would be unfortunate if any expression of this sympathy on our part should serve to embarrass the Democratic party in those States where the real contest centers. The Southern States have very friendly feelings toward the Canadian Provinces, but they are already strong in their adhesion to the Democratic party. The present contest will be close. The odds are heavily in favor of the Republicans, but, inasmuch as we desire to see President Cleveland successful, it is most certainly advisable that the Canadian press should guard against embarrassing his party, and precluding his success, by tendering his administration indiscriminate and fulsome compliment.

So there came silence over the English press and the Canadian press, and while in the debate upon the Mills bill not one word was said in the House of Representatives by any man who favored it in support of the principle of protection, the Democratic party is engaged now from morning till night, from Monday till Sunday, in shouting throughout the United States that the English papers were mistaken; that the Canadian papers were mistaken; that England does not know free trade when she sees it; that the Democracy is not in favor of free trade, and that the Mills bill is a protective measure.

But the wisdom of silence came to the English and Canadian press too late. Neither their sudden and continued silence after the first joyful outburst, nor the retaliation message of the President, whose purpose none have misunderstood, will drive from the minds of manufacturers and wage-workers and farmers in the United States the fact which stands boldly out and is palpable that the warmest adherents of the President's policy, as indicated by his message, are the Southern Democracy, long ago committed by national platform and Confederate constitution to the principle of free trade, the New York importers, and England.

Mr. TELLER. Mr. President——

Mr. COCKRELL. I presume it will be impossible for the Senator from Colorado to finish his remarks this evening. There is a little executive business that ought to be transacted. I move that the Senate proceed to the consideration of executive business.

Mr. HOAR. I move that the Senate adjourn.

Mr. COCKRELL. Let us have just a short executive session. It will not take three minutes.

Mr. HOAR. Why not wait until to-morrow?

Mr. FRYE. I wish to get in a report in executive session.

The PRESIDENT *pro tempore*. Does the Senator from Massachusetts withdraw his motion to adjourn?

Mr. HOAR. I do.

EXECUTIVE SESSION.

The PRESIDENT *pro tempore*. The Senator from Missouri moves that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After four minutes spent in executive session the doors were reopened, and (at 5 o'clock and 42 minutes p. m.) the Senate adjourned until Wednesday, October 17, 1888, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate October 16, 1888.

UNITED STATES MARSHAL.

George Moorman, of Louisiana, to be United States marshal for the eastern district of Louisiana, *vice* Reuben B. Pleasants, deceased.

FOR APPOINTMENT IN THE ARMY.

Sixteenth Regiment of Infantry.

Additional Second Lieut. Capers D. Vance, of the Twenty-first Infantry, to be second lieutenant, October 1, 1888, *vice* Wright, promoted.

FOR PROMOTION IN THE ARMY.

Medical Department.

Capt. Leonard Y. Loring, assistant surgeon, to be surgeon with the rank of major, October 9, 1888, *vice* Meacham, deceased.

Sixteenth Regiment of Infantry.

Second Lieut. Walter H. Wright, to be first lieutenant, October 1, 1888, *vice* Cushman, resigned.

FOR PROMOTION IN THE REVENUE SERVICE.

First Lieut. Joseph W. Congdon, to be a captain in the Revenue Service of the United States, *vice* Constable, deceased.

CONFIRMATIONS.

Executive nominations confirmed by the Senate October 10, 1888.

RECEIVER OF PUBLIC MONEYS.

Harry E. Shields to be receiver of public moneys at Seattle, Wash.

UNITED STATES ATTORNEY.

George S. Duryee, of New Jersey, to be attorney of the United States for the district of New Jersey.

UNITED STATES MARSHAL.

James A. Moore, of Nevada, to be marshal of the United States for the district of Nevada.

HOUSE OF REPRESENTATIVES.

TUESDAY, *October* 16, 1888.

The House met at 12 o'clock m. Prayer by Rev. J. H. CUTHBERT, D. D.

The Journal of the proceedings of yesterday was read and approved.

UNLAWFUL REGISTRY OF VESSELS.

The SPEAKER laid before the House a letter from the Secretary of the Treasury, transmitting a letter from the Commissioner of Navigation in response to a resolution of the House calling for information relative to alleged unlawful registry of vessels as vessels of the United States; which was referred to the Committee on Merchant Marine and Fisheries, and ordered to be printed.

BRIDGE AT LA CROSSE, WIS.

The SPEAKER also laid before the House a bill (H. R. 11139) to authorize the building of a bridge or bridges across the Mississippi River at La Crosse, Wis., with amendments of the Senate thereto.

Mr. HUDD. Mr. Speaker, the amendments of the Senate are merely formal, and I ask unanimous consent that they be now concurred in.

The SPEAKER. The Clerk will report the amendments.

The amendments were read, as follows:

Page 1, at the end of line 13, insert: "And there shall be submitted to the Secretary of War, for his examination and approval, a design and drawing of the bridge, and a map of the location, giving, for the space of 1 mile above and 1 mile below the proposed location, the topography of the banks of the river, the shore-lines at high and low water, the direction and strength of the current at all stages, and the soundings, accurately showing the bed of the stream, the location of any other bridge or bridges, and all other information required."

Page 1, line 17, after "Wisconsin," insert "and approved by the Secretary of War."

Page 2, strike out lines 12 and 13.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin that the amendments of the Senate be concurred in?

There was no objection.

The amendments were concurred in.

REPORT OF THE BUREAU OF ANIMAL INDUSTRY FOR 1887.

The SPEAKER also laid before the House a concurrent resolution of the Senate authorizing the printing of 50,000 copies of the fourth annual report of the Bureau of Animal Industry for the year 1887.

Mr. RICHARDSON. I ask unanimous consent that that concurrent resolution be now considered.

The resolution was read, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed 50,000 copies of the fourth annual report of the Bureau of Animal Industry for the year 1887, of which 13,000 copies shall be for the use of the members of the Senate, 27,000 copies for the use of members of the House of Representatives, and 10,000 copies for the use of the Commissioner of Agriculture; the illustrations to be executed under the supervision of the Public Printer in accordance with the directions of the Joint Committee on Printing; the work to be subject to the approval of the Commissioner of Agriculture.

Mr. RICHARDSON. Mr. Speaker, that provides for a large edition, 50,000 copies, and the resolution should be self-appropriating. I have drawn an amendment, which I ask unanimous consent to have considered at this time.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee [Mr. RICHARDSON] that this concurrent resolution be now considered?

Mr. OATES. I should like to know what is the necessity for printing so large a number of copies of this document?

Mr. RICHARDSON. It is the annual report of the Bureau of Animal Industry, and the number is the same as was printed last year and the year before. The resolution last year was not self-appropriating; it was so the year before last, but this one is not, and therefore I have drawn an amendment to make it so, and also to change the concurrent resolution to a joint resolution. The estimate for this printing is $27,930 for an edition of 50,000 copies.

Mr. OATES. This is not an agricultural report?

Mr. RICHARDSON. It is not an agricultural report, but it is the report of the Bureau of Animal Industry, which bears the same relation to live-stock that the agricultural report bears to agriculture.

The SPEAKER. Is there objection to the present consideration of the resolution?

There was no objection.

The amendments offered by Mr. RICHARDSON were read, as follows:

Add to the resolution the following:

"And that there be and is hereby appropriated out of any money in the Treasury not otherwise appropriated the sum of $27,930, or so much thereof as may be necessary for that purpose."

Also change the resolution from a concurrent to a joint resolution.

The amendments were agreed to.

The concurrent resolution was passed.

Mr. RICHARDSON moved to reconsider the vote by which the concurrent resolution was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BLISS, indefinitely.

To Mr. O'NEILL, of Pennsylvania, indefinitely, on account of important business.

To Mr. MANSUR, indefinitely, from October 16, on account of important business.

INVESTIGATION OF THE WASHINGTON AQUEDUCT.

The SPEAKER. The Chair will appoint as a committee to investigate the work upon the Washington Aqueduct, in accordance with the law passed this session, the gentleman from Georgia, Mr. CLEMENTS; the gentleman from Tennessee, Mr. MCMILLIN, and the gentleman from Kansas, Mr. RYAN.

ENROLLED BILLS SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that the committee had examined and found duly enrolled bills and joint resolutions of the following titles; when the Speaker signed the same:

A bill (H. R. 1239) to extend the jurisdiction of the Light-House Board to the Sacramento and San Joaquin Rivers, California;

A bill (H. R. 1249) for establishing a light-house and fog-signal on Roe Island, Suisun Bay, California;

A bill (H. R. 1641) for the erection of a light-house at or near a point about midway between Barnegat and Navesink lights, in the State of New Jersey;

A bill (H. R. 2196) for the relief of S. T. Marshall;

A bill (H. R. 2972) authorizing the President to appoint and retire Alfred Pleasonton with the rank and grade of major;

A bill (H. R. 5700) to facilitate the transportation of life-saving and light-house supplies at Hog Island, Virginia;

A bill (H. R. 6514) for the allowance of certain claims reported by the accounting officers of the United States Treasury Department;

A bill (H. R. 6619) for the relief of Eliza A. Cutler Jones;

A bill (H. R. 7421) for establishing a light off Pamlico Point, North Carolina;

A bill (H. R. 7547) granting the right of way to the Yankton and Missouri River Railway through the Yankton reservation in Dakota;

A bill (H. R. 7604) for the establishment of a light-house and fog-signal at or near Gull Shoal, Pamlico Sound, North Carolina;

A bill (H. R. 8855) for the establishment of a light-ship with a steam fog-signal at Sandy Hook, New York;

A bill (H. R. 8674) for the relief of Sterling H. Tucker and others;

A bill (H. R. 10183) to establish a light-ship off Great Round Shoal, near Nantucket, Mass.;

A bill (H. R. 11107) to amend an act entitled "An act to authorize the Fort Smith and Choctaw Bridge Company to construct a bridge across the Poteau River, in the Choctaw Nation, in the State of Arkansas;"

A bill (H. R. 11581) making an appropriation for the enforcement of the Chinese exclusion act;

A bill (S. 45) for the relief of Col. James C. Duane;

A bill (S. 307) for the relief of Margaret Kennedy;

A bill (S. 1190) for the relief of the estate of Joseph Fenno, deceased;

A bill (S. 1137) for the relief of Adam L. Epley;

A bill (S. 1494) to secure to the Cherokee freedmen and others their proportion of certain proceeds of lands under the act of March 3, 1883;

A bill (S. 2110) granting the right of way for the construction of a railroad through the Hot Springs reservation, State of Arkansas;

A bill (S. 2663) granting an increase of pension to Mrs. Mary M. Ord;

A bill (S. 2802) to fix the number of unbound and bound Journals of the Senate and House of Representatives, and to provide for their distribution;

A bill (S. 3433) authorizing the Secretary of the Interior to accept the surrender of and cancel land-patents to Indians in certain cases;

A bill (S. 3559) to allow persons who have abandoned or relinquished their homestead entries to make another entry, and for other purposes;

A bill (S. 3597) to provide for the disposal of the Fort Wallace military reservation, in Kansas;

A bill (S. 3620) supplementary to the act approved February 3, 1887, entitled "An act to fix the day for the meeting of the electors of President and Vice-President, and to provide for and regulate the counting of the votes for President and Vice-President, and the decisions of questions arising thereon;"

Joint resolution (S. R. 112) authorizing the Secretary of War to receive for instruction at the Military Academy at West Point Henry Lecomte, of Switzerland; and

Joint resolution (S. R. 59) authorizing Brig. Gen. Absalom Baird, United States Army, to accept from the President of the French Republic a diploma conferring the decoration of commander of the National Order of the Legion of Honor.

LAND OFFICE AT FOLSOM, N. MEX.

Mr. CONGER. I ask unanimous consent for the present consideration of the bill (S. 2040) to establish a land office at Folsom, in the

Territory of New Mexico. I desire to state it was agreed that the eastern half of New Mexico should be divided into two land districts, and the two bills for the creation of these districts should have passed at the same time. During my absence last week one was passed. This is a Senate bill, and has been unanimously reported by the Committee on Public Lands of this House.

The SPEAKER. The bill will be read, after which there will be opportunity for objection.

The bill was read.

The SPEAKER. Is there objection to the present consideration of this bill?

Mr. MCMILLIN. I wish to know whether this bill has been recommended by the Department of the Interior?

Mr. CONGER. It has been; and it has also been reported unanimously by the Committee on Public Lands.

Mr. MCMILLIN. We have already, if I remember correctly, established one additional land office for that Territory during this session.

Mr. HENDERSON, of Iowa. The gentleman will allow me to state that I have talked on this subject with the gentleman from Indiana [Mr. HOLMAN] and also with the delegate from New Mexico [Mr. JOSEPH], and they both favor the passage of the two bills. This bill should have gone through at the same time as the other. Both offices are necessary for the accommodation of that large Territory.

Mr. MCMILLIN. It seems to me that this is a rather sudden multiplication of demands on behalf of that Territory.

Mr. HENDERSON, of Iowa. It is a large Territory.

Mr. JACKSON. The gentleman from Tennessee [Mr. MCMILLIN] will allow me to say to him that I had charge of making the report in this case at the instance of the Committee on Public Lands; and whilst I might agree with him that this would seem like multiplying offices (to which there may be some objection on the ground that probably it furnishes places for some appointees of the gentleman's own party), at the same time the Department, in the report which I have examined, seems to favor the establishment of this office; at least it was stated in the report that the office is one which would accommodate the people of the Territory. I think the Department would approve of establishing this office.

Mr. MCMILLIN. "Would approve?"

Mr. JACKSON. I think I can say the Department does approve, because, although the request for information was not made in connection with this bill, the Department in its answer upon another question stated that there was no objection to the bill.

Mr. MCMILLIN. I think the bill itself ought to be referred to the Department before we enter upon an increase of offices. So far as concerns the remarks of my friend from Pennsylvania [Mr. JACKSON], that this will give us some additional offices, I will say that we are not thirsting for any new offices beyond what the public interest demands.

If the gentleman has no objection to letting this bill go over for the present, I will look into the matter between now and to-morrow morning; and if it seems to me correct I shall make no objection to the passage of the bill.

Mr. HENDERSON, of Iowa. I hope the gentleman will not interpose objection this morning. This bill came over here from the Senate before the bill establishing the other land office, and the Delegate from the Territory [Mr. JOSEPH] wanted this bill referred until both could go through together.

Mr. MCMILLIN. I suggest to my friend that we are not now crowded with business, and this matter will keep, I suppose, until to-morrow. I think I must object to action on the bill now; but if, on examination, the measure seems to me correct, I shall not object to-morrow.

The SPEAKER. The gentleman from Tennessee objects for the present. The request will be considered as pending to-morrow morning.

ORDER OF BUSINESS.

The SPEAKER proceeded to call the committees for reports.

Mr. OATES. I move to dispense with the morning hour for the presentation of reports. I do not suppose anybody wants to make any reports.

Mr. PLUMB. Will that interfere with the regular order, which would be, I understand, the call of the Labor Committee?

The SPEAKER. It will not. It is a means for getting at the hour for the consideration of bills reported from committees.

The motion of Mr. OATES to dispense with the morning hour for the presentation of reports was agreed to.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had agreed to the amendment of the House to the bill (S. 1482) granting a pension to Sarah C. Taylor.

The message also announced that the Senate had passed joint resolutions of the following titles; in which the concurrence of the House was requested:

Joint resolution (S. R. 115) authorizing the Departments of the Government to use articles in their possession for exhibition at the Paris Exposition of 1889; and

Joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel.

ORDER OF BUSINESS.

The SPEAKER. The next business in order is the consideration for one hour of bills reported from committees.

WASHINGTON AQUEDUCT.

Mr. SAYERS. A joint resolution in regard to the Washington Aqueduct has come over from the Senate, and it is proper that the House take some action on it immediately. I ask unanimous consent that it be read and considered at the present time. Its immediate passage may be very necessary in order to preserve the aqueduct.

The SPEAKER. The Chair will cause the joint resolution to be read, after which objection to its consideration will be asked for.

The Clerk read as follows:

Joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel.

Resolved, etc., That the Secretary of War be, and is hereby, authorized and directed to use so much of any unexpended balance of appropriations for the work of the Washington Aqueduct tunnel, District of Columbia, as may be necessary, for the purpose of protecting and preserving the work already done upon said tunnel.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

There was no objection.

Mr. MCMILLIN. I have an amendment to offer, which I think is important.

The SPEAKER. The amendment will be read.

The Clerk read as follows:

Add to the resolution:

"That the joint select committee of the Senate and House of Representatives, authorized by concurrent resolution of Congress to make inquiry and report concerning all of the work and contracts therefor, on the Washington Aqueduct tunnel, and other matters in relation thereto, are hereby, in addition to the powers conferred by said concurrent resolution, authorized and directed in their discretion to inquire and report touching all plans and estimates prepared under the auspices of the Government for extending the water supply of Washington City, and, finally, said committee may extend their inquiries as to any and all other matters concerning the extension of said water supply that may aid the Congress in ascertaining and fixing the responsibility for any mismanagement therein or for future construction and management thereof."

The amendment was adopted.

The joint resolution as amended was ordered to be read a third time; and it was accordingly read the third time, and passed.

Mr. SAYERS moved to reconsider the vote by which the joint resolution was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

ORDER OF BUSINESS.

The SPEAKER. The gentleman from Alabama was recognized.

Mr. OATES. I yield to the gentleman from Mississippi for a moment.

Mr. HOOKER. I ask unanimous consent to take from the Speaker's table the Senate joint resolution, just reported from that body, authorizing the various departments of the Government named therein to send their exhibits to the Paris exhibition. It appropriates no money at all, I will remark, but simply authorizes the unexpended balance remaining over from the Cincinnati exhibition, if any, to be used for this purpose. It is important that it shall be passed now, if at all.

The SPEAKER. But the gentleman from Illinois has demanded the regular order.

Mr. PLUMB. I will withdraw the demand temporarily to hear what this is.

The SPEAKER. The joint resolution called up by the gentleman from Mississippi will be read subject to objection.

The joint resolution (S. 115) was read at length.

The SPEAKER. Is there objection to the present consideration of this resolution?

Mr. KILGORE. I must object.

Mr. HOOKER. I hope the gentleman will permit me to make a brief statement.

Mr. KILGORE. Oh, well, I think we had better proceed with other matters.

Mr. HOOKER. This involves no appropriation, let me state.

Mr. KILGORE. I want to inquire then how this affair can be carried on without the expenditure of money?

Mr. HOOKER. It only authorizes the appropriation of the unexpended balance remaining over from the Cincinnati Exposition.

Mr. KILGORE. Then I object. There ought not to be a cent expended for any such purposes.

FINAL ADJOURNMENT.

Mr. OATES. Mr. Speaker, I now call up the resolution I offered on yesterday.

The SPEAKER. That is a privileged matter.

Mr. OATES. I ask that the resolution be read.

The Clerk read as follows:

Be it resolved by the Senate and House of Representatives. That the President of the Senate and the Speaker of the House of Representatives be authorized

to close the present session by adjourning their respective Houses on Wednesday, the 17th day of October, at 12 o'clock m.

Mr. OATES. I ask to amend the resolution by striking out "Wednesday, the 17th" and inserting "Thursday, the 18th."

Mr. SOWDEN. I move a further amendment to the amendment, to strike out "Thursday, the 18th" and insert "Wednesday, the 24th day of October."

The SPEAKER. The question is on agreeing to the amendment to the amendment.

Mr. RICHARDSON. Mr. Speaker, from time immemorial, I think, resolutions fixing the date for the final adjournment of Congress have invariably come into the House, during the control of both parties, from the Committee on Ways and Means. Inasmuch, therefore, as that has been the custom, and there is such a widespread difference of opinion, at least among members on this side of the House, as to the time to be fixed for final adjournment, it seems to me we ought not to depart from that old custom, and therefore I move the reference of the resolution to the Committee on Ways and Means.

The SPEAKER. That motion is in order.

Mr. OATES. I would ask the gentleman to show me and to show the House the Committee on Ways and Means. [Laughter.] It has disappeared. Some of the members are here, very respectable and intelligent gentlemen; but the committee as a committee does not appear.

Mr. RICHARDSON. I desire to say that I see four or five members of that committee here now.

Mr. OATES. That is not the committee.

Mr. RICHARDSON. I am quite sure a quorum of that committee could be obtained. The chairman was here yesterday. I see the gentleman who is second on the committee present; and the chairman is here to-day, I am told. I see about five members of the committee, and it only takes seven or eight to make a quorum; so that there could be no difficulty in getting a quorum now, as I am informed by members of the committee. I do not see a quorum of the committee present, but I take it for granted that if a resolution of this character be referred to that committee, it being the leading committee of the House, its members would feel that it was their duty to have a quorum to consider that resolution. I have no doubt a quorum could be had in twenty-four hours.

Mr. OATES. Mr. Speaker, a resolution for adjournment was introduced and referred to that committee——

Mr. FARQUHAR. And kept there.

Mr. OATES. And that committee never reported it. It is well known that a caucus of the majority side of the House considered it, and that action was satisfactory to me; but it did not change my opinion respecting the purpose of the resolution; and yet I acquiesced as cheerfully as any man could. And, sir, in answer to the point made by the gentleman from Tennessee [Mr. RICHARDSON] as to the custom of referring such resolutions to the Committee on Ways and Means, I may say that there is nothing in the rules of the House which requires a resolution of that character to go to that committee. There is nothing in the definition of the jurisdiction of that or any other committee of this House which would render it necessary for that resolution to go there. But, sir, I am not disposed to depart from the custom if that committee were here. It is known to all that there is not a quorum of that committee here. There is not a quorum of any committee of this House present.

Mr. RICHARDSON. I beg the pardon of the gentleman from Alabama. I have the honor to be a member on a committee, and I know it has a quorum present.

Mr. WHEELER. I have a committee, and there is a quorum of that committee present.

Mr. OATES. Oh, yes; of little committees of five or seven members there may be a quorum present.

Mr. RICHARDSON. I could not permit the statement of the gentleman from Alabama [Mr. OATES], that there was not a quorum of any committee present, to go unchallenged.

Mr. OATES. Oh, well——

The SPEAKER. A motion to refer is not debatable, except by vote of the House.

Mr. BRECKINRIDGE, of Kentucky. Mr. Speaker, if the gentleman from Alabama [Mr. OATES] will permit me, I will ask if it is in order to postpone the motion to refer until to-morrow?

The SPEAKER. The Chair knows of no instance where a motion to recommit has been postponed.

Mr. BRECKINRIDGE, of Kentucky. I do not make the motion to postpone the reference. I rise to make a parliamentary inquiry as to whether a motion to postpone the consideration of that resolution and the motion for a reference would be in order?

The SPEAKER. A postponement of the motion to refer would leave the resolution still pending for consideration in the House.

Mr. BRECKINRIDGE, of Kentucky. I move to postpone the consideration of the resolution and the motion made by the gentleman from Tennessee [Mr. RICHARDSON] to refer it to the Committee on Ways and Means.

The SPEAKER. The Chair will examine the rules in reference to the motion.

Mr. BRECKINRIDGE, of Kentucky. I will now yield the floor back to the gentleman from Alabama [Mr. OATES].

Mr. OATES. Mr. Speaker, I desire to complete the statement I had risen to make. In reply to the gentleman from Tennessee [Mr. RICHARDSON] I would state that no one has a greater respect for the Committee on Ways and Means or several of its members than myself. They have done very able and efficient service all through this session; but, sir, a member on this floor, because he is a member of that committee, has no more right or higher right on this floor than I have or any one else. But when that committee was supposed to have a quorum, or a quorum of its members were supposed to be present, that resolution to adjourn was referred with my approbation to that committee. Now doubtless it is well known that there is not a quorum of that committee present, and they could only act and advise as individual members of this House. We all know the rule requires a majority of a committee to make a legal report on anything, and the fact that I offer this resolution and ask for action does not deter them from giving their valuable opinions to this House. I therefore insist that it is not a departure from any established custom nor a reflection upon any of those gentlemen in the least. It is a matter upon which every member here has a right to call for action, and every member is responsible to his constituency for his action and to no one else. Now, sir, I know there is not perfect harmony of opinion upon this subject.

Mr. TURNER, of Georgia. Will the gentleman from Alabama [Mr. OATES] tell me if it is more necessary to have a quorum of the Committee on Ways and Means than it is to have a quorum of this House to act on this resolution? I believe the preamble of the gentleman's resolution states that there is not a quorum here.

Mr. OATES. That was a part of my speech, which has been withdrawn. [Laughter.] It presented the anomaly of reciting a truth which in that form defeated action. We have got to resort to falsehood, or at least to suppress the truth, in order to act in this matter. [Laughter.] To such a farce have we come in attempting legislation at this late day. Of course my friend from Georgia [Mr. TURNER] and every member here knows that it requires a quorum to fix a day to adjourn, if any member chooses to make that point.

I am perfectly aware of that, but I trust that no member will make the point. Mr. Speaker, I want to see this resolution adopted and sent to the Senate. If they are not ready to adjourn, there is no coercion of them in this resolution. They have the same power over the question that the House has, and if they want more time they will take it and we can acquiesce and go along. It is a custom which has prevailed for fifty years, perhaps throughout the entire history of our legislation, that these adjournment resolutions always originate in the House of Representatives, just as bills to raise revenue always originate here, and I suppose it was that fact which gave rise to the custom of referring the adjournment resolution to the Committee on Ways and Means. Now, sir, we are remaining here from day to day in the face of the fact that a member on the other side of this Chamber has given notice that no measure shall pass except, I believe, such as relate to pensions and labor bills; and if a point like that were made in the Senate, or anything that required a yea-and-nay vote, they could not move a peg, they could not adopt a single amendment to the important bill which they now have before them for consideration. Can it be hoped, then, that they are going to take any action in the way of passing a bill of such importance? It is to be presumed that a quorum would be required to be present before they could make any progress whatever in that direction, and now, with only two or three weeks remaining before the Presidential election, I do not believe that any good can be accomplished by continuing this session of Congress. Every movement now toward legislation of any character is certain to be political; but it is to be hoped, and I believe, that after the Presidential election legislation can be enacted which will be of more substantial benefit to the country than it would be possible to have now, even if we had a quorum present. Every consideration, to my mind, is in favor of an early and almost immediate adjournment of Congress.

I have expressed these views, with the indulgence of the House, merely to explain the reasons which have prompted me in the discharge of what I believed to be a duty, as no other member had moved in the matter, and, having discharged that duty, I desire now to have a vote upon the resolution. If a vote is had upon referring it to the Committee on Ways and Means with no quorum of that committee present in the city, in my judgment it will be equivalent to a defeat of the resolution, because even if the members of that committee who are present should to-morrow report back a resolution in favor of an adjournment, any member on this floor could make the point that it was not a legal report because there was not a quorum of the committee present, and we would have the resolution before us in substantially the same shape as now.

Therefore nothing could be accomplished in that way, and if any gentleman here is hostile to the resolution all he has to do, upon the vote being announced, is to demand a quorum, and that is the end of it.

Mr. KILGORE. Regular order.

Mr. RICHARDSON and Mr. MCMILLIN addressed the Chair.

Mr. WHEELER. I desire to offer a substitute.

The SPEAKER. The gentleman from Texas [Mr. KILGORE] de-

mands the regular order. The resolution is not debatable, and no substitute can be offered at this time, because there are two motions pending, both of which have priority over amendments. One is the motion to refer the resolution to the Committee on Ways and Means, and the other is the motion to postpone its consideration until to-morrow. The question is first on the motion to postpone.

Mr. McMILLIN. The gentleman from Texas [Mr. KILGORE], at my request, withdraws the demand for the regular order for a moment, and in that moment I desire simply to say a word, in order that there may be no misunderstanding of the motives of the Ways and Means Committee in declining to report back the adjournment resolution which was introduced by the gentleman from Alabama [Mr. OATES]. I should not comment upon that now but for the fact that the gentleman has spoken of that resolution and of the action of the party in reference to it.

Mr. OATES. Which I said disposed of it in a manner satisfactory to me.

Mr. McMILLIN. Yes. It is, however, proper for me to state that it was the concurrent judgment of this side of the House, after that resolution was introduced and after mature deliberation, that the resolution should not be reported favorably, and I undertake to say that there is not a member on this side of the House, I undertake to say that there is not a gentleman in the United States agreeing with us in political views, who will not say to-day that the action of the Ways and Means Committee in refusing to report that resolution, and the action of the party in declining to adjourn, was as wise as it could have been. We would have adjourned, leaving the Senate without having reported any tariff bill whatever, and with the bill which the House presented to fire at during the balance of the campaign; whereas we now have their admission that there ought to be a reduction of the revenue to the amount of at least $70,000,000.

Mr. OATES. I want to interrupt the gentleman to ask him to make a little exception to his broad statement. There are gentlemen who think it would have been wise to have adopted the resolution at that time.

Mr. McMILLIN. I did not know that. I thought the gentleman from Alabama himself said he thought the action then taken was proper.

Mr. OATES. I said that I did not blame the Ways and Means Committee, because the matter was considered in caucus, and I acquiesce cheerfully in the action of the caucus, but it did not change my opinion at all.

Mr. SOWDEN. Mr. Speaker, I demand the regular order. There is no use in disclosing the secrets of our organization here. [Laughter.]

The SPEAKER. The regular order is demanded. The question is on the motion to postpone the consideration of this resolution until to-morrow.

The question was taken; and there were—ayes 23, noes 21.

So the motion to postpone was agreed to.

WITHDRAWAL OF PAPERS.

Mr. RYAN, by unanimous consent, obtained leave to withdraw from the files of the House papers relating to the bill (H. R. 777) to compensate Mrs. Sarah L. Larimer for important services rendered the military authorities in 1864 at Deer Creek Station, Wyoming, and for loss of property taken by Sioux Indians.

ORDER OF BUSINESS.

The SPEAKER. The hour for the consideration of bills reported from committees begins at fifteen minutes before 1 o'clock. The call rests with the Committee on Labor.

Mr. LANHAM. I move that the House adjourn.

The SPEAKER. The pending question, if the House should not adjourn, is upon the motion made by the gentleman from Illinois [Mr. PLUMB] that the House resolve itself into Committee of the Whole on the state of the Union.

The question being taken on the motion to adjourn, there were—ayes 29, noes 21.

Mr. DINGLEY. I call for the yeas and nays.

The yeas and nays were ordered, 16 (more than one-fifth of the last vote) voting in favor thereof.

The question was taken; and it was decided in the negative—yeas 27, nays 31, not voting 266; as follows:

YEAS—27.

Breckinridge, Ky.	Howard,	Montgomery,	Sowden,
Campbell, Ohio	Hutton,	Oates,	Stone, Ky.
Clements,	Kilgore,	Penington,	Tillman,

Cowles,	Johnston, N. C.	Pidcock,	Yoder,
Cox,	Jones,	Post,	Yost.
Crain,	Kean,	Pugsley,	
Crisp,	Kelley,	Randall,	

So the House refused to adjourn.

Mr. LANHAM. I ask unanimous consent to dispense with the reading of the names.

There being no objection, it was ordered accordingly.

Mr. LANHAM. I ask unanimous consent that the pairs be inserted in the RECORD without being read by the Clerk.

There being no objection, it was ordered accordingly.

The following-named members were paired on all political questions until further notice:

Mr. DARGAN with Mr. GROUT.
Mr. TOWNSHEND with Mr. SPOONER.
Mr. HOLMAN with Mr. JOHNSTON, of Indiana.
Mr. COBB with Mr. ANDERSON, of Kansas.
Mr. CARLTON with Mr. FUNSTON.
Mr. McCREARY with Mr. CROUSE.
Mr. CARUTH with Mr. HUNTER.
Mr. HAYES with Mr. KERR.
Mr. BLOUNT with Mr. RUSSELL, of Connecticut.
Mr. FORAN with Mr. HIESTAND.
Mr. MAISH with Mr. LEHLBACH.
Mr. NEAL with Mr. HAYDEN.
Mr. BRYCE with Mr. GAINES.
Mr. JONES with Mr. BOWDEN.
Mr. ELLIOTT with Mr. BINGHAM.
Mr. COLLINS with Mr. ALLEN, of Massachusetts.
Mr. BRECKINRIDGE, of Arkansas, with Mr. BROWNE, of Indiana.
Mr. SPRINGER with Mr. HENDERSON, of Illinois.
Mr. CAMPBELL, of Ohio, with Mr. KENNEDY.
Mr. COMPTON with Mr. GOFF.
Mr. OUTHWAITE with Mr. McKINLEY.
Mr. HATCH with Mr. STEWART, of Vermont.
Mr. WILSON, of West Virginia, with Mr. McCOMAS.
Mr. RANDALL with Mr. LODGE.
Mr. BLAND with Mr. BUTTERWORTH.
Mr. SCOTT with Mr. GROSVENOR.

Mr. McMILLIN with Mr. BURROWS.
Mr. CRISP with Mr. REED.
Mr. COX with Mr. CANNON.
Mr. MATSON with Mr. HOVEY.
Mr. WILKINS with Mr. LONG.
Mr. MILLS with Mr. KELLEY.
Mr. FRENCH with Mr. STEPHENSON.
Mr. O'NEALL, of Indiana, with Mr. FINLEY.
Mr. McCLAMMY with Mr. OSBORNE.
Mr. DAVIDSON, of Florida, with Mr. WEBER.
Mr. HENDERSON, of North Carolina, with Mr. FLOOD.
Mr. ENLOE with Mr. PUGSLEY.
Mr. STEWART, of Georgia, with Mr. HARMER.
Mr. WILSON, of Minnesota, with Mr. ATKINSON.
Mr. BOOTHMAN with Mr. McKINNEY.
Mr. CULBERSON with Mr. BAKER, of Illinois.
Mr. STONE, of Missouri, with Mr. WILLIAMS.
Mr. TAULBEE with Mr. FARQUHAR.
Mr. LAWLER with Mr. SEYMOUR.
Mr. DUNN with Mr. ROWELL.
Mr. ANDERSON, of Illinois, with Mr. DALZELL.
Mr. MACDONALD with Mr. JOHN R. BROWN.
Mr. O'NEILL, of Missouri, with Mr. CONGER.
Mr. CHIPMAN with Mr. ARNOLD.
Mr. LANDES with Mr. McCORMICK.
Mr. VANCE with Mr. MOFFITT.
Mr. MANSUR with Mr. SAWYER.
Mr. WILKINSON with Mr. NICHOLS.
Mr. FISHER with Mr. BROWER.
Mr. ERMENTROUT with Mr. GALLINGER.
Mr. RAYNER with Mr. DE LANO.
Mr. NORWOOD with Mr. PARKER.
Mr. GLOVER with Mr. COOPER.
Mr. DIBBLE with Mr. BELDEN
Mr. DOCKERY with Mr. WARNER.
Mr. COWLES with Mr. THOMPSON, of Ohio.
Mr. NEWTON with Mr. FELTON.
Mr. GLASS with Mr. KETCHAM.
Mr. LATHAM with Mr. GEST.
Mr. SHIVELY with Mr. OWEN.
Mr. McSHANE with Mr. LAIRD.
Mr. MAHONEY with Mr. BROWN, of Ohio.
Mr. McADOO with Mr. BRUMM.
Mr. LYNCH with Mr. YARDLEY.
Mr. WHITING, of Michigan, with Mr. HOUK.
Mr. RUSSELL, of Massachusetts, with Mr. COGSWELL.
Mr. PIDCOCK with Mr. PHELPS.
Mr. DARLINGTON with Mr. MOORE.
Mr. CUTCHEON with Mr. TARSNEY.
Mr. HOWARD with Mr. HOPKINS, of Illinois.
Mr. MORSE with Mr. WHITING, of Massachusetts.
Mr. BLANCHARD with Mr. THOMAS, of Illinois.
Mr. GRANGER with Mr. ROCKWELL.
Mr. BELMONT with Mr. DAVENPORT.
Mr. O'FERRALL with Mr. MASON.
Mr. BIGGS with Mr. MORROW.
Mr. CLARDY with Mr. WADE.
Mr. STEWART, of Texas, with Mr. DUNHAM.
Mr. FORD with Mr. GUENTHER.
Mr. SNYDER with Mr. YOST.
Mr. DAVIDSON, of Alabama, with Mr. PATTON.
Mr. RUSK with Mr. O'DONNELL.
Mr. GREENMAN with Mr. SHERMAN
Mr. BYNUM with Mr. STEELE.
Mr. CANDLER with Mr. BREWER.
Mr. BOUTELLE with Mr. WISE.
Mr. SPINOLA with Mr. THOMAS, of Wisconsin.
Mr. TIMOTHY J. CAMPBELL with Mr. WEST.
Mr. BACON with Mr. BAKER, of New York.
Mr. HOGG with Mr. POST.
Mr. SIMMONS with Mr. JOSEPH D. TAYLOR.

The SPEAKER. The House refuses to adjourn, there being—ayes 27, noes 31. No quorum has voted.

Mr. OATES. Having endeavored to induce the House to adjourn and having failed in that I now ask leave to adjourn myself; in other words, I ask leave of absence for the remainder of the session.

The SPEAKER. The Chair hears no objection, and it is so ordered.

Mr. LANHAM. I make a similar request for indefinite leave of absence after to-morrow.

Mr. WHEELER. I think all these gentlemen should make a speech on the Senate tariff bill before they go away.

Mr. DINGLEY. Gentlemen will not let us adjourn and yet they go away themselves.

Mr. OATES. I am in favor of adjournment myself.

The SPEAKER. The Chair hears no objection, and it is so ordered.

Mr. HOOKER. I ask, by unanimous consent, to substitute a joint resolution——

The SPEAKER. The record has just disclosed the fact that there is no quorum in the House, and no business can be transacted except to order a call of the House or to adjourn, and a motion to adjourn has just been voted down.

Mr. LANHAM. I move there be a call of the House.

The House divided; and there were—ayes 23, noes 17.

So the motion was agreed to.

Mr. McMILLIN. I move the House do now adjourn.

The House divided; and there were—ayes 30, noes 20.

Mr. JACKSON demanded the yeas and nays, and subsequently withdrew the demand.

So the motion was agreed to; and accordingly (at 1 o'clock and 11 minutes p. m.) the House adjourned.

PETITIONS, ETC.

The following petitions and papers were laid on the Clerk's desk, under the rule, and referred as follows:

By Mr. BOWDEN: Petition of citizens of Clarke, Frederick, Warwick, and Dinwiddie Counties, Virginia, in favor of pure food, drugs, and lard—to the Committee on Agriculture.

By Mr. FARQUHAR: Petition of citizens of North Barton and of Natural Bridge, N. Y., in favor of pure food and drugs—to the Committee on Agriculture.

By Mr. LATHAM: Petition of citizens of Beaufort, Carteret, Bertie, and Craven Counties, North Carolina, in favor of pure food, drugs, and lard—to the Committee on Agriculture.

SENATE.

WEDNESDAY, *October* 17, 1888.

Prayer by Rev. HERMAN S. COOK, of Waynesborough, Pa.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

The PRESIDENT *pro tempore* presented a petition of the Workingmen's League of America, urging consideration of the construction given by the Secretary of the Treasury to the act of March 3, 1881, relating to the surplus; which was referred to the Committee on Finance.

He also presented a petition of the Nineteenth Illinois Veteran Club, of Chicago, Ill., praying for the passage of the bill to retire General W. S. Rosecrans with his late rank of major-general in the Army; which was referred to the Committee on Military Affairs.

Mr. ALLISON. I present the memorial of John Cowdon, of New Orleans, La., relating to the bridging of the Mississippi River.

I move that the memorial be referred to the Committee on the Improvement of the Mississippi River, and as it is brief, I ask unanimous consent that it may be inserted in the RECORD.

The memorial was referred to the Committee on the Improvement of the Mississippi River, and ordered to be printed in the RECORD, as follows:

To the honorable Senate and House of Representatives:

The present plans of bridges are too expensive. They retard the free outflow of water, causing greater overflows, and are great obstructions to the free navigation of all our rivers, greatly increasing the cost of transportation.

In the plans herewith presented will be found a remedy for all the above-named evils so detrimental to the people of the United States of America.

The material proposed to be used for the arches will give more than ten times the strength ever required.

The abutments will be as solid as rock, and will resist all the pressure that solid rock can resist.

The other and only remaining difficulty has been in raising the arches; but by the plans I shall adopt there will be no more difficulty on that point than have engineers had in raising spans 200 feet long and 50 feet high.

If desired, the arches for the 3,000 and 2,500 foot spans could be lowered 50 and 30 feet, respectively, as seen by lines A and B from the elevation as shown; but it would cost from $75,000 to $100,000 more, and the bridges would not be any stronger, when the cost of putting up the arches as proposed would not be $5,000 more than the spans 50 and 30 feet lower.

The estimates for the abutments and arches are ample, and will cover all that part of the expense, and will be fully two-thirds the entire cost. But should I be mistaken on the other part of the work (for I have no data on which to base an accurate estimate), and it should cost as much as the abutments and arches, then such bridges would not cost one-fifth as much as bridges of the same length of span now cost on any and every other plan now in use. The bridges are designed to have double railroad tracks with 30 feet space between for wagon-road and two footways.

In order to test this plan I intend to build a 3,000-foot span bridge, the railroad track to be 100 feet above high-water mark, across the Mississippi River, at Natchez, and at the second session of the Fiftieth Congress will ask for the authority to do so.

Respectfully submitted.

JOHN COWDON.

THEODORE LEWIS.

Mr. PUGH. I am instructed by the Committee on the Judiciary to report favorably, without amendment, the bill (H. R. 10735) for the removal of the political disabilities of Theodore Lewis, of Louisiana. I ask for the present consideration of the bill.

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed—two-thirds of the Senators present voting in the affirmative.

BILL INTRODUCED.

Mr. WILSON, of Maryland (by request), introduced a bill (S. 3640) to amend sections 851, 856, 857, 858, 861, and 862 of the Revised Statutes of the United States relating to the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

LEGAL REPRESENTATIVES OF ELIZA M. FERRIS.

Mr. SAWYER. I wish to withdraw a motion I entered yesterday to reconsider the bill (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris.

The PRESIDENT *pro tempore*. The Chair hears no objection, and the motion entered by the Senator from Wisconsin to reconsider the bill named by him will be withdrawn.

AWARDS UNDER MEXICAN TREATY.

Mr. MORGAN. I ask for the present consideration of the following resolution:

Resolved, That the Committee on Foreign Relations, or any subcommittee thereof charged with the investigation of the claim of La Abra Silver Mining Company against Mexico, have leave to sit in the recess of the Senate and conduct such investigation in Washington City or in the city of New York, and the powers given to said committee under existing resolutions of the Senate may be exercised in the recess of the Senate.

The Senate, by unanimous consent, proceeded to consider the resolution.

Mr. BROWN. I am a member of that subcommittee. I have no objection to the passage of the resolution, but I desire to give notice now that I can not attend its sittings during the recess.

Mr. MORGAN. Only formal sittings will be necessary.

The PRESIDENT *pro tempore*. The question is on agreeing to the resolution.

The resolution was agreed to.

THE REVENUE LAWS.

The PRESIDENT *pro tempore*. If there is no further morning business, that order is closed.

Mr. ALLISON. I move that the Senate proceed to the consideration of House bill 9051.

Mr. DOLPH. I ask the Senator from Iowa to yield to me to call up a bill to grant the right of way over an Indian reservation, a House bill reported unanimously from the Committee on Indian Affairs by the senior Senator from Minnesota [Mr. SABIN], who left it with his colleague [Mr. DAVIS]. The junior Senator from Minnesota was watching for an opportunity all day yesterday to call up the bill, but had to leave, and he asked me to call it up for him. It will not take long.

Mr. ALLISON. Let the revenue bill be taken up first.

Mr. DOLPH. Very well.

The PRESIDENT *pro tempore*. The Senator from Iowa moves that the Senate proceed to the consideration of the unfinished business, being the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

The motion was agreed to.

The PRESIDENT *pro tempore*. The Senator from Colorado [Mr. TELLER] is entitled to the floor on the unfinished business.

Mr. TELLER. I have no objection to yielding to the request of the Senator from Oregon, unless debate shall follow on the bill he wishes to call up.

Mr. DOLPH. If it does I shall not insist upon its consideration.

RIGHT OF WAY THROUGH SIOUX RESERVATION.

The PRESIDENT *pro tempore*. The title of the bill the consideration of which is requested by the Senator from Oregon [Mr. DOLPH] will be stated.

The CHIEF CLERK. A bill (H. R. 7964) granting to the Aberdeen, Bismarck and Northwestern Railway right of way across a portion of the Sioux reservation, in Dakota Territory.

The PRESIDENT *pro tempore*. The Senator from Oregon asks unanimous consent that the pending order, being the unfinished business, may be informally laid aside to enable him to ask for the consideration of the bill the title of which has been read. If there be no objection, the bill will be read at length for information, subject to objection.

The Chief Clerk read the bill.

The PRESIDENT *pro tempore*. Is there objection to the present consideration of the bill?

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ENROLLED BILLS SIGNED.

A message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the Speaker of the House had signed the following enrolled bills and joint resolution; and they were thereupon signed by the President *pro tempore:*

A bill (S. 1482) granting a pension to Sarah C. Taylor;

A bill (S. 11139) to authorize the building of a bridge or bridges across the Mississippi River at La Crosse, Wis.;

A bill (H. R. 11262) to authorize the construction of bridges across the Kentucky River and its tributaries by the Richmond, Irvine and Beattyville Railroad Company; and

Joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel.

SELECT COMMITTEE ON BUSINESS OF EXECUTIVE DEPARTMENTS.

Mr. COCKRELL. I would thank the Senator from Colorado [Mr. TELLER] to yield until I can secure an order. The select committee appointed during the last Congress to examine the methods of conducting business in the Executive Departments may desire to obtain some reports from the Departments in regard to the methods of business and any changes or improvements made in them.

I therefore ask that the committee may be continued, with leave to sit, if necessary, in vacation, and to report at any time during the next session. There will be no expense of any kind connected with it. It is simply a leave to sit.

The PRESIDENT *pro tempore*. It will be so ordered, if there be no objection.

STEAM-PRESSES IN BUREAU OF ENGRAVING AND PRINTING.

Mr. GEORGE. Mr. President, with the leave of the Senator from Colorado, I desire to state that on Friday last I gave notice that on Monday morning I should move to take up the bill (H. R. 9623) to provide for printing Government securities in the highest style of art. I have been unable to obtain the floor on the two legislative days which have intervened since that notice. This morning I had a conference with the legislative committee of the Knights of Labor, who are pressing this bill. Owing to the thinness of the Senate, the fact that they have been informed that the opponents of the bill desire to take some further testimony, and their wish to have the bill fully and fairly considered upon its merits in a full Senate and after full investigation, as the result of the conference between myself and the legislative committee to which I have referred, and at their request, I now notify the Senate that I shall not make the motion which I gave notice that I would make.

LEAVE OF ABSENCE.

Mr. TELLER. Mr. President——

Mr. GEORGE. If the Senator will indulge me another moment, I should like to ask from the Senate from to-morrow leave of absence during the remainder of the session.

Mr. COCKRELL and others. No objection.

The PRESIDENT *pro tempore*. The Senator from Mississippi asks leave to absent himself from the service of the Senate after to-morrow. The Chair hears no objection. Leave is granted.

THE REVENUE LAWS.

The Senate, as in Committee of the Whole, resumed the considerainon of the bill (H. R. 9051) to reduce taxation and simplify the laws ti relation to the collection of the revenue.

Mr. TELLER. Mr. President, at this hour of the session it may seem somewhat presumptuous to discuss what may be considered political questions in the Senate. I do not know that I should have felt constrained to detain the Senate with any remarks of mine but for the fact that the Secretary of the Treasury has seen fit in a recent public speech to make some statements that I think need contradiction—statements that Ithink are not supported by the record. He has made some explanations of the policy of the Administration that, I think, come from afterthought and after-consideration, and were not the moving cause at the time of the commission of the acts of which there has been considerable criticism.

The Secretary of the Treasury has fallen into a very general mistake, which has been made by others, when he addresses the brokers and bankers of Wall street, in supposing that what is their interest is the interest of the whole country, and that if the acts of the Administration are in accordance with their ideas and are commended by them they must necessarily be in the interest of the whole people. I noticed the other day that in speaking from the steps of the subtreasury building in New York the Secretary of the Treasury said "to the business men of New York:"

When I have the honor of thus addressing you I feel that I am speaking to the whole country, for you represent and are in touch with the business and business men of every part of the Union.

Later on he said:

I know that we are often told that your welfare is not the welfare of some parts of the country, but I have never been able to find reason to support this statement. Where is the dividing line? Where does your interest cease, and that other alleged interest begin? Good, economical government, prosperous business, safe currency, and low taxation are well for the whole country, are well for each and every part of the country. One part of it can not suffer in any of these respects without instant communication to every part.

Mr. President, I find no fault with the latter part of this statement, but I do find fault when the Secretary of the Treasury in addressing the bankers and brokers of New York, the non-producing element of that great city, asserts that he speaks to all the people of the United States and all of its varied interests by speaking to them. I deny his conclusion that their interests are the interests of the whole people of this country. On the contrary, I assert that their interests are not the interests of the whole country.

What I complain of now, and what I have complained of heretofore, is that this Administration has been conducted in its financial policy upon a Wall street basis, governed, controlled by Wall street influences and Wall street interests to the utter disregard of the great interests of the people.

Four years nearly of this Democratic Administration have passed, and I propose even at the risk of being somewhat tedious to the Senate to review its financial policy and its financial management, and to compare it with the management of the Republican party, so bitterly and severely criticised by the Democratic party at all times, not even excepting this present time. Even the Secretary of the Treasury finds time to cast some reflections upon the past management of public affairs under Republican administrations.

When the Administration came into power the first movement with regard to the management of the finances was to put a bank president at the head of the Treasury Department. I do not contend that he was incompetent because he was a bank president. I do not contend that because a man has spent his time in casting up accounts and poring over the ledgers of a national bank he is unfit and unsuitable to occupy the position of Secretary of the Treasury, but I do say that bank presidents as a general thing know very much more of the rates of interest and discount of bankable and non-bankable paper than they know of the great questions of finance which must be met and settled in a public office like that of the Secretary of the Treasury of the United States.

Not only was a bank officer put at the head of the financial department of the Government, but the Treasurer of the United States, second in importance in that great Department, was also selected from a bank in New York, and these two officers came here thoroughly imbued with the ideas of Wall street. Neither of them ever had an idea in common with the masses of the people, with the business interests of the West or the South or the North or the East, save and except those who have large fixed incomes and who deal in securities. They had no interest in the great masses, and I can say here that they do not represent the sentiments of the Democratic party in this body. Not 5 per cent. of the Democrats of this body were in accord with them; and yet to-day upon every occasion can be found men who were in utter antagonism with them when they came into power, ready on this floor to defend every act of omission or of commission, and to resent any criticism that may be made as to the administration of the finances of the nation.

With a Democratic majority in the other House committed to diverse views from those of the Secretary of the Treasury and the Chief Executive of the nation, why is it that they have stifled all these complaints? Why is it that nobody on the other side of this Chamber has been found to find fault with that which they complained of under other administrations when performed in a lesser degree? Is it because of the desire to sustain a partisan administration? Is it because the interest of the country is less than the interest of the party? Whatever may be the reason, there is one thing certain, that it would have been condemned if it had occurred under Republican administration, in the severest terms, by every member on the other side of the Chamber, and yet, with two or three exceptions, it is to-day accepted as a proper administration of public affairs. In supporting this Administration for re-election, they, as do their associates everywhere, know that it means another four years of Wall-street domination in the financial affairs of this Government.

When the present President was about to assume the duties of the Chief Executive of the nation, in an unusual manner he addressed members of the other House with a request for legislation. I need not now, and will not now, criticise the impropriety, to say the least of it, of an incoming President, with millions of money in the way of patronage at his command, addressing an outgoing House of Congress in accord with him and suggesting legislation of a financial character. His letter to members of the House of Representatives has been read again and again, in which he urged the suspension of the coinage of silver dollars upon the theory that if their coinage was not suspended disaster and ruin would come to the business of the country.

When he was inaugurated and came into power the very first official act which we received from him, save his inaugural address, teemed with attacks upon the financial system that Congress had indorsed in 1878, and that the people, with a unanimity which did not admit of any controversy anywhere, had approved. In his first message in December, 1885, he said:

> Nothing more important than the present condition of our currency and coinage can claim your attention.
>
> Since February, 1878, the Government has, under the compulsory provisions of law, purchased silver bullion and coined the same at the rate of more than $2,000,000 every month. By this process up to the present date 215,759,431 silver dollars have been coined.
>
> A reasonable appreciation of a delegation of power to the General Government would limit its exercise without express restrictive words to the people's needs and the requirements of the public welfare.
>
> Upon this theory, the authority to "coin money" given to Congress by the Constitution, if it permits the purchase by the Government of bullion for coinage in any event, does not justify such purchase and coinage to an extent beyond the amount needed for a sufficient circulating medium.

Congress had determined what was a sufficient circulating medium, but the President here attempted to determine that for himself, and decided that the amount Congress had determined was not the right sum. Before he had said this (and I read it in connection because the two go well together and show what was in the mind of the Chief Executive then, and it sustains a statement I made that this Administration was in all financial affairs in full accord with the extreme Wall-street idea) the President said:

> The very limited amount of circulating notes issued by our national banks compared with the amount the law permits them to issue, upon a deposit of bonds for their redemption, indicates that the volume of our circulating medium may be largely increased through this instrumentality.

He further in a very lengthy message complained of the coinage of silver, declaring that it threatened to put us on a silver basis, declaring that already the hoarding of gold had commenced in this country, and that if we continued to coin silver as we were coining it, for any considerable length of time, the country would be upon a silver basis, and all the gold would leave us. The last report of the financial officers of the Government shows that there are $650,000,000 of gold in this country to-day. It has rapidly increased since the President told us that hoarding had commenced and that gold would be scarce. Not only did the President take this view, but so did the Secretary of the Treasury and so did the Treasurer himself. Mr. Secretary Manning in his first report said:

> The disorders of our currency chiefly arise from the operation of two enactments:
>
> 1. The act of February 28, 1878, which has been construed as a permanent appropriation for perpetual Treasury purchases of at least $24,000,000 worth of silver per annum, although from causes mostly foreign that metal is now of mutable and falling value, which must be manufactured into coins of unlimited legal tender and issued to the people of the United States as equivalents of our monetary unit.

I call the attention of Democratic Senators to this language:

> 2. The act of May 31, 1878, which indefinitely postponed fulfillment of the solemn pledge (March 18, 1869) not only of "redemption" but also of "payment" of all the obligations of the United States not bearing interest, legalized as $346,000,000 paper money of unlimited legal tender, and required the post-redemption issue and reissue of these promises to pay dollars, as equivalents of our monetary unit.

Then he recommended not only the discontinuance of the coinage of the silver dollar, but he recommended also the retirement of the $346,000,000 of paper money called legal-tenders by the use of the surplus in the Treasury and such surplus as should arise in the Treasury for the purpose of paying off these notes.

The Treasurer of the United States, who was also as I said a bank officer in New York and came here imbued with Wall-street ideas, recommended the same thing. At the next session of Congress the Secretary of the Treasury sent us a further report upon this same question. He said, speaking of the coinage of the silver dollar:

> It is an expense and a taxation demonstrated by experience to be of no avail for any useful end. Needless as a tax, our silver purchase is also a disturbance in the Treasury, which threatens the currency without relieving the tax-payer. It is heaping up a heavy load of silver coin needing to be kept, but increasingly difficult to keep, in domestic commercial equivalence with our monetary unit.

Then he concluded that the only thing to do was to stop the purchase of silver. He said:

> IV. To stop the purchase of silver is our only choice, our duty, and our interest.
>
> It will stop a wasteful and injurious expense, and the taxation which defrays it.
>
> It will commence and promote reform in the sum and the methods of Federal taxation.
>
> It will recover to the United States an equality of position (non-coinage) with foreign powers, which will give us due influence in negotiation.

Then he concluded, after various recommendations:

> I respectfully recommend to the wisdom of Congress the unconditional repeal of the act of February 28, 1878, accompanied by such a declaration.

Such a declaration as he had suggested, which was a declaration that we would unite with the powers of Europe in adopting an international basis of coinage.

Passing from that, he went to the greenbacks, and said:

> Pay our unfunded debt of $346,681,016 with the present surplus, and the surplus which will accrue before the whole reduction of taxation can be made or take effect, and while no more funded debt can be paid except at a premium during the five years from now until 1891.
>
> * * * * * * *
>
> I therefore respectfully recommend:
>
> 1. Repeal of the clause in the act of February 28, 1878, making compulsory Treasury purchases of silver, for the reasons heretofore given and in order to reduce surplus and unnecessary taxation $24,000,000 a year.
>
> 2. Further reduction of surplus taxation, beginning in a manner which will be suggested below, close down to the necessities of the Government economically administered.
>
> 3. Repeal of the act of May 31, 1878, making compulsory, post-redemption issues and reissues of United States legal-tender notes, thus facilitating—
>
> 4. Gradual purchase and payment of $346,681,016 outstanding promissory notes of the United States with the present and accruing Treasury surplus, issuing silver certificates in their room, and gold certificates if need be, without contraction of the present circulating volume of the currency, these notes (called greenbacks) being now the only debt due and payable before 1891, except the 3 per cent. bonds, which are probably all to be called and paid early in the ensuing fiscal year.

Here were two conspicuous things in the financial policy of this Administration: First, the suspension of the coinage of the silver dollar; second, the retirement of the $346,000,000 of greenbacks which by the act of 1878 were not to be further retired.

Mr. PUGH. If it will not interrupt the Senator——

Mr. TELLER. Not a particle.

Mr. PUGH. I should like to ask him if the Republicans of Wall street did not concur with the President and the Secretary of the Treasury in those recommendations?

Mr. TELLER. I have no doubt that the Republicans of Wall street who are engaged in banking, who represent the great banking interest of that city, and who engage in brokerage, and I have not any doubt that the Republican importers also, fully concur with the financial policy of this Administration. I do not know of any considerable number of men in that great financial center who handle money who do not agree with the Administration.

Mr. PUGH. I will ask the Senator another question. Was it not the votes of Southern Democrats in Congress which prevented the suspension of the coinage of silver, and are not those Democrats now charged with being conspirators in a movement to destroy Northern industries?

Mr. TELLER. I have on more than one occasion given due praise to Democratic Senators for what I consider enlightened, advance statesmanship upon the silver question. I must confess that when I now see the same Senators supporting an administration that is directly and positively opposed to their former avowed policy on this question I am amazed; and that is as much I suppose as I have a right to say upon that subject. I know at all events that to-day the voices of those who were loudest in declaiming against the proposed suspension of the coinage of the silver dollar in this Chamber have been silenced—I do not say by Executive influence, for it would not be according to the rules of debate for me to say so. It is not for me to say why their voices are silent now.

I see the remarkable spectacle of a Democratic House allowing a bill that two-thirds of them were in entire accord upon to be suppressed by the Committee on Ways and Means and the bill not permitted to come before the House where a vote could be taken upon it. I have seen other remarkable exhibitions of Wall street influence that got beyond the Executive Departments of the Government through this Administration.

While I shall never fail myself to give the Southern Senators and Southern Members who voted with the Western Members and Senators upon the silver question their due praise, I must say that they were voting for their interest more than they were voting for ours; for although Colorado produces nearly one-quarter of the silver of the world, Alabama and Mississippi and Georgia have as much interest in the maintenance of the silver dollar as Colorado. It was not a question of local interest, as I have said before; it was a question in which all the people of this country and the world are interested; and when I see an Executive capable of using his influence in such a way as to stifle the voices from that section of the country in favor of the silver dollar, I apprehend that out of it may grow some future trouble.

But whatever may be now the sentiment of the Democratic Senators I am dealing with the administration of financial affairs in the executive department and not in the legislative; and will any Senator here deny what I have stated to be true, that in the very first message there was an attack upon silver, that there was an attack upon the greenback, and that it has been repeated in every message and every report from that day to this? Every public document that has emanated from the Treasury Department, whether it has had the *imprimatur* of Mr. Manning or Mr. Fairchild or Mr. Jordan, has been in sympathy and in accord with the men of Wall street whom I have heard denounced again and again from the other side of the Chamber as the robbers of the American people.

The President in his next message, of 1886, declared that he saw no reason why he should change his views on that subject. Then, too, Secretary Manning raised the question in his report, that there was no power to issue the legal-tender note. Perhaps the Senators would like to have that read. He said in his report:

> The power to force into the circulation an unfit representative of, a false equivalent of, a debt of, that monetary unit of value, as its namesake and equal in exchange, is a power to destroy men's faith in the honor of a Government and its laws. Their sense of betrayal, and their perception of the fact, are expressed by the non-equivalence in exchange often disclosed between the undebased coin and the debased coin, between the coin and the promise to pay converted into a legal tender, between the coin undepreciated and the depreciated coin, according as in any of these ways the monetary unit has been the instrument or the memorial of that duplicity. But such proceeding found no precedent, such opinions as are here controverted found no believer, no defender among the lawyers, statesmen, or people in the first seventy-two years of this Republic.
>
> Not until after 1861, when a great danger had beclouded most men's perceptions of financial as well as constitutional law, was a legal-tender money made out of the debts of the United States.
>
> Not until the infection spread was it ever deliberately argued that any representative of the unit of value could justly be suffered to be made, or to abide, in permanent depreciation and disparity therewith.
>
> But whether or not a non-equivalent of the coin dollar may be made a lawful dollar, and whether or not post-redemption issues and reissues of such promises can be lawfully made, after twenty-one years of peace have superseded any real or imagined exigency of war, certain it is that every argument of policy now forbids the continuance of that legalized injustice. Had it ever been conferred, the Federal Government should be stripped of so dangerous a power. No executive and no legislature is fit to be trusted with the control it involves over the earnings and the savings of the people. No earthly sovereign or servant is capable of a just exercise of such authority to impair and pervert the obligation of contracts.
>
> To apply the present and the unavoidably accruing proceeds of our surplus taxation during the next five years in payment of the only portion of the public debt beyond the vanishing 3 per cents, which is now due or will be payable, except at a high premium, before the 4½ percents of 1891 mature, besides being a large measure of currency reform, will also diminish and finally dissipate the objectionable and invidious influence of the Treasury upon the money market and upon the business of the country.

I commend that to the Democratic Senators who are lawyers. I commend that to the Democratic Senators who sustain the Supreme Court in the assertion that the Government has the power to make a legal-tender note. He continued—

> What surplus we expend in paying off the greenback debt will diminish by so much the immediate reduction of our tariff taxation; for, while the funded debt stands, certainly it is not wise to discard the taxes on whisky, tobacco, and beer.

So it was the purpose of this Administration, then, if they could, to get the consent of Congress to retire the greenbacks as well as to suspend the coinage of silver; and in his letter of February 1, 1887, Mr. Manning reiterated practically the same doctrine that he advanced in these former reports. I call attention to these extracts from that letter:

> That another species of our outstanding indebtedness, namely, the legal-tenders or greenbacks, known in law as United States notes, are, equally with what the law designates as Treasury notes, beyond any need or excuse for reissue; that temporary notes which are a debt of principal only, like notes which are a debt of principal and interest, should at once be cashed and canceled from abundant and superfluous coin in hand not now capable of being applied to any other use—this is so obvious a principle of sound finance, such as a prudent citizen would apply to his private affairs, that any Secretary of the Treasury would be subject to just reproach for departure therefrom by reissues, were it not that the act of May 31, 1878, seems to require of him that fiscal misstep. And I beg leave to submit to the House the question whether, among many other reasons for its repeal, the contraction of the currency sought to be averted by that act can now in any other and better way be prevented than by its repeal.
>
> * * * * * * *
>
> It is therefore necessary now, not only to reduce taxation in order to prevent surplus-tax-collecting from being currency-contracting again and again, but it is necessary also to employ our present and unavoidable tax surplus in the payment, not of funded, but of the unfunded debt.
>
> * * * * * * *
>
> Great extravagance of needless expense or serious monetary trouble can both so be avoided. The people's representatives, by action before adjournment, can relieve the Secretary of the Treasury from the bad choice between these now present alternatives.
>
> The surplus coin and bullion which will remain in the Treasury after all the bonds subject to call have been paid and before the Fiftieth Congress will assemble, together with the proceeds of surplus taxation which will flow into the Treasury before any possible reduction of taxes by the present Congress can take effect, constitute a sum which can well be got out of the Treasury into the hands of the people where it belongs, by the payment of the greenback debt. Coin certificates are a ready and superior paper money to the greenbacks. The substitution can be effected as a mere matter of the Treasury administration whenever two indispensable conditions are first fulfilled by Congress. Of these, the first is that the silver purchases should be stopped.
>
> * * * * * * *
>
> The repeal of the compulsory silver purchases (act of February 28, 1878) is the first and indispensable condition. The repeal of the compulsory post-redemption reissues of United States notes (act of May 31, 1878) is the next and only other condition.
>
> These two repeals are together necessary to prevent either on the one hand an extravagant expense or on the other hand a considerable contraction of the currency. I can see no other alternatives. As the evil is at our door, I can not conceive that the case admits of further delay.

It was the policy of this Administration to leave the funded debt, the interest-bearing debt of the Government to draw interest, and to pay off the unfunded debt, or the $346,000,000 of greenbacks. Mr. President, I wait to see whether there is any Senator on the other side of the Chamber who will announce himself in accord with that doctrine so repeatedly enunciated by the Chief Executive and his chief financial officer and never disclaimed to this hour.

Mr. Manning departed from the Treasury Department, and Mr. Fairchild, who so recently addressed the "business men of New York," became his successor, and in his report of last December, dealing with the silver question, speaking of its difficulties, and advising the suspension of the coinage of silver, as his predecessor had done, he said:

> Another plan, somewhat similar to that recommended by my predecessor in his last annual report, would be to provide that when the reserve was exceeded an amount of United States notes equal in value to such excess should be canceled, if enough of them were in the Treasury; but if not, then the purchase of bullion to cease until the maximum reserve should be reached. This would create a vacuum in the circulating medium which would be filled by silver. The amount of United States notes would be gradually reduced until the whole were extinguished.

Mr. President, I think I need not read any further from the published reports of the Government officers to show that my statement is unquestionable, can not be questioned, that the Treasury Department proposed instead of paying the public debt, which it had been the policy of the Republican party when in power, to do the other thing—keep the public debt alive, keep in existence the interest-bearing debt, and retire that which was costing the people nothing, that which was serving the people as money as no other money ever served any people in the world.

Why, let me ask, should we retire the greenback circulation, a money that is good wherever civilized men trade, although it is paper money; good wherever civilized men meet each other and exchange products; good in every corner of the world where men read and where they know the actual condition of their fellows in other parts of the world? It saves to the people the interest on $346,000,000 of money to have the greenbacks continued in existence; and in whose interest could it be to retire them save that of the holders of Government bonds, and theirs alone?

When the Republican party went out of power they left in the Treasury of the United States $100,000,000 set apart for the redemption of greenbacks, which had been set apart in the early days of resumption,

and which are now required by law to be so held, or at least public opinion had consented that they should be there held for the purpose of making good at any time in gold the greenback when it should be presented. How much more did they leave? About $25,000,000 of subsidiary coin, which this Administration has stricken from the available assets of the Government and declared to be of no practical benefit. Then they left in addition, not, as Mr. Fairchild says in his recent speech, $22,000,000, but $8,764,590.11.

Nobody can have forgotten that in 1884, during the political campaign, every Democratic orator, from the candidate for Vice-President down, declared again and again upon the public rostrums that we had accumulated a hundred millions of surplus in the Treasury over and above the $100,000,000 required for the redemption of greenbacks, and that that hundred millions ought to be applied to the payment of the public debt, and I am astonished to see in the public prints that that stupendous falsehood is being repeated now by prominent Democratic orators in the land.

A Democrat recently in one of the Western States, a candidate for a high office, declared that when they came into power they found one hundred millions of money in the Treasury not needed, which they, he said, at once proceeded to pay on the public debt. Now I propose to make a little examination of how they have paid the public debt. I read from the report of the late Secretary, Mr. Manning, and the same statement can be found in the report of the Treasurer:

Net balance—

This is December, 1885, showing the indebtedness of the United States on March 4, 1885, as to which he concludes:

The assets of the Treasury on the 4th of March, 1885, excluding fractional coin and other unavailable items, were as follows:

* * * * * * *

Net balance in Treasury, $8,764,590.11.

That was the available balance in the Treasury when the Republican party went out of power and when the Democratic party came in. During the portion of the fiscal year 1885 that had run when we went out of office we had paid out about $45,000,000 on the public debt. We had in the preceding fifteen months paid out $110,000,000 on the public debt, and we had paid out the year before that $99,000,000 on the public debt, and the year before still more, and the year before still more. As money came into the Treasury month by month the surplus was paid out until, as I said, when the Democrats took charge of the administration of public affairs all the money had been paid that it was prudent to pay on the public debt, and much more than they have since declared ought to have been paid. Instead of there being $100,000,000 there was practically no money left at all to be paid by them. There was an increasing surplus. It was more in May than it was in April, more in April than it was in March; and on the last of June, 1885, there was about $44,000,000 of surplus in the Treasury.

When the Democratic party came into power there was a trifle more than $194,000,000 of 3 per cent. bonds outstanding that were due and payable. These were the bonds that Republican Secretaries had been retiring as rapidly as the surplus would allow. What was the duty of the present Administration when they had ten, fifteen, or twenty millions of dollars in the Treasury which could have been paid upon these bonds? Every one of them could have been called if there was money. What did they do? Let us see.

On the 31st of July, 1885, the surplus had increased to $44,052,229. Not a dollar of the 3 percents or any other bonds had been paid. During the month of July there was added to that amount the sum of $5,663,643, making the surplus on the 1st day of August, 1885, $49,715,872 independent of fractional coin, independent of what they called the unavailable assets. Of the available assets there were practically $50,000,000 in round numbers in the Treasury, while 3 per cent. bonds to the extent of almost $200,000,000 were outstanding drawing nearly $500,000 a month of interest, and yet not a dollar was paid on the public debt. During the month of September, 1885, the increase of surplus was $14,186,534, coming into the Treasury at the rate of half a million dollars a day nearly, more than for every working day in the month; and the surplus on the last day of that month was $63,903,106, and still not a dollar had been paid on the public debt.

By December 31 of that year this amount had increased to $71,018,872; and by the 1st of January, 1886, to $79,689,862 of available assets, over and above what they termed unavailable assets, that had always in our accounting been treated as a part of the surplus moneys of the Treasury. Not a bond had yet been called in, and no effort had been made to pay the public debt or to reduce the burden of taxation upon the people. The whole $194,150,000 of unpaid 3 percents, when the Administration came in, were still unpaid, drawing, as I said, almost $6,000,000 a year out of the people of the United States, that went to the holders of those bonds.

Nobody who was a member of this body in the fall and winter of 1885 has forgotten the fierce attack made upon this policy by the senior Senator from Kentucky [Mr. BECK]. I could hardly say myself in this Chamber the harsh things he said of the policy that would accumulate the people's money in the Treasury of the United States with the interest-bearing debt still due and unpaid. Yet since that time I do not know that I have heard anybody criticise the Administration that practically continued this same policy for more than eighteen months thereafter. So grievous had this policy of the Administration become to the people, so objectionable and so odious, that on the 23d of February, 1886, the Committee on Ways and Means of the House of Representatives submitted a resolution, known as the Morrison resolution, in which they asserted that there was $179,000,000 of available surplus that could be paid upon the public debt. The committee in their report state—

That on January 30, 1886, as shown by the official "statement of the assets and liabilities of the Treasury of the United States," there was in the Treasury and United States depositories, including amount held for the redemption of United States notes, and not including minor and fractional silver coin classed "as assets not available," the sum of $179,689,862.24 in excess of all other liabilities than the redemption of said United States notes.

It is believed that this sum is largely in excess of the sum required for the purpose for which it is held, and that a considerable part thereof should be applied to the payment of the interest-bearing debt of the United States now payable, to the end that public moneys shall be used to lighten public burdens and not unnecessarily held to lure the agents and representatives of the people on to improvident and wasteful expenditures.

Your committee therefore reports the accompanying joint resolution and recommends its adoption.

Resolved by the Senate and House of Representatives in Congress assembled, That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby, made the duty of the Secretary of the Treasury to apply such excess in sums not less than ten millions per month during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States, payable at the option of the Government.

That resolution was passed by the House, came to this body, and was here amended upon the application of the Treasury Department, which declared that it was necessary that $20,000,000 should be retained in the Treasury over and above the one hundred millions for the redemption of greenbacks. It then went to the President. Mr. Jordan, who came before the Finance Committee of this body in regard to it, declared that $20,000,000 was not sufficient, that there should be at least $50,000,000 kept in the Treasury besides the one hundred millions for greenback redemption. In a few days after this Morrison resolution went to the President, Congress adjourned, and the President vetoed it by a pocket veto—the meanest and most contemptible, in my judgment, of all vetoes. As much as I have felt inclined to censure some of his vetoes, I think the most contemptible of all is when the President puts a bill in his pocket and thus lets it fail.

That resolution passed the House on the 14th of July, 1886. It came to this body, and as I said was amended, and it went to the President on the 30th of the same month, or at least it passed this body on the 30th of the same month. When the resolution passed the Senate there was a surplus in the Treasury of $80,000,000, $60,000,000 of which must by the terms of this resolution have been promptly paid upon the $194,000,000 of 3 per cent. bonds still unpaid. Rather than pay $60,000,000 on these bonds the President chose to disregard the legislative will, and to allow the resolution to die in his hands.

The first call was made on the 29th of December, 1885, for $10,000,000, to be paid February 1, 1886. At that time the surplus revenues were $71,018,872. The second call was made on the 29th day of January, 1886, for $10,000,000, and at that time the surplus was $79,689,862, or at least it was three days thereafter. The third call was made on the 20th of February, 1886, for $10,000,000, to be delivered on the 1st of April. On the 28th day of February, eight days after this call, the surplus was $72,298,202. The fourth call was made on the 22d of March, 1886, for $10,000,000, to be delivered May 1. On the 1st day of March the surplus was $76,381,099. The fifth call was made on the 20th of April, 1886, for $10,000,000, to be delivered on the 1st of June. On the 30th of April the surplus was $77,030,999.

Can anybody give any reasonable excuse, can anybody give any reason why these calls were made for $10,000,000 of bonds when there were seventy-five, seventy-eight, seventy-nine million of money in the Treasury, every dollar of which might have been paid out upon the public debt, and thus have reduced the interest-bearing debt to that extent? Nobody can explain it except upon the theory which I have advanced, that it was the policy of this Administration to keep the bonds out and not pay the public indebtedness bearing interest, but, if possible, to pay the indebtedness bearing no interest. In whose interest was this?

The sixth call was made on the 22d of May, 1886, and I desire to ask a little attention to this call. On the 22d of May the call was for $4,000,000, to be delivered on the 1st of July. When this call was made, the surplus was no less than $73,000,000, for nine days later, May 31, it was $76,142,611; and yet the call was for only $4,000,000 of 3 percents.

The seventh call was made on the 21st June, 1886, for a like sum of $4,000,000, to be delivered on the 1st of August. When this call was made the surplus could not have been less than $72,000,000, for at the end of the month it was $75,101,109.

On the 19th of July, 1886, five days after the Morrison joint resolution had passed the House, the eighth call was made for a like sum of $4,000,000, to be delivered on the 1st of September. At the time this call was made the surplus was not less than $75,000,000, for on the last day of July it was $80,206,325.

With $80,000,000, out of which was to come but $4,000,000, no fur-

ther calls were made until the 12th day of August, 1886, when a call was made for $10,000,000.

I have called attention to the surplus when these calls were made. I now desire to call the attention of the Senate to the surplus when these calls matured, when the time of payment arrived. When the first call, made on the 29th day of December, 1885, was payable, that is, the 1st of February, 1886, for ten millions, there were $79,689,862 in the Treasury, and the public indebtedness bearing 3 per cent. that might be paid was $194,150,000. When the next call matured there was $72,298,202, and the public indebtedness that was then payable was $184,000,000. Each of these calls I have stated in a table, which I will now put in:

Calls.	Date.	Redeemable.	Amount called.	Surplus.	Public debt payable.
First	Dec. 29, 1885	Feb. 1, 1886	$10,000,000	$79,689,862	$194,000,000
Second	Jan. 29, 1886	Mar. 1, 1886	10,000,000	72,298,202	184,000,000
Third	Feb. 20, 1886	April 1, 1886	10,000,000	76,381,099	174,000,000
Fourth	Mar. 22, 1886	May 1, 1886	10,000,000	77,030,999	164,000,000
Fifth	Apr. 20, 1886	June 1, 1886	10,000,000	76,142,611	154,000,000
Sixth	May 22, 1886	July 1, 1886	4,000,000	75,191,109	144,000,000
Seventh	June 21, 1886	Aug. 1, 1886	4,000,000	80,206,325	140,000,000
Eighth	July 19, 1886	Sept. 1, 1886	4,000,000	76,527,561	136,000,000

But I want to attract a little attention to the fact that when the $4,000,000 call due on the 1st of July was payable, there was $75,191,109 in the Treasury surplus money and $144,000,000 of unpaid 3 per cent. bonds still out. Why was only $4,000,000 called? Simply because Wall street did not want any of these bonds called, and because a pretense must be made in the interest of the people, a pretense that they were paying off the public debt; and those three calls of $4,000,000 each were made when the call ought to have been for $70,000,000 when the first call was made, when the bonds could have been practically paid off, half of them at least, by one single call; but the calls were strung out and the last of them was not paid until July 1, 1887, when they could have been all paid by the close of the fiscal year, 1886; or if not by June 30, at least within two months thereafter.

Mr. President, there was more than one period during the time I have recited when $75,000,000 would have paid half of the 3 per cent. bonds or more, and when that amount was in the Treasury applicable to that purpose. What excuse, what reason can be given for not having done it? I have never heard any given. I have never yet found any man living who was willing to stand up here and defend the conduct of the Administration in that particular. Much as Senators and Members and outside adherents may prate of its honesty and of its ability, none of them are willing to say that the management of the 3 per cent. bonds is marked by anything but imbecility of the grossest character, to put it in no harsher terms.

How much money do you suppose we lost by this dallying? Remember that the interest on these 3 percents as I stated was almost $500,000 a month. Think of it! The President of the United States has arrogated to himself, or if he has not his friends have, a great deal of credit because he has stood between this body and the other, on the one side and the public Treasury on the other when we have been sending him pension bills involving $96 a year, or perhaps $144, for some lone widow and has met them with a veto, and the whole Democratic portion of the country has resounded with praise that he has stood between rapacious legislation and the Treasury! There have never been five days since this Administration came into power that they have not lost more money by their negligent management than it would have taken in any one year to pay all the vetoed pensions. A week ago I carefully examined every pension bill that the President had vetoed, and carefully estimated how much he has saved to the public Treasury; $28,116 is the total that he has saved per annum. Think of it! Five hundred thousand dollars a month was left in the hands of the bondholders of Wall street to accommodate them, and then he attempted to save it by wringing it out of the poor unfortunate defenders of our flag.

Suppose they could not prove that they had incurred their disabilities in the line of duty; suppose they could not show that they were practically and perfectly sound when they went into the Army, they have rendered to the Government of the United States a service for which they ought to be compensated, which can not be done in dollars and cents; and when we say that we will give the pittance of $12 a month to the widow of one of these men, or $8 a month to the crippled soldier, whether crippled in the service or not, the President in the interest of the revenue of the country steps up and vetoes the bill, and yet he allows a half a million a month of the money of the United States to go into the hands of bondholders of New York, and he does that for eleven months without an attempt to pay a dollar of the public debt! He has lost more money on the 3 per cent. bonds than would have paid every single vetoed pension bill for more than one hundred and fifty years, if the beneficiaries should have all lived that length of time. But it was in the interest of the bondholder, it was in the interest of the money-lender, it was in the interest of the money-grabber that this was done, and not in the interest of poor men.

There was $75,000,000 lying in the Treasury month in and month out for more than a year, and the interest on that would have been, at 3 per cent., two millions and a quarter of money. That nobody can deny; that proposition can not be gainsaid. It was stated by a prominent member of the Committee on Appropriations in the House of Representatives that the Government lost more than four millions on that single transaction of the 3 per cent. bonds.

The last of the 3 per cent. bonds were paid on the 1st day of July, 1887. There were at that time $244,000,000 of bonds bearing interest at the rate of 4½ per cent., $738,000,000 bearing interest at 4 per cent., and $64,000,000 bearing interest at 6 per cent. The 4½ per cent. bonds are due in September, 1891. The $738,000,000 of 4 per cent. bonds are due in 1907, and the $64,000,000 of sixes are due in 1895 and 1896. Here were more than a thousand million dollars of indebtedness bearing, some of it 4½ and some 6 per cent. interest. The interest charged on this is about $14,000,000 or $45,000,000 a year.

The President all this time had ample authority to buy these bonds. It was simply a matter of discretion; it was simply a matter whether the Government could make money by taking its surplus funds and buying these bonds, and there was not a bond then that could not have been bought—not one of any denomination that I have mentioned which could not have been got so as to save to the Government of the United States from 2¼ to 2½ per cent. on every dollar that it invested in that purchase. Was it wisdom to allow the money to lie in the Treasury ($44,000,000 when the last 3 per cent. bond was bought), drawing no interest, and to allow these bonds to continue to draw interest? What was the practical and business-like method to deal with a surplus when there was no other method of disposing of it? To buy bonds at such figures as would net to the Government the greatest amount of interest upon the expenditure of its money. That is what ought to have been done; that is what the act of 1881 proposed should be done. That was why it was passed. That had been enacted by the Morrison resolution and by every act and by every movement of the legislative department of the Government, that the surplus money should go to retire the debt.

It is not worth while now for the Senators on the other side or the friends of the Administration to say there ought not to have been a surplus. That has nothing to do with the question. There was a surplus that they knew would continue. There had been a surplus of $80,000,000 or of $83,000,000 at one time, before they paid a dollar on the public debt. There was still a surplus and bonds were still to be had, I repeat, at a rate that would have saved to the Government from 2¼ to 2½ per cent. per annum on its money.

Mr. PUGH. I should like to ask the Senator if the action of the Senate in the adoption of the Beck amendment to the resolution in relation to the power of the President, declaratory of that power to make the purchase of bonds, did not show that the Senate was opposed to the President's exercising the power to purchase bonds without supplying the deficiency made by the purchase on account of the withdrawal of national-bank notes by silver certificates or silver coin?

Mr. TELLER. I do not think it indicated anything of the kind.

Mr. PUGH. Why did the Senate, then, make that amendment to the House resolution?

Mr. TELLER. I will tell the Senator why the Senate made that amendment. We knew that these bonds had to be bought; we knew that no administration could live and continue to accumulate money in the public Treasury in that way; we knew that necessarily in buying these bonds there would be some reduction of the currency of the country, which we did not propose should occur; and so we said, "As you buy these bonds, when you buy the bonds of a bank that has issues of national-bank notes, and they by reason of disposing of their bonds retire their notes, you shall issue an additional amount of silver money equal to the circulation retired." There never was a suggestion in this Chamber that we should not buy the bonds. And I venture to say here that if that question had been submitted to this body there would never have been a single vote, and no man could have been found in this body who would have voted against the proposition that the Government should buy the bonds when they could be bought at a reasonable profit to the Government.

Mr. PUGH. I will ask the Senator, if that was so plain, so perfectly manifest, why did they leave it to the discretion of the President? Why did not the Senate make the *authority* mandatory to purchase these bonds?

Mr. TELLER. The Senator knows very well that it was contended that the act of 1881 was practically mandatory. The Senator knows very well that the Administration had sent here a statement that they wanted to buy bonds, but they did not know whether they could or not.

Mr. PUGH. Still the power was left discretionary.

Mr. TELLER. Certainly it was discretionary. You could not say how many they should buy, because if you did say that they should put every dollar of public money in bonds it would have been within the power of the men holding the bonds to unite and force the Government to pay an unreasonable sum. It was not reasonable to say they should buy bonds at any price. What we intended to say was, and what the House had said in the resolution that came to us was, "You have the authority." That was all. And that was all the Adminis-

tration asked, and that was what the Democratic House said it had the authority to do; and we said, "You have the authority," but we said, "In exercising that authority you may reduce the circulating medium of the country, and we do not want that done, and so you shall issue as many silver dollars as you contract national-bank notes." That is all there was of it, and the Administration understood that Congress intended that they should buy bonds, and they have been buying since in a limited and laggard way.

The Senator knows very well and everybody knows that in this body the authority of the Administration to buy bonds was never questioned. I do not believe there is a Senator in this Chamber who would have stood here and expressed a doubt upon that proposition. The Senator from Missouri [Mr. VEST] said the other day that it was the universal sentiment of the profession everywhere that that authority existed, that the lawyers of the country everywhere so believed, and there never could have been any doubt about it. There never was any doubt of it. It would not be proper for me to say that it was a pretense. It would not be proper for me to say that the President and the Secretary of the Treasury sent it here knowing that that was the law. It would hardly be the thing for me to say that. If I was not restrained by this place and this presence, I would say it. I do not believe that any man who had the capacity to be a justice of the peace in the United States doubted the authority to buy bonds under the act of 1881.

Mr. SAULSBURY. Will the Senator allow me a moment?

Mr. TELLER. Certainly.

Mr. SAULSBURY. I think the Senator from Colorado has not quoted the Senator from Missouri correctly. The Senator from Missouri said that he had no doubt about it, but that there were abler lawyers than he who had expressed doubts, and among the rest the Attorney-General.

Mr. TELLER. I have heard before that the Attorney-General had so decided. I do not know but that it is so; but I do know that the Attorney-General decided upon another proposition in an appropriation act and declared that if it was a general provision it stood like any other. If he did give the opinion now claimed, he has made two decisions, one contrary to the other. I shall believe that the Attorney-General has made the decision now referred to, when I see it. I believe it has not yet been incorporated in the published opinions of the Attorney-General, and I take this occasion to say that when that is again asserted I trust somebody will produce that opinion, so that we may see upon what theory and upon what ground it is based. I should like to see where the Attorney-General says that that is different from any other provision of an appropriation act. How can he distinguish that from the provision which says that the President of the United States shall receive $50,000 a year instead of $25,000? How can he distinguish that act from hundreds of others that have gone into the Revised Statutes that in the revision were taken out of appropriation bills?

I repeat again, Mr. President, that it could not have been a question amongst lawyers. It might have been a question amongst politicians; it might have been a question amongst bankers who did not want this power exercised; it might have been a question among the brokers of Wall street who were protesting against the paying of these bonds, who wanted to hold on to them, who wanted the money to accumulate in the Treasury; but it was not a question amongst men who are accustomed to construing statutes.

Mr. PUGH. If the Senator will indulge me a moment——

Mr. TELLER. Certainly, I am quite willing to yield.

Mr. PUGH. The Senator is aware that the act of 1881 conferred authority to make this purchase within the discretion of the President in reference to the 3 per cent. bonds. At the time that act was passed the bonds running to maturity had not the large premium that they afterwards had in the market, and the President stated that he doubted whether that authority extended to the purchase of bonds in advance of their maturity at high premiums. It was the premium that these bonds had in the market after this authority to make the purchase was given, that caused him to hesitate in the exercise of that discretionary power, and he asked Congress to reaffirm it or to declare that it existed in the face of this increase in the value of the bonds.

Mr. TELLER. Oh, Mr. President, the authority of the Executive to buy bonds does not depend upon the price of the bonds. That is his discretion. If he had the authority he could buy the bonds if they went to 500, though he might be blamable for doing it at that price.

Mr. PUGH. A great many claim that he ought not to buy at the present premium.

Mr. TELLER. That is not the question. The question is, did he have the power, not was it a wise exercise of the power. Did he have the power? We shall discuss the other question later. Whether it was a wise exercise of the power has nothing to do with it. Did he have the power? He asserts that he doubted his power, but he never gave any good or valid reason why he doubted the power. Let us see what the act was:

That the Secretary of the Treasury may at any time apply the surplus money in the Treasury not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds: *Provided*, That the bonds so purchased or redeemed shall constitute no part of the sinking fund, but shall be canceled.

The 3 per cent. bonds were not purchased. The $194,000,000 of 3 per cent. bonds that were taken in were never purchased. They were redeemed. We do not purchase bonds that are due. The Senator knows that. Here was authority to use the money in the Treasury to redeem the bonds due or to purchase bonds. To purchase bonds means to take any bonds not due. That is a matter, then, of contract between the Government and the holder of the bond; at least that is the construction given to the law in the Treasury Department. I myself have never had any question, and I do not have any now, that it is in the power of any sovereign state to call in its securities and pay them off whenever it sees fit. I do not believe that any government in the world ought to abdicate that power. But another construction has been put on it, and I do not propose to quarrel with it, because I would have the Government always keep what the people believe to be faith with them. The people have been led to believe that the Government had no right to pay these debts until the time fixed for their maturity; and because of that I am willing the Government should pay them according to the public opinion, for it is better that the Government of the United States should sink millions of money than that it should discredit itself in the minds of the people of the United States.

So I was willing and am willing now that the Government should purchase these bonds and pay the premium, and any premium, I do not care how great it is, provided that it is cheaper for the Government to pay the premium; that is, that the Government would be the gainer by doing that instead of allowing the money to lie idle in the Treasury. I am not now dealing with the question whether it is wise to accumulate a surplus. That has nothing to do with this point. It is going to be there, and it will be there in spite of everything that can be done at this session, and the administration officials knew it was going to be there then. What the Government should have done was to buy the bonds at such figures as would net the Government the greatest possible revenue.

After the redemption of the 3 per cent. bonds the money continued to accumulate in the Treasury until on the last day of November, 1887, a few days prior to the President's famous free-trade message, there was in the Treasury $55,258,701 beyond what was needed to carry out the provisions of the sinking fund.

The Secretary of the Treasury on the 3d day of August, 1887, gave notice that he would receive proposals for the delivery of 4½ per cent. bonds on the 10th of August, and every Wednesday following, to carry out the provisions of the sinking-fund statutes. On the 22d of September the Secretary gave a further notice that he would purchase 4½ per cent. bonds at 108.4 until the 1st of October, and the 4 per cent. bonds at 125 until the 1st of October, and at 124 from that date until the 8th of October, the aggregate not to exceed, however, $14,000,000. That was supposed to be the necessary sum for the sinking fund to comply with the provisions of the statutes.

At this time the surplus was about $45,000,000, and after the purchase up to the 8th of October, of which I will speak later, it was still more than $40,000,000. Under the circular of August 3 the Secretary purchased of the 4½ per cent. bonds $11,505,300. Under the circular of September 22 the Secretary purchased $7,780,100 of 4½ per cent. bonds, for which he paid, of course, 108.4 because that was the price that he had fixed, making a total of the 4½ percents of $19,455,400, and a total of both classes of bonds of $24,844,050 at a cost of $27,842,237.

These transactions were closed on the 8th of October, 1887, and this amount was passed to the sinking fund. On the last day of that month the surplus was $56,758,704. Why did not the Secretary of the Treasury continue to buy bonds? He rejected a very large number of bids for 4 percents, as I will show in a few moments, at 125. He rejected a great number of 4½ per cent. bond bids at less than 108. Why did he not buy all the bonds that were then offered to him? I have here a statement of the Treasury Department showing the amount of bonds offered.

After the purchase, which was closed on October 8, 1887, no further bonds were bought until 1888. The House of Representatives on the 7th of February, 1888, passed a resolution inquiring why the Secretary was not purchasing bonds in these words:

Whereas it appears from a letter of the honorable Secretary of the Treasury, dated January 13, 1888, addressed to the Speaker of the House of Representatives, and printed in Executive Document No. 78, first session, Fiftieth Congress, that an additional appropriation of $2,000 is made necessary to meet an anticipated deficiency in telegraphic expenses of the Treasury Department caused by the regulations recently adopted relating to deposits of Government funds in national-bank depositories; and

Whereas the Secretary of the Treasury, in his annual report to Congress, says: "The Government has purchased some bonds during the present fiscal year for the sinking fund, and has been obliged to pay such a price for them that the annual saving in interest upon the purchases is only about 2½ per cent.; that the price of the same class of bonds has materially advanced since these purchases, and that the premium paid on said purchases amounted to $2,852,015.88;" and

Whereas the policy of purchasing bonds with surplus money in the Treasury, as aforesaid, has ceased, and the policy of depositing the public funds in a large number of national banks has been substituted in lieu thereof; and

Whereas the statute authorizing the Secretary of the Treasury to designate national banks as United States depositories provides that the Secretary shall prescribe the regulations by which said depositories of public funds shall be governed: Therefore,

Resolved, That the Secretary of the Treasury be, and is hereby, directed to re-

port to this House at the earliest possible moment all the facts bearing upon the following inquiries:

First. At what dates were the propositions made by the Treasury Department to buy said bonds, and if any person or association was employed to purchase said bonds, and give name of said person or persons or association; give dates of purchase, name of seller, kinds of bonds purchased, amounts paid, and current rates at which said bonds were quoted at the time the proposition to purchase was made by the Department.

Second. State when the policy relating to deposits in national-bank depositories was adopted which created the deficiency spoken of in the letter aforesaid of the Secretary of the Treasury, and whether after the purchase of bonds spoken of on the eleventh page of the annual report of the Secretary of the Treasury for the year 1887; give also reasons for changing policy first adopted, to wit, the purchase of bonds.

Third. State if the deficiency spoken of in the aforesaid letter of the Secretary was caused by the large increase in the number of national-bank depositories. Append to your answer a statement showing the per cent. of deposits on bonds deposited to secure the same under present regulations of the Treasury Department; also append copy of said regulations. State what per cent. of deposits has been allowed by the Department on United States bonds deposited for this purpose for the past twelve years, and whether the rate has been uniform, and whether below or above the par value of the bonds previous to the adoption of the present policy, and what was the rate percentage at the date of change or policy.

Fourth. Has said new policy of the Department concerning United States depositaries the number thereof, and the increased percentage of deposits allowed, had any effect to either increase or diminish the circulation of national-bank notes, and to what extent, and whether said policy has resulted in the increase or diminution of the money supply of the country?

Fifth. State the number of national banks which have been designated as depositaries of public funds since the adoption of the present policy, the number formerly designated that have availed themselves of the increased rate, and where said banks have been designated since the adoption of the present policy and rate of deposits; state when the bonds deposited in the Treasury by said designated depositories were transferred to said associations, and by whom.

After the passage of this resolution the Secretary of the Treasury commenced the purchase of bonds, not for the sinking fund, but for the purpose of reducing the surplus. I find that on the 17th of April the Secretary issued a circular inviting offers of bonds, and he received offers down to the 15th of June, according to the last detailed statement that has been furnished, of $47,505,250 of the 4 per cent. bonds, of which he had accepted $15,669,450, leaving the sum rejected $31,835,800. This is what I referred to when I asked why he had not bought all the bonds that were offered. When the Secretary of the Treasury began to buy these bonds, which was on the 23d day of April, 1888, the first bid was for $20,000 4 per cent. bonds at 125. These were taken. The next bid was for $100,000 at 125½, which he rejected. The same day, also, he rejected a bid for $200,000 at 125½. He received a bid for $250,000 at 125⅝. He rejected $250,000 in lots at 126¼ and 126½, and $250,000 in lots at 126½, and various other lots, including one lot of $1,000,000, on the 28th of that month, at 126⅝.

In May large offers were rejected at 126⅝. A million and a quarter bid was rejected at 127, and a long list was rejected from 126⅝ to 127.

Again, on the 8th, 9th, and 10th of May, large lots of $100,000, $2,000,000, $375,000, $50,000, $1,500,000, $2,750,000, $40,000, etc., were rejected at from 127 to 127¼ and 127⅛, and one lot at 126⅞. On the 15th of the same month a million was rejected at 127¼. Large amounts were rejected at sums ranging from that up to 127⅜.

On the 22d of May a million and a half were rejected at 128. Large sums were rejected at 127 and a fraction near to 128.

The total of these rejections shows more than $20,000,000 rejected below 128; very large offers were rejected at 127 and later in the month taken in at the same price, and the later transactions of the Department show that it has bought a large amount of these bonds within the last few weeks at 128 and a fraction, and some of them almost to 129. Rumor says that within the last ten or fifteen days 130 has been paid for these bonds. I have myself been unable to get anything but the average, and that does not go very far from 129.

Not only is this so in regard to the fours, but of the two-and-a-halfs. Large offers have been rejected, amounting to $21,000,000, and since then large sums have been bought at a price exceeding that at which these offers were rejected. It is said by the friends of the Administration, and the Secretary himself in his speech in New York claimed that in making these purchases bonds necessarily went up. When he fixed the price at 125 and said, "I will take these 4 per cent. bonds at 125 from all who bring them," the holders brought the bonds and he had no trouble with them. When he said, "I will take them, the next day, for a limited period of eight days at 124," they still brought them and sold them, and if the Secretary of the Treasury had said, as he ought to have said, "I will give you 126 and a fraction," which would have left the Government a very handsome sum on its money invested, he could have bought all the bonds that the surplus money of the United States would have paid for. Even if he had bought them at 128 he would have saved to the Government more than 2 per cent. per annum on the money invested, but the Secretary did not choose to do that; he preferred to use the money in another direction.

Of these $31,835,800 of 4 percents that were rejected, some were offered at 127, some at 127⅛, some at 127½, and some at 127⅞, at which last price some lots were purchased. These bonds can not now be purchased for any such sum. The same may be said of the others, although the 4½ percents may be bought now at a less price than the Secretary paid for them when he commenced buying them.

I come now to one other transaction and then I shall not detain further the Senate on this subject. It is said by the Secretary of the Treasury in his New York speech that the purchase of these bonds would have a tendency to increase their price. I want to tell the Senate and the country what in my judgment has enhanced the price of these bonds. The bonds had a value as an interest-bearing security, drawing a large and valuable interest, 4 per cent. on some and 4½ per cent. on others. The 4½ percents must certainly be redeemed in 1891; the 4 percents are as certainly redeemable in 1907, or nineteen years from this time. What were they worth? They were worth whatever a man could buy them for; so that he could get them at rates which would pay him 3 per cent. on his money, or even 2½ per cent., he might be satisfied with that. What did the Secretary do? He gave to these bonds a character and a power that they never had before possessed, and what was that? A power, I assert, that no government security anywhere in the world ever possessed, and I am not aware that any other securities of ours ever possessed—the power to borrow not simply small sums, but more than their face of the public money without interest.

When the Secretary of the Treasury adopted the policy of putting the Treasury money into the national banks and holding as security for it these bonds, of course he enhanced the value of the bonds. If they had been his own bonds and he had been intrusted with a scheme to make them valuable, there was no other method by which he could have made them so valuable, unless it was to have extended the time of their payment, which he did not have the power to do. When he said, "Your bond has got the power to draw its 4 or 4½ per cent. and I will put into your banks $110 of every $100 of bonds, and on that you may draw $6.60 more," he gave them an interest power, instead of $40 a thousand on the fours and $45 on the four-and-a-halfs, of 100 per cent. and more, and is it strange that when these bonds could be hypothecated and money borrowed on them for which they paid no interest at all, they should have gone up? Is it strange that the man who had theretofore been drawing his $40 on his $1,000, when he found that he could draw $105 on it, should hold on to the bonds and that he should decline to put them in the market. If the Secretary of the Treasury had taken the advice of the men who held these bonds and had followed their advice he could not have made them so valuable as he made them in any other way than the way he did. No other system would have given them the value in the eyes of the investing public that he gave them by putting $60,000,000 of the money of the people in the national banks without a cent of interest, and that, too, when every dollar of it would have netted the Government from 2½ to 2½ per cent. by the purchase of Government bonds.

We were told by the Senator from Missouri [Mr. VEST] the other night that great amounts of money had been put in the banks by the predecessors of the present Secretary of the Treasury. Mr. President, it is not true that any considerable sums of public money had been put in the banks save and except for the convenience and accommodation of the Treasury of the United States in its refunding operations. Of course when we refunded several hundred million dollars of debt these transactions went through the banks and there was nominally a large amount of money that went out of the national Treasury; it was not money that was transmitted from the Treasury at Washington or the subtreasuries to the banks; and that is what we complain of.

The Secretary says that the people who have the money can not afford to go out and buy bonds at these figures, and then he figures that on $1,000,000 a man will only make, who takes a Government deposit, $5,600. These people did not buy these bonds to make money on. They were the holders and the owners of these bonds. They were then in possession of them, drawing the interest on them, and the Government was wanting to buy them, and the Government said all at once, "We will not buy them, but we will let you bring us your bonds, and for every $100 that you put into the Treasury we will give you $110;" and thus the banks holding the securities drew in their currency and contracted the circulation! Why should they not? On every million dollars held as security for their issue of notes they could issue $900,000 of national-bank notes. When they had retired their national-bank notes they could borrow $200,000 more on the same amount of bonds. Who pretends that the banks could not make from 3 to 6 per cent. on these bonds in New York City? Who pretends that they were not put there for the interest of the bankers? The Secretary says that it has not been profitable. He says they are returning them. Very few of them appear to have been returned, for the last statement makes the amount hard on to $60,000,000 yet, as I understand.

The Secretary said in his speech in New York that this is a little more than the amount the banks have heretofore held. When the Democrats came into power there was deposited in all the national banks of the United States, for the convenience of the United States and nothing else, $10,150,036. June 30, 1885, the sum was $12,928,264.47; and when the November report was made by the Secretary of the Treasury the deposits were $13,595,550. In November, 1886, the deposits were $16,266,639. I find in looking over the reports that the deposits in national banks that year were $122,098,651. I might stand up here and insist that there was over $122,000,000 of Government money deposited; but I understand that to mean that in the course of the business transactions $122,000,000 passed through the banks properly and legitimately, and upon that I have no criticism whatever to

make. That explains the condition when we were refunding, how it happened that $200,000,000 at one time was found in the banks, and in a few days it was all out and in the Treasury.

What we complain of is that for a year now these banks have been carrying from $40,000,000 to $60,000,000 of the people's money without interest. What is more, it is dangerous to the public interest to have this money there. The Government must some day call for it. When it calls for it, it will compel the banks to contract their loans for a very large amount of money. There is not any Secretary of the Treasury who dares to call for it promptly. It would be better to let it lie there and waste the interest on it for a time than to call for it suddenly and thus disrupt and break up all the business of the country.

What right has the Secretary of the Treasury to put that money in the banks and thus take upon himself the power to disturb the great interests of this country by either calling for it or refusing to call for it? No more money should be put into the national banks than could be put there properly and profitably for the interest of the Government. If it is necessary to get the money out, buy bonds with it as long as it will save the Government 2 per cent., or 1 per cent., or one-half per cent., or a quarter per cent. interest, rather than let it be in the banks. Is it not better that the Government should get 2 per cent. than that the banks should get it? If this had been done under a Republican administration there would have been no end to the complaint; there would have been no end to the denunciation of the administration that would thus build up these great banks.

I have heard a great deal of talk about robbing the people of the United States through the tariff. What do the Senators say about robbing the public of their interest money through the national banks? Are they any better than the manufacturers? Have they any more souls? Are they any kinder to the poor? Have they done as much for the interests of the country as the men who produce? The men who count money and who only count money, who handle money and handle money alone, are useful and valuable in society, but they are not the chief agents in progress; they are not the moving agencies to move the business of the country. It is another class than the great corporations which have piled up their millions of money, as the Senator from Missouri told us the other day. He need not have singled out one bank. There are other banks which have made as much money as that bank has made. There are other banks which sell their stock at higher prices than the stock of that bank sells for. There has been a new bank comparatively recently started in New York which holds a million dollars of the Government money. I want to call the attention of the Senate to how this money got into the bank. We can not have forgotten that the Western National Bank of New York was organized in New York by the late Secretary of the Treasury, now dead, and Mr. Jordan, formerly Treasurer of the United States. I find this letter, written on the 8th day of October, 1887, dated at Washington and directed to the Treasurer of the United States:

SIR: The Western National Bank of New York City has been designated a United States depository, and the security fixed for the present at $1,000,000 of United States 4 per cent. bonds. In order to avoid the usual delay in obtaining a balance by accumulating revenue deposits, I will thank you, when the bonds are received, to cause to be transferred to said bank from national-bank depositories other than those in New York City such amounts as may be deposited therein to the credit of your general account in excess of their authorized balances, until the sum of $1,100,000 is reached, which amount the Western National Bank will be authorized to hold as a fixed balance.

Respectfully, yours,

C. S. FAIRCHILD, *Secretary.*

A fixed balance. How long is it to be held? If that had occurred under a Republican administration it would have been said that that was a pet bank. You draw the money out of the bank outside of New York City, disturb the business of the country, take it out of a bank that has Government deposits and is as much entitled to them as this Western bank; you take out its deposits for the purpose of putting them in this bank at New York City, dominated and controlled by late officials of the Treasury Department.

Yet we are told that there has been no favoritism in this transaction; that all the banks of the country have fared alike. Whether that is true or false is immaterial in this discussion. The question is, has the Treasury Department managed the finances of the country with economy and with skill?

A careful analysis of the several extracts I have gone over to-day will show without a question that the Treasury Department has lost to the Government since it went into power of money, that should have been saved, not less than $10,000,000. It is a vast sum of money to take out of the tax-payers of this country for the benefit of the national banks and national bondholders; men who do but little towards encouraging the industrial pursuits of the country; men who do not, it is believed by a great majority of the people of this country, bear their due proportion of the public burdens. Why should they be picked out to lend money to? Why, on the contrary, should we not go to work and pay off the public debt, and reduce the surplus, and reduce the taxation by way of interest?

Mr. President, the close of this Administration is at hand. If there was time I do not know but that I should be inclined to compare the financial management of this Administration and its general management with the administration that preceded it or the administration preceding that. But before I leave this question I desire to insert as part of my remarks a statement that I find in the New York Sun criticising the action of the Treasury Department:

Secretary Fairchild has raised his limit for the purchase of United States 4 per cent. bonds to 130, and at that figure has just bought $6,340,350 of them. In January last the Secretary could have purchased these bonds at from 125 to 126. In the same month of January he deposited with certain favored national banks $30,000,000 and upward of public money free of interest, with which he could have bought $24,000,000 of bonds. Adding to the 130 he is now paying for them the 2 per cent. interest paid since January brings their cost to the Government up to 132, as against say 126, which the cost would have been if he had bought them in January. Here is a dead loss to the national Treasury of 6 per cent. on $24,000,000, or $1,440,000, and a corresponding profit to the banks which bought the bonds and pledged them to the Treasury. This might have been avoided, and could have been avoided by the exercise of a little common sense. What says the President?

I also submit the following table showing the surplus in the Treasury:

Net cash (surplus in Treasury) on dates stated, as shown by public-debt statements from July 31, 1885, *to August* 31, 1888.

March 4, 1885, commencement of Cleveland's Administration (Finance Report, 1885, pages 12, 13)	$8,764,590.11	November 30, 1886	$40,093,556.22
July 31, 1885	44,052,929.35	December 31, 1886	42,196,632.77
August 31, 1885	49,716,572.69	January 31, 1887	27,780,050.87
September 30, 1885	63,903,106.30	February 28, 1887	19,148,975.45
October 31, 1885	66,818,292.38	March 31, 1887	21,859,983.51
November 30, 1885	61,930,595.34	April 30, 1887	34,886,038.20
December 31, 1885	71,018,872.23	May 31, 1887	23,951,692.44
January 31, 1886	79,689,862.24	June 30, 1887	40,853,369.28
February 28, 1886	72,298,202.92	July 31, 1887	45,698,594.15
March 31, 1886	76,381,099.54	August 31, 1887	44,760,908.86
April 30, 1886	77,030,999.35	September 30, 1887	45,269,665.15
May 31, 1886	76,142,611.33	October 31, 1887	56,758,704.83
June 30, 1886	75,191,109.95	November 30, 1887	55,258,701.19
July 31, 1886	80,206,325.98	December 31, 1887	69,842,879.11
August 31, 1886	76,527,561.24	January 31, 1888	85,230,746.09
September 30, 1886	67,896,321.01	February 29, 1888	92,987,796.82
October 31, 1886	52,783,199.98	March 31, 1888	104,573,930.34
		April 30, 1888	110,244,969.60
		May 31, 1888	94,706,617.08
		June 30, 1888	103,220,464.71
		August 31, 1888	107,673,320.92

Mr. President, since I have been a member of the Senate I have been exceedingly careful to say nothing harsh, nothing not supported by the evidence, in regard to public officials. I do not now desire to say anything harsh of the present or past administration of the Treasury Department. I have submitted these facts. I have submitted them for the benefit of those who profess to believe that there has been a wise, economical administration of the finances of this country. I have submitted them for the benefit of the people who are about to vote upon the succession of the Administration, and who are to determine whether they want the silver dollars destroyed. I want them to understand that that is a cardinal feature of the faith of this Administration. I want them to understand that it is a further idea to destroy the greenbacks. I want them to understand that this Administration has paid out with laggard steps the surplus money on the public debt only when compelled by resolutions of the House and Senate and by public opinion that would no longer be stayed. They have been compelled to pay, and have paid, as I said before, with laggard steps, with delay and hesitation the money of the people on the public debt.

The Senator from Alabama [Mr. PUGH] asked me if the Southern Senators had not stood up for silver, and if they were not now charged with having attempted to destroy the industrial interests of the North. I do not mean to say here or anywhere else that they have willfully and intentionally gone into a scheme to destroy the industrial interests of this country. I know the charge has been made. I could not make it here properly, if I believed it. I should be loath to believe that there was so much of the old venom and rancor left in Senators from the Southern States that they would willfully inflict upon the Northern people an injury. I am bound in honesty of mind to believe that it is owing to their faulty education, that it is owing to the surroundings and to the false teachings of which the Senator from Connecticut [Mr. PLATT] spoke so vigorously a few days since. The fact is that the Southern people have been brought up in a different political school from ours. They have inherited different political ideas, and strange as it may seem, with the great prosperity of the North before them, with all the examples held up to them in the North and in the East and in the West of unexampled prosperity under the protective system, they are unable to see them, and instead of applying them to their own region of country, and getting some of the benefits of this wonderful progress and wonderful prosperity, they on the contrary say that they would return to the old ideas, that they would have no manufactures, or but few; that they would be agriculturists, and they would put us upon a free-trade basis.

I will admit that within a few days it has been denied that they would put us upon a free-trade basis. The Senator from Missouri [Mr. COCKRELL] disclaimed yesterday that he was a free-trader; other Senators have declared that they were not free-traders; but no Democratic Senator save one has stood on this floor and declared that he was a protectionist. I believe perhaps one or two others, if they had expressed themselves, would have been compelled to say they were protectionists; but not exceeding three men on that side of the Chamber will rise here

and say they are in favor of the doctrine of protection. When it was asserted that that doctrine had not been supported or advanced on the Democratic side of the House, a prominent Democrat replied, "No, and you will not find it." The Democratic party is not a protection party except just a few days before an election. It has been a free-trade party since 1856, when it declared in its national platform that the time had come for progressive free trade. There has not been an argument adduced on this floor or in the other House by a Democrat which has not been in favor of free trade. They have used all the Cobden Club arguments, they have used all the free-trade arguments, and they have held up to us as an example to follow, Great Britain, with its wonderful prosperity, as they say.

The prosperity of Great Britain was fully explained and shown up by the Senator from Wisconsin [Mr. SPOONER] yesterday. There is poverty, distress over all that land, and stagnation of business. The markets of the world are open to them; they have cheap labor, intelligent labor; capital is cheaper there than in any other country on the face of the earth; and yet they are suffering in every department of life, and are fleeing to this country at a rate unexampled and unparalleled in the history of that remarkable country. If the people of the United States want free trade they do not want it because of the prosperity that it has brought to Great Britain. Great Britain is many times poorer than she was fifty years ago. The laborers of Great Britain are in a worse condition now than they were twenty years ago. The Senator from Wisconsin called attention to some statistics that I had handed him. Ninety-two million dollars a year for the poor of Great Britain, $27,000,000 a year for education, science, and art; a million and a quarter people who are called paupers; seven million people in Great Britain who have received assistance from the public authorities. As one of their distinguished men said, every fifth man in the kingdom is toeing the line of pauperism. Is that the kind of a feast to which we are inviting the American people? Oh, no, Mr. President, the economic management and the economic principles of this Democratic Administration do not commend themselves to the American people.

I should like to submit a few extracts that I have here from different speeches made by members of the Democratic party in Congress and out, to show the free-trade tendency of the Democratic party. I will first call attention to the declaration of the Democracy in their platform of 1856:

Resolved, That the time has come for the people of the United States to declare themselves in favor of progressive free trade throughout the world.

Henry George, in a recent number of the Standard, said:

I spent the latter part of last week in Washington. Mr. Cleveland has the reputation of being even a stronger free-trader than his message would indicate—and that is strong enough for all practical purposes. The message, as originally written, is said to have been more radical even than as finally sent in, being modified somewhat at the suggestion of free-trade Democrats, who feared it might be too strong for the party in its demoralized condition on the tariff question.

Mr. Cleveland has burned his ships; he stands before the country a champion of free trade against protection; and he must make, as he has ample power to do, the weak and treacherous politicians of New York and other doubtful States accept that position or go into opposition; else in spite of the splendid courage he has heretofore shown, they will involve him in the fate that in affairs of great moment befalls the timid.

The way to win is to silence apologists, send skulkers and cowards to the rear, and face the music. If Mr. Cleveland is re-elected, as with courage I believe he will be, protection will have received its death-blow.

The London Daily News of July 6, 1888, has the following editorial on this subject:

President Cleveland's speech is more to the point. He discusses the principles at issue in the struggle and shows that he is the free-trade candidate in everything but name. The reservation is an important one for American party purposes. The President feels compelled to characterize the attempt to brand him as a free-trader as deception, but for all that the electoral conflict now in progress is a conflict between free trade and protection, and nothing less. This is a very good conflict as things go, and, like warfare between good and evil, it threatens to be perpetual. Mr. Cleveland may find a more formidable antagonist in General Harrison than we have been led to suspect.

The Philadelphia Press displayed in its editorial columns the following editorial from the London Globe:

As a rule, the Presidential contest has very little interest for the Old World. On the present occasion, however, an issue is involved which very closely concerns Europe, more particularly Great Britain. Mr. Cleveland has taken his stand on free trade, and although his party managers have considerably planed down his platform, he is universally recognized in the States as pledged to initiate a new departure in fiscal policy, nor can there be any doubt that he would act up to this understanding were he elected. The central issue of the contest lies between the maintenance of the present fiscal system intact and its modification in the direction of free trade. And on that broad question Mr. Cleveland's candidature naturally and necessarily carries English sympathy.

[London Times of July 6, 1888.]

It would hardly be possible to put the free-trade case more clearly or more strongly, and yet such is the force of words, President Cleveland shrinks from the use of the term "free trade," and in fact declares that those who taunt him with being a free-trader are deceiving the country. "Free trade" appears to be equivalent, in the language of American political controversy, to "enemy of the workingmen and of industrial enterprises."

That it should be so is one of the curiosities of politics, and an extraordinary instance of the power of a phrase even over minds which are commonly shrewd and reasonable; for it is certain that the arguments which President Cleveland urges are those which Cobden used to employ forty-five years ago, and which any English free-trader would employ now. Such propositions as that taxation ought to be strictly limited by the needs of the country; that it is unjust to tax the whole community for the benefit of special classes; that import duties stifle production and limit the area of a country's markets, are purely free-trade arguments. As such we are very glad to see President Cleveland using them, though we are sorry for the popular infatuation which makes it dangerous to give them their right name.

[London Iron and Steel Trades Journal, July 7, 1888.]

There can be no doubt that President Cleveland is one of the most sound economists of the day, and his speeches display the most thorough grasp of commercial questions. The recent remarks in which he stated that it is the clear right of the people to demand that the cost of government should be limited by frugality and its burden of expenditure by actual needs are worthy of J. S. Mill himself.

[Speech of Hon. C. R. Breckinridge, of Arkansas, in House of Representatives, May 17, 1888.]

Of course any reduction of excessive rates of tariff taxation is in the direction of free trade. I do not seek to conceal my own belief in the wisdom of the greatest possible freedom of trade from all hindrance and restrictions.

[Speech of Hon. John H. O'Neall, of Indiana, in House of Representatives, May 14, 1888.]

As a free-trader—and I claim to be one—I protest against making the tariff so high as to destroy competition from abroad.

[Speech of Hon. R. P. Bland, of Missouri, in House of Representatives, July 19, 1888.]

I am not here for the purpose of voting for a tariff on lead, or a tariff on flax, or a tariff on anything, but I am here to get the tariff off everything I can. I am in a combine for the purpose of reducing taxes, and I will vote for a bill with free lead, or free anything else in it to accomplish that purpose.

[Speech of Hon. S. S. Cox, of New York, in House of Representatives, May 18, 1888.]

There was no warrant in England, there is no warrant here, either by natural laws or State laws, or constitutional requirement, to restrict such freedom of exchange for the personal or class interests of any one, any more than there is a warrant for a State religion or the abridgment of speech, press, and suffrage. * * * Freedom, not only to work as we please, but to dispose of the product of our work as we please; freedom to spend our money where we can get the most for it, and freedom to make that money without the ignominy of enslaving statutes.

[Speech of Hon. Silas Hare, of Texas, in House of Representatives, May 12, 1888.]

I believe that a tariff for protection is the foundation and principal cause of all the complaints and unrest that have either threatened or actually disturbed the public peace and quiet for years. * * * If we did not require money to defray the expenses of Government, I would be an absolute and uncompromising free-trader.

[Speech of Hon. Peter T. Glass, of Tennessee, in House of Representatives, April 26, 1888.]

I am in favor of putting all the raw materials of manufacture on the free-list, including salt, coal, iron ore, copper, timber, and lumber, together with every article now on the free-list.

[Speech of Hon. L. F. McKinney, of New Hampshire, in House of Representatives, May 4, 1888.]

Give us a free and open market with the world, break down the barriers that a false system has built around us, go back once more to the principles of true Democracy. As an abstract question of right, who is there who dares to say, with his hand upon his heart, looking to God, "I have not the right, the God-given, inalienable right, to buy what I may need or require wherever I can buy it most cheaply?" Not one.

[Speech of Hon. J. B. McCreary, of Kentucky, in House of Representatives, May 2, 1888.]

I am glad to be a member of a Congress to which a President sent an annual message entirely on tax reform, and which is true to the principles and teachings of the Democratic party from its organization by Jefferson at the beginning of this century to the present time.

[Speech of Hon. W. J. Stone, of Kentucky, in House of Representatives, May 16, 1888.]

The North yet worships the shrine of protection, but the handwriting is on the wall and that idea is doomed to pass out of the list of American idols.

[Speech of Hon. Isidor Rayner, of Maryland, in House of Representatives, May 1, 1888.]

But, Mr. Chairman, I appeal to the Democracy here to stand true to their colors. [Applause on the Democratic side.] I appeal to them to stand up to the traditions of our party. A tariff for anything else than revenue is outside the traditions and principles of our party, and at war with its pledges and history. It is foreign to our platform. We have given to the people the assurances of our intention to do this. Let us prove our faith by our works. [Applause on the Democratic side.] Let us engrave upon the imperishable tablets of the law the truth of the doctrine we have proclaimed. A man can not, at this time, upon this floor, be a Democrat and be in favor of the continuance of the present system.

[Speech of Hon. Edward Lane, of Illinois, in House of Representatives, May 12, 1888.]

Free trade is the natural right of commerce. * * * Protection is forever a cheat and delusion. * * * Protection is not right. * * * It should be an inherent right in every American citizen to sell his labor and his wares where he can get the best price, and to buy where he can buy the cheapest. * * * The protective system is un-American, and is a perversion of the laws of nature, of God, and man.

[Speech of Hon. Charles T. O'Ferrall, of Virginia, in House of Representatives, May 2, 1888.]

"Tariff for revenue" is the motto which I have tacked to the masthead, and if I shall fall, I shall fall with my face to the enemy still crying aloud against the oppression of my people. I intend to stand by, uphold, and defend, as far as God has given me the ability, the underlying principles of Democracy upon this question. I may be a weak defender of the right, but I will at least be a bold one. The flag of tariff for revenue will soon float in triumph, and when victory is once inscribed upon it, the child has not been born that will ever see defeat written over it. * * * Sir, I believe commerce between nations should be relieved, as far as possible, of all fetters and all restraints.

[Speech of Hon. Edward Lane, of Illinois, in House of Representatives, July 16, 1888.]

I am for free and unrestricted interchange of commodities with the whole world (with a tariff for revenue only). If this is free trade, then I am a free-

trader from the topmost hair of my head to the lowest extremity of my feet, in every nerve and fiber of my being, and I will not be driven from it by the taunts of any set of men or party.

[Senator Coke.]

I will just say to the Senator that if there is any one thing in this world the average Texan would go any number of miles out of his way to kick and kill and destroy it is a protective tariff.

[Roger Q. Mills's speech at East St. Louis, Ill., September 25, 1888.]

If Grover Cleveland is re-elected President of the United States—as he will be [a voice: "He will that"]; if another Democratic House of Representatives is chosen, and if we can get our Republican friends out of the other end of the Capitol and get Democrats in place of them, then we will pass a tariff bill that puts raw materials all on the free-list, and then we will put our own intelligent and skillful and productive labor in this country upon a plane of equality with the laborers of all other countries.

I call attention, also, to an extract from the Memphis Appeal, one of the leading Democratic papers published in the South, in which it says:

We lay down concisely, and we trust clearly, the Democratic doctrine of free trade, which is as old as the birth of the party. The Democratic party was always known as the party that strictly construed the Constitution, and was therefore opposed to the levy or collection of a tax for any other purpose than the support of the Government, and was equally as rigidly opposed to the appropriation of public moneys for any other purpose, its motive in its first and most notable campaign being "free trade and sailors' rights." The doubtful States have long been familiar with the fact that the Democratic party is the free-trade party, and they know that any attempt to reconcile it to protection in any form, shape, character, or degree would be an abandonment of principle that would and of right ought to cover it with obloquy and disgrace.

I have here an extract from the letter of the Senator from Missouri [Mr. VEST]. I had made the extract before I heard his explanation of the letter. His statement was that—

We are entering upon a most fearful Presidential contest, the most important since that of 1860. Mr. Cleveland, by his message, for which I sincerely honor him, has challenged the protected industries of the country to a fight of extermination.

I understand the Senator to simply say that he wrote this in a private letter; I do not understand that the Senator now disavows the sentiments that are there expressed. I do not understand that the Senator indicates that he is in favor of protection under any system or any form whatever, but on the contrary, that protection is as odious to him as to all others of his party.

Mr. President, I do not believe that I can conclude my remarks any better than by calling the attention of the country to the remarks made by the great German, Bismarck, on the question of protection in America. Our remarkable success, our wonderful progress, unequaled in the annals of history, that has astonished the world, as it has astonished ourselves, he attributes to the protective tariff, and advises Germany, who follows readily his advice, to adopt the same system, and the result shows that the labor wages of Germany, which were very low and very much depressed under free trade, have gradually risen under the system of protection, and they will rise ultimately undoubtedly until they reach a rate equal to our own. I admit that a tariff does not make wages higher except that it produces and provides employment, furnishes opportunity for men, and thus it does make wages higher.

On the 14th of May, 1882, Bismarck, in a speech before the German Reichstag, said:

The success of the United States in material development is the most illustrious of modern time. The American nation has not only successfully borne and suppressed the most gigantic and expensive war of all history, but immediately afterwards disbanded its army, found employment for all its soldiers and marines, paid off most of its debt, gave labor and homes to all the unemployed of Europe as fast as they could arrive within its territory, and still by a system of taxation so indirect as not to be perceived, much less felt. Because it is my deliberate judgment that the prosperity of America is mainly due to its system of protective laws, I urge that Germany has now reached that point where it is necessary to imitate the tariff system of the United States.

Mr. MORGAN obtained the floor.

PROPOSED RECESS—FINAL ADJOURNMENT.

Mr. ALLISON. If the Senator from Alabama will yield to me, I desire to offer at this time a concurrent resolution.

The PRESIDING OFFICER (Mr. DOLPH in the chair). The resolution will be read.

The Secretary read as follows:

Resolved by the Senate (the House of Representatives concurring), That at 1 o'clock p. m. on Saturday, the 20th day of October, instant, the President of the Senate and the Speaker of the House of Representatives adjourn their respective Houses, to meet on Monday, the 19th day of November next, at 12 o'clock m.

Mr. ALLISON. I will say in offering this resolution, as I stated the day before yesterday to the Senator from Georgia [Mr. BROWN], that I am satisfied we can make but little further progress with the revenue bill now. I propose this recess for the reason that it will give us two weeks before the beginning of the regular session in which to go on with the bill and make it absolutely certain, as far as the Senate is concerned, that it can be passed before the 1st of January. That is the only motive I have in suggesting a recess.

The PRESIDING OFFICER. Does the Senator from Iowa ask for the present consideration of the resolution?

Mr. ALLISON. I ask unanimous consent that it may be considered.

Mr. COCKRELL. I desire to suggest to the Senator from Iowa that it would be better to refer the resolution, to-day at least, to a select committee of, say, five Senators. It would be hardly fair to refer it to the Committee on Finance or the Committee on Appropriations.

In regard to the propriety of the recess suggested, I have very serious doubts. The Senator admits frankly that nothing can be done during the remaining days between this time and the election. That being the fact, I do not think final action upon the bill will be hastened by bringing Congress back here on the 19th day of November. If Congress were to take a recess until that time, it would be exceedingly inconvenient for the members of the other House to come here and practically have nothing to do. It is very doubtful whether there would be a full Senate at that time, and it would be only two weeks before the beginning of the regular session. That would only give us twelve days after the election.

I suggest to the Senator that it would be better, in the interest of the early passage of the bill, to have an adjournment until the regular session, and then let the Senator give notice that on the second day of that regular session he will call the bill up for action, and that he will press it, and will oppose any adjournment for the Christmas holidays. In that way he would secure the passage of the bill just as early as by having Congress meet on the 19th day of November. For one, I will pledge myself in advance, if that is done, that I shall oppose any regular recess during the holidays, except simply an adjournment over from one day to another, or two or three days before Christmas, and the same way at New Year's. So we should have all the time to devote to the bill, and I think with that understanding members of the Senate and House would all come here with that expectation, and there would be no calculation of the ordinary adjournment for the Christmas holidays, which ought never to be done, I will say, at a short session of Congress.

There is a reason why a long holiday recess is taken at the beginning of a regular Congress. It is a rare thing after the Speaker is elected and the officers of the House chosen that the committees are formed and ready to be announced until after the 1st of January. Therefore very little can be done before the holidays are over. In the Senate we organize our committees at the beginning of a regular Congress and arrange all the business, which takes some time, and when that has been done it is usually time to take the recess. But I say that the habit of Congress taking a long recess in the short session is pernicious and injurious to the public business, and we ought to break it up, and there is no better time in the world to put a stop to it than this year.

I think that it would be in the interest of the promotion of final action upon the bill if instead of taking a recess until the 19th of November we should substitute an adjournment until the regular session.

Mr. HOAR. The course which the Senator suggests was taken in the short session in 1883, when the large reduction in the tariff duties and extension of the free-list was made.

Mr. COCKRELL. I remember; and that course ought to be followed at every short session.

Mr. ALLISON. My only object in saving the two weeks prior to the regular session is that the Senate may go on and consider the revenue bill. Whether we meet on the 19th of November or on the first Monday in December, it is my purpose, and so far as I know, the purpose of this side of the Chamber, to press the bill to the exclusion of all other business. Of course in a matter of this importance we should consider the convenience of Senators and the probability of securing a full attendance, because I think Senators will all agree that in a matter of this moment there should be a full attendance in the Senate. Senators very well know that the Senate has been thin for some days. There has not been that full attendance in the Senate which there ought to be in the consideration of so important a bill as this.

Mr. BROWN. Will the Senator from Iowa allow me to ask him a question?

Mr. ALLISON. Yes, sir.

Mr. BROWN. After the Senate has been ten and a half months in session, when Senators can not at most have more than a month and ten days, say, of vacation, does the Senator believe that he could get a quorum of the two Houses, or anything like a full Senate or House, to return here on the 19th of November?

Mr. ALLISON. I hoped that could be done. The time fixed is two weeks after the election. Senators would be gathering in, I should think.

Mr. BROWN. Does the Senator think it reasonably probable that it could be done?

Mr. ALLISON. I think so.

Mr. REAGAN. Mr. President, it is apparent that we are not going to make any progress during the remainder of this session in the investigation of the bill before the Senate. Congress has been in session nearly eleven months. The individual convenience of members, of course, is not to be very largely considered. I have not seen my home in more than eleven months. I do not feel, for one, that I can well return here by the 19th of November.

I concur with the Senator from Missouri. If Congress can be adjourned until the regular meeting, I will unite with those who desire to prevent a holiday recess and to urge the consideration of the revenue bill until it is disposed of. I feel that that is necessary; that the interests of the country require it. If the bill is to be disposed of, it

ought to be disposed of so that the business interests of the country may not continue to be disturbed by keeping the tariff question open. I believe the bill ought to be disposed of, and I am sorry that we are not able to dispose of it at this session. If Congress can be adjourned, I say in advance that I will assist in retaining the Senate in session during the time usually spent in holidays and in urging the consideration of this bill until it is disposed of.

I think a good deal of inconvenience in many respects would result from taking a recess now. From now until election day, the 6th of November, very little opportunity will be allowed to Senators to attend to any of their own business, which has been neglected now for nearly a year. Between the election and the 19th, less the time required to get back here, scarcely any time would be allowed to Senators to look after their affairs at home. It seems to me that Senators ought to have three or four weeks to look after the condition of their business at home.

I hope it may be agreeable to the Senate to adjourn with the understanding that in order to facilitate action upon the tariff bill we shall avoid the usual holiday recess and go on with the consideration of the bill until it is disposed of.

Mr. COCKRELL. I think that the Senator from Iowa will see at once the propriety of changing the resolution as I have indicated. While as a matter of course we know there are not Senators enough here personally to make any binding obligation, I am satisfied that all on this side of the Chamber who are here will concur in the statement that we will oppose any of the ordinary motions for a recess during the Christmas holidays, and will join with the Senator from Iowa in securing continued consideration of the bill from the day of the regular meeting of Congress until final action is had upon it, as my friends here suggest, sitting on Fridays and Saturdays. In other words, we will devote the time assiduously to the consideration of the bill, and the Senator from Iowa may rest assured there will be no opposition to final action upon the bill on this side of the Chamber. There will be no attempt to delay action at all. Action will be facilitated by the course I suggest.

The PRESIDENT *pro tempore*. Does the Senator from Iowa ask for the present consideration of the resolution?

Mr. ALLISON. I ask for its present consideration.

Mr. COCKRELL. I move that the resolution be referred to a select committee to be appointed by the Chair, to consist of five Senators. I think that course would be better.

Mr. HALE. I suggest to the Senator from Iowa, in order to bring this matter to a head, that there is a great deal of force in the suggestions which have been made by the Senator from Missouri and other Senators upon that side of the Chamber. To come here at any time in the middle of November or soon afterwards would be a matter of great inconvenience, and it would be doubtful whether many Senators could be got here.

In view of the earnest, and so far as we have seen, unanimous, expression upon the other side in favor of an adjournment rather than a recess, and in view of what has been said by the Senator from Texas as to what would be his course in pushing forward the revenue bill at the regular session, I suggest to the Senator from Iowa whether it would not be wise, rather than to delay action or send the resolution to any committee, to substitute for his resolution for a recess one that shall provide for an adjournment instead, in accordance with the suggestions which have been made upon the other side.

Mr. SAULSBURY. Mr. President, I concur in the propriety of the suggestion made by the Senator from Missouri and the Senator from Maine. Personally I have no special objection to coming here on the 19th of November, but I am satisfied that we should not have a majority here. I think it has been apparent to the country for the last several weeks that no tariff bill would be passed at the present session. The attempt to pass one on the part of the Senate has been in the estimation of the country but a farce, as it was very apparent that no bill could be passed at the present session. I do not care to continue any longer what in the judgment of the country is a farce.

If we are going to adjourn, let us adjourn to the regular term. We all know if we come back here in November there will be no tariff bill passed during the present session, and we might just as well adjourn at once; and we could have adjourned six weeks ago with just as much propriety as we can to-day, in my judgment. I have been ready myself, whenever a proper resolution should come, to vote for an adjournment.

Mr. ALLISON. Yesterday the Senator from Missouri [Mr. COCKRELL] during the course of his remarks took occasion to say that the Senate substitute was a mere temporary arrangement, that so far as the Senate was concerned it was a play, and the venerable Senator from Delaware [Mr. SAULSBURY] now intimates the same thing.

Mr. President, I want to test the sense of the Senate, and both sides of it, as to whether it is our purpose to pass a tariff bill or not. My object in proposing a recess instead of an adjournment is that if it is necessary that we should pass a tariff bill, we shall go and do it. I have not the slightest doubt that there will be a full quorum of the Senate on this side on the 19th of November, no matter what happens. That is what I believe, and it is for that reason that I propose this recess. I know the views of Senators on both sides of the Chamber as respects this question. I will say frankly to both sides of the Chamber (because there is on this side a desire to adjourn as well as upon that) that—I see that the Senator from Alabama smiles when I make these remarks.

Mr. MORGAN. I was merely smiling at the hole some of our friends have dropped into. That was all. [Laughter.]

Mr. ALLISON. Mr. President, I shall test the sense of the Senate on my resolution.

Mr. BROWN. Does the Senator mean that he will pass it by a majority without a constitutional quorum?

Mr. ALLISON. I mean to say that I shall take the sense of the Senate upon it.

Mr. MORGAN. I object to the consideration of the resolution this morning.

The PRESIDENT *pro tempore*. The resolution goes over under the rules until to-morrow, and will be printed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8074) to provide for allotment of land in severalty to United Peorias and Miamies in Indian Territory.

The message also returned to the Senate, in compliance with its request, the bill (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris.

The message further announced that the House had passed a bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a *mail-bag repair-shop*, and for other purposes; in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris; and it was thereupon signed by the President *pro tempore*.

THE REVENUE LAWS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. MORGAN. Mr. President, the resolution just now offered by the Senator from Iowa in charge of this bill [Mr. ALLISON], to take a recess until the 19th of November, alters the apparent situation, but not the real situation, as to legislating upon tariff taxation. The general in command orders the bugles to sound a retreat instead of a surrender, but his army disappears all the same. The fifteen days in November set apart for the discussion of this measure, made to take the place of twenty days between this and the 6th of November—the election day—had just as well be utilized now in debating and voting upon this bill.

I must be pardoned for still doubting as to the real motive of this movement. It seems to me that it is only a *finesse* by which to escape the disclosure of serious disagreement among Republican Senators as to the items of this almost inscrutable bill.

If the Republican majority in the Senate desire that the people shall pass upon the new issue they seek to inject into this campaign—differing widely from the issue presented by the Chicago convention, and still more widely from the platform that General Harrison has been building for his personal use—they should prove their faith by their works. They should stay in this Chamber and vote on this bill, and then the people, in their voting, would better understand who and what they are expected to vote for.

This Chamber has been deserted by the majority, who claim to be the earnest, enlightened, and only capable tariff reformers. They fled from their own bill; they have so managed that no vote on it is possible until the Senators are summoned back by the remnant who linger here to their post of duty, and the resolution just read is intended to excuse them from returning here to vote on this measure.

How long will it be assumed by the Senate that the people can be deceived by the thin varnish of appearances? None of the empty declarations of a purpose to relieve the country from a pressing and dangerous emergency that now echo through this deserted Chamber will strike the public ear with any other than a sense of their insincerity.

The Senate cannot afford to play at this farce in the face of an anxious people.

The people want to know if the subsidized class of monopolists who have so long grown rich upon their toil, through excessive and unjust taxation, are still to throttle them, and whether a day of relief will ever come.

The people have the power now, in this Chamber and in the other House, to get some relief under the Senate bill and greater relief under the House bill. Why not give it to them? Why do we wait until

after the elections to relieve the people unless the majority in the Senate hope that the elections may be construed into an excuse from performing a great duty to the country which the Senate bill confesses and the report of the Committee on Finance emphasizes.

Is the Senate waiting for an excuse to relapse into that state of inaction that has permitted bondholders, money kings, and subsidized parasites to fix their grasp on the taxing power as a means of money-making? The situation of the country was never more dangerous than it is at this hour. Fortunes ranging from $270,000,000 down to the common grade of $1,000,000 each have been amassed within the last twenty years by men who have produced not one dollar of wealth added to the common stock. Nothing but the state of our laws could have given such advantages to such men.

The money contributed to the campaign fund to perpetuate monopoly, under the name of protection, by the subsidized manufacturers, which the Senator from Missouri [Mr. COCKRELL] proved in his speech yesterday, may fasten on this country the perpetuation of this era of the domination of money over the moral power of a free people. If this is to be the result of this movement of the Senate to escape a plain and acknowledged duty, as it is confessed in the bill now before this body, we shall find that a fearful responsibility has been incurred.

November 19 is appointed in this resolve as the day of the expected death of the Senate bill. Unless the people speak out and demand relief in terms that will admit of no denial, they will not escape from the calamity. I say now that they need not expect relief for many years to come, unless in the November election they shall constrain the majority of the Senate at last to obey their often-expressed will.

Turning to the measure before the Senate, I find that the statement of the Senator from Iowa [Mr. ALLISON], first made by him, is that the Senate bill proposes to reduce the revenue an amount ranging from sixty-five to seventy-three million dollars. "We agreed (he says) that from sixty to seventy million reduction would be safe."

His next statement is, "That for the current year (1888–'89) upon the estimate made by the Secretary of the Treasury * * * there will be a surplus of but $19,000,000 in round numbers."

And that estimate of the revenue income, he alleges, is too large.

These statements present us a very urgent inquiry. Why should the Senate Committee on Finance be willing to create a deficit of $46,000,000 in the Treasury? The pressure on them surely must be very great to force them to such desperate legislation.

The reductions made in the Senate bill are stated as follows:

Sugar	$27,759,783.95
Tobacco	24,371,460.98
Whisky	7,000,000.00
Free-list	6,428,095.56
Total	65,559,340.49

Another estimate based on reduced importation of other merchandise puts the total reduction under the Senate bill at $73,668,994.30. This would leave $8,109,653.81 of reduction on all other dutiable imports than those I have just stated. What does this large reduction of revenue imply?

The answers are obvious:

First. That the existing taxes are too large by that amount ($73,668,994.30) and are an injustice to the people.

Second. That it endangers the financial condition of the country to gather such excessive sums into the Treasury.

Third. That it is the consumer and not the foreign producer who pays this tax.

These simple facts, presented in the Senate bill, as a substitute for the House bill, speak volumes as to the earnest progress the people are making and are forcing the majority in the Senate to make both in the reduction of high taxes and high protection.

In the Senate bill there is a very ingenious arrangement to save the grand aggregate of profits to the capitalists by shifting the protection, as it is called, from some classes of articles that now are heavily taxed to others on which it imposes still heavier duties; but there is cause for congratulation to the country that at last the united and consolidated array of all the tax-nurtured classes, as one man, or rather one corporation, against all the consumers of their productions, has been compelled to disintegrate. This bill selects some of them for slaughter, and, without mercy, offers them as a sacrifice to appease the hot indignation of the people.

The House and the Senate committee agree that excessive taxation exists, and they both agree with the President that "excessive taxation is unjust taxation." This agreement with the President goes still further. It is a distinct admission not only that the aggregate of taxation is excessive and unjust, but that the taxes are excessive on several articles of leading importance, such as sugar, rice, and jute. This agreement with the President both by the House and the Senate committee goes still further. They all agree that the financial condition of the country is seriously imperiled by the annual locking up of $120,000,000 in the Treasury, there to remain useless to the country; to tempt Congress to indulge in extravagant and corrupting expenditures in order to get it back again into circulation, and to prevent the starvation of enterprise and industry, from which it is was abstracted.

So anxious are the Senate committees as to the dangers that attend this piling up of money in the Treasury through excessive taxation that they turn aside from the discussion of the remedy for this great evil to berate the President for permitting any of it to remain in the banks where the people can have some chance to use it in moving their crops to market, alleging that such proceeding is unsafe as to the security of the fund. They and their candidate for the Presidency point out that it is even better to buy in our bonds at 129 cents on the dollar, an operation that is expensive and unjust thus to permit the people to have any access to their own money to be used in their daily business.

Remembering that the Republican party made our bonds payable only at the date of maturity, and that the Government could not force their redemption at an earlier date; remembering that the interest to be paid was changed from United States currency to gold, to favor the bondholder; that silver was demonetized by the Republican party, so that this payment of the principal of our bonds should only be made in gold; remembering that the custom-house receipts were pledged for the payment of the interest on our bonds, and that the Republican party has all the time refused to allow the tariff dues to be paid in United States legal-tender notes or in national-bank notes, all for the benefit of the bondholders, it is not to be expected that all the motives for continuing these extraordinary favors to that class have ceased.

Mr. ALDRICH. Will the Senator allow me to interrupt him?

The PRESIDENT *pro tempore*. Does the Senator from Alabama yield?

Mr. MORGAN. Yes, sir.

Mr. ALDRICH. Do I understand the Senator to say that the customs authorities refuse to receive legal-tender notes in the payment of customs duties?

Mr. MORGAN. No; I did not say that. I said you refused to pass a law to authorize it to be done.

Mr. ALDRICH. It is done now.

Mr. MORGAN. I know it is done. We have asked you time and again on this floor to pass such a law, and you would not do it because you were afraid.

Mr. ALDRICH. What is the occasion of passing it?

Mr. MORGAN. There is occasion always to have a sworn officer obey the law.

Mr. ALDRICH. Nobody has ever questioned the authority of the Secretary.

Mr. MORGAN. There is occasion for having a sworn officer of the Government obey the law, and if the law is such——

Mr. ALDRICH. Does the Senator mean to say that the present Secretary of the Treasury is violating the law by receiving legal-tender notes?

Mr. MORGAN. I do not propose to be diverted from this little enterprise now by side-bar questions such as the Senator from Rhode Island desires to put to me.

Mr. HOAR. May I ask the Senator a question?

Mr. MORGAN. No, I beg pardon. I do not wish to be interrupted.

That this favoritism to the bondholders has not ceased is manifest from the declarations of General Harrison, re-enforced by the report of the Senate Committee on Finance, that bonds should be bought in at 128 cents on the dollar, or at whatever price they may reach in the market, and that taxation should be maintained for that purpose. This is a very dangerous avowal of policy.

Is it not as easy to corner the market on the remnant of 4 percents due in October, 1891, as it was for "Old Hutch," as some person is affectionately styled in Chicago, to corner the wheat market and add the tears of the poor as a sauce to make bitter the bread they must eat sparingly to make him richer? Only declare the policy General Harrison has so recklessly avowed, that the surplus revenues must be used in buying our bonds not yet due at whatever is the market premium on them, and it is altogether easy to put up the rate to 130 or 135 if a few capitalists will organize a "trust" for that purpose. All the bondholders, whether in the "trust" or not, would share the benefits of such an opportunity.

In the double duty of buying in the bonds and avoiding the creation of an excited and advancing market, the Secretary of the Treasury has been compelled to demonstrate to the bondholders that they were not the only channel through which the people could still have some benefit from the money that the cruel tariff now in force dragged from their pockets and locked up in the Treasury. He has done this in a way that the laws enacted by the Republican party justified, and has saved the country from the rapacious greed of the bondholders and their friends in Congress.

One of three alternatives was forced upon the Secretary of the Treasury by the existing state of the laws, which the Democratic party have been unable to change, and he has chosen that which was least favorable to the "coupon clippers" and most favorable to the people. He was compelled to leave the surplus money in the vaults of the Treasury, where it was dead, or pay it out to bondholders at enormous premiums, or else leave it in the national depositories—the banks—where it is held under the ample security of our bonds, and could still be in reach of the demands of the people for means to carry on their business.

It is claimed that the Government saves something in the final interest account—in the long run—by paying this enormous premium to the bondholder. If that is true in a final balance-sheet, how does the result compare with the losses now being sustained by the people in having $128,000,000 taken from their business to-day in order to pay that sum, ten years or twenty years in advance of its maturity?

Whether or not the Government loses money by this operation, the people not only lose it at a fearful rate in their business, but they lose it in that hardest of all impositions upon commerce and industry which compels an encroachment upon the capital needed to carry on any form of trade by compelling them to pay the principal and interest to-day on debts that fall due twenty years after date. No legitimate business can stand such depletions. High taxation to compel the people to raise money to-day to pay the principal and interest of a public debt to mature twenty years hence is the least justifiable, the most oppressive, and the most cruel tyranny that was ever practiced in the name and under color of the laws. And to do this, to put money in the pockets of a legalized monopoly, or to enrich one class at the expense of another is an abuse of the taxing power for which there can be no excuse.

Notwithstanding the fact that General Harrison and the Chicago convention regard this as an inconvenient time to stop the raid of the bondholders and the subsidized classes upon the earnings of the people, and have no quarrel with the annual excessive taxation of $120,000,000, because the bondholders can so profitably absorb it at 29 per cent. premium on their bonds, and because the protected capitalists can realize from it much larger percentages in their profits, the country will welcome these eleventh-hour comers into the vineyard, the Senate committee, with their pruning-hooks and leather aprons, prepared to cut off this parasitical excrescence. They come very late, and angrily threatening to cut the tendrils of the true vine; but since the Democracy have at last forced them to work for the country instead of the lords of the vineyard, we will have a care that they shall do no serious harm.

They come protesting that their labors are all for the benefit of foreign capital and foreign pauper labor, who, they allege, are the real taxpayers, but they feel that this is an error which they have not yet the courage to recant in words.

In their speeches they cling to this error, but they abandon it in their bill and come squarely abreast with the President in declaring that unnecessary taxation is an unjust taxation, and that this excess of $73,668,999.30 is an unjust tax and must be pruned off, leaving the true vine to grow and bear fruit. The logic of their speeches is in deadly conflict with the logic of this Senate bill.

The Secretary of the Treasury, in a speech in New York last week, has so clearly stated the manner in which this Administration has used the surplus revenue that the present unjust and dangerous tariff has poured into the Treasury that I gladly avail of this opportunity to present it to the Senate. It is an answer to statements and questions put in the Senate by the Senator from Iowa [Mr. ALLISON], which, I trust, will convince him that he has not fully comprehended all the reasons that dictated this wise policy.

> The present Administration upon coming into power found many difficult problems to deal with. My predecessor was confronted at the outset by a general alarm as to the future of our circulating medium. This alarm was, as would now appear, premature, but it was very real, and threatened disaster. He met it by various devices, which averted the danger and allayed fear. Among these devices was the suspension of bond calls until such a state of things was reached that every kind of our money was received with confidence by our people in every part of the Union. On March 31, 1885, there was a surplus in the Treasury of $22,259,025.76. This surplus increased until on January 31, 1886, it was $79,689,862.24. The ownership of silver dollars by the Government also increased from $43,878,256 to $93,959,880. Thus the surplus formed a reservoir which caught and held that kind of money which the people did not wish to hold themselves. This temporary accumulation in the Treasury the then Secretary believed would keep those silver dollars which the people still held as valuable as they were when paid to them by the Government. The result justified his belief.
>
> At this time confidence had then fairly well been restored, and bond calls began again, and were made in such amounts as to prevent any further accumulation of surplus until August, 1886, when I, then being Acting Secretary of the Treasury, deemed it prudent and wise to increase the amount of each call, the result of which was the reduction of the surplus on February 28, 1887, to $19,148,975.45, or $3,000,000 less than the Administration found it on assuming power two years before. When we began calling the bonds there were $194,190,500 of 3 percents subject to call. The last of these bonds was called in July 1, 1887, and at the end of that month we had a surplus of $45,698,594.15, to which the revenues were daily adding, and there were no bonds which could be called or bought, except on such terms as the holders thereof might demand. Money soon became in sharp demand, bank reserves were low, timid capital was seeking safety, business men became alarmed, and were pressing in their appeals to the Treasury Department to save the country from financial disaster; therefore all the remaining bonds needed for the sinking fund during the fiscal year ended June 30, 1888, were purchased between July 31 and October 1, 1887, at a total premium of $2,852,015.88, and thus the surplus was kept from increasing during those two months.
>
> After the sinking-fund requirements had been met, there was no indisputably lawful method left to avert surplus accumulation. An increase of Government deposits in national-bank depositories was the only certainly lawful means left to save the country from the evils which a rapid withdrawal of the circulating medium from the channels of business might cause, consequently the banks were urged to become depositors, and thus put at least a portion of the daily surplus of the Government where it might be available for trade. As a further inducement to do this the percentage of deposits to the par value of the United States bonds, which were in all instances taken as security, was somewhat raised, but always was kept within the limits of absolute safety. In fact, the money thus deposited was and is far more amply secured than the money in the subtreasuries; there is no possibility of the loss of a dollar of these deposits. The banks, particularly in this city, at first were reluctant to take deposits, and for a time I feared that this resource might fail, but gradually more and more banks applied, until about $40,000,000 above what would have been the normal deposits under proper conditions was thus placed and made available for the country's business. I need not add that there was absolutely no favoritism in this matter; the banks were designated and deposits made in the order of the applications; political and personal friends and foes were treated exactly alike, the widest possible distribution was sought, until almost every State and Territory had one or more depositories, and could use some of the money which rightfully belonged to their business.
>
> Our critics say: But you ought to have bought bonds; the law gave you ample power; you could have saved interest on the bonds bought. In reply, I say that considering the large sums of money which we knew that we must invest in bonds, and which we have since invested in them, I believe that had we attempted to spend $40,000,000 in the purchase of bonds between October 1 and December 31, 1887, the price of the bonds would have advanced much more than it did, and that the net result now would be a much greater outlay in premiums than the interest which would have been saved had the bonds been bought. I say further that many good authorities doubted the lawful power to pay premiums for any but sinking-fund purposes; the purchase was not absolutely necessary; and consequently we deemed it best to adopt the conservative course and keep within unquestioned law and await the advice of Congress, then to meet within two months. The question involved was the use of the public money in the payment of high premiums on the debt not yet due. I am accused of overcaution in doing this, of anxiety, to be sure, that it had the sanction of the law-making power; if this be a crime in an executive officer, then I am guilty.
>
> * * * * * * *
>
> Mr. Blaine says that a deposit of $1,000,000 is worth to the depository $50,000 a year. Let us see how this is. A deposit of $1,000,000 would require $910,000 in 4 per cent. bonds as the security, which, at 125, would have cost $1,137,500. This money loaned at 5 per cent. would have given the bank $56,875, if the bank had not become a depository, but, being a depository, it must keep 25 per cent. of the deposit as a reserve; so it can loan but $750,000, which produces $37,500 interest. Now add the interest on the United States bonds, which Mr. Blaine with horror says that the banks are allowed to collect. Four per cent. on $910,000 is $36,000, and you have $73,900 received by the depository; but from this should be deducted 1½ per cent., the yearly proportion of the 25 per cent. premium which the owner of the bonds must lose when the bonds are paid at maturity, twenty years from date of purchase, and there is left $62,525, the difference between which and $56,875 is $5,650, not $50,000, as stated by Mr. Blaine, as the reward to the bank for serving as the medium to put a million of dollars where it could be useful at a time of dire necessity.

The report of the Senate Committee on Finance is both a confession and a demonstration of the fallacy that the taxes on imports, sold in our markets, is a tax on the foreign producer and not on the consumer. No other subject but tax-fed monopoly would ever find logicians ready to uphold so bold and misleading an error as this. I rejoice that this committee has marched over the débris of this absurd proposition that has so long done service to injustice and wrong. If the existing revenues from taxation are too large by the sum of $73,668,999.30 annually collected, how do we give any relief to our people by reducing the tax; if it is true that it is the foreign producer and not the home consumer, who pays this tax? It can not possibly hurt our people to have high taxation on any imported goods if those taxes are, in fact, paid by the foreign producer. This committee solemnly declares, when it brings in this bill, the absurdity of this assertion. They explode it.

They give up this unnecessary tax because it is a burden on our people, for which there is no plea or excuse, and which they are aware that the people will no longer endure.

If it is true that high taxes make low prices by increasing home competition in home production, and if low taxes increase prices, why does this committee lower the taxes on any imported products unless they desire thereby to increase the price of that product. If a high tax lowers prices by increasing competition a low tax must raise them for the same reason. And yet this committee boasts of decreasing some taxes while it deplores increasing others. The proposition that the existing taxes are too high for the good of the people is admitted by this Senate bill just as it is by the House bill, and they both adopt the same rule of measuring the excess of taxation, namely, the sum that the revenue exceeds the utmost probable limit of the needs of the Government.

Both Houses also agree that a reduction of revenue from tariff taxation is a public necessity, and the Senate committee makes a boast of the reduction of tax rates on sugar, jute, and other crude materials in the following sympathetic and gratulatory statements:

> The high rates of duty which have been levied upon this important article of food have not successfully developed the sugar-producing industry of the United States. The great natural advantages which the producers of cane sugars in the tropical islands have over those of the United States preclude domestic competition upon equal terms. If it were not for the fact that parties interested in the production of sugar from sorghum or beets are confident *of the rapid* development of these industries in the United States the committee would recommend a still greater reduction in the rate of duty upon sugar, as the advantages of this reduction would be felt through a larger circle than any other which could be made in our tariff schedules.

The general drift, therefore, of both bills is towards lower rates of taxation. The ship is unmoored at last and floats with the current of popular feeling and of American policy. The ice nip in which it was frozen has thawed in the warm breath of an indignant people, and the Republican committee of the Senate are coming in "out of the cold."

The Republican minority of the House Committee on Ways and Means could neither be driven nor induced to formulate a bill to reduce taxes.

In debate they could not deny the necessity for such reduction, but the winter was still upon them. It was too early in the contest for them to feel sensibly that the country was growing hot for a relaxa-

tion of excessive taxation, and they flattered themselves that they could still defeat the progress of the people towards justice and equal rights under the laws, by debate, protestation, and inaction. They resolved to "hold the fort" as long as its walls would stand, and to refuse any line of action that would expose them and their "infant-industry" protégés to a contest in the open fields. It is well known to the country that the obstruction and delay of tariff reform, which began in 1880, was kept up through all the years to 1888, by the Republicans in the House, as a body, and that in the proceedings during this Congress on the tariff bill this delay has taken the form of obstinate resistance to any tax reform.

The Republicans of the House declined to act upon this great public duty which the Republicans of the Senate declare to be incumbent on them and too imperative to be neglected. They offered no relief to the country, they suggested no remedy; they only opposed all progress in that direction by objections to any plan the Democrats could suggest, and by compelling all the delay that was possible in the passage of the bill.

When the "Mills bill" reached the Senate, more than two months ago, there was anxious conference in the Republican circle. It was found that the pledges of Republican national conventions, the recommendations of Republican Presidents, and the findings and recommendations of a Republican tariff commission, and the speeches of Republican Senators were such solemn committals to the people of the country that the tariff taxes should be reformed and the revenue reduced, that the Senate could not afford to follow the lead of the Republicans in the House, and was forced, yes, literally forced, to take a step in the direction of tariff reform.

It is true that they never intended, and do not now intend, at this session of Congress, to go another inch in that direction beyond the presentation of this bill and its general discussion as a whole. They do not intend to pass this bill as it is now or hereafter. They do not intend to have it read now by sections for amendment, for that proceeding would disclose the cunning of the Republican right hand now supposed to be concealed from its left hand, in putting on the stage this masquerade of monopoly, disguised in the innocent appearance of fair dealing and justice to the country.

But this bill brought in by the Republican majority of the Senate is a great and notable triumph for the Democracy, because it is a broad and conclusive admission that the people need and demand the relaxation of high taxes and some concession from the favored classes. The Democracy have forced the Republican party to take position in favor of the people's right to make this demand.

We have forced them to declare their purpose (which I admit they do not intend shall be carried out) to reduce the revenues $73,000,000. How can we suppose that they intend to cut off $73,000,000 of revenue when they declare that the excess of revenues for the current year will only amount to $19,000,000? Such a declaration, made under such circumstances, has the appearance of being made under the duress of abject fear of the people. Such a conclusion would be inevitable if it was intended to pass this bill—the substitute—but for the fact that it is so easy and so just to the people, by changing another statute, to omit from the current annual expenses $50,000,000 now gathered from them to be put in the sinking fund for the redemption of our bonds. This $50,000,000 added to the $19,000,000 of surplus that the Senator from Iowa [Mr. ALLISON] admits will be found in the Treasury on June 30, 1889, makes $69,000,000, a sum within a small fraction of the estimated reduction of the revenue to be secured by the Senate bill.

It would never do for the Republicans, at this time, to take from the shoulders of the people this useless and cruel tax of $50,000,000 a year, which is the alleged security for the redemption of bonds originally bought for 50 cents, or less, on the dollar and now held firmly at $1.28. Their nurslings, the bondholders, would kick out of the party traces and refuse the money to keep the procession moving, if the credit of their bonds should be lowered somewhat to the neighborhood of their par value.

Moreover, this neat excuse for unnecessary taxation carries with it as much, annually, as $2,000,000 of profits to monopolist classes, and would furnish about the most conclusive plea that can be stated why the unnecessary taxation of the people should cease. Why, then, should the Republican party create a plain necessity for the reduction of taxation $50,000,000 annually, by repealing the sinking-fund act? That would be too costly an experiment, so far as votes are concerned, in those vast areas of political influence over which the bondholders have almost undisputed sway.

They reason thus: "This sinking fund ought to cease; it is a useless, expensive, and dangerous law. But to cut it down now would increase the surplus in the Treasury by $50,000,000 each year, and would lose our friends, the bondholders, 2 or 3 cents on their premium of 28 cents on their bonds. They are too proud to pocket such a loss." They reason further: "If we find that our bill runs the revenue down to, or below, the sum of the annual surplus, then we can demand of the bondholders that they shall give up the pretended security of $50,000,000 they hold in the sinking fund and look to the security afforded by the good faith of 65,000,000 people for the redemption of the few bonds as yet unpaid.",

The adroitness of the Republican committee in holding the repeal of the sinking fund in reserve as a door of escape from any trouble that may come to them, and in counting this now as one of the current necessary expenses of the Government in order to find that large excuse for high taxation, shows a very high order of financial ability, of the sort that misleads with false appearances, and substitutes them for facts.

Why should we deceive the people with the pretense that $50,000,000 a year is taxed out of them to meet an obligation of honor, when its only effect is to "gild the refined gold" of our credit by placing a mortgage on our revenues to raise this vast sum yearly to pay to the holders of our bonds and increase the premiums on them? Is this done to furnish excuses to 65,000,000 of people why they should each pay nearly a dollar per annum on this account alone of excessive taxation?

If there were no selected classes to receive this subsidy thus forced from the tax-paying people through our tariff laws no sane man could imagine an excuse for this needless tax upon the people.

If this Senate bill could become a law, and if the surplus should be reduced to $19,000,000, and if there should be $46,000,000 of deficit in June, 1889, the sinking-fund tax will not live a day longer than the Finance Committee of the Senate can get its head under the ax. But until this is demonstrated and until the November storm has cleared the atmosphere the Republican party will fail and refuse to see that the $50,000,000 annual taxes to supply the sinking fund is unnecessary taxation upon this generation; that it takes from the capital invested in their business that enormous sum annually, and makes hard lines for them, and in unpleasant places, merely to enrich capitalists.

Passing from this general view of the situation—of which I have only time to give the faintest outline—every Democrat in the Senate would welcome the opportunity to enter with the Republican majority here into an examination and vote upon the items of this Senate bill as it is reported. But the majority here do not intend to have this discussion in time to inform the country as to the real merits of the bill so that they can consider it in the November elections.

This is a bold policy for such a majority to adopt—a majority of one in the Senate, of whom as many as three represent States that vote against the prohibitive subsidy features of all tariff taxation—a majority of one in the Senate that is already reversed, as to that one Senator, by the elections in a sovereign State of other Senators who are opposed to excessive taxation, to class legislation, and to monopoly in tariff laws.

This majority of one increases and intensifies the monopoly and subsidy of the present tariff laws by the most masterly ingenuity in reclassifying the schedules, in the Senate bill, and thus endeavors to appease General Harrison, who declares that he will not permit a single step to be taken in the direction of reducing the bounty to capital, that he is pleased to christen as the protection of labor. He declares that no part of the protection under the existing tariff shall be given up, and no step in that direction shall be taken if he is President. He may be satisfied, however, with the reduction of protection on sugar, rice, and jute, as it is merely transferred to and increased on wool and woolens, cotton goods, and metals.

This majority of one openly rebukes the Chicago convention for its string of vapid platitudes, and resorts at once to the destruction of all taxes on tobacco, and to the shipwreck of the system of whisky taxation, which that convention had decided to hold amongst the reserved forces to sustain the advanced line of the high protection phalanx. The convention ordered that this tax should not be resorted to unless for the purpose of relieving the attack on that part of the line. The Finance Committee at once cut down these taxes, which no man pays except to gratify a taste or fancy, and that is purely voluntary, and put the burden on the articles of necessity that rich and poor, healthy and sick, prosperous and miserable, must all have to maintain life, health, and comfort.

This majority of one in the Senate even dares to speak harshly of trusts and combines, although Mr. Blaine has said that they are private matters, not within the domain of proper legislation, and much more innocent than people generally suppose them to be.

But this majority of one, after bringing in a bill that is original in almost every line, and is intended to originate a complete system of tax laws in the Senate, disperse to the country and ascend the stumps to address "the jury," as the Senator from Connecticut declares. They leave us without a quorum to do business; they desert the forum where the jury of Senators should be found, to discuss before the masses, where no records are made, the intricacies of a tariff bill upon which the Senate can not act intelligently without full explanation. Not one Senator on this floor, not a member of the Committee on Finance, would venture to assert that he could explain the tangle of rates, classifications, and compound duties that this bill presents, so as to tell the country what will be their effect on the cost of goods imported or made at home, without patient research and free discussion of the items found in these nineteen general classifications.

A shepherd who has watched the stars every night of his life could as well be expected to give us a distinct idea of the individual stars of the Milky Way as that which a tax-paying farmer could gather in reference to the provisions of this bill from the confused blaze of light and

wisdom reflected upon the canvas just for a moment from the magic-lantern of the majority of the Senate Committee on Finance and is then turned away to flash again upon the political meetings.

If there had been at any time any expectation that the Senate would be permitted to vote on this bill before November, this absence of Senators would be a grave matter, and the country would take note of the situation. It is the Republican party that has required this delay in considering this bill, and not the individuals who comprise that party.

This expedient for longer maintaining the present unjust and ruinous tariff is of a piece with all the party tactics that have been resorted to by the Republican party for years.

Whatever their party platforms, Presidential candidates, Congressmen, and leading papers may say, or may have said. even in the form of solemn pledges to the people in favor of tariff reform, results only in broken promises.

When, in 1880 to 1883, the people demanded tariff reduction and reform, the demand was evaded by providing a Republican commission to investigate the subject of Federal taxation, and to report their recommendations to Congress. They were all the friends of a protective tariff as contradistinguished from a revenue tariff.

They were of that class who are now claimed to be the only people fit to consider a tariff bill—the friends of high protection. This startling arrogance on the part of the advocates of monopoly, that only protectionists should be permitted to deal with protection, found its supposed exclusive privilege to doctor the tariff in the appointment of that commission. In their report this vainglorious demand was fully complied with, and high protectionists were formed into a commission to reform the tariff. That commission could not defiantly shame the truth. They could not witness with indifference the real sufferings of the people. They reported a tariff measure far more moderate than the Mills bill, and urged its adoption for the following reasons, among others:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties, except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors, can be justified. Excessive duties, or those above such standard of equalization, are positively injurious to the interest which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprises by rash and unskilled speculators, to be followed by disaster to the adventurers and their employés and a plethora of commodities, which deranges the operations of skilled and prudent enterprise.

Numerous examples of such disasters and derangements occurred during and shortly after the excessively protective period of the late war, when tariff duties were enhanced by the rates of foreign exchange and premiums upon gold. Excessive duties generally, or exceptionally high duties in particular cases, discredit our whole national economic system and furnish plausible arguments for its complete subversion. They serve to increase uncertainty on the part of industrial enterprise, whether it shall enlarge or contract its operations, and take from commerce, as well as production, the sense of stability required for extended undertakings. It would seem that the rates of duties under the existing tariff—fixed, for the most part during the war under the evident necessity at that time of stimulating to its utmost extent all domestic production—might be adapted, through reduction, to the present condition of peace requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which has become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties.

Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free-list, and the abolition of the duties on charges and commissions at which the commission has aimed, is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent.

The Republican party resisted legislation in both Houses to carry out the views of this commission. Finally, in 1883, when driven to the wall, they passed the law as it stands now, in which there is legislation by a conference committee against the express votes of both Houses, and that legislation was all in the interest of high duties, of which the highest were on articles of prime necessity.

With constant effort since that time the Democracy have been unable to get the subject considered in the House, and the tariff of 1883 has remained intact. It is a sunken rock in the sea. Waves of popular indignation roll across it, but there it remains, immovable. Until the people have again spoken on this subject, in terms that will warn monopoly, conspiracy, trusts, and combines that they are no longer the disposers of their rights and the regulators of their industries, these favored classes will never yield any of their advantages, and will never consent to a tariff revision in the interests of the toiling masses. When the people elected Tilden they expressed their confidence in a statesman who went as far as Mr. Cleveland has ever gone in his efforts to reduce the taxation of the people. Mr. Garfield, a member of the Cobden Club, went as far as Mr. Cleveland in the same direction. Mr. Arthur urged his party to reform the tariff and reduce taxation, and Mr. EVARTS, while a Cabinet minister of the Hayes administration, under his responsibility, made a report to the first session of the Forty-sixth Congress, in which he said:

There is something in the Republic which gives an individuality to the people of the United States possessed by no other people to such a degree. Our inventive genius in mechanical appliances is original, and at least twenty-five years ahead of Europe. Our people accept innovation; are prepared for it by anticipation. Europeans do not. One workman in the United States, as will be seen from the foregoing extracts, does as much as two workmen in most of the countries of Europe; even the immigrant from Europe attains this progressive spirit by a few years' association with American workmen. We have no oppressed and stupid peasantry, little more intelligent than the tools they handle. All are self-thinking, self-acting, and self-supporting.

Within the last fifteen years we have demonstrated our ability by the brilliant development of our own resources to exclude by honest competition foreign manufactures, to a large extent, from our shores. The question which now peremptorily challenges all thinking minds is how to create a foreign demand for those manufactures which are left after supplying our home demands. We can not stand still, for the momentum of increase will soon become so great that it will push us outward anyway; to push us safely and profitably is of so much importance as to almost overtop all other questions of the hour.

The question appeals equally to the selfishness and patriotism of all our citizens, but to the laborer it appeals with tenfold force; for without work he can not live, and unless we can extend the markets for our manufacturers he can not expect steady work, and unless our manufacturers can undersell foreign manufacturers we can not enlarge our foreign market.

The first great truth to be learned by the manufacturers and workingmen is that the days of sudden fortunes and double wages are gone. We must realize the fact that ocean steam communication has annihilated distance and brought the nations face to face. This drawing together of the nations means equalization in trade, profits, wages, etc., the advantage being with those who soonest accept the situation, and show the most sensible continuity in the new paths of success.

But so firm is the grip of protected monopoly upon the power of taxation that nothing, it seems, can cause it to relax, and so imperious are their demands for the ownership of what they call the home market that they require that the tariff shall yield no revenue to the Government when its operations admit the products of any foreign country into competition with them. Not a step of progress in that direction has been made in reality since 1867, although in 1883, under the pretense of reducing the revenue, the increase caused by that act has endangered the country to a frightful degree.

It is the fixed purpose of the monopolists to stand by the tariff of 1883 with all its dangerous consequences, and this bill and its history prove the fact. This Chamber would not be deserted by the high-tax Senators to give them an opportunity to endeavor to control the people in their votes if they did not intend that excessive taxation should still continue to pour into the Treasury more than $100,000,000 a year of surplus revenue and more than $300,000,000 a year into the coffers of the protected capitalists.

The present tariff in all its essential features is intended to be permanent. If the surplus is reduced $73,000,000 a year, it will be done only on the condition that this sum shall be multiplied by three in its advantages to the protected capitalists, and at the expense of a suffering people, so far as the Republican side of this Chamber can control legislation.

In any European state a surplus revenue of $120,000,000 annually, as a fixed income, would breed wars of conquest and aggrandizement that would destroy the people. When our bonded debt is extinguished, or even while we are waiting for its maturity, what will we do with this constantly increasing store of money?

What more dangerous thing could exist in our country than the fixed certainty of the yield of this vast sum to the Treasury every year, taxed from all consumers to pay a few producers for engaging in pursuits that yield naturally large returns for skilled labor?

Already the laborers clamor and strike for a larger dividend in the tax-bonus that was alleged to be raised to pay for their toil. The owners of the labor-saving machines claim five parts out of six for what they contribute to the production. They differ; the labor ceases until want has compelled a resumption of work. In the mean time the high tariff has forced out competition, and the scarcity of supply has forced the home market up many points. The strike has starved the workingmen into submission, while the capitalist, the owner of the machines, has greatly increased his wealth by waiting for a higher market.

How often has it turned out that strikes have been provoked by the owners of plants and machinery in order to produce this very result? Let our laboring men answer.

It is easier, safer, more respectable to have the operatives desert a factory where "their room is good company" than it is to lock them out when they are working contentedly for subsistence. If all the money that has been made by capitalists in the rise of prices for their productions, in consequence of strikes and lock-outs, could have been distributed to their employés, millions of hungry men, women, and children would shout for joy.

If the laborer could receive his fair share of the bounty given to the capitalists by unequal tax laws, the men who suffer most from the unjust exaction would feel compensated, in great measure, for the wrongs they suffer. The people understand all this. They know the causes that breed discontent amongst operatives of all classes in this land, where all others are contented and live in peace.

It is a reproach to a free government that such troubles should exist and that they should be, as they are, beyond the powers of the civil authorities to control them. They could not exist if a rankling sense

of injustice did not goad the sufferers into resistance, and if the temptations to speculation in human labor did not cause that injustice. These evils and many others quite as great are the fruits of the tariff of 1883. Yet the Republicans in this body make concerted effort to delay the reformation of a system that has produced those results every day it has existed, and the still more dangerous result to the people at large of a Treasury loaded to congestion with money that is the life-blood of all industry, the dangerous fruit of unjust taxation.

My wish on this occasion is for thorough examination and enlightened votes on the items of this bill. In one great matter the avowed purpose of both sides of the Chamber is the same. We agree that the inflow of surplus revenues must be stopped. That one object is of sufficient importance to the country to demand the earnest and unceasing labors of every representative of every State on this floor, as it did gain the untiring labors of the representatives of every Congressional district in the other House of Congress.

Why should we not, at least, make one effort to agree on some plan that will remove this threatening evil from our financial situation? But the field of labor and progress towards a remedy is abandoned in the hunt for political power, and the ground so dearly won in the House must be lost to the people. Nothing of the promised discussion and action upon Federal taxation remains in reach of the Senate but the criticisms of the House bill and of the Senate bill, and of the Democratic party and the Republican party, all intended as mere stump speeches to affect the pending elections. The country may, in the enthusiasm of party rivalry, forgive us for this indifference to a great and pressing duty, but I can not repress the conviction that the majority, at least, should be here to press this measure to a vote, if they intend to pass it, and let the other House consider the question whether we can come to an agreement in conference.

We can not plead the excuse for our delay that the people will in November settle the question as between the Mills bill or the Senate bill. Their vote will not change any vote in the Senate, not that the Senate does not respond as readily as the House to the will of the people, but for the reason that the Senate bill has never received a party indorsement outside of this Chamber; and it is notoriously a radical departure from the Chicago platform of the Republican party. If Mr. Cleveland is re-elected this point will be made by every Republican Senator against the Mills bill and in favor of the Senate bill.

The people are not settling the controversy for the Senate between the Mills bill and the Senate bill. That subject will be as open for discussion in December as it is now, and I can see no reason why the discussion should not proceed now as well as then.

I will not assume that I am so informed in the details of values, prices, qualities, classifications, and all the varied information relating to imported goods, and goods that compete with them, as to enable me to expound the occult mysteries of the Senate bill. I doubt if any one Senator on the Committee on Finance knows all these things. They examined interested people, who are experts, to get the facts on which these taxes are based. That evidence is still in the hands of the printers, so we must decide first and hear the evidence afterwards as to whether this is, as is alleged, the best first draught of a tariff bill that ever came before the American Senate.

The Senate will agree with me that the absence of the Senator from Kentucky [Mr. BECK] from the Senate is a deplorable loss, as is the absence of the Senator from Vermont [Mr. MORRILL]. Mr. BECK'S views on this question are stated by him in a way that precludes any efforts to improve them, or to make his arguments more powerful or convincing. His contribution to the report of the minority enables us to survey a field with comparative ease that would be otherwise crowded with difficulties. He had not seen the bill, I think, when his report was written, but he was informed as to its general tenor and provisions.

I have felt that we could not add much to the weight of his argument until we could enter upon a consideration of the bill, item by item, and then we could only give specific application of the facts and doctrines he has stated in a general way to the provisions of the bill in detail. The tables prepared by Mr. Switzler and submitted by the Senator from Missouri [Mr. VEST] are upon the best expert authority to which we could resort. They do not give the comparative taxation of separate articles of the respective classes of goods, but are sufficiently in detail to enable us to understand the general drift and purpose of the authors of the Senate bill.

The first and most distinctive feature in both the House and Senate bills is the free-list. Amongst all the absurdities that are uttered in the discussion of our tariff system among the grossest of them is that which imputes to the Democratic plan of taxation the epithet (for such it is intended to be) that it is a free-trade plan.

Equally absurd is the notion that the Republican plan is for protection throughout, and contains no elements of free trade. A mere phrase can not be invented that will fully describe the plan of taxation of either party. As near an approach to it as I can make would describe the Democratic plan as giving equal justice in the tariff laws to every American industry, while the Republican plan seeks to confer upon certain selected industries, in certain favored sections, peculiar advantages in money-making at the expense of all other industries and of consumers of the subsidized productions.

As to free trade, it is a part of every tariff law that was ever enacted by Congress. No tariff law has been without a free-list—not articles omitted from taxation by inadvertence, but a list of articles put on the free-list by the force of the statute prohibiting their taxation. The man who would put every imported article of foreign production on the free-list is a free-trader, and nobody else is a free-trader in theory or practice. As to the manner of supporting the Government by taxation, the free-trader and the prohibitionist of importations of foreign goods stand on the same ground precisely. Neither of them wants any revenue collected on imports, and both are, therefore, thrown back upon direct or internal taxation for the money to support the Government. Thus do we see, again, in the circuit of political movements, that "extremes meet." To the extent that any Senator recommends and votes for placing any imported article of foreign production on the free-list that Senator is a free-trader.

The free-list under the present tariff comprises many hundreds of articles classed in section 2503 of the Revised Statutes under 332 general classifications. Of these many hundreds of articles as to which free trade is compelled under existing laws, more than two-thirds of them are either grown or manufactured in the United States, or else we have in our own country other articles of like kind that are quite as useful.

Will any Republican Senator claim for his party that it is not responsible for this immense movement towards free trade by which we give up all revenue on imported goods that were valued during the last fiscal year at more than $300,000,000? Will any such Senator pretend that under the Republican treaty of 1871 with Great Britain, and the Republican act of Congress of 1873, we do not yield to Canada every year $20,000,000 of taxation by the free-trade plan of letting her goods pass to and fro through our country, free of all duty, for the benefit of a few railroad corporations?

Did not the Republican President and Senate ratify a treaty with Mexico, which the Democratic House of Representatives, I am pained to admit, has failed to put in force, by which not less than $50,000,000 of Mexican productions, now heavily taxed, would come in free of duty? Have we not yielded more than $10,000,000 a year of duties to Hawaii, in order to get her sugar and other productions free of duty? With all this history of the tremendous strides towards free trade which the Republican party have made in treaties and in legislation, when the Democrats had scarcely a voice in Congress, how can their leaders expect to blind the people so that they can not discover their inconsistencies by standing in the fog they have created and ringing their alarm bells to warn the country against the Democracy as a malign conspiracy of free-traders?

And this present Committee of Finance "cry aloud and spare not" against the Democratic party and the Mills bill as the evil machinators of free trade, while they quietly add to the existing free-list under the present tariff forty-two classifications of articles which embrace many hundreds of distinctive items. The following is the free-trade side of the Senate bill:

ADDITIONS TO FREE-LIST, SENATE SUBSTITUTE.

Acorns, raw, dried or undried, but unground.
Baryta, sulphate of, or barytes, unmanufactured.
* Bees-wax.
* Books and pamphlets, printed exclusively in languages other than English.
* Braids, plats, flats, laces, etc., for ornamenting hats, etc.
* Bristles, raw or unmanufactured.
* Bulbs and bulbous roots, not edible.
Chicory root, raw, dried or undried, but unground.
* Coal, slack or culm.

The chairman of the committee said that was a mistake, not a clerical mistake; no, not clerical; that is to say, it was a mistake of judgment on the part of the committee putting that in there. As soon as they heard from West Virginia and that the hair was rising on the heads of some of their Republican friends out there, they took it back and apologized for it, calling it a mistake.

Mr. GEORGE. What is it?

Mr. MORGAN. "Coal-slack or culm" on the free-list. That was a mistake, but it was a mistake not of the printer but of the men who wrote the article that the printer was to set up. I continue the addition to the free-list:

* Coal-tar, crude.
Curling-stone handles.
* Currants, Zante or other, dried.
* Dandelion roots, raw, dried, or undried, but unground.
* Eggs' yolks.
* Feathers and downs of all kinds, crude and unmanufactured.
Jute.
Jute butts.
Manila.
* Ramie.
Sisal-grass.
Sunn.
* All other textile grasses or fibrous substances, unmanufactured or undressed.
* Floor matting, Chinese, known as.
* Grease and oils, used commonly in soap-making or wire-drawing.
* Human hair, raw or uncleaned, and not drawn.
* Mineral waters, not specially enumerated.
* Molasses, testing not above fifty-six degrees.

* Olive oil, for manufacturing or mechanical purposes.
* Nut oil, or oil of nuts.
Opium, crude or unmanufactured.

I believe that was a mistake; that was in the report, but was not in the bill; that was a change of opinion of course, unless the bill was written before the report was—a change of opinion anyway.

Mr. ALDRICH. It is in both the bill and report.

Mr. MORGAN. Opium, crude or unmanufactured?

Mr. ALDRICH. Yes, sir.

Mr. MORGAN. I beg pardon; I thought it was stated the other day that it was not, in reply to a remark of the Senator from North Carolina [Mr. VANCE].

Mr. ALDRICH. The Senator mistakes.

Mr. MORGAN. The list continues:

* Potash, crude carbonate.
* Potash, caustic or hydrate.
* Potash, nitrate of.
* Potash, sulphate of.
* Potash, chlorate.
* Rags, all not enumerated.
* Hemp seed.
* Rape seed.
* Sponges.
* Sand.
* Tar and pitch, of wood.
* Turpentine, spirits of.

Let us look at this free-trade schedule of the Committee of Finance and see whether it was intended to apply to articles not grown or manufactured in the United States.

I have referred to these articles by a star in front of each. What about spirits of turpentine? What country makes more than we do?

Mr. ALLISON. No country.

Mr. MORGAN. What about bees-wax? Why put bees-wax on the free-list when every old lady in the United States who has a few beehives can melt out a little bit of wax and take it to the country store and buy a few spools of thread to sew up the cloth that she spins on her spinning-wheel and weaves on her home-made loom? Bees-wax is useful in many manufactures, and yet it is the most domestic of all domestic industries that I know anything of, and when you put that on the free-list you strike at the income of almost every poor old lady in the South, to say the least of it, and I expect a great many in the North.

This measure has very little consideration for that class of people. They are not known to exist in the world, so far as this bill is concerned, and Providence might just as well have omitted the unnecessary act of creating them, for, after all, they have got to take care of themselves and support everybody else. The toils that they perform every day around their households they are to get no benefit from, and they are discriminated against in favor of wealthy men like Jay Gould and Vanderbilt, who never planted a grain of corn or of wheat in the world, and yet they have run their fortunes up until Jay Gould's is said to be $277,000,000, and God knows how much Vanderbilt's is, for they have got the practice now of hiding how rich they are.

If George Washington or Thomas Jefferson had supposed that the Republic of which they were laying the foundation could be so far abused in the warping of the Constitution of the country as to open the seams through which this vast flood of money could pour into the pockets of single individuals they would have shut the door on them and have tried some other plan. It was entirely unexpected and unanticipated that in a country of freedom and equality of privileges and of rights and immunities of every kind, the law could be framed in such a manner, through the pressure of a political party whose chief aim it is to make their friends rich, as that one man in this country, without ever laboring or toiling or contributing anything whatsoever to the general good of mankind, could amass a fortune according to law of $277,000,000.

I look upon it, as I think this world must, with utter amazement. There is not a crowned monarchy in this world that can confer upon one of its subjects by all the monopolies it can put within his reach and by all the exclusive privileges and honors it can confer, the opportunity or the ability to do that which this Republican party have provided in favor of men like Jay Gould and Vanderbilt through their system of the abuse of the Constitution of the country.

Mr. GEORGE. They subscribe to the campaign fund.

Mr. ALDRICH. Which campaign fund?

Mr. MORGAN. It does not make any difference to me which. I am here not to deal with political parties or political partisans or that celebrated gang of upstarts who are called political leaders, but I am here as an embassador from the State of Alabama for the purpose of trying to rectify the laws so that these men can not use this power and can not find it to be used for these corrupting political ends, and so that every man in the United States shall have an equal, a fair, and a just opportunity to rise under the smiles of Providence to the true dignity of his manhood and to the enjoyment of the benefactions that He has provided for us all.

I do not ask which party they subscribe to. The Senator from Rhode Island may want to know. I do not. It makes no difference in what party these things appear. If, in looking upon the statute-books of my country, I find that the laws as they exist are capable of bringing about such results as these, it is my duty not to desert this Chamber and go off to make speeches in aid of these subscriptions of fat fried out of protected manufacturers, but it is my duty to stand here in this Senate and look these laws over night and day, and Sunday, if need be, until we have brought relief to a suffering people. That is my duty, and that is what I am trying to perform.

This committee, however, of free-traders—for what is a free-trader but a man who wants goods imported without duty?—add forty-two classifications of imported articles to the three hundred and thirty-two already admitted free of duty by Republicans in Congress, and to all the goods of Canada and nearly all coming from Hawaii, amounting in value annually to more than $293,000,000, while all dutiable imports amount to $450,325,321.

Largely more than half of the goods imported from foreign countries into the United States are admitted free of duty under the Republican law of 1883, and this committee adds hundreds of articles under forty-two classifications to that list, and yet they have the assurance to rise in this Chamber, man after man, and denounce this side of the Senate as being free-traders.

I will read an extract on that subject from their report on page 28:

A free-trade country may be properly described as one which does not impose protective duties upon importations. Lord Salisbury lately defined a free-trader as one who is opposed to protection. Mr. David A. Wells recently said, "Free trade, as an economic principle or politico-commercial system, is the direct opposite to the so-called principle or system of protection." If these definitions are correct the promoters of this bill are self-confessed free-traders, and the denial that they are engaged in a "crusade of free trade" comes too late, for the American people are not likely to forget the lessons of 1841 and the political rallying cry of "Polk, Dallas, and the tariff of '42."

I can imagine what must be the feelings of a man who has pocketed a fifty-dollar bill that belongs to somebody else and is going off with it, and as he passes out of view he meets a friend whom he reproaches as being a thief. The friend points to the fact, "You have got $50 of stolen money in your pocket; why do you call me a thief?" "Because if you had had the opportunity you would have stolen $100." Here is this committee carrying this enormous free trade in foreign goods making no objection to it, or very slight, and adding forty-two classifications of articles to it, turning around in their report and engaging in new definitions of what a free-trader is; something that they put up that they think will fit our side in order to get the chance to apply to us what they believe to be an unpopular epithet, and yet they are passing through the Senate here and through history as the champions of a system that brings in more than $293,000,000 of values a year without the imposition of a single cent of duty.

And when Mr. Cleveland asked them to reinstate the tariff upon Canadian goods, and the House passed a bill that it should be done, amounting to not less than $20,000,000 a year, and when that would seem to be necessary as a measure of reaction or retaliation against Canada on account of ill-treatment to us under an alleged existing provision of the treaty of Washington, the House passed the bill and it came over here and went to the Committee on Foreign Relations, of which I happen to be a member, and there it sleeps the sleep of death. Why? There are two reasons for it. Twenty million dollars a year would have added too much to the surplus revenue, which would have made a necessity for cutting it down a little more, and the blessed railroad corporations, that have got so much fat to be fried out of them yet for the benefit of campaign purposes, would have lost money! That is a plain statement, but it is nevertheless absolutely true.

Why did the committee add anything to the free-list unless the people needed the relief they give them, small as it is, and partial, until it sickens the sense of justice? Why did they not propose to repeal the existing free-list, so far as it includes any articles that are produced in the United States, or for which we can produce a good substitute, if they intend to protect American industries simply because they yield home productions? Hides, tan-bark, tannin, charcoal, horns and hoofs of cattle, indigo, lemon and lime juice, asbestus, sulphur, drugs, aluminium, cotton, eggs, fire-wood, fresh fish, goat-skins, logs, railroad ties, and great number of articles are on the free-list of 1883 and are produced in our country.

Not only are these left on the free-list by these avowed enemies of free trade, but they add to the list forty-two classifications of articles, all of which but seven are produced in the United States. Driven into this corner by their substituted tariff bill, they resort to new definitions of what they call free trade, and attempt to convict us of political heresy for practicing what they preach. It is a vain thing to attempt to convict the Democracy of evil intentions when our accusers do precisely what we are doing, except that we are trying to distribute and adjust taxation so as to save the people and they are trying to increase the riches of the capitalists at the expense of the people.

It is with much satisfaction that I present the list of articles free of duty which the Mills bill proposes to add to the existing free-list in a table that shows the present rate of duty on each article. In that list is found the highest merit of the Mills bill. That is taxation remitted, and every human being in the United States shares in the relief just given. I will put this table as an appendix to my remarks. Under this

list duties to the amount of $22,189,505.48 are cut off. They are not merely transferred by increased duties to other articles.

Three-fourths of this sum was paid by manufacturers on wool and tin-plate, two articles that are of prime necessity to working people and their families. Wool is produced everywhere in the farming and grazing districts of the United States, and a very large proportion of it is grown in the sheep ranges of the South and West, and at no cost to the wool-growers for grazing, except the care of the shepherds. Tin-plate is used in every household throughout the country, and in canning goods, fish, meats of every variety, and in all our climates. No other articles could have been selected which, in their growth and production, are less sectional than these, although they are much more necessary for general use in the North than they are in the South.

Raiment next to food, and the cooking of food next to both, are things that are elementary in the living of our population, and a reduction of taxes of $5,706,435.89 annually on tin-plates, of $5,899,816.63 on wool, and of $12,332,211.65 on woolen goods, is a blessing to the industrial classes of the country, the memory of which will not fade. Its enjoyment may be postponed or defeated, but it will come in the near future. The people will have this relief, while this large reduction will still leave wool and woolen fabrics under such shelter against foreign competition that their producers will still be amongst the most fortunate of the bounty-fed industries in the United States.

Until the discussion of this bill reaches the stage where the items are being separately considered it will not be practicable, within limits of debate that are reasonable, to point out fully the application of this bill to each particular branch of trade or industry.

We well understand that the discussion will not be permitted to reach this stage at this session of Congress, and I will reserve the expression of my views as to the separate items of the Senate bill until they are respectively called for the action of the Senate. But the summary of results I will now state will, for the present, show sufficiently the changes made by the Senate bill.

Tables carefully prepared by the Chief of the Bureau of Statistics give this comparison of the average ad valorem duties under the present law, and of those proposed by the House bill and Senate bill respectively, on the different classes of dutiable imports under each:

Chemicals: Present law, 32.83 per cent.; House bill, 29.11 per cent.; Senate bill, 28.72 per cent.
Earthen and glass ware: Present law, 59.56 per cent.; House bill, 53 per cent,; Senate bill, 57.82 per cent.
Metals: Present law, 40.77 per cent.; House bill, 41.12 per cent.; Senate bill, 41.12 per cent.
Woodenware: Present law, 18 per cent.; House bill, 29.32 per cent.; Senate bill, 18.88 per cent.
Sugar: Present law, 78.15 per cent.; House bill, 63.41 per cent.; Senate bill, 41.02 per cent.
Tobacco: Present law, 83.32 per cent.; House bill, 83.32 per cent.; Senate bill, 70.36 per cent.
Provisions: Present law, 24.33 per cent.; House bill, 23.34 per cent.; Senate bill, 23.58 per cent.
Liquors: Present law, 72.64 per cent.; House bill, 72.64 per cent.; Senate bill, 72.61 per cent.
Cottons: Present law, 39.99 per cent.; House bill, 39.07 per cent.; Senate bill, 40.74 per cent.
Hemp, flax, and jute: Present law, 28.09 per cent.; House bill, 24.81 per cent.; Senate bill, 35.47 per cent.
Wool and woolens: Present law, 58.80 per cent.; House bill, 40.08 per cent.; Senate bill, 66.12 per cent.
Silk goods: Present law, 49.71 per cent.; House bill, 49.71 per cent.; Senate bill, 50.67 per cent.
Books and papers: Present law, 22.14 per cent.; House bill, 22.07 per cent.; Senate bill, 23.51.
Sundries: Present law, 26.86 per cent.; House bill, 24.78 per cent.; Senate bill, 28.20 per cent.

But the House bill puts on the free-list merchandise valued at $70,443,012.64 on which duties are collected under the present law, and the Senate bill adds to the present free-list merchandise valued at $26,331,815.38, as follows:

Chemicals: House bill, $4,535,557.96; Senate bill, $2,873,972.27.
Earthen and glass wares: House bill, $30,789.97.
Metals: House bill, $18,323,612.91.
Woodenware: House bill, $6,679,202.12.
Sugar: House bill, $000.00; Senate bill, $5,336,364.15.
Provisions: House bill, $3,334,013.86; Senate bill, $1,232,695.
Cottons: House bill, $000.00; Senate bill, $172.00.
Hemp, flax, and jute: House bill, $14,490,501.40; Senate bill, $9,004,675.
Wool and woolens: House bill, $18,205,987.97; Senate, $000,000.
Sundries: House bill, $4,842,346.45; Senate bill, $7,884,026.98.

These facts easily enable us to discern the conclusion to which they all point, that the concessions made to the tax-payers in the cost of sugar, whisky, and tobacco are more than balanced by the increased exactions on other articles that are indispensable to human comfort and even to human life.

I am not disposed to make complaints because the section of country in which I live is denied a full share in the discriminating favors of the Government. With such resources as we have and with a world-wide monopoly in iron and coal, yellow-pine timber, and cotton, if we choose to use the blessings of Providence to extort money from other less favored sections, it is much the safer policy for us to hasten slowly through the natural growth of our wealth than it is to lift one great industry high above another by the artificial assistance of acts of Congress.

We have a basis of prosperity, laid by the hand of the Creator, that will never be taken from our country or decreased in its yield of income that enables us to grow rich and strong without being constantly appealing to Congress to tax other sections for our advantage. So that it is not the amount of money we are to lose that causes me to enter my protest against the discrimination against sugar, rice, and cottonties and cotton-bagging in the bill. The great body of Louisiana sugars rate in color below No. 13 Dutch standard.

Sugars under No. 13 Dutch standard, and testing 75 per cent. of saccharine matter under the polariscope, are now taxed $1.40 per 100 pounds. The Senate bill reduces the tariff on this class of sugars to 70 cents per 100 pounds, or one-half, and on sugars above No. 13 Dutch standard in color to $1.37½ per 100 pounds, just one-half. The refiner has nothing to do but to raise the color of the sugar we import to or above No. 13 Dutch standard, and make 100 per cent. on the duties he pays on his sugar without reference to its saccharine strength.

The sugar producer here is between the monopoly of the refiner on the one hand and the competition of the Cuban producer on the other, and the consumer who will always buy the cleanest looking sugar he can find at a price within his means will buy of the refiner and compel the producer to come down in his prices. An evil of the same sort is in the present law, but it is somewhat checked by the fact that it requires twice the sum to control the market for low-grade imported sugars under the existing law that would be required under the Senate bill. This is a terrible descent from the autocratic position assumed and carried out by the committee of conference in 1883, so well stated by the Senator from Kentucky [Mr. BECK] in his minority report, in which he says:

Mr. MORRILL might very well observe in this interview that the restoration of these duties even in such a conference committee was an unpromising risk, because if Senators had known half of what had been done against their known wishes by their own conferees, instead of the bill being passed as it was, by a vote of 32 to 31, it would have been defeated by an overwhelming majority, and the condemnation of the conference would have been too pronounced even for them to have ventured into the newspapers to quarrel over their action. Perhaps the worst part of their conduct was not referred to by either of them, and that was in regard to the duties on sugar.

The House had never acted upon that schedule, as their bill shows, but the Senate had in the most emphatic manner determined that the tax on sugar between No. 13 and No. 16 Dutch standard should not exceed $2.40 per 100 pounds. It had fixed the tax on sugar under No. 13 Dutch standard at a satisfactory rate; but that class of sugar was simply raw material for the refiner, not being used in any form except by them, and $2.40 was, by a yea-and-nay vote of the Senate, as is shown by the RECORD, after full discussion, fixed as the proper tax upon sugar between 13 and 16 Dutch standard. Mr. MORRILL and others protested that it was too low, and that foreign competitors would interfere with domestic refiners.

Some of us who had strongly urged $2.40 as a proper rate, believing that it might possibly cripple our domestic refiners in their operations, agreed to $2.50, after being assured by Senators on the other side, especially by Senator MORRILL, that $2.50 per hundred would be entirely satisfactory. I hope the RECORD of that debate will be turned to. It will be found on pages 2548 to 2555 of the RECORD of that session. Yet the conference committee deliberately increased the rate of taxation upon imported sugar between 13 and 16 to $2.75 per hundred, thereby giving to the sugar refiner an absolute monopoly of the sugar-refining business. They thus laid the foundation for the trusts which have been so much and so justly complained of by the country against the domestic refiners of sugar. That act on the part of the Senate conference, which was not only wholly unjustifiable and unwarranted but in violation of pledges they had given, has cost the consumers of sugar in this country not less than $8,000,000, while the fact that they had made such a change in the conference committee was carefully concealed from the Senate, as the record will show.

If the Senator from Kentucky has made a true statement about this matter, Mr. President, we begin to understand the power of monopoly in its influence upon the Senate of the United States. When a tariff bill gets into conference between the two Houses and high protectionists in the Senate and in the House of Representatives, whether Democrats or Republicans, conclude that they will violate the express votes of both bodies, or of one body, and they conclude that they will violate the pledges that they have given to their brother Senators and raise sugar from $2.50 per hundred pounds to $2.75 per hundred pounds, and thereby make it possible for $8,000,000 to be leeched out of the common people of the United States, it is not worth while in the face of facts like these to deny that the Senate of the United States is the subordinate slave of the subsidized monopolies of the United States. I come to the center to make the declaration and sustain it by the facts stated in this report by the Senator from Kentucky.

Mr. ALDRICH. Will the Senator from Alabama allow me to say a few words in response to the statement he has now made?

Mr. MORGAN. After I get through, yes.

Mr. ALDRICH. I should be glad to say a word now.

Mr. MORGAN. If it is in denial of anything I have stated here, of course the Senator is at liberty.

The PRESIDENT *pro tempore*. Does the Senator from Alabama yield to the Senator from Rhode Island?

Mr. MORGAN. I expect I had better get through and let the Senator take his own time to reply.

The PRESIDENT *pro tempore*. The Senator from Alabama declines to yield.

Mr. ALDRICH. I want to enter a denial now.

Mr. MORGAN. Of the facts stated by the Senator from Kentucky?

Mr. ALDRICH. Yes, sir.

Mr. MORGAN. He is not here. God grant that he were here. When the life of that man shall have passed out, and there might have

been some apprehension awhile back that it was about to be demanded of him, the United States of America would not find among its own native-born sons one that it could not spare with less regret than this adopted Scotchman, who came to us a boy. His heart is with the people of this country. He takes the Democratic view of the Constitution of the United States, which gives to every man in this land an equal right to rise by his own energies and his own abilities.

While he is detained from the Chamber by sickness his nature chafes and frets at the thought that he is not able physically to be here to take a hand in this great battle between the people and the monopolies. His statements, sir, made in a written report will be received by the people of the United States until the itemized facts are produced and the witnesses appear who are to deny those statements, and when I repeat from him what he solemnly utters, I always feel that I have under my feet a foundation that is immovable.

The sugar monopoly is made easier by the Senate bill, and the consumer of nearly every pound that is made will pay the refiner in addition to his mercantile profit from 75 to 100 per cent. profit on all the duties he pays on imported sugars. The committee abandon the protection of sugar. Why they did not put it on the free-list is a question alone for the consumers to examine into since the producers are openly deserted by them. This is what the committee say on that subject, and it is a point of very considerable importance:

The high rates of duty which have been levied upon this important article of food have not successfully developed the sugar-producing industry of the United States. The great natural advantages which the producers of cane sugars in the tropical islands have over those of the United States preclude domestic competition upon equal terms. If it were not for the fact that parties interested in the production of sugar from sorghum or beets are confident of the rapid development of these industries in the United States the committee would recommend a still greater reduction in the rate of duty upon sugar, as the advantages of this reduction would be felt through a larger circle than any other which could be made in our tariff schedules.

There is a clear abandonment on the part of this committee of any duty supposed to rest upon them heretofore to give any protection to sugar, because they say that they have tried it, and the production of sugar can not be improved by high rates of taxation. So that Southern agricultural production is dropped out of the scheme of protection entirely. I repeat, why is it that the consumers of sugar throughout the United States shall not demand that sugar shall be put on the free-list, the Republicans, who have professed heretofore to be the nursing mother of all protected industries, having abandoned this infant to the inclemency of the season? This is retaliation upon a Southern industry, so meant, so intended, and so avowed.

I can not more truly or more forcibly present the retaliation of the Senate bill upon the cotton-growers of the country than by quoting from the report of the minority of the committee:

Cotton-ties also receive careful consideration by the majority. It is not enough that the most formidable and insolent trust which ever laid its hand upon the throat of honest labor, threatening every class, from the poor colored cotton-picker whose few pounds of crop he could not get to market for lack of means to wrap it, to the merchant and capitalist who had advanced the necessaries of life to sustain that labor through the season. To these come the proposed revision, not with helping hand, but other burdens, and the cotton-ties which their own friends had reduced to 35 per cent. in the tariff of 1883 (one of the bright oases in a desert of iniquity) they omit by name, but include in a new classification, so that instead of 35 per cent., it must pay according to the valuation of 1887 over 100 per cent., adding nearly a quarter million dollars tax on the imported ties alone, all of which is a loss to the cotton producer. Even with this they are not content, but still further tax the struggling agriculturist in this schedule by raising the duties on trace chains, and all other kinds less than three-eighths of an inch thick, from 2½ cents, which is equivalent to 44.37 per cent., to 3 cents per pound, equivalent to a rate of 53.57 per cent. Can ingenuity go further?

I say that the taxation of cotton-ties is a mere act of unjust retaliation for an alleged discrimination in favor of Southern producers, and to prove it I will read from the report of the majority their confession of this purpose:

The removal of the duties from cotton-ties, burlaps to be used as cotton-bagging, machinery for making cotton-bagging, jute bags, etc., the retention of high duties on certain plantation products, such as sugar at 68 per cent. and rice at 100 per cent., the imposition of duties which would be protective on the coarser kinds of cotton and woolen fabrics manufactured in this section, all point to an attempt by the terms of the House bill to discriminate in favor of the planters of the cotton-growing States, an attempt made with the vain hope that it may be found possible to achieve the permanent prosperity of one section at the expense of another.

The industries of this section are not disturbed. It is well known that a considerable number of interests in other sections are suffering from insufficient protection, and yet it is significant that the only article upon which the rate of duty is increased in the entire bill is uncleaned rice, which by a change in classification is advanced from 70 to 100 per cent. ad valorem. We submit herewith (Appendix E) a suggestive table, taken from the census reports, which shows the relative proportion of the various manufactured products upon which rates are removed or largely reduced by the House bill that were produced in 1880 in the eleven cotton States and in the other States. This table discloses the fact that the section which furnishes the bill and two-thirds of its effective supporters supplies but 2½ per cent. of the industries to be crippled or destroyed.

The House bill throughout is a measure for the reduction of taxation. The fact that the duty on uncleaned rice is increased does show an intent to foster the rice-growing industry by subsidy. I object to the principle involved in that feature of the bill, but when it is called to mind that rice is grown only in malarial districts where negro labor alone can be employed, that the area of the rice-growing districts is very small, that it is an agricultural pursuit apart from all others, requiring such peculiar knowledge of the art that a rice-grower is as distinct from other agriculturists in his skill as a fruit-grower is from a corn-grower, it claims the approval of philanthropy that we should encourage this industry. The negro who grows rice is the competitor of the Chinese cooly, of the Hindoo laborer, the Egyptian fellah, and is not in competition with any other laborer in the United States. In view of these facts the flimsy excuse for this legislative retaliation on the leading industries of more than half the arable portions of this country has no reasonable justification.

The bagging, forced by a tariff tax that gives shelter to conspiracy to extort from the cotton-grower enormous tribute, and the iron ties that are taxed in the Senate bill more than 100 per cent. on their cost, are a dead loss to the cotton-grower. The tare on every bale of cotton in Liverpool is 28 pounds, without reference to the weight of the bale. With cotton at 10 cents a pound it is $2.80 deducted from every 500-pound bale, worth $50. If the bale weighs less, say 400 pounds, it is worth $40 minus $2.80. This tare reduces the selling price of the 500 pound bale to $47.20, and of the 400-pound bale to $37.20. This is 5.60 per cent. on the value of the crop. On a crop of 6,000,000 bales, at 10 cents per pound, the loss to the cotton-growers is $16,800,000. This is all thrown away, for they are not even allowed to have the discarded iron hoops and the bagging stripped from the cotton bales by this arbitrary rule of the market.

Now, for us to add more than 100 per cent. to the cost of the cotton-ties and nearly as much to the cost of the cotton-bagging to increase our revenues that are already so grossly in excess that Congress is ready to resort to any measures to get rid of it, however dangerous to the country, is a species of legislative retaliation that no acrimony of party feeling and no exaggeration of sectional resentment can justify to the minds of a thoughtful, honest, and generous people. The cotton crop of the South is the permanent and irrevocable gift of Providence to this country as an incident of our climate. No richer gift was ever bestowed upon any land, and no other country can, by its productions, destroy its values. More than half the yield from this crop is produced by white labor, and 95 per cent. of those engaged in its subsequent manufacture are white people.

In the cotton-fields the father and mother, sons and daughters, are engaged first in the cultivation and then in the harvest, which must be gathered by hand labor. More of personal toil enters into this crop than in any other industry, even more than in rice and sugar. The product is $300,000,000 a year in ready cash, and that money is gold whenever it is demanded. In the exchanges of the United States it is the leading factor. Without this our balances of trade would shrink out of sight and be lost to hope. The Constitution compels us to ship it without the protection of an export duty. In cotton we must have compulsory free trade, and our market is with people who are daily styled paupers by our learned Senators. The home market could no more absorb our cotton crop than Alabama could consume all the wheat in the Northwest. With fivefold our present population we could not absorb the increase of production that will attend such an increase of our population.

Cotton clothing is the first lesson that impresses the savage and leads him up to civilization. The uses of cotton will extend and amplify with the increase of human population, which is the true mission of Christian philanthropy. The more people there are in the world, and the more they are enlightened and refined, the greater must be the demand for cotton.

That the Senate Committee on Finance should have forgotten these things when it declared a war of retaliation on cotton is a sad evidence of the extent to which the passing demands of a political campaign can tempt our justly distinguished statesmen to attack anything that seems to oppose their march to power and make open war upon an industry that is the whole living of their negro allies in the South.

Fully half of every bale of cotton raised by negro labor belongs to him the moment it is gathered. If negro labor produces 3,000,000 bales one-half the burdens I have stated falls upon the negro race, and this is a hard blow to be inflicted by the pretended friends of those people. I leave them to settle their own family quarrels. The white people of the South spend the cash proceeds of their cotton after large usury is paid for money borrowed to support the working people, for provisions and clothing. It is they and not the manufacturers of New England that furnish the great home market to the Northwest and New England.

If they had no other claim than this to some indulgence from excessive taxation, I should feel it a privilege to see them dealt justly with. Those who still desire to legislate for sections or against sections will still find followers who go where their prejudices lead them; but, if the Senate still desires the South to be made the subject of retaliatory legislation to gratify a prejudice, the resort to tax laws for this purpose is cruel to innocent people, especially so to the improvident negro population, and is not up to the standard of magnanimity or of courageous legislation which the American people expect to find in the Senate.

I will not attempt further to debate this bill until it is called for

action, by sections, which is a duty that the majority in this body can retire from if they choose, but which I will not assist them to evade.

APPENDIX.

Additions to free-list by H. R. 9051.

Articles.	Present rate.
Bristles	15 cents a pound.
Boracic acid (commercial)	4 cents a pound.
Boracic acid (pure)	5 cents a pound.
Alumina, alum, patent alum, alum substitute, sulphate alumina, aluminous cake, and alum in crystals or ground	$\frac{6}{10}$ cent a pound.
Antimony, as regulus or metal	10 per cent.
Bark for tanning, extract of; hemlock	20 per cent.
Bibles, books, and pamphlets printed in other than English, and all books and publications of foreign governments and societies for gratuitous distribution	
Borax (crude)	3 cents a pound.
Borax (refined)	5 cents a pound.
Coal tar, all preparations of, not colors or dyes, not specifically enumerated or provided for	20 per cent.
Copper, sulphate of	3 cents a pound.
Crysilic wash for sheep	20 per cent.
Glycerine, crude, brown, or yellow, of specific gravity of 125 or less at a temperature of 60 degrees, not purified by refining or distilling	2 cents a pound.
Indigo, and extract of	10 per cent.
Iodine	40 cents a pound.
Iron, sulphate of	$\frac{3}{10}$ cent a pound.
Logwood and other dye-woods, extracts, and decoctions	10 per cent.
Mineral waters, imitations of natural and artificial	30 per cent.
Opium, crude, containing 9 per cent. and over of morphia	$1 a pound.
Phosphorus	10 cents a pound.
Potash, carbonate of, or fused, and caustic	20 per cent.
Potash, chlorate of	3 cents a pound.
Potash, crude	20 per cent.
Potash, nitrate of (crude)	1 cent a pound.
Potash, sulphate of	20 per cent.
Soda, sulphate of (Glauber's-salts)	20 per cent.
Soda, sulphate of (salt cake, crude, or refined, or niter cake, crude or refined	20 per cent.
Sulphur, refined	$10 per ton.
Barks, beans, berries, balsams, buds, bulbs, and bulbous roots and excrescenses, such as nut-galls, forest-flowers, dried fibers, grains, gums, and gum-resins, herbs, leaves, lichens, mosses, nuts, roots, and stems, etc	10 per cent.
Chicory root	2 cents a pound.
Clay, unwrought or manufactured, not specially enumerated or provided for	$1.50 a ton.
Cocoa, prepared or manufactured	2 cents a pound.
Coffee, substitutes for, not specially enumerated or provided for	2 cents a pound.
Copper, ores, fine copper contained therein	2½ cents a pound.
Copper, regulus of, and black or coarse copper and copper cement, fine copper contained therein	3½ cents a pound.
Copper, fit only for remanufacture	3 cents a pound.
Brick, other than fire brick	20 per cent.
Canes and walking sticks, unfinished	20 per cent.
Feathers, ostrich and others, crude or not dressed, colored, or manufactured	25 per cent.
Flax, not hackled or dressed	$20 a ton.
Flax, straw	$5 ton.
Flax, tow of	$10 a ton.
Hemp	$25 a ton.
Hemp, tow of	$10 a ton.
Hemp, manila, and other like substitutes for, not specially enumerated or provided for	$25 a ton.
Sunn	$15
Jute	20 per cent.
Jute-butts	$5 a ton.
Sisal-grass	$15 a ton.
Other vegetable substances not specially enumerated or provided for	$15 a ton.
Burlaps of flax, jute, or hemp, or in which they are component material of chief value (except such as may be suitable for bagging for cotton), not over 60 inches wide	30 per cent.
Bags of jute for grain	40 per cent.
Currants, Zante or other	1 cent a pound.
Dates	1 cent a pound.
Figs	2 cents a pound.
Glass, German looking-glass plates of blown glass	45 per cent.
Glass, plates or disks, for spectacles	10 per cent.
Grease, not specially enumerated or provided for	25 per cent.
Hair, curled, except of hogs, used for beds or mattresses	20 per cent.
Hair, human, raw, unclean, and not drawn	15 per cent.
Iron, chromic ore	35 per cent.
Cotton-ties, or hoops for baling purposes	1 cent a pound.
Iron, sheets or plates, or taggers' iron, etc., known as tin-plates, terne-plates, and taggers' tin	45 per cent.
Machinery for the manufacture of jute	25 per cent.
Needles, sewing, darning, knitting, etc	3 cents a pound.
Lime, borate of	$2 a gallon.
Alcohol, 94 per cent. anhydrous alcohol	$1 a gallon.
Compounds or preparations of which distilled spirits are component part of chief value containing 50 per cent. anhydrous alcohol	$1 a ton.
Stone, unmanufactured or undressed	$1.75 a ton.
Stones, grind	20 per cent.
Metals, unwrought, not specially enumerated or provided for	10 per cent.
Quicksilver	
Minerals, non-dutiable, advanced in value or condition by refining or grinding, or by other process of manufacture, not specially enumerated or provided for	10 per cent.

Additions to free-list by H. R. 9051—Continued.

Articles.	Present rate.
Mineral substances in a crude state, not specially enumerated or provided for	20 per cent.
Oil, neat's-foot, seal, whale, and fish, not elsewhere specified, and all other animal oils and combinations of	20 per cent.
Oil, naphtha, benzine, etc	20 per cent.
Oil, petroleum, crude	10 per cent.
Oil, cotton-seed	25 per cent.
Oil, croton	50 cents a gallon.
Oil, hemp-seed and rape-seed	10 cents a gallon.
Oil, olive, and salad other than olive	25 per cent.
Baryta, unmanufactured	10 per cent.
Ocher, dry	½ cent a pound.
Sienna and sienna earths, dry	½ cent a pound.
Umber and umber earths, dry	½ cent a pound.
Powders, finishing	35 per cent.
Meats, game, and poultry, not elsewhere specified, dressed or undressed, but not otherwise prepared	10 per cent.
Tallow	10 per cent.
Milk, fresh	10 per cent.
Egg yelks	20 per cent.
Rags, not specially enumerated or provided for	10 per cent.
Salt, in bags, sacks, barrels, or packages	12 cents per 100 lbs.
Salt, in bulk	8 cents per 100 lbs.
Bulbs and bulbous roots, not medicinal, not specially enumerated or provided for	20 per cent.
Seeds, garden, except of the sugar-beet	20 per cent.
Seed, hemp, rape, and other of like character	½ cent pound.
Soap, hard and soft, not specially enumerated or provided for	20 per cent.
Strings, of cat-gut, etc., other than strings for musical instruments	25 per cent.
Tar, pitch of	20 per cent.
Tar, of coal, and tar and pitch of wood	10 per cent.
Turpentine, spirits of	20 cents a gallon.
Beans and pease, not for seed	10 per cent.
Pease, split	10 per cent.
Waste, all not specially enumerated or provided for	10 per cent.
Bees-wax	20 per cent.
Bass-wood and other fiber, not otherwise provided for	10 per cent.
Brush, for crib work	10 per cent.
Wood, unmanufactured, not specially enumerated or provided for	20 per cent.
Timber, used for spars and building wharves	20 per cent.
Timber, hewn and sawed	20 per cent.
Timber, square or sided, not specially enumerated or provided for	1 cent cubic foot.
Lumber	From $1 per 1,000 feet to $3.50.
Clapboards, pine	$2 per 1,000.
Clapboards, spruce	$1.50 per 1,000.
Hubs for wheels, posts, lasts, wagon, oar, gun, etc., blocks, and all like blocks, rough-hewn or sawed only	20 per cent.
Laths	15 cents per 1,000.
Pickets and palings	20 per cent.
Shingles	35 cents per 1,000.
Shooks, sugar-box and packing boxes and packing-box shooks	30 per cent.
Staves of all kinds	10 per cent.
Ozier, or willow, prepared for basket-makers	25 per cent.
Osier and willow baskets, etc	20 per cent.
Rattans and reeds, manufactured, but not made up into completed articles	10 per cent.
Wools, unmanufactured	2½ to 36 cents.
Woolen rags	10 cents a pound.
Sacks, crates, boxes, etc	100 per cent.

The PRESIDENT *pro tempore*. The bill is before the Senate, as in Committee of the Whole, and will be read at length.

Mr. COCKRELL. If the Senator from Iowa has no objection, I will move that the Senate proceed to the consideration of executive business.

The PRESIDENT *pro tempore*. The Secretary will proceed with the reading of the amendment reported by the Committee on Finance.

The SECRETARY. It is proposed to strike out all after the enacting clause and insert——

Mr. ALLISON. I want to say just a word in response to the Senator from Alabama [Mr. MORGAN] as respects cotton-ties and the injustice that has been done in regard to this necessary article for baling cotton. The Senator assumes that the rate of duty is added to the price, which, of course, it is not. Although he does not state that, I suppose his argument is based upon that idea. The present duty on cotton-ties is 35 per cent. ad valorem. The price of cotton-ties, according to the unit of value, is 1.2 cents per pound, the foreign value. It takes 9 pounds of hoop-iron to circle a bale of cotton, so that the foreign price of hoop-iron for a bale of cotton is nine times 1.2 cents. Cotton-ties now pay 35 per cent. duty. The Senate substitute increases it somewhat.

Mr. MORGAN. How much?

Mr. ALLISON. It increases it to the extent of 8 cents a bale on each bale of cotton, assuming that all the duty is paid by the consumer.

Mr. MORGAN. Is not that equivalent to 100 per cent. on the present duty?

Mr. ALLISON. It is nearly that on the present duty.

Mr. MORGAN. That is what I stated or meant to state.

Mr. ALLISON. But I am coming to the point of the injustice. It is perfectly well known that these cotton-ties will be made, can be made

in this country, in the Senator's own State. Assuming, however, what is claimed, that this duty will add one-quarter to the ties, it only makes, as the Senate substitute proposes, a difference of 2 cents a bale to every bale of cotton in the United States, which when sold in this country is paid for as cotton.

Mr. MORGAN. The Senator is mistaken about its being paid for as cotton in this country. It is not paid for as cotton. Tare affects the price here as it does in Liverpool.

Mr. ALLISON. That is a question of course of debate. What I mean to say is that when a bale of cotton is purchased in this country it is purchased with the cotton bagging and the iron hoops on it.

Mr. GEORGE. The tare is taken off.

Mr. ALDRICH. It is a question whether it is or not. The New England manufacturer buys 9 pounds of iron which cost the cotton planter 2 cents a pound and he pays 10 cents a pound for it. Upon whom the tax rests ultimately I do not say.

Mr. GEORGE. He gets it for nothing by its reducing the price of the cotton.

Mr. ALDRICH. It is a question of argument whether it does or not.

Mr. MORGAN. No, a bale of cotton that weighs 528 pounds is sold for 500 pounds.

Mr. ALDRICH. Not in this country.

Mr. MORGAN. Yes, sir.

Mr. ALDRICH. I beg the Senator's pardon. The manufacturer of New England who buys a bale of cotton weighing 528 pounds, iron hoops, bagging, and all, pays for 528 pounds without any allowance for tare whatever.

Mr. MORGAN. But you get your market rate at Liverpool.

Mr. ALDRICH. It is an open question whether you do.

Mr. MORGAN. And the market rate at Liverpool is fixed by the fact that 28 pounds are taken from every bale.

Mr. ALDRICH. The market rate in Liverpool is not the same always as the market rate in New England. It is a very complicated question.

Mr. ALLISON. I wish merely to state that this proposition as to cotton-ties makes a difference of 2 cents a bale on the cotton, and no more.

Mr. ALDRICH. I feel that I ought to say a word in regard to the statement made by the Senator from Alabama concerning the action of the conference committee on the tariff law of 1883.

Mr. MORGAN. I made no statement, if the Senator will allow me; I read from the report of the Senator from Kentucky [Mr. BECK].

Mr. ALDRICH. The Senator reiterates the statement which the Senator from Kentucky makes in his minority report.

Mr. MORGAN. That has always been my conviction, however.

Mr. ALDRICH. I am the only Senator who was a member of that conference committee now in the city, and I should have hitherto paid some attention to the statement contained in the views of the minority submitted by the Senator from Kentucky had it not been for the enforced absence of that Senator—an absence the occasion of which I regret as much as the Senator from Alabama.

Many of the statements which the Senator from Kentucky makes as to the action and motives of members of the conference, based upon the allegations of others, are absolutely untrue, as can be demonstrated by the RECORD, and as will be shown whenever the Senator from Kentucky shall appear in his seat, which I hope may be very soon.

Mr. GEORGE. I hope the Senator from Rhode Island will allow us to believe the Senator from Kentucky, whom we all know to be a very accurate man, until his statement is shown by demonstration to be false.

Mr. ALDRICH. I have no doubt the Senator from Kentucky believed that his statements were true. I have as high respect and admiration for that Senator as any man upon this floor, and, as I have no doubt, he was misled. I believe that upon an examination of the record he will as quickly and as readily exonerate his colleagues on the Finance Committee and admit his error as any other Senator in the Chamber would.

Mr. EUSTIS. Will the Senator state what the inaccuracy is?

Mr. ALDRICH. It is too long a story to go into now, and I prefer to have the Senator from Kentucky as well as the chairman of the committee [Mr. MORRILL] and the Senator from Ohio [Mr. SHERMAN] here whenever the statement is made.

One word in regard to sugar. The Senator from Alabama says that the Senate substitute fixes a rate of duty upon raw sugars, testing 75 degrees of saccharine strength by the polariscope, at .70 cent per pound, and on the first grade of refined sugars, between Nos. 13 and 16, 1⅜ cents per pound, or a difference of .67 cent per pound, or a duty on refined sugar nearly double the duty on raw sugars, for the benefit of the refiners.

The House bill fixes the rate of duty upon sugars testing 75 degrees of saccharine strength at 1.15 cents a pound, and upon refined sugars, between 13 and 16, at 2.20 cents per pound, showing a difference between raw and refined in the House bill of 1.5 cents per pound as against .67 cent per pound by the Senate bill, giving an additional benefit to the refiners by the House bill of .38 of a cent a pound, or an annual gratuity to the refiners upon all the sugars consumed in this country which pass through the refineries of $11,400,000. This bonus to the refiners, it should be borne in mind, is in addition to the protection which they receive under the Senate substitute. I think it due to the Senate that this statement should be made.

Mr. MORGAN. My reference to the sugar production was more particularly to the fact that the Senate bill does not change the relative rate of duty on unrefined and refined sugars, but the duty on grades below No. 13 Dutch standard.

Mr. ALDRICH. In that the Senator is very much mistaken.

Mr. MORGAN. I can not be, because it is put in a specific sum.

Mr. ALDRICH. I think I can convince the Senator of that by a single statement.

Under the existing law the duty upon sugars below No. 13 Dutch standard, the average being ninety degrees, is 2 cents per pound, and the duty on refined sugars between 13 and 16 is 2.75 cents, or a difference of seventy-five one-hundredths, or three-quarters of a cent per pound. By the Senate bill the average rate on raw sugars at ninety degrees is 1 cent a pound, while the duty upon No. 13 to 16 is 1⅜ cents, or a difference of three-eighths of a cent a pound. We have then a difference of three-eighths of a cent a pound under the Senate bill between raw and refined as against three-quarters of a cent under existing law, or a reduction of three-eighths cent per pound of the protection afforded refiners.

Mr. MORGAN. Ninety degrees of saccharine strength as developed by the polariscope is not a fair test.

Mr. ALDRICH. I stated that ninety degrees was the average.

Mr. MORGAN. Then why do you put seventy-five degrees in the bill?

Mr. ALDRICH. We commence assessing the duties at seventy-five degrees.

Mr. MORGAN. The fair test is to take the extremes, the lowest on sugars below 13, and the lowest on sugars above 13.

Mr. ALDRICH. If the Senator takes that as a basis he will find a very much greater difference between the present law and the Senate substitute than the basis taken by me. For instance, at seventy-five degrees, under existing law, the duty is 1.4 cents a pound, and from 13 to 16 it is 2¾ cents per pound, making a difference of 1.35 cents per pound between seventy-five degrees and 13 to 16, while under the Senate bill this difference is but .67 cent. If the Senator takes that basis for his calculation he is worse off than before.

Mr. MORGAN. I have no right to complain of the Senate Finance Committee about this matter, because they have openly and avowedly and in a very frank way disclaimed any intention to protect sugar hereafter, so that it would be a heartless job; but what I complain of now, and what I complained of in 1883, was that the difference in duty between the grades below 13 and above 13 was very great. The Senate committee has held on to precisely the same relative differences in duty. Certainly it has to lower the grade of sugars at 75 degrees saccharine strength and those that are 13 by the Dutch standard or above it. If you put the duty at just one-half, exactly what it is under the act of 1883, you lower the grades.

Mr. ALLISON. Will the Senator allow me a moment?

Mr. MORGAN. Yes, I want to be corrected if I am mistaken about it.

Mr. ALLISON. All sugars under 13 Dutch standard must go into the refineries; that is to say, they are unfit for consumption, and therefore must go through the refineries. The protection to the refiner comes between 13 and 16 and above. The existing protection to the refiner is three-quarters of one cent per pound, and that is the gravamen of the contest made by the Senator from Kentucky [Mr. BECK] in his strictures upon the act of 1883. The present protection to the refiner is three-quarters of a cent. Under the Senate substitute the protection is three-eighths of a cent. So we have reduced the relative protection to the refiner one-half, or from three-quarters of a cent to three-eighths of a cent a pound.

Mr. MORGAN. In reducing that you have given the refiner the opportunity of one-half the money to form his combination and control all the sugar under 13.

Mr. ALLISON. If the Senator will allow me one moment more, I ought to add that the House bill, which I suppose the Senator proposes to favor, gives to the refiners fifty-seven one-hundredths of a cent protection, as against thirty-seven and a half one-hundredths in the Senate bill, or, in other words, twenty one-hundredths of a cent per pound more than the Senate bill upon every pound of sugar that passes through the refineries. That is the entire production of foreign sugars. So the Senator can quarrel with the House bill, and not with the Senate bill in his criticism.

Mr. MORGAN. I have not quarreled with either the House bill or the Senate bill as yet, because I have not had an opportunity to find out precisely what they do. We are getting at it a little bit now upon sugar. I was felicitating the Senate and the country upon the fact that both the House and the Senate were making reductions in the existing rates of duties upon all commodities that were touched, and I thought it was a good occasion for us to get together and consider the

bill, and see if we could not agree about something that would relieve this country.

I am not by any means committed to the sugar tariff in the House bill. There are some other features of the House bill which do not meet my approval. I might take the House bill as a whole in preference to not taking any bill at all, as I might take the Senate bill as a whole in preference to not taking any bill at all. I want to have an opportunity to make a comparison between the propositions of the House and Senate upon these questions.

The objection that I was making about the sugar rate is the same that I made in 1883, that there was too wide a difference between sugars above 13 and sugars below 13; that that discriminated very decidedly against the American sugar producer, and also it discriminated very largely against the American sugar consumer, because, as I have said to-day in my remarks, every man will have the brightest, clearest, best-looking sugar he can get within reach, and the refiner will monopolize the market by the use of a small amount of money. While the producer gets but a very low protection of tariff duty upon his product, the refiner will take the matter into his own hands and compel the Louisiana producer to come to his terms. I think it is very unfortunate in this bill, or in any other bill, and certainly very unfortunate in the law as it stands now, that any set of men in the United States are given the opportunity by our legislation to monopolize this product of universal use, and tax the people enormously and unnecessarily in its consumption, and at the same time use it for the purpose of breaking down a domestic industry. That is my position.

Mr. ALLISON. That is precisely the position of the House bill, I will say to the Senator.

Mr. MORGAN. Now, let us go on and consider your bill. It may be that I shall vote for it.

Mr. ALLISON. In 1883 we discussed the sugar question, and the Senator participated in that discussion. As the Senator from Kentucky said, the first vote in this body was a vote giving the refiners .40 of a cent, and then afterwards it was changed to .50 of a cent. Now, the Senate bill is .02½ of a cent below anything that was suggested in this Chamber in 1883.

Mr. MORGAN. It may be a better bill than any we have had, and I may vote for that feature of it.

Mr. ALDRICH. My object in calling the attention of the Senator from Alabama to these facts, which I supposed he had overlooked, was this: I remembered that on a former occasion, in 1883, he, alone I think upon that side of the Chamber, voted with the Republican Senators in favor of a large reduction of duty upon sugar; and I believed that when his attention was called to the fact that upon the basis he had adopted that the House bill made a definite and positive discrimination of $11,400,000 a year in favor of the sugar trust, that his voice would be no longer heard in support of that measure.

Mr. MORGAN. Perhaps not in support of that feature of it.

Mr. GEORGE. I am a little surprised, Mr. President, to hear it asserted in this body that intelligent, true, commercial men will pay for 28 pounds of worthless stuff, as bagging and ties are after they are put on the bale, the same price that they pay for the cotton which is inclosed within the bale, without making any deduction from the price. I think I can state a fact or two very well known in commercial circles in the South which will remove all doubt upon that subject.

In the first place, the price of cotton in this country is fixed by the market in Liverpool. New Orleans is the great commercial mart of cotton in the South. Large amounts of cotton are brought to New Orleans for the purpose of shipment and sale to Liverpool. In Liverpool the tare is taken off. Can any sane man believe that the purchaser in New Orleans for shipment to Liverpool, buying by the Liverpool price (that is regulating the price in New Orleans by what the cotton can be sold for in Liverpool with a fair profit), will pay 8 or 10 cents a pound for 28 pounds of tare when as soon as its gets to Liverpool he will not get anything for it?

There are one or two other facts to which I will call the attention of Senators. A commercial bale of cotton in the South formerly was 450 pounds. I believe in late years it has risen to 500 pounds. It is a well-known fact, recognized in all the markets in the South where the tare, bagging, and ties are taken without making any special deduction, that if the bale of cotton offered for sale is a light bale, less than 400 pounds, then the price is reduced, simply because it is light and simply because the tare, the bagging, and ties which inclose the cotton and which have been adjusted in the price for a commercial bale would be unequal; and therefore a reduction is made.

I call the attention of Senators to another fact very well known in the South. Six or seven yards—I have forgotten which, and it is not material—of bagging are ordinarily put around a bale of cotton. If there be an excess over the number of pounds which is the regulation, then a deduction is made on that account. That shows that the tare is adjusted in the price. Six hoops or ties is the regulation number for a bale of cotton. If you put seven ties upon a bale of cotton, then there is a deduction for that.

These things show quite evidently to a thinking man that the tare, instead of being deducted specifically, is weighed with the bale and adjusted in the price which is paid.

Mr. ALDRICH. Just what regulates the price of cotton in New Orleans, Natchez, Memphis, or in any other Southern port, is a very complicated question, which depends upon many different elements. For instance, a certain grade of long staple cotton to be used in the manufacture of fine yarns, or some other particular grade of cotton for a special purpose might be in such demand in New Orleans at a particular time that the Liverpool price would have but little influence in regulating the price for the New England market. To what extent the New England price affects the Liverpool price, or the Liverpool price affects the New England price, is a very uncertain problem.

There is one fact, however, which invariably confronts the New England manufacturer; he has to pay 10 cents a pound for 28 or 30 pounds of cotton-bagging and iron hoops which costs the Southern planter 2 or 3 cents a pound. Whether he pays more or less than the Liverpool price is a question which he may not be able to ascertain. Nor do I imagine that any Senator upon this floor could tell with any degree of certainty how much was paid by the manufacturer, how much by the planter, and how much by the consumer.

Mr. GEORGE. If the New England manufacturer, with his eye open, actually pays the full value of cotton as cotton according to the markets of the world, and then pays 10 cents a pound in addition to that for 28 pounds of bagging and ties, I have only this to say about it, that he is a species of Yankee I never heard of before.

Mr. FRYE. Does not the Senator know that we buy bushels and bushels of sand, enough to make a small hill in the neighborhood of a large cotton-mill?

Mr. GEORGE. That is deducted.

Mr. FRYE. Oh, no; it is not deducted.

Mr. GEORGE. There is nothing better known in the commercial circles of the South than that dirty cotton sells for a less price per pound than clean cotton.

Mr. FRYE. We do not know it until we pick it.

Mr. GEORGE. If you have not found that out in New England, it is the first thing in New England you never did find out.

As to what regulates the price of cotton, Liverpool, as I understand, is not a manufacturing city. I understand that Manchester and some other places are the manufacturing towns. Liverpool is the great commercial mart of cotton in the world. If a manufacturer wants a certain kind of cotton, very fine or very low, he goes to Liverpool, if he is over in that country, because he knows he can find all kinds of cotton there. Liverpool does not sell any particular kind of cotton, but all kinds of cotton. In New Orleans, I admit, sometimes when a corner has been made on cotton, and when somebody is found short on sales, or something of that sort, cotton rises for a few days before settling time to a higher price than the normal price, and somebody is hurt; but taking the thing all the way through in the cotton season the price of cotton in every market in this country is fixed by the price in Liverpool.

The PRESIDENT *pro tempore*. The Secretary will proceed with the reading of the amendment proposed by the Committee on Finance.

Mr. ALLISON. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 15 minutes p. m.) the Senate adjourned until to-morrow, Thursday, October 18, 1888, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *October* 17, 1888.

The House met at 12 o'clock m. Prayer by Rev. J. H. CUTHBERT, D. D.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT.

A message from the President of the United States, in writing, was communicated to the House by Mr. PRUDEN, one of his secretaries.

The message also announced as follows:

The following bill was approved by the President October 2, 1888:

An act (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes.

The following bills and joint resolution were approved by the President October 12, 1888:

An act (H. R. 11101) to include Sapelo Sound, Sapelo River, and Sapelo Island in the Brunswick collection district in the State of Georgia;

An act (H. R. 9619) to authorize the construction of a bridge across the Missouri River at some accessible point within 1 mile north and 1 mile south and east of the mouth of the Kansas River;

An act (H. R. 10068) granting a pension to Lieut. Starkey R. Powell, of Black Hawk war;

An act (H. R. 10934) to authorize the Secretary of the Interior to sell township maps or plats remaining on hand in his office;

An act (H. R. 7410) for the relief of settlers upon Old Camp Sheridan military reservation;

An act (H. R. 10060) prescribing the times for sales and for notice of sales of property in the District of Columbia for overdue taxes;

Joint resolution (H. Res. 210) authorizing the printing of the third annual report of the Commissioner of Labor;

An act (H. R. 2696) for the relief of John J. Crooke; and

An act (H. R. 5248) for the relief of the American Grocer Association of the city of New York.

The following bill was approved October 13, 1888:

An act (H. R. 1923) providing for the establishment of a life-saving station at the harbor of Kewaunee, Wis., and at other places herein named.

The following bills were approved October 15, 1888:

An act (H. R. 200) granting a pension to Walter O. Watson;

An act (H. R. 201) granting a pension to Edward Waters;

An act (H. R. 968) granting a pension to H. S. Sayre;

An act (H. R. 1085) granting a pension to Thomas Raines;

An act (H. R. 2139) granting a pension to George Rhody;

An act (H. R. 2471) granting a pension to Anna M. Noyes;

An act (H. R. 2474) granting a pension to Joseph Lincoln Young;

An act (H. R. 2716) granting a pension to J. W. Leight;

An act (H. R. 2788) granting a pension to Lieut. George T. Russell;

An act (H. R. 4039) granting a pension to Mary A. Pfeiffer;

An act (H. R. 5174) granting a pension to Statira Young;

An act (H. R. 5740) granting a pension to Anson Ward;

An act (H. R. 7185) granting a pension to Samuel Neikirk;

An act (H. R. 7485) granting a pension to Mrs. Susan V. Wilcox, mother of Martin V. Wilcox;

An act (H. R. 8200) granting a pension to Lydia Ann Wilber;

An act (H. R. 9182) granting a pension to Ransom Riley;

An act (H. R. 9341) granting a pension to Mrs. Dulcena Noel;

An act (H. R. 9862) granting a pension to Benjamin F. Bair;

An act (H. R. 9975) granting a pension to Joseph Welsh;

An act (H. R. 10017) granting a pension to Samuel Anderson;

An act (H. R. 10121) granting a pension to Sarah A. Mason;

An act (H. R. 10122) granting a pension to Margaret Quinton;

An act (H. R. 10629) granting a pension to Washington Ryan;

An act (H. R. 10705) granting a pension to Mary L. Tanner;

An act (H. R. 10824) granting a pension to Mary A. Van Buskirk;

An act (H. R. 10907) granting a pension to Henry Mitchell Youngblood;

An act (H. R. 11030) granting a pension to Susan E. Latture;

An act (H. R. 71243) granting a pension to Mary E. McQueen;

An act (H. R. 4038) granting a pension to Victor, Gertrude, Margaret, and Helen, minor children of Lieut. George R. McGuire;

An act (H. R. 9371) granting a pension to Betsy Williams, widow of William R. Williams, private Company C, Eighth Regiment Michigan Volunteers;

An act (H. R. 2073) granting an increase of pension to Daniel Willborg;

An act (H. R. 9358) to increase the pension of Rosalie O'Sullivan;

An act (H. R. 10210) granting an increase of pension to Philip Thomas;

An act (H. R. 10733) to increase the pension of George C. Quick;

An act (H. R. 2566) for the relief of Phillip Kopplin;

An act (H. R. 6449) for the relief of Perry R. Nye;

An act (H. R. 7912) for the relief of Frances P. Vernon;

An act (H. R. 9719) for the relief of Thomas Shackelford;

An act (H. R. 10007) for the relief of Henry Rose;

An act (H. R. 10827) for the relief of Catharine Teegardin;

An act (H. R. 11029) for the relief of Mary Vanbuskirk;

An act (H. R. 10241) increasing the pension of Richard Porter;

An act (H. R. 10106) to place the name of Matilda Spangler on the pension-roll;

An act (H. R. 10256) to place the name of Lucy Wagor, of Hillsdale, Mich., on the pension-roll;

An act (H. R. 10258) to place the name of Cyrus Millius, of Ogden Centre, Mich., on the pension-roll; and

An act (H. R. 10944) granting a pension to Victoria May.

The following bills were approved October 16, 1888:

An act (H. R. 508) granting a pension to Sarah F. Hawkins;

An act (H. R. 2120) granting a pension to Elizabeth Evans;

An act (H. R. 2689) granting a pension to Johanna Geyer, widow of Gustav W. Geyer;

An act (H. R. 3801) granting a pension to Nelson J. Crook;

An act (H. R. 7457) granting a pension to Eleanor D. Heath:

An act (H. R. 8553) granting a pension to Arabella Davis;

An act (H. R. 9169) granting a pension to Tempy M. Johnston;

An act (H. R. 10103) granting a pension to William Fairbanks;

An act (H. R. 10159) granting a pension to Jenny Buell;

An act (H. R. 10224) granting a pension to Elias H. Hall;

An act (H. R. 10687) granting a pension to Charles Junot;

An act (H. R. 10708) granting a pension to Jane E. Knoble;

An act (H. R. 10881) granting a pension to Nancy J. Cotner;

An act (H. R. 11057) granting a pension to Margaret Gray;

An act (H. R. 9370) granting a pension to Mrs. Susan Bates, widow of Thomas Bates, late private Company A, Twenty-sixth Regiment Michigan Volunteers;

An act (H. R. 3152) for the relief of Arlington M. Harrington;

An act (H. R. 3504) for the relief of John German;

An act (H. R. 6309) for the relief of Mary A. Covey;

An act (H. R. 8993) for the relief of Shadrack W. Brown;

An act (H. R. 8748) to increase the pension of Richard Jobes;

An act (H. R. 9935) to increase the pension of Isaac Hurd;

An act (H. R. 11021) to increase the pension of Charles Hahneman;

An act (H. R. 5193) granting an increase of pension to Benjamin Franklin; and

An act (H. R. 10245) granting an increase of pension to Hannibal Kimball.

VETO MESSAGE—JOHN ROBESON.

The SPEAKER laid before the House the following message from the President of the United States; which was read:

To the House of Representatives:

I return without approval House bill No. 6201, entitled "An act granting a pension to John Robeson."

The beneficiary named in this bill enlisted August 8, 1862, and was discharged for disability on the 21st day of November, 1862, after a service of a little more than three months.

In the certificate of disability upon which his discharge was granted, the captain of the beneficiary's company states that he has been unfit for duty for sixty days; that the soldier represents that he has not done efficient service since enlistment by reason of phthisic, from which he has suffered since childhood, but has grown worse since entering the service. The surgeon of the regiment states in said certificate that the soldier has asthma, with which he has been afflicted from infancy.

Upon this certificate based necessarily so far as his previous condition is concerned, this man procured his discharge after doing but very slight service.

He filed an application for pension in the Pension Bureau in October, 1879, basing his claim upon the allegation that he contracted asthma in September, 1862, about a month after he entered the service.

Two special examinations were had in his case, and his statement was taken in each.

On the first examination he said he could not account for the statements of his captain and surgeon, unless they arose from a remark he made that he had phthisic when he was small.

On the second he accounted for the statements of the captain and surgeon by saying that he felt very sick, and feared that he could not live if he remained in the service; that he was suffering with jaundice, as well as asthma, and having been told that he could not be discharged on account of jaundice, but could on account of asthma, he asked the captain to tell the surgeon that he had known him to have asthma before enlistment. He also says that he procured others to tell the same story.

On these examinations there was the usual negative testimony produced of certain parties who knew the claimant before enlistment, and did not know that he was afflicted. This is balanced by the evidence of others who testify that the claimant had asthma before enlistment.

Upon consideration of the character of the ailment, the testimony upon the two examinations, and the conduct of the beneficiary and his own admissions, I can not escape the conviction that whatever disability he had at the date of discharge he had when he enlisted, and that his claim was properly rejected by the Pension Bureau.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 16, 1888.

Mr. MORRILL. I ask that the further reading of the messages be dispensed with, that they be printed in the RECORD, and referred to the appropriate committees.

Mr. MCMILLIN. I think they had better be read.

The SPEAKER. Objection is made to the request of the gentleman from Kansas [Mr. MORRILL], and if there be no objection the message will be referred to the Committee on Invalid Pensions.

PETER LINER.

The SPEAKER laid before the House the following veto message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 9106, entitled "An act granting a pension to Peter Liner."

The beneficiary named in this bill enlisted as a sergeant in the regular Army in 1871, and he alleges that he served a previous term of enlistment, commencing in 1866.

While on a march from one post to another on the frontier in September, 1874, the beneficiary was severely wounded by the bursting of a gun, necessitating the amputation of three of his fingers.

The reports of this occurrence develop the fact that the gun which bursted in his hands was a shot-gun, and that the accident happened while the beneficiary was hunting "for his own pleasure or benefit."

His wound was a severe one, and the injured man was probably a good and faithful soldier, but it seems quite clear to me that it would be extending the pension theory to an unwarrantable limit to hold the Government responsible for such an accident.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 16, 1888.

SOPHIA VOGELSANG.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 10661, entitled "An act granting a pension to Mrs. Sophia Vogelsang."

The husband of this beneficiary was severely wounded in the military service of the United States, and in consequence of said wound his left leg was amputated. This was in 1862. In January, 1863, another amputation was performed higher up above the knee. He appears at that time to have been living, or at least was treated, at Detroit, Mich. He was pensioned at the rate of $30 per

month at the time of his death, which occurred at Louisville, Ky., where he appears to have then resided, on the 21st day of July, 1885.

The beneficiary filed a claim for pension in November, 1885, alleging that her husband died of gangrene.

There does not, however, seem to be a particle of evidence establishing that cause of death. On the contrary, the report received at the Pension Bureau of his death attributes it to sunstroke, and this does not seem to be directly questioned.

The report of the House Committee to whom this bill was referred, proceeds upon the theory that death was caused from the use of opium to allay the pain of the wound. This theory is presented upon the alleged opinion of the surgeon living in Detroit, who made the second amputation in 1863. He says that the pain of the wound obliged the soldier to take morphine. But it does not appear that he observed the case for a long time preceding death. Instead of his giving an opinion that the disability and morphine produced death, he says, as it is reported to me, after describing the condition of the limb previous to its amputation in 1863, and immediately thereafter, "according to my opinion said disability and the constant use of morphia in consequence of it may have been the cause of his death." This, and the statement of a druggist in Louisville, that he sold him morphine to alleviate pain, and of two different persons with whom he boarded at that city in 1885, to the same effect, is all the evidence that I can discover tending in the least to hint that the death of the pensioner resulted from any cause but sunstroke, which really stands as the undisputed cause of death.

The allegation in the committee's report that the beneficiary's claim was rejected by the Pension Bureau on the ground that her husband's death proceeded from the use of morphine, is erroneous. The cause of rejection is stated to be "that the death cause (sunstroke) was not the result of the soldier's military service."

We are not therefore left to the consideration of the question whether death from the use of morphine to allay pain can be charged to the disability incurred, for if death resulted from sunstroke it will hardly be claimed that it was in any way related to such disability.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 16, 1888.

WILLIAM S. LATHAM.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I herewith return without approval House bill No. 10563, entitled "An act granting a pension to William S. Latham."

The beneficiary named in this bill enlisted in August, 1862. The rolls for March and April, 1863, report him a deserter, but it having been ascertained that sickness was the cause of his failure to return to his regiment at the end of a furlough granted to him, upon which failure the charge of desertion was based, he was restored to his company and the charge of desertion removed.

All this is stated in the report of the committee to which this bill was referred.

But it is not mentioned in said report that he was again furloughed on the 17th day of August, 1863, and failing to return at the end of his furlough, one month thereafter, again became a deserter, but was not so reported until October 8, 1863.

He was arrested January 1, 1864, but there appears to be no record of his trial or his restoration.

He filed a claim for pension in the Pension Bureau in January, 1870, and he was informed twice during the year 1888 that no favorable action could be taken until the charge of desertion had been removed.

On application to the Adjutant-General, that officer, on the 21st day of February, 1888, declined to remove said charge of desertion.

The claim is still pending before the Pension Bureau.

I do not suppose that the Congress is prepared to go so far in special pension legislation as to grant pensions to those against whom charges of desertion appear of record.

In the belief that the fact of the second desertion above mentioned was overlooked by the Congress, and because the application for pension in this case is still pending in the Pension Bureau, where complete justice can still be done, I am constrained to withhold my approval of this bill.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 16, 1888.

MARY WOODWORTH.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 7657, entitled "An act granting a pension to Mary Woodworth, widow of Ebenezer F. Woodworth."

The husband of this beneficiary enlisted October 1, 1861. On the rolls of his company for May and June, 1862, he is reported as a deserter, and the report is the same on the muster-out roll of his regiment, dated October 24, 1864.

An effort was made on the application by the beneficiary for pension to the Pension Bureau to attribute the charge of desertion to the unfriendliness and injustice of the soldier's captain, and an unsuccessful effort was made to have the charge removed from the record by the Adjutant-General.

The soldier, therefore, is still recorded as a deserter from camp near Farmington, Miss., since March 12, 1862.

The application of the widow to the Pension Bureau in 1867 states that her husband was missing at Hamburgh, Tenn., May 7, 1862, and not having since been heard from, is supposed to be dead.

The captain of the company testifies that the soldier was employed with the ambulance corps, and that for misconduct he, the captain, ordered him to his company and censured him; that very soon after that the soldier was absent at roll-call and was marked as absent without leave; that in a day or two after that a member of a detail returned to camp from Hamburgh Landing and reported that he had seen the soldier there and had been told by him that "he was off and never would go back." Thereupon he was dropped from the roll as a deserter.

Various theories are presented to account for the soldier's absence in other ways than by desertion, some of his comrades going so far as to express the opinion that he was murdered at the instigation of his captain. None of these theories, however, seem to be more than conjectures with various degrees of plausibility.

If the question of desertion could be solved favorably to the beneficiary, another difficulty immediately arises from the fact that there is absolutely no proof of death except the soldier's long absence without knowledge of his whereabouts; and if his death could be presumed, the cause of it, and whether connected at all with military service, are matters regarding which we have no information whatever.

I am unable to see how a case in such a situation can be considered a proper subject for favorable pension legislation.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 16, 1888.

ELIZA S. GLASS.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 11332, entitled "An act granting a pension to Eliza S. Glass."

The husband of this beneficiary was in the military service from December 28, 1863, to April 27, 1864, a period of four months.

He was discharged at the last-mentioned date for disability, the surgeon stating in the certificate his trouble to be "chronic hemorrhoids and rheumatism, both together producing lameness of back; unfit for Invalid Corps." The captain of the soldier's company, in the same certificate, states: "During the last two months said soldier has been unfit for duty fifty-four days in consequence of chronic rheumatism, owing to spinal affections and sprains received before entering the service, and made worse by drilling in double quick."

He filed a claim for pension December 24, 1879, more than fifteen years after discharge, in which he claimed that on the 15th day of January, 1864, he received an injury to his back by slipping and falling upon the ground.

After a thorough examination, this claim was rejected on the ground that his disability existed prior to enlistment.

The beneficiary filed a claim for pension December 3, 1885, alleging the death of the soldier April 26, 1885.

This claim was also rejected on the ground that the death causes, "nervous prostration and spinal trouble," were not due to the service.

Both of these cases were appealed to the Secretary of the Interior, and in the decision of said appeals it is stated that upon an application for a discharge from the service the soldier first set up an injury to his back, from a fall while on drill; that the regimental surgeon refused to entertain this proposition; that the next day the soldier returned, and upon the representations of himself and his captain that his trouble dated back of the alleged accident upon drill, and was chronic, the certificate for discharge was made out, and pursuant thereto his discharge was granted.

I am of the opinion that considering the cause of death and all the facts and circumstances surrounding this case, the certificate of discharge which the soldier himself procured to be made out should stand as stating the true origin of his disability. And if the certificate was set aside and all the facts tending to support it were disregarded, the cause of death would still, in my opinion, appear to be disconnected with military service.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

ELLEN KELLY.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 4820, entitled "An act granting a pension to Ellen Kelly."

The husband of this beneficiary was granted a furlough to go home and vote on the 31st day of October, 1864. On his way there he was severely injured by a railroad collision, and there does not seem to be a particle of doubt that the injuries thus sustained caused his death.

Upon these facts this does not seem to be a proper case for the granting of a pension.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

ELIZABETH HECKLER.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 11222, entitled "An act granting a pension to Elizabeth Heckler."

The husband of this beneficiary was pensioned for asthma, and there is no doubt of the propriety of such pension, nor is there doubt upon the evidence that this affection continued up to the time of his death.

But he died of acute inflammation of the bladder and chronic enlargement of prostate gland. There is no proof that these causes of death were in the least complicated with the difficulty for which the deceased was pensioned, or any other trouble which was the result of military service.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

MARY A. CARR.

The SPEAKER laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 4102, entitled "An act granting a pension to Mary A. Carr."

The husband of this beneficiary served in the Army from November 5, 1863, to June 15, 1865. He made a claim for pension for injury to his left ankle, caused by being thrown from a horse while in the service, and some time after his death a pension was allowed upon his claim at the rate of $4 per month, commencing at the date of his discharge and ending at the date of his death.

He died on the 16th day of March, 1877, of apoplexy, and his widow filed a claim for pension on her own behalf in March, 1885, based upon the allegation that the injury for which her husband was pensioned was the cause of his death.

I can not upon the facts of this case arrive at a conclusion different from the Pension Bureau, where it was determined that the death of the soldier could not be accepted as having been caused by the injury to his ankle.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

LYDIA A. EATON.

The SPEAKER laid before the House the following message; which

was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 2472, entitled "An act granting a pension to Lydia A. Eaton."

The husband of this beneficiary was pensioned for chronic rheumatism at the rate of $4 a month up to the date of his death, August 4, 1884.

The beneficiary filed a claim for pension on the 2d day of September, 1884.

The cause of her husband's death was cystitis, which being interpreted is inflammation of the bladder.

The claim of the beneficiary was rejected on the ground that the fatal disease was not due to army service, and I fail to discover how any other conclusion can be reached.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

JOHN DAUPER.

The SPEAKER also laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 10342, entitled "An act granting a pension to John Dauper."

This beneficiary enlisted April 24, 1861, and was discharged August 28, 1861, four months after enlistment.

He filed a claim for pension in September, 1879, alleging as cause of disability diarrhea and disease of the stomach, liver, kidneys, and bladder.

None of these ailments were established satisfactorily as originating in the soldier's brief service, and as constituting disabilities after discharge.

The claim was therefore rejected by the Pension Bureau, and this action appears to be entirely justified upon the facts presented.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

ESTER GAVEN.

The SPEAKER also laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 11005, entitled "An act granting a pension to Ester Gaven."

This act provides that the beneficiary shall be placed upon the pension-roll as the widow of Bernard Gaven, and the report of the committee to whom this bill was referred throughout speaks of her as bearing that relation to the soldier.

She filed a claim in the Pension Bureau for a pension on the 31st day of January, 1881, as the mother of Bernard Gaven.

This claim is still pending, and, though evidence that the death of the soldier had any relation to his military service is entirely lacking and some other difficulties are apparent, the case may still be made out in the Pension Bureau. If it is, the beneficiary can be put upon the pension-roll in her true character as mother of the soldier, instead of widow, as erroneously stated in the bill herewith returned.

Upon the merits as the case now stands and because of the mistake in describing the relationship of the beneficiary this bill, I think, should not become a law.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

MARY HOOPER.

The SPEAKER also laid before the House the following message; which was read, referred to the Committee on Invalid Pensions, and ordered to be printed:

To the House of Representatives:

I return without approval House bill No. 10504, entitled an "An act granting a pension to Mary Hooper."

The husband of this beneficiary was first lieutenant in the volunteer service from December 7, 1861, to February 28, 1862, a little over two months, when he resigned. His resignation was based upon a medical certificate in which it is stated that this officer is unfit for duty on account of chronic pleuritis and pulmonary consumption, from which he has suffered for the past four months.

This certificate is dated February 14, 1862.

The soldier filed a claim in 1871, alleging typhoid fever resulting in paralysis, and that the fever was contracted in the latter part of February, 1862.

The soldier died January 17, 1884, of paralysis.

The beneficiary filed a claim for pension November 17, 1887, claiming that her husband died of disease contracted in the service.

The claims have been specially and thoroughly examined. The testimony does not establish any disease or disability in the service other than those stated in the certificate procured by him when he resigned, but it does tend to establish that about April 17, 1862, after his resignation, the soldier was sick with typhoid fever and that afterwards he suffered from partial paralysis, which increased and finally caused his death.

I make no reference to the fact stated in the committee's report, suggesting the idea that the courage of the deceased soldier had been questioned, further than to correct the allegation of the report that either his or his widow's claim for pension has been rejected for cowardice. It appears from the record furnished to me that they were rejected on the ground that the evidence is insufficient to connect the death cause or disability with the soldier's military service.

I am unable to see what other conclusion could be reached in the face of the soldier's own statements, as contained in the medical certificate furnished him and elsewhere made, and upon consideration of the other facts in the case.

GROVER CLEVELAND.

EXECUTIVE MANSION, *October* 17, 1888.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. ABBOTT, indefinitely, on account of business.

To Mr. SAYERS, indefinitely.

To Mr. BLISS, indefinitely, on account of important business.

To Mr. ROGERS, indefinitely.

To Mr. JACKSON, for five days, on account of business.

ENROLLED BILLS SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled bills and joint resolution of the House and Senate of the following titles; when the Speaker signed the same:

A bill (H. R. 11139) to authorize the building of a bridge or bridges across the Mississippi River, at La Crosse, Wis.;

A bill (H. R. 11262) to authorize the construction of bridges across the Kentucky River and its tributaries by the Richmond, Irvine and Beattyville Railroad Company;

Joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel; and

A bill (S. 1482) granting a pension to Sarah C. Taylor.

CORRECTION.

The SPEAKER. The Chair will recognize the gentleman from Kansas [Mr. RYAN], as he desires to correct the RECORD.

Mr. RYAN. I desire unanimous consent to call attention to what I believe to be an error reflecting upon the methods of a very prominent business man, contained in a speech recently delivered by Mr. HATCH, of Missouri. It appears in a report which he quotes in his speech from a commercial agent named Washington, dated September 15, and addressed to the Assistant Secretary of State. The specific matter I refer to is as follows:

I am credibly advised——

Mr. BRECKINRIDGE, of Kentucky. What is the matter which the gentleman desires to present?

The SPEAKER. The Chair understood that the gentleman from Kansas [Mr. RYAN] desired to make a correction of the RECORD.

Mr. RYAN. I think the Chair misapprehended me. I desire to call attention to an erroneous statement which was made in a speech recently delivered by the gentleman from Missouri [Mr. HATCH] upon the floor of the House—a statement which does injustice to a business man.

Mr. BRECKINRIDGE, of Kentucky. That is not a question of privilege.

Mr. RYAN. It is not, and I have not risen to a question of privilege. I ask unanimous consent to call attention to this statement and have read a letter from the business man referred to. That is all I wish to say upon the subject.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

Mr. BRECKINRIDGE, of Kentucky. In the absence of the gentleman from Missouri [Mr. HATCH] it does not seem proper that anything intended as a reply to his statement should go into the RECORD by unanimous consent.

Mr. RYAN. I do not propose to make any comment whatever on the matter myself.

Mr. BRECKINRIDGE, of Kentucky. Then I object.

Mr. RYAN. I make this request simply for the purpose of allowing a gentleman who can not be heard upon this floor to correct an error which does him injustice, and his letter is very brief.

The SPEAKER. The Chair will state to the gentleman from Kansas [Mr. RYAN] that under an order of the House heretofore made every member has a right to print in the RECORD remarks on the subject of the tariff, and that is a subject to which this statement relates.

Mr. RYAN. Then I will avail myself of that order to make this correction.

Mr. BRECKINRIDGE, of Kentucky. I have no objection to that. All that I objected to was that unanimous consent should be given for a statement made by a gentleman not a member of the House to be printed in the RECORD as a correction of another statement said to be erroneous made heretofore by a gentleman who is a member of the House and who is now absent.

Mr. RYAN. Do I understand that the gentleman objects to having the letter read?

Mr. BRECKINRIDGE, of Kentucky. As a matter of unanimous consent.

The SPEAKER. The gentleman from Kansas has leave to print.

Mr. RYAN. I shall then avail myself of this leave, and shall make such comments of my own as may seem appropriate.

On the 8th of the present month the gentleman from Missouri [Mr. HATCH] made a speech in this House. The object was apparently to demonstrate to the farmers of our country that the tariff enabled our manufacturers to rob them by exacting extortionate prices. To this end he reiterated what he has elsewhere stated—

That farm implements and farm machinery manufactured in this country were exported and sold to foreign buyers both in Canada and in Mexico, as well as in Europe, at prices lower than they were sold to the American farmers.

He said he made this statement upon the authority of a report made by a commercial agent named Washington, dated London, Ontario, September 15, 1888, and addressed to the Assistant Secretary of State.

To support his statement he incorporated into his remarks the full text of Mr. Washington's report.

I find in that report the following:

I am credibly advised by a very prominent Canadian farmer that he has just bought an American self-binding reaper (Walter A. Wood's) for $110. Laid

down in an American city near the lines the price of same machine in same place to an American farmer would be from $150 to $170.

This same Walter A. Wood was a highly respected member of the Forty-sixth and Forty-seventh Congresses, and is one of the largest manufacturers of harvesting machines in the United States. This morning I received a letter from him showing that this statement in Mr. Washington's report is, to use a mild phrase, decidedly misleading. Here is Mr. Wood's letter:

WORMLEY'S HOTEL, *Washington, D. C., October* 17, 1888.

DEAR SIR: I want you to call the attention of the House to a statement which appears in a speech made recently on the floor of the House of Representatives by Mr. HATCH, of Missouri, that one of my machines was sold to a Canadian farmer for a less price than I sell the same machine for to one of our own farmers.

If this is a true statement, the transaction was without my knowledge and not by my authority.

I have a trade in my harvesting machines in every grain-growing country on the globe except Canada, where I have no trade, and in no country do I sell machines for a less price than I sell them for in the United States. I have neither agents or customers in Canada, and I don't believe there are two of my make of harvesting machines in the Dominion. If there is, some one unknown to me has placed them there.

Two hundred thousand copies of this speech, I am told, have been sent out by one press for the farmers to read, from which they get the impression that I trade more fairly with Canada than with the United States, which is not the truth.

If Mr. HATCH cares enough about this question to get at the real truth as far as I am connected with it, I will show him or his secretary my books. If after an examination he does not say his speech has given to the farmers of the United States a wrong impression of the way my business is conducted, I will pay him for his expenses and the trouble he incurs in making the examination.

Very respectfully, yours,

WALTER A. WOOD.

Hon. THOMAS RYAN,
House of Representatives.

But the report of this "commercial agent," as he designates himself, contains a further statement, in substance that the Oliver Chilled Plow Company, of Indiana, sells the Oliver plow in Canada $4 less than they sell it in the United States. The Oliver Plow Company deny this in the most unequivocal terms in a letter which I find in the speech referred to. Let the letter speak for itself:

SOUTH BEND, IND., *August* 31, 1888.

DEAR SIR: Your favor of the 29th ultimo is at hand and carefully noted. We do not suppose that Hon. W. H. HATCH, Congressman from your district, would willfully misrepresent us, but the statements made in his speech at your place on the 28th instant have no foundation in fact whatever. The truth is, we have little or no trade in Canada, as the 35 per cent. duty most effectually shuts us out from that market. There may be imitations of our plows, produced by Canadian manufacturers, but we know nothing of them, and are in no wise responsible for them. We do not favor foreign trade in the least, and all reports that we do are false. We export our plows largely to Europe, Mexico, South America, and elsewhere, but buyers for those countries pay us exactly the same price that American dealers do. As to the retail price, take your number 40, which is our standard plow. It is retailed in this country, complete with wheel and jointer, for $14, while the same plow is sold in Great Britain for several dollars more. It is gratifying to us to have our plows so well thought of abroad, but we can say without egotism that their popularity is due solely to their merit.

The United States is the home of the plow, and its manufacture has been brought nearer to perfection in this country than elsewhere on the face of the globe. Competition is brisk; factories are plenty, and not only do Americans produce the best plows made, but they are sold cheaper to the user here than in any foreign land. The statements made by Mr. HATCH are not new, and each Presidential year "bob up serenely" as a factor in politics, but we are somewhat surprised that a gentleman of his reputation should make such charges without satisfying himself of their truth. What we have said to you is the truth, pure and simple, and we are prepared to substantiate the same on any or all occasions.

Mr. P. M. Smith, of your place, writes us in regard to this same subject, and we reply to him as we do to you. Thanking you both for calling our attention to the matter, and hoping that we may be set right in your community, we beg to remain,

Yours, truly,

OLIVER CHILLED PLOW WORKS.

H. F. MILLAN, Esq., *Kirksville, Mo.*

This Mr. Washington could read with profit the story of another Washington and his little hatchet. The zeal of this free-trade official of this free-trade Administration seems to have seriously warped his capacity for accuracy.

If the statements of Mr. Wood and the Oliver Chilled Plow Company are entitled to credit, the report of Mr. Washington, upon which the gentleman from Missouri based his speech, is not creditable even as a campaign document, for which it was evidently designed.

Inaccurate and misleading as it is, the speech of the gentleman of Missouri is made the vehicle to transport it through the mails at the cost of the tax-payers of the United States to the farmers of our country for the purpose of prejudicing and arraying them against the manufacturing industries of our own land. By such doubtful methods it is supposed American farmers will be persuaded to break down their own home markets that take more than 90 per cent. of their products. By such questionable influences it is sought to move the American farmer to close the American workshops and drive our wagemen therefrom or reduce them to the wretched condition of foreign labor.

By such agencies it is hoped to align the farmer against himself by securing his assistance to drive our wagemen from the shop to the farm, thereby converting the consumer of his products into a competitor. Such is the artful means by which it is expected the American farmer may be induced to strike down his own home market, without the possibility of any material increase of his foreign market, and to surrender the rich markets of our own country to foreign producers, who, when once they get a monopoly of our trade, will be able to dictate to them—to our farmers—the prices of what they have to sell and what they need to buy.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had passed without amendment House bills of the following titles:

A bill (H. R. 7964) granting to the Aberdeen, Bismarck and Northern Railway a right of way across a portion of the Sioux reservation in Dakota Territory; and

A bill (H. R. 10735) for the removal of the political disabilities of Theodore Lewis, of Louisiana.

The message also announced that the Senate had agreed to the amendment of the House to the joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel.

The message further announced that the Senate had directed its Secretary to request the return to the Senate of a bill (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris.

LEAVE TO PRINT.

Mr. COX. Mr. Speaker, before rising to the question of privilege, I ask unanimous consent to print some remarks in the RECORD. In the early part of this session I introduced a joint resolution in relation to the employment of Army and Navy bands, and I want to print a few remarks in response to what fell from the gentleman from Alabama [Mr. HERBERT] on that subject. There is no politics in it.

There was no objection.

ORDER OF BUSINESS.

Mr. KILGORE. What is the regular order?

The SPEAKER. The regular order is the call of committees for reports; but a request was made by the gentleman from Iowa [Mr. CONGER] yesterday for the consideration of a bill which was objected to temporarily by the gentleman from Tennessee [Mr. MCMILLIN] and the request came over to this morning, and the gentleman from Iowa [Mr. CONGER] now requests that it be considered; but the gentleman from New York [Mr. COX] states that he rises to a question of privilege, and that is the regular order if it be a question of privilege.

QUESTION OF PRIVILEGE.

Mr. COX. I send to the Clerk's desk and ask to have read an editorial from the New York Tribune of September 29, 1888.

The Clerk read as follows:

MR. S. S. COX'S POSTAL FRAUDS.

Illustrations are multiplying, as the campaign proceeds, of the dishonest use that is being made by the Administration and its supporters of the Post-Office Department. It is bad enough to have to put up with such wretched service as the Democracy is giving the country, everywhere involving numberless losses and delays in the transmission of mail matter. We could fill several columns of the Tribune with complaints of this character received from our readers during the last year. It would seem that the Democratic officials at Washington have used the postal service as a reservoir for all the stupidity they have in their party. Scarcely one of the experienced and faithful clerks whose diligence and care had made the service almost perfect when the Democrats took possession of it now remains, and in their places is a lot of ignorant employés appointed solely in payment of party labors. The inevitable result is a demoralized service. That, we say, is bad enough. But to find in addition that the Department is being used by Democratic officials and campaign committees all over the land to aid Mr. Cleveland's re-election is worse.

It was only the other day we discovered that a lot of Democratic campaign documents had been inserted in wrappers containing the Tribune after they had been mailed at the New York post-office. If there were any decency in the Department's management, the rascals who perpetrated that fraud would be hunted down and punished. And now we hold in our possession a large bundle, weighing nearly 4 pounds, addressed to an interior resident, postmarked at station E in this city, and bearing in one corner these words: "Pub. Doc., Free," and in another the signature, "S. S. Cox, M. C." The law which gives Congressmen the franking privilege provides that they "may send and receive through the mail all public documents printed by order of Congress," nothing more and nothing else. Let us look at the "Pub. Doc., Free," printed by order of Congress, which Mr. COX is sending all over the State in 4-pound packages. They are:

1. One copy of "Cartoons from Puck," being a series of the works of Mr. Keppler's artists, devoted largely to the representation of Mr. Cleveland as a sort of demigod, and of Republican statesmen as clowns, dragons, snakes, and creatures of those sorts. There is no mark on this public document indicating that it was "printed by order of Congress."

2. One copy of "The Cartoon," a Democratic campaign paper, some features of which render Mr. COX's liability to the penal statutes against circulating lewd and immoral pictures through the mails a question which District Attorney Walker may perhaps think it necessary to consider. Nor does this public document bear any evidence of having been printed by order of Congress.

3. Nineteen copies of a circular containing twenty-two lies about General Harrison's Chinese record, together with a disgusting picture representing him in the embraces of a Chinaman. We hardly suppose Mr. COX capable of circulating such stuff as this circular contains, though, of course, if he would consent to cheat the Government and to tell a falsehood as he has done by declaring these papers to be "public documents printed by order of Congress," it may well be argued that it is not much worse to bear false witness against General Harrison.

4. Forty-five copies of a lie addressed to farmers, declaring that "the Republican party favors free whisky and the unrestricted manufacture of bogus butter."

5. Ten copies of a card entitled "Facts to Consider," including several that are not facts at all, among which is a statement the inference of which is that "The Christian Union" has declared for Cleveland and Thurman.

6. Ten copies of the Democratic platform.

7. Ten copies of Mr. MILLS's recent harangue at Tammany Hall.

8. Eight copies of "The Louisville Courier-Journal."

9. Fourteen copies of Mr. FITCH'S speech, ten of Mr. SPRINGER'S speech, and nine of Mr. SCOTT'S speech, these being the only public documents in the entire bundle.

As a member of Congress Mr. COX has a great advantage in committing frauds on the postal service over the ordinary Government employé. Had a clerk in one of the Departments abused the penalty stamp as Mr. COX has abused his franking privilege he could have been indicted and sent to jail. Mr. COX will not fail, we are sure, to see the impropriety of a law which permits him to cheat the revenues with impunity.

Will Mr. Don M. Dickinson kindly return to his duty and put a stop to these scandalous abuses?

Mr. COX. Mr. Speaker, I am not very anxious to vindicate what little character I may have as a member of this House, nor any reputation which I may have with members on both sides for the just performance of my duties here. This editorial in the New York Tribune was as much of a surprise to me as I presume it was to any gentleman of either party. It came out while I was at home on my brief vacation, and I at once went to the office of the Tribune and saw the editor and saw the package. The package was very unlike anything ever sent out from this House or from this Congress, or from any Congress. It was not gotten up in the ordinary form; it was not in the ordinary envelope in which we send out public documents that are frankable. It was a melange of everything piled in together. It had what purported to be my frank upon it, and in large letters, "Pub. Doc."—"M. C." The signature was a tolerably good imitation, though very much larger than mine, and the "Pub. Doc." and the "M. C." were so unlike my writing that they might well have suggested the idea of a forgery; but it seems they did not to those engaged in this conspiracy.

I looked at it and told the editor on the instant that it was a forgery. Thereupon he asked me to write a statement which I dictated in his office. I ask the Clerk to read that statement, which was published in the Tribune of the 30th of September last.

Mr. ROGERS. Give us the name of the editor.

Mr. COX. I will give it.

The Clerk read as follows:

To the Editor of the Tribune:

SIR: The editorial in your journal to-day, headed "Mr. S. S. COX'S Postal Frauds," must be founded on a total misconception of facts. I have not directly or indirectly sent out under my frank any documents not frankable under the statute, and no one has been authorized by me to use my name for that purpose. I have no knowledge of any such business, and would not permit it for a moment. I shall write to the Post-Office Department promptly to investigate and punish any one guilty of this infraction of the law.

Since writing the foregoing, I have called upon you in person. You have shown me the package in question, and although it bears the stamp of the Post-Office authorities, showing that the signature has been accepted as mine and the package has gone through the mails, I unhesitatingly pronounce the signature a forgery, and will unite with you in any efforts to bring the perpetrator of such a fraud to justice.

S. S. COX.

NEW YORK, *September* 29, 1888.

Mr. COX. On looking at the signature purporting to be my frank, it occurred to me to make a statement, which I did, to the Postmaster-General, calling his attention to the matter. I stated to him that while I was at home in New York, at the time when this franked package was mailed, as alleged, at Station E, near the Democratic headquarters, I had not franked any documents whatever in New York except half a dozen speeches on the Life-Saving Service and perhaps one or two on the census—speeches which I sent to friends and which I got out of my trunk. I did no other franking in New York City. Apart from that, the only franking I have done during this session has been in this city by a stamp which exhausted itself some weeks ago, when I put it under lock and key and thought no more about it. I have never used it since. The franking done in New York City under my name was the franking of my own speeches, which the national committee ordered. In that case the frank was limited by my own written order to my own speeches, and that order is on file with the committee. So that I could not have been more strict than I was in regard to this business, and I was strict, sir, because I never favored the resuscitation of the franking privilege, as my votes years ago will show.

I ask the Clerk to read also the answer of the Postmaster-General to my request for an investigation. This will give the animus of this business as nearly as I can find it out.

The Clerk read as follows:

POST-OFFICE DEPARTMENT,
OFFICE OF THE POSTMASTER-GENERAL,
Washington, D. C., October 3, 1888.

SIR: I have the honor to acknowledge receipt of your letter of the 30th ultimo, inclosing two articles extracted from recent issues of the New York Tribune with regard to the use by some unknown person of a forged imitation of your frank in the transmission through the mails of certain unfrankable matter.

Several cases involving the misuse of franks of members of Congress have been recently brought to the attention of the Department and are now undergoing investigation.

In two of these cases the genuine frank of Hon. A. P. HOVEY was used some time during the past month to send through the mails certain German Republican newspapers, one of them being the Cincinnati Volksblatt, which are not in any sense frankable matter; though Mr. HOVEY, who was notified of the facts on the 19th ultimo, has declared that the use of his frank for such a purpose was never authorized by him.

In two other cases what appears to be the genuine frank of Hon. M. S. QUAY was used to transmit free through the mails a pamphtet entitled "A Short Review of the Public and Private Life of General Benjamin Harrison;" another entitled the "State Prison South;" several tariff tracts isued by the Industrial League, and a card entitled "Cleveland's Record," which are not and do not purport to be public documents.

In still another case an apparently genuine frank of Hon. JNO. KEAN, jr., has been used to cover a pamphlet entitled "The Liquor Traffic," and another entitled "Protection and Prices," neither of which is frankable under the law.

Information was communicated on the 19th ultimo to both Mr. QUAY and Mr. KEAN of this misuse of their franks, but the Department has, up to this time, not received from either of them any explanation whatever in regard thereto.

These cases all differ from yours in this respect: that they involve the misuse of genuine franks, while in your case the frank is an unmistakable forgery. They are cited to show that the Department is giving prompt attention to matters of this character.

The chief post-office inspector will be directed to give this affair a prompt and thorough investigation, in the course of which an endeavor will be made to obtain from the publishers of the Tribune the wrapper bearing the forged frank, and also to ascertain how the franked package came into their possession.

Yours, very respectfully,

DON M. DICKINSON,
Postmaster-General.

Hon. S. S. COX,
House of Representatives.

Mr. COX. After I had written to the Postmaster-General asking his attention to the matter and his scrutiny into it he sent to the regular authorities at New York, who sent out an inspector. The inspector first called at the New York Tribune office and afterward on me. What he did, the result of his investigation and examination, appears in the report which has been made to the Postmaster-General, and which I procured this morning. I ask the Clerk to read the report to the Postmaster-General and the paper which is an exhibit attached to it.

The Clerk read as follows:

POST-OFFICE DEPARTMENT, OFFICE OF POST-OFFICE INSPECTOR,
New York, N. Y., October 9, 1888.

DEAR SIR: Above case, No. 105072c, subject "Alleged illegal use of the frank of Hon. S. S. COX, M. C.," has been investigated, and I have the honor to submit the following report: The complaint of the Hon. S. S. COX is that his frank has been used upon a package of mixed matter, some of it frankable and some not. Said package was addressed to "Susan B. Beebe, P. M., South Apalachin, Tioga County, New York," and indorsed "Pub. doc., free; S. S. COX, M. C.," all in writing, and postmarked "New York, E." The papers in the above case were handed to me on the morning of the 5th day of October, 1888, and I at once proceeded to an investigation by calling at the editorial rooms of the New York Daily Tribune, in New York City, N. Y. Saw Mr. Reid, the editor-in-chief, and informed him that the Post-Office Department had undertaken an investigation of the complaint of the Hon. S. S. COX, M. C., as to the illegal use of his frank, and for the purpose of making a proper and thorough investigation, I requested that I be allowed to take the package in question. This request was refused, saying that he had no authority to allow the package to go out of his possession. He was asked if he would allow me to take the package with the assurance that the same would be safely kept and returned to him in good order. He still refused, saying that he would not allow the package to go out of his possession except upon an order from the addressee of the package. He suggested that as successful investigation of the case could be made with a fac-simile of the package bearing the frank of S. S. COX, M. C., and published in the Daily Tribune of October 3, 1888, as could be made with the original package. He was also requested to give the name of the person from whom he received the package. He refused to give the name, saying that he received it from a responsible party. Believing that the possession of this package was absolutely necessary in order to make a successful investigation of this case, I started for South Apalachin, N. Y., on the night of October 5, 1888, to procure, if possible, an order from Susan B. Beebe on Mr. Reid for the delivery of the package. I also desired to make an investigation of the case at South Apalachin, N. Y., post-office. On arriving at the post-office at South Apalachin, N. Y., on the 6th October, 1888, I ascertained that Susan B. Beebe was not the postmaster at that place, and had not been since September 30, 1887.

Elvira E. Bills is the postmaster at South Apalachin, N. Y., and has been since the 30th September, 1887. She is now an invalid, and her husband attends to the duties of the office.

Alonzo Bills, assistant postmaster, says that he was in charge of the post-office at South Apalachin, N. Y., when a package addressed to Susan B. Beebe arrived in the mail from Apalachin, N. Y., about two weeks ago, and he delivered it to either Reuben or Orrin Beebe; does not know which; can not say whether the package was similar to the one described in the Tribune of October 3, 1888, or whether the package was addressed to Susan B. Beebe, postmaster; can not say that the package described in the Tribune of October 3, 1888, ever came through the mail and was delivered to Susan B. Beebe or any member of her family; would not swear that the package did or did not come through the mail; his opinion was that the package came through this office.

Susan H. Beebe says that she was postmaster at South Apalachin, N. Y., up to about the 1st of October, 1887; received a package same as the fac-simile published in the Tribune of October 3, 1888; received the package from her grandson, aged about seven years, who brought the same from the post-office; noticed the address on the package, and my husband and stepson examined the contents, laid it away, and my stepson, Orrin Beebe, took charge of it; never before received a package addressed as the one in question; the package contained books and papers; have not seen the package since my stepson took charge of it; had no knowledge of the package before it was received, nor did not know what disposition would be made of the same after it was received. After explaining the object of this investigation, Mrs. Beebe was requested to give us an order on the editor of the Tribune for the package in his possession addressed to her, which she did.

Reuben Beebe, husband of Susan B. Beebe, says the package was received, as stated by Mrs. Beebe, some time from the 16th to 20th September, 1888; it was handed to me, and I opened the same, took out one paper and read it. The package was in the house two or three days. My son, Orrin Beebe, was a delegate to the Republican Congressional convention held at Owego, N. Y., about the 22d September, 1888, and when there he met Mr. DE LANO, Republican candidate for member of Congress, to whom he stated the circumstance of my wife receiving the package. Mr. DE LANO requested my son to send the package to him, and it was forwarded to him by express from Apalachin. The next we heard of the package was what we read about it in the Tribune.

On the afternoon of October 8, 1888, I presented the order received from Mrs. Beebe for the delivery of the packages at the editorial rooms of the New York Daily Tribune, and the gentleman to whom it was presented questioned the genuineness of the order, remarking that the body of the order was not in the same handwriting as the signature. I informed him that the order was written by myself at Mrs. Beebe's request, and that she signed the same. He refused to deliver the package, at the same time exhibiting a telegram dated at Owego, October 6, 1888, purporting to be from Mrs. Beebe, countermanding the order given me on the same date, remarking at the same time that if he considered the package necessary in the prosecution of this investigation he would deliver

it to me notwithstanding the telegram countermanding the order for the delivery of the same. He further remarked that he did not believe the Department was sincere in its efforts to investigate this matter.

Investigation of this case at headquarters of the Democratic national committee at No. 10 East Twenty-ninth street, New York City, N. Y., shows that documents sent out from this place are usually sent out in large quantities to State or county committees, and only by request from an individual or from some person for them are small packages sent out; that no request to send Susan B. Beebe, P. M., a package of documents has been received at said headquarters; that the name of Susan B. Beebe, P. M., does not appear on the list of persons to whom packages are to be sent, and that documents are not sent out bearing the frank of S. S. Cox, M. C. J. B. Treanor, the gentleman who has charge of forwarding documents, says that he will make affidavit that the package in question was not sent from the national Democratic headquarters in New York City by authority of any one in charge of the mailing department at said headquarters; that he is thoroughly acquainted with the postal laws, and never sends matter under frank of "M. C." unless the same is frankable.

Investigation at the New York State Democratic headquarters at the Hoffman House in New York City shows by the statements of C. R. De Freest, clerk of the executive committee, that no packages similar to the one described in the Daily Tribune of October 3, 1888, have been sent out from the said headquarters; that explicit orders have been given by him not to mail documents addressed to females, whether they were postmasters or not, and that such orders have been strictly observed; that the frank of S. S. Cox, M. C., is only used on envelopes covering the speeches of said S. S. Cox, M. C., mailed from the said New York State Democratic headquarters.

Investigation at Branch E of the New York, N. Y., post-office, shows that large quantities of documents have been received at said Branch E for mailing from the headquarters of the national and State Democratic committees in New York city, and it is impossible to ascertain at what time or by whom the package in question was mailed.

Hon. S. S. Cox, M. C., states that the alleged package franked by him is an unmistakable forgery; and that he will testify on oath that the signature is not his and he did not authorize it.

As a result of this investigation I conclude as follows:

First. That the indorsement of the name of S. S. Cox, M. C., on the package addressed to Susan B. Beebe, P. M., South Apalachin, Tioga County, New York, and mailed at Branch E, New York, N. Y., post-office, is a forgery.

Second. That the Hon. S. S. Cox did not authorize the use of his name on said package.

Third. That it does not appear that said package was authorized to be made by any one at either the national or State Democratic headquarters in the city of New York.

Fourth. That the investigation as to who forged the signature of Hon. S. S. Cox as it appears on said package is practically defeated by the attitude of the Tribune in refusing to deliver up the package upon which the forgery appears. The action of the Tribune seems to have been directed so as to obstruct and defeat investigation rather than promote it. They have done everything possible to block the way to the truth rather than assist in developing the facts.

Herewith inclosed please find order of Susan B. Beebe on the editor of the Tribune for the delivery of the package.

Respectfully, yours, etc.,

C. L. MORRIS,
Post-Office Inspector.

C. E. DOSSER, Esq.,
Inspector in charge New York Division.

Mr. COX. I have the original of that order from Mrs. Beebe. I have made a copy of it, as I must return the original to the files of the Post-Office Department. I will ask the Clerk to read the order of this lady.

The Clerk read as follows:

[Copy.]

SOUTH APALACHIN, N. Y., *October* 6, 1888.

DEAR SIR: I am informed through the columns of the New York Daily Tribune that you have in your possession a package of documents and papers addressed to "Susan B. Beebe, P. M., South Apalachin, Tioga County, New York. Pub. Doc., free; S. S. Cox, M. C." For the purpose of an investigation by the Post-Office Department as to whether the indorsement upon said package of the signature of S. S. Cox, M. C., is a forgery or not, will you have the kindness to deliver the said package addressed as above to C. L. Morris, post-office inspector, and oblige,

Yours, respectfully,

SUSAN B. BEEBE.

Mr. WHITELAW REID,
Editor New York Daily Tribune, New York City, N. Y.

Mr. COX. Mr. Speaker, I think the only package of this kind sent out under what purported to be my frank—at least so far as I could ascertain—was the package which has been traced from Station E, New York City, to this place in Tioga County; so that it is not a fact, as stated in the Tribune article, that the country has been flooded with matter of this kind.

Shortly after my statement to the editor of the Tribune and after the publication of my letter to the Postmaster-General, which has been read, the editor very graciously withdrew his charge against me; and in an editorial published on the 30th of September, which happened to be my birthday, he gave me very kindly congratulations, stating that he was very glad to know I was not such a person as I had been represented.

Now, the animus of all this business I will not to-day inquire into. It is not a matter for rhetoric; it is not a matter for objurgation; it is not a matter for retaliation on either side of this House. I bring the subject to the attention of the House now when there is leisure, with the view to the adoption of some remedy for this business in the future. These very franks or stamps which have been used are still being used by Senator QUAY and others, notwithstanding the Postmaster-General has called attention to the matter and written letters to them——

Mr. HENDERSON, of Iowa. The gentleman will allow me a moment. He states that the franks referred to are still being used by Senator QUAY. There is no evidence of that fact.

Mr. COX. I get it from the Postmaster-General; but I withdraw that statement.

Mr. HENDERSON, of Iowa. There is no evidence before the House that that is so.

Mr. COX. Yes, sir; there is some evidence.

Mr. HENDERSON, of Iowa. It has not been put in.

Mr. COX. I have a statement by the gentleman from Missouri [Mr. MANSUR] that recently, within a few days, the State of Missouri has been flooded with these unfrankable documents under the stamp of Mr. QUAY; and I have one here before me, sent to me this morning, which comes from a gentleman in New Berne, N. C. The matter covered by the frank in this case embraces extracts purporting to be from various London and other papers—we all know the character of the matter—matter not taken from the RECORD at all; and this is still going on.

Mr. FARQUHAR. The gentleman says those extracts are not from the RECORD. I believe all those British extracts have been published in the RECORD as a part of Congressional speeches.

Mr. COX. If the gentleman will wait until I get through he will find out something more. In this letter from New Berne, N. C., the writer says:

NEW BERNE, N. C., *October* 11, 1888.

DEAR SIR: Inclosed please find one of Mr. QUAY'S franks as used by him and sent all over North Carolina. I did not even have time to read it; anyhow, it may be of service to you.

Very truly,

C. ABNER,
Of Baltimore City, 26 S. Paca street.

Mr. SUNSET COX, *Washington, D. C.*

I do not know anything about this, except that it comes to me from an authentic source.

In regard to the retraction of this publication, so far as it impugned my character and reputation, the Tribune did very well on my birthday, and I supposed it was all ended.

I did not propose any remedy for myself personally. I knew that article which was read here was libelous both in law and in fact. I knew it was libelous on Congress—not a legal but a moral libel on Congress. I knew the whole thing would be developed in time; that is, after the election, perhaps; and therefore I rested there about it—did not make it a question to be presented here, did not come here for that purpose. I rested on the statement made by Mr. Reid, editor of the Tribune, after he gave publicity as he did to that cruel and outrageous charge on me of being a cheat and a fraud and using these frauds for some personal or party purpose.

Now, what is the object of fixing a forged frank on me? I had no knowledge, until the inspector revealed it, Mr. DE LANO, my colleague in New York, was engaged in this business. I hope he is not, but it seems a delegate in his Congressional convention was a nephew of the woman who received this anomalous and curious package. He gives it to Mr. DE LANO. I invited him to be here this week, for I did not know how long Congress would last. He is not here. I wish he were, so we might understand why it was that when this forged package—this unfrankable matter came into his possession—why it was that he did not send it to the Postmaster-General. Why did he not at least call attention that such postal matter was going out? Why did he not at least inform me of the transaction and inquire into the alleged forgery? My relations with this gentleman were friendly enough to warrant his doing this much. It certainly demands explanation.

Mr. MCCULLOGH. Mr. DE LANO, the gentleman from New York, is a friend of mine. Does the gentleman mean to make any charge against him?

Mr. COX. You got up once before when I was talking. I thought you were getting tired of getting up. [Laughter.]

Mr. MCCULLOGH. I will get up and sit down whenever I choose.

Mr. COX. Whenever you want anything from me you can get it. [Laughter.] I will take a drink with the gentleman after the election.

Mr. MCCULLOGH. You ought not to say anything about a man behind his back.

Mr. COX. It is not my fault he is not here.

Mr. MCCULLOGH. But he is not here.

Mr. COX. I gave him notice to be here. I am not responsible for this matter at all, or his absence.

Now, any one will see when he examines this signature that it looks like mine. Anybody can make my name; there it is, a few circular marks and it is done. [Laughter.] I know also that if you examine the "Pub. Doc., M. C.," any one can see it is a shabby awkard forgery.

I state now that I sent no matter in New York or elsewhere not frankable. I never have done it. Whoever did do it did it for some purpose. It was to fix reproach on our party or in order to avoid the reproach which may fall upon gentlemen on the other side. Not gentlemen who sit here on the other side, but gentlemen of the party.

These documents have gone all over the country. Why did not these Senators and others call attention of the Post-Office Department to them as I have done? I have done my duty. Why do they not do it? It is all I can do. I can not go elsewhere. You authorized this inspection service. I can not go elsewhere. I am too old a politician to meddle much in newspaper business. It does not pay in the long run to have a contest with one of these grand newspapers, therefore I have avoided it now as I have always done. I felt it to be my duty to my constituents to make this statement to the House.

Why do I say that? Because after the statement of Mr. Reid, so handsomely made, of having thoroughly exculpated myself from the action

alleged in the editorial to which I have called attention here, he comes out on the following Sunday in an editorial and reiterates substantially the same statements, and publishes a fac-simile of the forged signature and indorsements on the package, with the name reduced so as to make it more similar to the manner in which I ordinarily write my own name. It was written originally fully three times as large as I ordinarily write. In the fac-simile as published in the Tribune it is reduced to about the size of my signature. Why is this thing being promulgated? What is the animus of it? Is it for a good purpose? The forged package is now, as a matter of fact, posted up in the Tribune window in Park Row—in their show-window in Printing House Square—for the people to look at and fix a stigma upon me as a man and as a candidate for Congress.

It will not have the effect hoped any more than if it was written in water. But the reproach is there, and every gentleman in Congress shares in it with me if this thing should be allowed to go on with such scandalous effrontery.

These, Mr. Speaker, all are facts. Every gentleman must see that there is a little, sneaking, unkind, unfair, microscopic meanness about it for which language has no term of reproach and human ingenuity no fit mode of expression.

Without reflecting upon anybody, unless to vindicate myself and the American Congress, I leave the matter where it is, to the good sense o the American people everywhere. [Applause on the Democratic side.]

Mr. BAYNE. Mr. Speaker——

The SPEAKER *pro tempore* (Mr. MCMILLIN). For what purpose does the gentleman from Pennsylvania rise?

Mr. BAYNE. I wish to be heard upon this question for a moment.

The SPEAKER *pro tempore*. It is not debatable. The gentleman from New York rose to a question of privilege.

Mr. BAYNE. I wish to be heard——

Mr. COX. Permit me one moment further. I have a letter here sent from a gentleman in Iowa, which contains certain matter which is unfrankable, extracts from English newspapers. "England seeks to make the United States a dependency of her own" and other matter of that kind, which has been sent out in that part of the country under the frank of Mr. QUAY to a gentleman in Iowa, whose name I will not give unless it shall be necessary, and which matter has been sent to the Speaker of this House for the purpose of showing that Iowa is also being flooded with just such matter as I have called attention to. If the assault upon me has not been made to cover up this sort of action on the part of somebody else I am unable to perceive what can be the motive.

Mr. HENDERSON, of Iowa. Will the gentleman allow a word?

Mr. COX. Certainly.

Mr. HENDERSON, of Iowa. I do not know what frank, if any, these documents are being sent out under; but I do know that the State of Iowa is being flooded with Puck, and the oleomargarine document to which reference is made in that package, from New York, and which is in the Tribune office. The very same documents are being sent out there and scattered throughout that State; but whether franked or not I do not know.

Mr. COX. Well, will the gentleman from Iowa, if there be a wrong in this thing, aid me in finding out the wrong-doer?

Mr. HENDERSON, of Iowa. I do not know who does this.

Mr. COX. Well, will you join me in endeavoring to hunt the matter down? The Postmaster-General says that he will probe the matter to the bottom, and he will bring it before the grand jury. He will do this in the forgery in my case to obtain a conviction of the forger. To this end, to prove the body of the crime, the original document will be had.

Mr. HENDERSON, of Iowa. I will join with you in an endeavor to investigate the matter.

Mr. COX. I knew you would. You are an honorable man and a soldier, and I am satisfied to stand by you.

Mr. HENDERSON, of Iowa. But I call the attention of the gentleman to the fact that the Postmaster-General is swift to give the names of men on one side whose franks are alleged to be used in this manner, but he does not call attention to any on the other, even to the name of the gentleman from Mississippi [Mr. ALLEN] whose name was used in that same connection.

Mr. WHEELER. Because there are no Democrats engaged in that business.

Mr. HENDERSON, of Iowa. I presume the gentleman from New York can attend to this matter.

Mr. COX. I will take care of it.

Mr. HENDERSON, of Iowa. And I trust that the gentleman from New York in the range he has taken will take a broad enough view of this subject to concede the right on this side of the House to be heard briefly on this question, and not to shut off some remarks in answer to what he has said.

Mr. COX. I have not tried to do so. I will be very glad to hear from the gentleman.

Mr. HENDERSON, of Iowa. The gentleman from Pennsylvania and myself would like to be heard.

Mr. EZRA B. TAYLOR. I would like to ask the gentleman from New York a question.

Mr. COX. Certainly.

Mr. EZRA B. TAYLOR. Believing most sincerely in the statement that the gentleman from New York has made with reference to his connection with the matter under discussion, I hope for the sake of the dignity of the occasion that he will withdraw all allusions to the possibility of this action having been inaugurated for the purpose of covering up any infractions of law which may be alleged against the other side.

Mr. COX. I will withdraw that with a great deal of pleasure, *pro forma*, if you will have the manliness to say that I have made a perfect exculpation of myself from the charge of the New York Tribune.

Mr. EZRA B. TAYLOR. I do say it.

Mr. COX. Then I hope the gentleman from Pennsylvania will begin his remarks in the same kind tone.

Mr. BAYNE. I wish to make a few observations.

Mr. COX. I will yield to you, if you will begin in that way. [Laughter.]

Mr. BAYNE. If the gentleman had permitted a suggestion I was about to make to come without putting a condition upon it, it would have been more satisfactory to him and to myself also. I fully acquit the gentleman from New York of having committed anything wrong in this matter, and take his explanation to be candid and true.

Mr. COX. That is all right.

Mr. BAYNE. While, however, the gentleman has made an explanation which should be entirely satisfactory regarding himself, he has by the report of the Postmaster-General and by some observations he himself has made undertaken to involve Senator QUAY in the kind of a difficulty from which he has extricated himself. I desire to say a word or two on this part of his speech. The gentleman stated, and he must have done so without sufficient examination, that the gentleman from Missouri [Mr. MANSUR], I believe, handed him documents——

Mr. COX. I said he had gone for the documents, and that a great lot of them had gone to his State. This one came from North Carolina.

Mr. BAYNE. This is another one.

Mr. COX. Yes, sir.

Mr. BAYNE. Well, the gentleman stated that some documents had gone into North Carolina under the frank of Hon. M. S. QUAY, United States Senator, and that they were not frankable matter. There are several documents contained in that envelope, and every one of them is a frankable document. The gentleman did not examine them. If he will do so, he will see that every one is a portion of a speech made by somebody in the House of Representatives or the Senate. The first I have in my hand quotes a number of sentences from a speech made by Hon. NELSON DINGLEY, Jr., of Maine, in the House of Representatives, May 4, 1888. This is followed by a quotation from a speech by Hon. SETH L. MILLIKEN, of Maine, in the House of Representatives, May 12, 1888; then comes an extract from a speech of Hon. S. R. PETERS, in the House of Representatives, May 17, 1888; then a quotation from a speech made by Hon. JAMES BUCHANAN, of New Jersey, April 26, 1884; then a quotation from a speech of the same gentleman; still another, and still another. Then there is a quotation from a speech made by Hon. WILLIAM MCKINLEY, Jr., of Ohio, in the House of Representatives, May 18, 1888; then another quotation from Mr. MCKINLEY, and one quotation after another from speeches made by members of the House of Representatives in the discussion on the tariff question during this year and in the year 1884.

Mr. NELSON. Will the gentleman from Pennsylvania [Mr. BAYNE] allow me a question?

Mr. BAYNE. Let me get through with my statement.

Mr. NELSON. I just want to ask one question.

Mr. BAYNE. Very well.

Mr. NELSON. My question is this: Were these papers printed at the Government Printing Office?

Mr. BAYNE. I do not know whether they were or not.

Mr. NELSON. Now, is not that the dividing line?

Mr. BAYNE. Oh, no, sir.

Several MEMBERS. No, it is not.

Mr. BAYNE. I have seen an immense edition of the speech delivered by the able Speaker of the House of Representatives, which was not printed at the Government Printing Office, and which was distributed under frank.

Mr. NELSON. Suppose somebody collects speeches and makes a compendium and the printing is done at a private printing office. Is that frankable?

Mr. RYAN. Yes.

Mr. WARNER. Certainly it is.

Mr. BAYNE. It is perfectly plain that it is; and it has been the practice all along. You can have them printed at any place you please and send them out under the franking privilege.

Now, Mr. Speaker, these documents, all of which seem to have been inclosed in one envelope and sent to Mr. J. K. Kearn, New Berne, N. C., and under the frank of Senator QUAY, are frankable documents. There may be a disposition on the part of some one to take a technical exception, because, perhaps, captions are put on them.

Mr. COX. I would like to ask the gentleman a question there.

Mr. BAYNE. Whether these captions appear in the CONGRESSIONAL RECORD I do not know.

Mr. COX. Suppose they do not?

Mr. BAYNE. I do not know——

Mr. COX. Suppose they do not appear in the RECORD, would that be frankable matter?

Mr. BAYNE. I should say it was, because the substance is given; and a designation of that sort, especially where separated from the body of the speech, is necessary to direct attention to the subject-matter of the article.

Mr. MCMILLIN. Does the gentleman from Pennsylvania hold that excerpts from or a syllabus of a speech that was never made or printed in the RECORD as such would be frankable matter because it was put in that speech?

Mr. BAYNE. I say that it has been the practice of the parties from time immemorial.

Mr. MCMILLIN. To send that kind of matter?

Mr. BAYNE. To send that kind of matter.

Mr. MCMILLIN. I deny it. There never was an instance of it, so far as I know, until it went out under Senator QUAY'S frank, in such a form as I will read if the gentleman will permit me:

The present conspiracy against the material interests of the Pacific coast. Remarkable utterances of an English statesman. Free trade will establish there all the insignia of conquest.

That goes out as a heading to an extract from a speech.

A MEMBER. Was it ever published in the RECORD?

Mr. MCMILLIN. There is no evidence that it ever was. It does not have any such appearance; it is not in the type of the Government Printing Office, and I hold that there is no justification for such a publication being sent out under a frank.

Mr. BAYNE. And I aver, with knowledge of the facts to a very considerable extent, that it has been the practice of both parties from time immemorial to send out such matter.

Mr. MCMILLIN. Where is the evidence of it?

Mr. BAYNE. I decline to be interrupted further.

Mr. MCMILLIN. The gentleman has been holding the floor by unanimous consent, and can be cut off at any moment.

Mr. BAYNE. The gentleman from New York [Mr. COX] yielded to me.

Mr. MCMILLIN. I am not going to cut the gentleman off, but I called attention to the fact that he was proceeding by unanimous consent, because I wanted him to understand that neither the gentleman from New York [Mr. COX], nor any other gentleman has the right, upon a question of privilege, to yield the time of the House to any one else. I want it understood that we know how we are proceeding here.

Mr. BAYNE. Courtesy was extended to the gentleman from New York [Mr. COX], and very properly, to make his statement, and then he yielded to me, and I——

Mr. MCMILLIN. Courtesy was extended to the gentleman from New York on a question of privilege.

Mr. BAYNE. Who has the floor? Courtesy was extended to the gentleman from New York to go on and make his statement. He made it. Part of that statement, it seemed to me, was open to serious exception, even as a vindication of himself. He read a report from the Postmaster-General which failed utterly to explain the matters with which the frank of the gentleman from New York [Mr. COX] was connected; and when the Postmaster-General went to the extent of alleging that General HOVEY, and Senator QUAY, and Mr. KEAN, of New Jersey, had sent out improper matter under their franks, as if that distinguished legal mind thought that the vindication of the gentleman from New York was to be made by saying to these Republicans "You're another; somebody else has done what you have done, and therefore you are guiltless." When the Postmaster-General went to that extent, I thought it was quite outside of this case.

The statement of the gentleman from New York himself with respect to his connection with this affair, and the statement of the inspector, were evidence that bore directly upon the case, and constituted, to my mind, the gentleman's full vindication, and I accord to him the full benefit of it. But when it was assumed and alleged by the Postmaster-General that Senator QUAY had sent out documents improperly, when it was assumed and alleged by the gentleman from New York that Senator QUAY had violated the franking privilege, and when the evidence produced to sustain that allegation utterly refutes it in the light of the experience and practice of both parties from time immemorial, then the country can form some judgment of the value of the conclusion arrived at by the Postmaster-General respecting the alleged abuse of the franking privilege by Senator QUAY. It is conceded that a part of the matters contained in the package sent out under the frank of the gentleman from New York were in no sense frankable. That package contained a copy of Puck, which certainly was not frankable, and there were other unfrankable matters in it. But when documents made up of excerpts from the CONGRESSIONAL RECORD, extracts from speeches delivered in the House and in the Senate, with perhaps a little heading added for the purpose of drawing attention to the substance of the extract—when these things are adduced here as evidence to show that the franking privilege has been violated by other gentlemen, I say they utterly fail to establish that fact, and the allegation is false, whether it comes from the Postmaster-General or any other man, and deserves no confidence.

Mr. ROGERS. Do I understand from the statement of the gentleman from Pennsylvania that he admits that Senator QUAY is sending out those things, or authorizing it to be done?

Mr. BAYNE. I do not know, but I do not doubt that he is, and I claim that these matters are properly and legitimately frankable.

Mr. ROGERS. I only wanted to have the fact understood.

Mr. BAYNE. I do not know the fact, but I have no doubt of it.

Mr. DOUGHERTY. Will the gentleman permit a question?

Mr. BAYNE. Yes, sir.

Mr. DOUGHERTY. I hold in my hand a copy of the CONGRESSIONAL RECORD of August 25. Does the gentleman mean to say that if this RECORD was sent to any printing office in any part of the country and was there copied *verbatim et literatim*, the copy thus made would be a frankable document?

Mr. BAYNE. I do.

Mr. COX. Suppose there were subheads as large as the extracts?

Mr. BAYNE. That is another question.

Mr. COX. Now, are you really clear in your own mind and conscience that you are right about that?

Mr. BAYNE. I am, because it has been the practice, and because liberty has been given in these campaigns to prepare extracts from speeches and circulate them in this way. In reply to the suggestion of the gentleman from Florida [Mr. DOUGHERTY], I will say that I have at times sent out copies of my own speeches delivered in the House which were printed outside of the Government Printing Office. The present Speaker of this House has also done it; and he ought to know what is proper in this matter. There are many other members of this House who have done the same thing. It has been the practice for many years to do it. These subheadings themselves, for aught that I know, may appear in the speeches themselves. I have had no opportunity to make an examination and comparison in that respect; but whether that be so or not, both parties are doing this thing in this canvass, and both parties have done it in years past. Right on my left——

Mr. COX. Allow me——

Mr. BAYNE. One moment.

Mr. COX. I hope the gentleman will yield to me; I was courteous to him.

Mr. BAYNE. I will yield in a moment. On my left sits the distinguished gentleman from Kentucky [Mr. BRECKINRIDGE], who is either sending out or having sent out hundreds upon hundreds—perhaps thousands upon thousands—of speeches, each one of which seems to take up a particular topic; and these speeches are circulated with subheads which do not appear in the RECORD. I have copies of them at home now, lying on my desk. If there has been, then, a violation of the franking privilege by Senator QUAY, the gentleman from Kentucky is guilty of a similar violation of law in the circulation of these speeches which are now going over the country, for aught that I know, by tens of thousands.

Mr. COX. I gave to the gentleman at his request the extracts which were sent to Mr. Speaker CARLISLE. Does the gentleman undertake to tell the House that any of those extracts were ever in the RECORD?

Mr. BAYNE. I say exactly that; that these extracts were in the RECORD. Here is a speech of Hon. J. N. DOLPH——

Mr. COX. Do not mix up the different matters.

Mr. BAYNE. No, sir. I have here the one sent to Speaker CARLISLE. It is a speech of Hon. J. N. DOLPH, of Oregon, in the Senate May 12, 1888. From this speech two of the extracts are taken, one a quotation from the London Globe, which Senator DOLPH put in the RECORD; another from the London Daily News, which, no doubt, he also put in the RECORD as a part of his speech. These are credited to Senator DOLPH, as embraced in his speech in the Senate May 12, 1888. Here is another, and still another, from the same quarter. Here is a quotation from the speech of Hon. WILLIAM MCKINLEY, of Ohio, in the House of Representatives, May 18, 1888. Everything set forth in these extracts is in the RECORD, unless it be the subheads, and as to subheads the gentleman from Kentucky has properly enough employed them in the circulation of some of his speeches; and other gentlemen on both sides of the House have, no doubt, done the same.

This is all I have to say. These facts tell their own story. They are a complete and thorough vindication of the integrity of Senator QUAY in this matter. I have no doubt that the case of Mr. KEAN, of New Jersey, is analogous. If some German papers were sent out under the frank of General HOVEY, of Indiana, it is stated that he has explained the matter to the satisfaction of the Postmaster-General, just as my friend from New York [Mr. COX] has made an explanation satisfactory, not only to the Postmaster-General, but to the whole country.

Mr. COX. Does the gentleman believe that a translation into German of matter taken from the RECORD would be frankable?

Mr. BAYNE. I do.

Mr. COX. Well, I declare!

Several MEMBERS. Regular order.

The SPEAKER. The regular order is demanded.

Mr. BRECKINRIDGE, of Kentucky. Mr. Speaker, I think after the allusion which has been made to me, I ought to be allowed a moment. The difference between——

Mr. BAYNE. The gentleman from Kentucky will excuse me one moment. I wish to add that inquiry was made of the Postmaster-

General, and he gave authority for the sending through the mails under frank of public documents translated into different languages.

Mr. COX. And you think that right?

Mr. BAYNE. The Postmaster-General has so decided.

Mr. HAUGEN. I wish to state that in the early part of this session Senator SAWYER made inquiry at the Post-Office Department whether translations into other languages of matter taken from the RECORD were frankable, and he was informed that they were. At the same time inquiry was made whether RECORD matter, if printed elsewhere than at the Government Printing Office, was frankable; and again the answer was in the affirmative.

Mr. COX. Who authorizes the translation and who translates in such cases? How can it be known that the translation is accurate?

A MEMBER. The Postmaster-General has given his opinion.

Mr. COX. I do not care who gives an opinion, if the law be not complied with. The Postmaster-General has been too liberal.

Mr. MILLIKEN. You have no right to impeach your own witness.

Mr. COX. I am not doing so.

I wish to reiterate, before my friend from Kentucky addresses the House, that the only object I had in calling attention to the statement of the Postmaster-General as to these other franks was to get at the intent of making this false charge against me. What could have been the reason for it? Was it the cry of "Stop thief?"

Mr. BAYNE. Oh, no, because the cases are not analogous.

Mr. COX. Really!

Mr. BAYNE. Although I acquit the gentleman from New York, and believe every word he has said about this matter, I insist there is no foundation whatever for any charge against Senator QUAY or Mr. KEAN—not a particle.

Mr. COX. I thank the gentleman from Pennsylvania very cordially for his kind expressions in regard to myself.

Mr. BAYNE. Let me say one thing further to the gentleman from New York. Upon an investigation, it appears that every one of these subheads is taken from the speech as published in the RECORD.

Mr. HENDERSON, of Iowa. Every one of the subheads appearing in the copy of the speech sent to Mr. CARLISLE will be found in the RECORD.

Mr. BAYNE. So that in fact no matter has been circulated by Senator QUAY in this way except that which was a part of the RECORD?

Mr. COX. If the subheads are taken from the RECORD, it does not matter, of course, as to the typography.

That is not the question I raise here against Senators and others, of complaints of subheads sent broadcast over the country and no response made to this statement of the Post-Office Department by the Republican party; but whether there was not a sort of mystery, a sort of diabolism in raising this charge against an innocent man like myself. [Laughter.]

Mr. HENDERSON, of Iowa. The gentleman must remember so far as the charge is true these documents were sent out by somebody. You stand acquitted, but the Tribune has the right to publish that to show the Democratic party during that time, not through the gentleman from New York, has been distributing these documents to the editors of the country.

Mr. COX. My inference is that there is some motive outside of mere politics.

Mr. HENDERSON, of Iowa. The reports furnished by the gentleman from New York show a greater desire to comment for political effect rather than to get at the real party.

Mr. COX. It is true I might find as a motive for this transaction it was if intended to cloud this business by sending out garbled extracts and subheads from Republican headquarters and from others to raise the charge on me.

Mr. HENDERSON, of Iowa. You have not proved they are garbled. That remains to be proved. And you must admit those documents referred to in the Tribune were sent under your frank. Notwithstanding what the Postmaster-General says, it is evident they submitted them to inspection and invited them to make exact copies, which would answer every purpose for the use of the inspector. They had the right, however, to hold the thing itself in the Tribune office, because everybody knows that would be legal evidence in court.

Mr. BAYNE rose.

Mr. MCMILLIN. I call for the regular order.

The SPEAKER. The gentleman's hour expired some time ago.

Mr. BAYNE. I ask to be printed as part of my remarks this document.

Mr. MCMILLIN. I object, because I do not want it made frankable.

Mr. BAYNE. These documents——

Mr. HENDERSON, of Iowa, It is frankable now, and you can not prevent it.

Mr. BRECKINRIDGE, of Kentucky. Give me a moment, only a moment, as my name has been brought in. I do not make any comment upon what has been done by the Senator from Pennsylvania, for I have not examined the documents, nor have I any information whether this is frankable, whether these compendiums can be made; but as to the gratuitous reference to myself by the gentleman from Pennsylvania the whole foundation for it is, and I have sent for one of my speeches, at the top of page 3 are the words, "On free raw hides and free wool." Another one was "Tax on books or information." I have not that one here.

Mr. BAYNE. Another was on sugar.

Mr. BRECKINRIDGE, of Kentucky. Yes. Another was on the sugar bounty.

Mr. BAYNE. Another on free raw hides.

Mr. BRECKINRIDGE, of Kentucky. Yes; another on free raw hides. Those are subheads.

Mr. BAYNE. And do not appear in the RECORD.

Mr. BRECKINRIDGE, of Kentucky. And I suppose do not appear in the RECORD.

Mr. HENDERSON, of Iowa. All right. We do not object. It is done by both committees, and has been since the flood.

Mr. BRECKINRIDGE, of Kentucky. What I wanted to do was to put on the record the exact fact so far as I am concerned so the RECORD may show the extent of my guilt, if I am guilty, and to thank my friend from Pennsylvania [Mr. BAYNE] for acquitting his distinguished Senator by saying he followed my example, even if it were a bad example.

Mr. HENDERSON, of Iowa. You were both innocent.

ENROLLED BILL SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled a bill (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris; when the Speaker signed the same.

UNITED PEORIAS AND MIAMIES.

Mr. PEEL. Mr. Speaker, I wish to submit a privileged report from a committee of conference.

The report was read, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8074) to provide for the allotment of lands in severalty to the United Peorias and Miamies in the Indian Territory, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows:

On page 2 in line 29, of the matter proposed to be inserted by said amendment, after the word "building," insert the words "together with the land." On page 5 of said amendment, in lines 9 and 10, strike out the words "in the Interior Department."

On page 6 of said amendment in line 1 strike out the word "removed to the Indian Territory;" and strike out all from lines 16 to 19, inclusive, on page 6 of said amendment, and insert in lieu thereof the following:

"And the court may ascertain the reasonable value of the services of counsel employed by said confederated tribes to represent the tribes on said examination, not to exceed 10 per cent. of the aggregate sum actually in controversy; and the Secretary of the Interior shall cause to be paid to said counsel so much of the sum so ascertained as in equity and justice he may consider to be due for such service, out of any money in the Treasury of the United States now due to said tribes arising from the sale of the lands of said tribes in Kansas."

And the Senate agree to the same.

S. W. PEEL,
J. M. ALLEN,
B. W. PERKINS,
Managers on the part of the House.

H. L. DAWES,
O. H. PLATT,
JOHN T. MORGAN,
Managers on the part of the Senate.

The managers on the part of the House submit the following statement:

The managers upon the part of the House after a full and free conference with the conferees upon the part of the Senate upon the disagreeing votes of the two Houses upon H. R. 8074, alloting lands between the Peoria and Miami Indians in Indian Territory, and for other purposes, beg leave to submit the following report: House bill provided that each person of the confederated tribes be allotted 220 acres with the privilege of selling all of his or her allotment except 160 acres. Senate amendment changed the amount to be allotted to each person from 220 to 200 acres without right to sell any part of it, and the remainder of this reservation to be held in common and leased for the benefit of the tribes under direction of the Secretary of the Interior, to which your conferees agree, and ask that the House adopt, etc.

Also Senate amendment allowing that portion of the Peorias known as the citizens members to bring suit in Court of Claims to settle their rights and interest to certain moneys held in trust by the United States, to which we also agree, and respectfully ask concurrence upon part of the House.

S. W. PEEL,
J. M. ALLEN,
B. W. PERKINS,
Managers on the part of the House of Representatives.

Mr. PEEL. I ask the adoption of the report.

Mr. HAUGEN. Mr. Speaker, at the time this bill was under consideration in the House there were certain features of it which were opposed by my colleague, Mr. LA FOLLETTE, a member of the Committee on Indian Affairs. He is now, with so many other members of the House, necessarily absent, but informs me that after the passage of the bill through the House he made an inquiry at the Indian Office and found that the Commissioner of Indian Affairs was opposed to the bill in its present form.

He desires to have this bill held for consideration until his return, as he wishes to make some observations or remarks in regard to it; and for that reason I shall have to oppose its consideration at this time. I shall do it on his account alone.

Mr. PEEL. I am not aware that there is any opposition in the Indian Office or anywhere else to the bill in its present form. My colleague on the committee [Mr. LA FOLLETTE], as I understand, never made any opposition to the provisions of this bill.

Mr. HAUGEN. The particular feature of the bill to which he is opposed, and to which he informed me the Indian Office is opposed, is that referring to the alienation of the lands by the grantees of the allottees.

The bill, as I understand it, for I am not familiar with its provisions, provides that the allottees shall not alienate the lands allotted to them except to some other Indian; but there is no restraint upon the other Indian who may become the grantee of the allotment.

Mr. PEEL. There is nothing of that kind in the Senate amendment.

Mr. HAUGEN. Not in the Senate amendment, but in the bill as it passed the House.

Mr. PEEL. This bill has been changed entirely by the Senate. This simply changes the manner of allotment.

Mr. HAUGEN. I understand the Senate amendment does not touch that feature.

Mr. PEEL. That is not the bill at all.

Mr. HAUGEN. But the Senate amendment does not strike that from the bill?

Mr. PEEL. The Senate amendment is a substitute for the bill. It is all stricken out.

Mr. HAUGEN. Let the bill lie over until to-morrow——

Mr. PEEL. I should not object to that, but I will be compelled to be absent.

Mr. HAUGEN. Then let it lie over for a few moments until I can examine it. I do not object, of course, on my own account.

Mr. PEEL. Very well; I will withdraw the report for a few minutes to give the gentleman an opportunity to examine the bill.

LAND DISTRICT, FOLSOM, N. MEX.

Mr. CONGER. Mr. Speaker, I desire to call up for present consideration the bill S. 2040, which was before the House on yesterday.

The SPEAKER *pro tempore* (Mr. COX). The gentleman from Iowa [Mr. CONGER] calls up the bill the title of which the Clerk will read.

Mr. CONGER. This bill was read on yesterday.

Mr. HENDERSON, of Iowa. And it is a continuing matter.

Mr. RYAN. What is the bill?

Mr. CONGER. A bill for the establishment of a land district in the eastern part of the Territory of New Mexico.

Mr. RYAN. Was unanimous consent given on yesterday?

Mr. CONGER. It was laid over at the suggestion of the gentleman from Tennessee [Mr. MCMILLIN], who wanted time to examine it before giving consent to its consideration. I hope the gentleman from Kansas will not object.

Mr. RYAN. I desire to know the status of the bill. I understood it was objected to on yesterday by the gentleman from Tennessee. If that is so, and if he withdraws the objection this morning, it is still the subject of objection, as I understand.

The SPEAKER *pro tempore*. The gentleman from Tennessee asked that it lie over until to-day; but it is still open to objection.

Mr. RYAN. Then I hope it will not be considered this morning. I wish to examine it, and shall object for the present.

The SPEAKER *pro tempore*. Objection being made, the bill is not before the House.

Mr. KILGORE. I demanded the regular order a few moments ago, but will withhold it for the present to allow the gentleman from Kentucky to make a request.

REPAIR SHOP FOR MAIL-BAGS.

Mr. MONTGOMERY. I ask unanimous consent to take up for present consideration the bill which I send to the Clerk's desk.

The Clerk read as follows:

A bill (H. R. 11599) authorizing the Postmaster-General to rent a suitable building in the city of Washington, to be used as a mail-bag repair-shop, and for other purposes.

The SPEAKER *pro tempore*. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none.

The bill was read, as follows:

Be it enacted, etc., That the Postmaster-General be, and he is hereby, authorized to rent for a term until July 1, 1889, a suitable building in the city of Washington for the purpose of being used as a mail-bag repair-shop and for the storage of the supplies used by the Post-Office Department in supplying post-offices, at a rental not exceeding the rate of $3,000 per annum.

And for the purpose of providing for the expenses incidental to the occupancy of such building and for the proper performance of the work therein until July 1, 1889, the following sums are hereby appropriated, payable out of any moneys in the Treasury not otherwise appropriated:

For rent, $3,000, or so much thereof as may be necessary; for two watchmen, at the rate of $720 per annum each; one laborer, at the rate of $660 per annum; one charwoman, at the rate of $240 per annum; for gas, $250, or so much thereof as may be necessary; and for fuel, $500, or so much thereof as may be necessary; in all, $6,090.

The bill was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

Mr. MONTGOMERY moved to reconsider the vote by which the bill was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

Mr. MONTGOMERY. I ask that the letters, which I send to the Clerk's desk and which are explanatory of the necessity for the passage of this bill, be published in the RECORD.

Mr. EZRA B. TAYLOR. What is the substance of the letters?

Mr. MONTGOMERY. They simply explain the necessity for the passage of this bill.

Mr. EZRA B. TAYLOR. I have announced my purpose of objecting to the passage of any bills except those connected with labor; and understanding that this bill just passed was one of that kind I made no objection. I do not see the necessity for printing the letters.

The SPEAKER *pro tempore*. The gentleman from Ohio objects.

Mr. EZRA B. TAYLOR. Mr. Speaker, it is stated to me that it may be for the information of the Senate to have these letters printed, and I therefore withdraw my objection.

There was no further objection, and it was so ordered.

The letters are as follows:

POST-OFFICE DEPARTMENT,
OFFICE OF THE SECOND ASSISTANT POSTMASTER-GENERAL,
Washington, D. C., October 5, 1888.

SIR: In view of the fact that the post-office at Washington City will be removed from its present site on Louisiana avenue, and that the mail-bag repair-shop, which is located in the post-office building, can have no room in the new building at the Pension Office, I have the honor to request that application be made to Congress for an appropriation of at least $5,000 to enable the Department to rent a suitable building for the mail-bag repair-shop.

Under recent orders issued by you, the mail-bag repair-shop at the city of Washington has become the main repair shop of all the bags in the service. At present there are ninety persons employed in this shop, and the premises now occupied by them are partly unfit and can not be used in the winter.

The result of your order making Washington City the main repair office has been a very large saving in the annual cost of bags and sacks, and it would be a great detriment to the public service and seriously to be deprecated if the efficient work of this shop should be interfered with for the want of proper accommodation.

Very respectfully,

A. LEO KNOTT,
Second Assistant Postmaster-General.

Hon. DON M. DICKINSON,
Postmaster-General.

POST-OFFICE DEPARTMENT,
OFFICE OF FIRST ASSISTANT POSTMASTER-GENERAL,
DIVISION OF POST-OFFICE SUPPLIES,
Washington, D. C., October 8, 1888.

SIR: By the request of the chief clerk of the Post-Office Department I have the honor to submit the reasons in brief for the necessity of additional storage room being furnished to the division of post-office supplies.

The present space is entirely inadequate to keep on hand a sufficient stock of the articles required by the postal service. Owing to this lack of room the Department is required to make orders for small quantities of the various articles contracted for, thus adding largely to the clerical work; and in case of contractors furnishing inferior supplies, owing to the limited amount of these articles enabled to be kept on hand the inspection committee is obliged to accept them at a reduction instead of rejecting them as should be done in all cases when supplies do not come up to the contract requirements. This course is detrimental to the service and costly to the Department.

Often, when contractors are delayed in the delivery of supplies owing to the breaking of machinery or negligence, or when railroads fail to deliver promptly, from accident or otherwise, the Department is unable to furnish postmasters with the supplies necessary to properly conduct their business, and the postal service of the country is embarrassed. For nearly four years no additional storage room has been furnished, while during that time 12,510 new post-offices have been established, which, taken with the natural growth in the business of the service, have completely overrun the storage room of the division. Every available space is now occupied to its fullest extent, even to the corridors, and heavy articles like twine and wrapping-paper have to be piled to such a height that the lives of visitors to the Department and of employés are often in danger. By this course additional help is required to perform the manual labor. Action should at once be taken to procure storage room sufficient to carry at least a three months' supply of the various articles furnished.

I have the honor to remain, very respectfully,

J. L. WOODBRIDGE, *Superintendent.*

Hon. DON M. DICKINSON,
Postmaster-General.

WASHINGTON, D. C., *October* 9, 1888.

SIR: Referring to my letter of the 5th instant to the Postmaster-General, by him referred to you with a recommendation for an appropriation of $5,000 for a repair shop in the city of Washington and a storage-room for post-office supplies, I have the honor to submit the following facts:

An investigation made last March disclosed the fact that there were in the New York and Washington post-offices on March 1, 1888, about 375,000 bags—leather and jute—which had been suffered to accumulate in those repair shops and had not been, by proper repairs, kept in the current stock of the Department and in use.

Under an order of the Postmaster-General, the repair shop at the city of Washington was placed under my immediate charge, and Maj. R. D. S. Tyler was appointed superintendent thereof, and orders were issued to the various repair shops and to the railway mail service to send all the damaged bags—leather, jute, and canvas—to this shop for repairs. In order to perform this work expeditiously the force was from time to time increased until it now stands at the following figures:

Women, on jute sacks	51
Canvas-workers	9
Leather-workers	14
Laborers	17

The total number of bags, jute, canvas, and leather, repaired in this shop since the order placing this work under the charge of the Second Assistant Postmaster-General was made, is 344,643, and the current service has been kept in full and abundant supply without making any additional requisitions for new bags.

By the establishment of the Washington repair-shop and the bringing of the damaged bags here under the immediate direction of this office, instead of leaving them to the postmasters at the several repair-shops, the saving to the Department therefor can be best illustrated by the following statement, to wit:

The amount paid for new pouches and bags of all kinds from June 30, 1887, to February 1, 1888, was $167,460.75.

The amount paid for new mail-bags from February 1, 1888, to October 10, 1888, was $10,621.62.

The total cost for the ninety employés in the repair-shop during the month of September was $4,016.26.

We have not employed ninety persons during this time, but the average probably since February 1 was about forty-five, and the expenditure per month since that date for payment of wages to employés, materials, and tools used in the repair of bags would probably average $3,000, making a total of about, say, $25,000 expended for this purpose since February 1, 1888. This added to the sum of $10,621.62 gives a total of $35,621.62 expended for mail sacks and mail bags as against an expenditure of $167,460.75 for new pouches and bags of all kinds from June 30, 1887, to February 1, 1888, making a difference of $131,739.17. I say that this illustrates a saving, but I do not mean to say that this sum of $131,739.17 would have been expended in new mail bags, as the stock which was thus obtained would have gone through the balance of the fiscal year. Assuming that we would not have expended more than one-half of this amount for new bags from February 1 to October 1, 1888, in other words about $65,869, the figures still show the sum of at least $30,248 as the estimated saving resulting from repairing the accumulated stock and putting it in the service and use since February 1, 1888. The best estimate that I can reach as to the annual saving to the mail-equipment division of this office by keeping the repair shop in Washington on its present basis will be $60,000 per annum.

Very respectfully,

A. LEO KNOTT,
Second Assistant Postmaster-General.

Hon. C. L. ANDERSON,
Acting Chairman Committee on Post-Offices and Post-Roads, House of Representatives.

JULIA A. NUTT.

Mr. LAGAN. I wish to offer the bill which I send to the Clerk's desk to be read, for the purpose of having the claim referred to the Court of Claims.

The Clerk read the title of the bill, as follows:

A bill (H. R. 11580) for the relief of Julia A. Nutt, widow and executrix of Haller Nutt, deceased.

Mr. EZRA B. TAYLOR. I shall object to the consideration of that bill.

The SPEAKER *pro tempore*. The gentleman asks that the claim be referred to the Court of Claims.

Mr. EZRA B. TAYLOR. I object.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. NEWELL, one of its clerks, announced that the Senate requested the House to return to the Senate the bill of the House (H. R. 1152) for the relief of the legal representatives of Eliza M. Ferris.

ORDER OF BUSINESS.

Mr. KILGORE. I demand the regular order.

The SPEAKER *pro tempore*. The regular order is the call of committees for reports.

Mr. McMILLIN. The announcement having been made that no business can be transacted, I therefore move that the House adjourn.

Mr. HENDERSON, of Iowa. Pending that, I ask to be excused from attendance at further sessions of the House during this session, as it is impossible to do business without a quorum. I make this request on that account.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from Iowa? The Chair hears none.

Mr. PLUMB. I also ask to be excused during the remainder of the session.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from Illinois? The Chair hears none.

Mr. DOUGHERTY. Mr. Speaker, I make the same request.

Mr. KILGORE. Mr. Speaker, I want to present a privileged question before we adjourn.

The SPEAKER *pro tempore*. Does the gentleman object to the request of the gentleman from Florida for leave of absence?

Mr. KILGORE. Oh, no; let him go. [Laughter.]

The SPEAKER *pro tempore*. The Chair hears no objection to the request of the gentleman from Florida.

FINAL ADJOURNMENT.

Mr. KILGORE. Mr. Speaker, I want to present a privileged question.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. DOUGHERTY. I think the House will probably be glad if I take the gentleman from Texas with me. [Laughter.]

Mr. KILGORE. I ask consideration of the resolution I send to the Clerk's desk.

The Clerk read as follows:

Resolved by the Senate and House of Representatives, That the President of the Senate and the Speaker of the House of Representatives be authorized to close the present session by adjourning their respective Houses on Saturday, October 20, 1888, at 1 o'clock p. m.

Mr. McMILLIN. For the purpose of permitting action to be taken on the resolution, I withdraw my motion to adjourn.

Mr. WHEELER. I desire to offer the following amendment.

Mr. KILGORE. I demand immediate consideration of that resolution.

The SPEAKER *pro tempore*. The gentleman from Alabama proposes an amendment, which the Clerk will read.

Mr. WHEELER. A substitute.

Mr. EZRA B. TAYLOR. I understand that the previous question was demanded on the resolution as it stands.

Mr. KILGORE. I do demand the previous question.

The SPEAKER *pro tempore*. The previous question is demanded.

Mr. WHEELER. Without allowing the amendment to go in?

Mr. RICHARDSON. Pending that motion, I move to refer the resolution to the Committee on Ways and Means.

Mr. KILGORE. I want to raise the point of order that that can not be done under the rules. [Laughter.]

The SPEAKER *pro tempore*. The Chair will hear the gentleman on the point of order.

Mr. KILGORE. I understand that this is a privileged question, and if this privileged question can be referred to a committee, then any other privileged question can be so referred. Now, the rule in relation to questions of privilege is this:

Questions of privilege shall be, first, those affecting the rights of the House collectively, its safety, dignity, and the integrity of its proceedings; second, the rights, reputation, and conduct of members individually in their representative capacity only; and shall have precedence of all other questions, except motions to fix the day to which the House shall adjourn, to adjourn, and for a recess.

A motion to adjourn appears to be the highest question of privilege that can possibly be presented to the House, because it can even take precedence of a question affecting the safety of the House, the dignity of the House, or the personal privilege of any member of the House; and I assume that it would not be contended for a moment that a question of privilege affecting the safety or the dignity of this House could be referred to the Committee on Ways and Means, or any other committee.

But further, sir, there appears to be no Committee on Ways and Means here. About the only committee that has been able to make any report to this House for the last three months is the Committee on Enrolled Bills, and I think that if the resolution is to be referred at all, it ought to go to that committee. [Laughter.]

Mr. RICHARDSON. I beg the gentleman's pardon, the Committee on Printing has made several reports lately.

Mr. WHEELER. The Committee on Expenditures in the Treasury Department has made four reports within a month.

Mr. KILGORE. With the chairmen of these committees and the clerks and the apple women out in the lobby we have got a quorum. [Laughter.]

Now, Mr. Speaker, let us look at the jurisdiction of the Committee on Ways and Means, and I think it will be seen that this resolution might just as well be referred to the Committee on Enrolled Bills as to the Committee on Ways and Means, so far as jurisdiction is concerned, because the jurisdiction of the Committee on Ways and Means applies to bills relating to revenue and to the bonded debt of the United States. But I assume, sir, that a question of privilege like this can not be referred to any committee at all. The very meaning of the "privilege" is that the matter may be called up and acted upon at the time it is called up instead of being buried in a committee. Gentlemen can of course vote it down, and that will be tantamount to referring it to a committee.

Now, I want to make an observation about the policy of continuing this Congress in session.

Mr. BRECKINRIDGE, of Kentucky. Mr. Speaker, I rise to a question of order.

The SPEAKER. The gentleman will state it.

Mr. BRECKINRIDGE, of Kentucky. As I understand, the gentleman from Texas wishes to call up a motion to adjourn.

The SPEAKER. The present occupant was not in the chair when this matter came up, but his understanding is that the gentleman from Texas [Mr. KILGORE] has offered a resolution to adjourn.

Mr. KILGORE. I have.

Mr. BRECKINRIDGE, of Kentucky. And I understand that upon the offering of that resolution a motion was made to refer it to a committee.

The SPEAKER. The Chair would like to understand the situation. If the gentleman from Texas has simply called up the resolution which was offered yesterday, then the motion to refer was pending at the time the proposition was postponed. If the gentleman has offered a new resolution, of course that is a new proposition and subject to all proper parliamentary motions.

Mr. McMILLIN. The gentleman from Tennessee [Mr. RICHARDSON] moved to refer the resolution after the gentleman from Texas [Mr. KILGORE] had demanded the previous question.

The SPEAKER. Did the gentleman from Texas offer a new resolution?

Mr. McMILLIN. He did.

Mr. KILGORE. Yes, sir; I offered a resolution to adjourn on Saturday.

Mr. BRECKINRIDGE, of Kentucky. The point I make is that this was not a privileged matter when there was already pending a motion to refer a similar resolution offered by the gentleman from Alabama [Mr. OATES] on yesterday.

The SPEAKER. The Chair thinks there may be any number of the same character.

Mr. BRECKINRIDGE, of Kentucky. And that any proposition to adjourn is privileged, no matter how often it may be made?

The SPEAKER. The Chair thinks so.

Mr. RICHARDSON. I rise to a point of order.

The SPEAKER. The gentleman will state it.

Mr. RICHARDSON. The gentleman from Texas [Mr. KILGORE]

offered his resolution, and upon it he demanded the previous question. I then moved that it be referred to the Committee on Ways and Means. The gentleman from Texas now makes the point of order upon my motion that it can not apply to his resolution for a final adjournment. The gentleman arose to debate the question of order, but he has departed from that and has stated that he wishes to debate now the question of the propriety of an adjournment, and the point I make is that in debating the question of order he can not proceed to debate the other question.

Mr. DOUGHERTY. I rise to a point of order.

The SPEAKER. There is one point of order now pending.

Mr. DOUGHERTY. Then I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. DOUGHERTY. Is a motion to adjourn debatable?

The SPEAKER. A motion to fix the time at which the House shall adjourn *sine die* is debatable. This is not a motion to adjourn, nor a motion to fix a day to which the House will adjourn.

Mr. RICHARDSON. I want to add, upon the point of order which the gentleman from Texas [Mr. KILGORE] makes upon my motion, that the words "shall adjourn" and "for a recess," in the rule which he quotes, apply not to final adjournment, but to the usual daily adjournments of the House.

The SPEAKER. The Chair has just stated that distinction. The Clerk will read the fourth subdivision of Rule XVI as to the priority of motions.

The Clerk read as follows:

When a question is under debate, no motion shall be received but to fix the day to which the House shall adjourn, to adjourn, to take a recess, to lay on the table, for the previous question (which motions shall be decided without debate), to postpone to a day certain, to refer or amend, or to postpone indefinitely, which several motions shall have precedence in the foregoing order.

The SPEAKER. It will be observed that the motion for the previous question has priority, under the rule, over the motion to refer; therefore, while the motion to refer may be made pending the demand for the previous question, the vote must first be taken on ordering the previous question. If the House should decline to order the previous question——

Mr. RICHARDSON. I beg pardon for one moment. If the Chair will refer to Rule XVII he will find the following language:

It shall be in order, pending the motion for, or after the previous question shall have been ordered on its passage, for the Speaker to entertain and submit a motion to commit, with or without instructions, to a standing or select committee.

The SPEAKER. The gentleman is correct; the Chair for the moment did not remember the rule. It is a rule which has usually been applied to matters of legislation, the passage of bills, joint resolutions, etc., but the Chair thinks it applies as well to any proposition pending before the House. Therefore the motion to refer is in order pending the demand for the previous question, or after the previous question has been ordered.

Mr. WHEELER. Is this motion to refer debatable?

The SPEAKER. It is not, under the rules of the House.

The question being taken on the motion to refer the resolution to the Committee on Ways and Means, there were—ayes 19, noes 20.

Mr. RICHARDSON. No quorum.

Tellers were ordered; and Mr. RICHARDSON and Mr. KILGORE were appointed.

The House again divided; and the tellers reported—ayes 20, noes 7.

Mr. RICHARDSON. I withdraw the point of no quorum.

Mr. KILGORE. Mr. Speaker, I renew it. [Laughter.]

Mr. SOWDEN. It is very evident there is no quorum present. I therefore move that the House do now adjourn.

Mr. PEEL. I hope the gentleman will allow a vote on the conference report which was presented a short time ago. The gentleman from Wisconsin [Mr. HAUGEN] withdraws his objection.

The SPEAKER. The House is dividing, and under the rules a conference report can not be entertained when a division is being taken. But if there is no objection, the Chair will entertain the request of the gentleman from Arkansas [Mr. PEEL].

Mr. KILGORE. What is involved in the matter?

Mr. PEEL. The report was presented awhile ago; and the gentleman from Wisconsin [Mr. HAUGEN] asked that action be deferred until he could look into it. He does not now object.

The SPEAKER. The report has already been read. The question is on agreeing to it.

Mr. HAUGEN. Since this report was presented I have examined this matter; and I am satisfied that if my colleague were here he would not object to the bill in its present form. I withdraw my objection.

The report of the committee of conference was agreed to.

ORDER OF BUSINESS.

Mr. SOWDEN. I now renew my motion that the House adjourn.

The SPEAKER (having put the question). The ayes seem to have it.

Mr. MCMILLIN. I call for a division.

Mr. KILGORE. I withdraw the point of "no quorum" upon the reference of the adjournment resolution. I am willing to allow the matter to be referred.

The SPEAKER. A motion to adjourn is pending.

Mr. MCMILLIN. I ask that the Chair announce the result of the vote on the question upon which the House was dividing.

The SPEAKER. Upon the motion made by the gentleman from Tennessee to refer the resolution with regard to adjournment to the Committee on Ways and Means, the ayes were 20, the noes 7. The ayes have it, and the motion is agreed to.

Mr. MCMILLIN. I now withdraw the demand for a division on the motion to adjourn.

The SPEAKER. The demand for a division being withdrawn, the motion that the House adjourn is agreed to.

The House accordingly (at 2 o'clock and 10 minutes p. m.) adjourned.

PRIVATE BILLS INTRODUCED AND REFERRED.

Under the rule private bills of the following titles were introduced and referred as indicated below:

By Mr. J. E. CAMPBELL: A bill (H. R. 11600) granting a pension to W. T. Nichols—to the Committee on Invalid Pensions.

By Mr. HOOKER: A bill (H. R. 11601) for the relief of the Roman Catholic Church of St. Peter, Jackson, Miss.—to the Committee on War Claims.

By Mr. FELIX CAMPBELL: A bill (H. R. 11602) to reinstate John Wilson in the Engineer Corps of the United States Navy—to the Committee on Naval Affairs.

By Mr. MCRAE: A bill (H. R. 11603) for the relief of John B. Luttrell—to the Committee on War Claims.

By Mr. MCMILLIN: A bill (H. R. 11604) to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee—to the Committee on Commerce.

By Mr. WILLIAM WHITING: A bill (H. R. 11605) for the relief of William Murphy—to the Committee on Invalid Pensions.

PETITIONS, ETC.

The following petitions and papers were laid on the Clerk's desk, under the rule, and referred as follows:

By Mr. CLEMENTS: Petition of Benjamin Heath, of Georgia, for reference of his claim to the Court of Claims—to the Committee on War Claims.

By Mr. MCMILLIN: Petition of E. W. Bass, late captain in Fifth Tennessee, for removal of charges against him—to the Committee on Military Affairs.

By Mr. WHEELER: Petition of Rachael Lawson, of Lauderdale County, Alabama, for reference of her claim to the Court of Claims—to the Committee on War Claims.

SENATE.

THURSDAY, *October* 18, 1888.

Prayer by the Chaplain, Rev. J. G. BUTLER, D. D.

The Journal of yesterday's proceedings was read and approved.

MAIL-BAG REPAIR-SHOP.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a bill from the House of Representatives.

The bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair-shop, and for other purposes, was read the first time by its title.

Mr. SAWYER. I ask unanimous consent that that bill may be now considered.

By unanimous consent, the bill was read the second time at length, and considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, and was read the third time.

Mr. SAULSBURY. Before the vote is taken on the passage of the bill, I should like to inquire of the Senator in charge of it whether in the opinion of the Department the passage of the bill is necessary, or whether it is a voluntary movement on the part of the House of Representatives.

Mr. SAWYER. I will state to my friend from Delaware that representatives of the Post-Office Department came to the Senate Committee on Appropriations and requested a clause for this purpose to be put into the Post-Office appropriation bill. It passed the Senate, but the conferees on the part of the House insisted upon its being struck out, and it was struck out. Then the representatives of the Post-Office Department went to the House and got the House to pass this bill, and came here yesterday and asked me specially to take charge of it and secure its passage by the Senate. I think the bill ought to pass. It is very important.

The PRESIDENT *pro tempore*. The question is, Shall the bill pass?

The bill was passed.

LANDS OF UNITED PEORIAS AND MIAMIES.

The PRESIDENT *pro tempore*. The Chair lays before the Senate the action of the House of Representatives on the conference report on House bill 8074, which will be read.

The Chief Clerk read as follows:

IN THE HOUSE OF REPRESENTATIVES, *October* 17, 1888.

Resolved, That the House concur in the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8074) to provide for allotment of land in severalty to united Peorias and Miamies in Indian Territory.

Mr. MORGAN. I submit the report of the committee of conference on the part of the Senate.

The PRESIDENT *pro tempore*. The report will be read.

The Chief Clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8074) to provide for the allotment of land in severalty to United Peorias and Miamies in Indian Territory, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same.

That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with amendments as follows:

On page 2, in line 29, of the matter proposed to be inserted by said amendment, after the word "building" insert the words "together with the land." On page 5 of said amendment, in lines 9 and 10, strike out the words "in the Interior Department."

On page 6 of said amendment in line 1 strike out the words "removed to the Indian Territory;" and strike out all of lines 15 to 19, inclusive, on page 6 of said amendment, and insert in lieu thereof the following:

"And the court may ascertain the reasonable value of the services of counsel employed by said confederated tribes to represent the tribes on such examination, not to exceed 10 per cent. of the aggregate sum actually in controversy; and the Secretary of the Interior shall cause to be paid to said counsel so much of the sum so ascertained as in equity and justice he may consider to be due them for such services out of any money in the Treasury of the United States now due to such tribes arising from the sale of the lands of said tribes in Kansas."

And the Senate agree to the same.

H. L. DAWES,
O. H. PLATT,
JOHN T. MORGAN,
Managers on the part of the Senate.

S. W. PEEL,
JOHN M. ALLEN,
B. W. PERKINS,
Managers on the part of the House.

The PRESIDENT *pro tempore*. The question is on concurring in the report.

The report was concurred in.

PETITIONS AND MEMORIALS.

Mr. GRAY. I present a petition, which has been sent to me in the absence of both the Senators from Connecticut, being the petition of more than 500 citizens of that State, representing nearly all the gainful occupations of our country. As the petition is short I will ask permission to read it.

The PRESIDENT *pro tempore*. The Chair hears no objection.

Mr. GRAY. The petition is as follows:

To the Senate of the United States:

GENTLEMEN: The workingmen of Connecticut, wage-earners, manufacturers and farmers, use upwards of $100,000,000 worth of raw materials annually in their industries. A large amount of these materials can not be obtained in this country. Nearly all of these materials come from without the borders of our State. The increased cost of these materials, particularly of wool, salt, lumber, tin-plates, etc., by reason of the tariff taxes, has become an intolerable burden. The Mills bill, which now comes before you, relieves us from many of these taxes. The final enactment of the bill will be worth millions of dollars to our people. It will revive many industries which are now much depressed. It will tend to increase the wages of our mechanics and the profits of our manufacturers. It will add value to our farms and our factories. We, the undersigned, citizens of Connecticut, therefore most respectfully ask that the bill be speedily passed by your honorable body.

The petition is signed by W. H. Shannon and over 500 others.

The PRESIDENT *pro tempore*. The petition having been read will appear in the RECORD, as the Chair supposes without the names. It is so ordered, if there be no objection. The bill having been reported, the petition will lie upon the table.

BILL INTRODUCED.

Mr. HALE (by request) introduced a bill (S. 3641) to confer the rank of lieutenant by law on Nathaniel Johnson Coffin; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

PROPOSED RECESS—FINAL ADJOURNMENT.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a resolution coming over under objection from yesterday, which will be read.

The Chief Clerk read the concurrent resolution submitted yesterday by Mr. ALLISON, as follows:

Resolved by the Senate (the House of Representatives concurring), That at 1 o'clock p. m. on Saturday, the 20th day of October, instant, the President of the Senate and the Speaker of the House of Representatives adjourn their respective Houses, to meet on Monday, the 19th day of November next, at 12 o'clock m.

The PRESIDENT *pro tempore*. If the Chair remembers correctly, the Senator from Missouri [Mr. COCKRELL] yesterday moved to refer the resolution to a committee of five, to be appointed by the Presiding Officer, and under the objection of the Senator from Alabama [Mr. MORGAN], the subject went over until to-day.

Mr. COCKRELL. That is right.

Mr. PADDOCK. I desire to offer an amendment to the resolution.

The PRESIDENT *pro tempore*. The amendment will be stated.

The CHIEF CLERK. It is proposed to amend the resolution in line 3, by striking out "20th" and inserting "27th;" and in line 4, by striking out "19th" and inserting "12th;" so as to read:

That at 1 o'clock p. m. on Saturday, the 27th day of October, instant, the President of the Senate and the Speaker of the House of Representatives adjourn their respective Houses to meet on Monday, the 12th day of November next, at 12 o'clock m.

The PRESIDENT *pro tempore*. Does the Senator from Missouri desire action upon his motion to refer?

Mr. COCKRELL. Not now. I withdraw it for the present.

The PRESIDENT *pro tempore*. The question is on agreeing to the amendment proposed by the Senator from Nebraska [Mr. PADDOCK].

Mr. ALLISON. I have consulted as many Senators as I could on both sides of the Chamber as to what we should do respecting the question of adjournment, and I think the prevailing opinion is on both sides—I know there are Senators on both sides who do not agree to it—but the prevailing opinion is that it is wiser to adjourn until the first Monday in December. I think that is the prevalent opinion on both sides of the Chamber, so far as I can gather that opinion. I understood that the Senator from Georgia [Mr. BROWN] intended to propose an amendment looking to an adjournment, and if he does so, I shall for myself support it.

Mr. BROWN. I think the Senate should pursue whatever course would best promote the passage of a tariff bill at the earliest day that it can reasonably and properly be done, but I do not believe that we can facilitate that result by taking a recess from Saturday until the 19th day of next month, and then again assembling before the regular time of meeting in December.

The Senate has been in session now over ten and a half months. Senators who have attended to their duties during that length of time at the Capitol might, it seems to me, reasonably ask for at least a month and twenty days of vacation before the commencement of the next session of Congress. My own opinion is that you could not get a quorum to attend on the 19th of next month, and if a quorum did appear it would only forward the matter by a few days and would not really be a gain in time of any great public concern.

Again, the Presidential election takes place in the mean time, and the popular verdict that may be then pronounced will have a great deal to do with the shape in which the tariff bill will finally pass. If the Democrats are successful, I presume something very near the Mills bill, if not identical with the Mills bill, will be passed at the December session. If the Republicans should be successful, probably something more nearly like the bill reported by the Finance Committee of the Senate as a substitute would be enacted into a law.

I think it is desirable therefore, in this state of the case, that we should not take final action until the Presidential election, and let the popular verdict be known before the tariff bill is passed into a law.

Entertaining these views, and being satisfied that the resolution to take a recess would be unwise, I think I should call for a division on that question if it should be put to the Senate, and we should then have to test the question whether there is a quorum present. Under all the circumstances, however, I believe it is better that we should adjourn; and therefore I offer the following resolution as a substitute for the resolution of the Senator from Iowa:

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives declare their respective Houses adjourned without day on Saturday, the 20th day of October, at 1 o'clock p. m.

The PRESIDENT *pro tempore*. The Senator from Georgia moves to strike out all after the word "that" in the resolution of the Senator from Iowa, and to insert. The question is on agreeing to the substitute proposed by the Senator from Georgia.

Mr. EVARTS. Mr. President, I hope the amendment proposed by the Senator from Georgia will be adopted. We of all the people in this country ought not to be inattentive to the fact that the two Houses of Congress are not now in a position to debate the details of the tariff bill, on which, of course, divisions would need to be taken. We of all men in the country should not be the only ones unobservant of the fact that the Presidential election intervenes about half way between our present date and the meeting of the next session of Congress. We are all aware that the subject of the tariff is the principal topic heretofore debated, and the principal matter to be decided in the opinions of the people at this election.

It seems to me, therefore, from any observation that I have made outside of these Chambers and outside of Washington, that the general feeling of the country is that we have faithfully debated on both sides the question of the change of the tariff, and that now the debate on principles has been brought to a close in this body, and the details, if they are ever to become practically determinable by this Congress, will need an attendance of a majority here.

I therefore heartily support the motion made by the Senator from Georgia.

Mr. DOLPH. If it is proposed to adjourn, I should like to be informed as to the object of putting the hour at 1 o'clock on Saturday. I have not heard of any Senator on either side of the Chamber who proposes now to enter into a general discussion of the revenue bill which has been under consideration. I suppose there is no certainty that the deficiency bill will be signed before that date, and if we are

going to adjourn I do not see what difference it makes whether we adjourn to-day at 1 o'clock, or to-morrow at 1 o'clock, or on Saturday—whenever the other House can act on the resolution.

Mr. ALLISON. I will say to the Senator from Oregon that the deficiency bill, which is certainly an important bill, is now under consideration, I suppose, by the President; and the object in fixing Saturday is to give him an opportunity to examine that bill and some other bills which have recently been sent to him.

The PRESIDENT *pro tempore*. The Chair will state that several other bills of considerable importance have recently been signed by the Presiding Officers of both Houses and forwarded to the Executive for his approval. In the opinion of the Chair there should be an interval in which the Executive might act; otherwise, the Senate and the House adjourning, the legislation would entirely fail.

Mr. DOLPH. It is well understood that the legislation of the Congress continues through the short session, until 12 o'clock on the 4th of March, and bills are hurried to the President and receive his signature at the close of the session. However, I merely make the suggestion, if we have proceeded with the tariff bill as far as we can under existing circumstances and there is no further legislation, whether it is necessary that the session should be extended until Saturday.

Mr. ALLISON. I think there are Senators who desire to make some observations on the bill before we adjourn, so that we are not ready to adjourn to-day. But certainly the President should have an opportunity to examine the bills which have been sent to him, because if they are not signed they fail on adjournment.

Mr. DOLPH. If they are not signed they will fail in any event, and if returned without the signature of the President they would fail in the existing condition of both Houses.

Mr. PADDOCK. The object that I should seek to accomplish by the amendment which I propose is that if we could continue the consideration of the tariff bill and such speeches as would be made between this and the 27th should be delivered, the Senate being relieved to that extent, it might happen that a date not remote in the future might be fixed for a final vote on this proposition. Possibly the Committee on Finance might conclude after a little that it would be proper to name a date upon which the vote could be taken—perhaps the 12th of December, or some time thereabouts. Whereas if we should take so long a recess as has been proposed, or if we should adjourn, the speeches which could be made now would have yet to be made hereafter, and the date of the determination of this question correspondingly delayed—postponed very far into the future.

My judgment is, and the desire of the people of the State whom I have the honor in part to represent here is, that there should be a revision of the tariff at the earliest possible date. I believe that a great majority of my constituents are in favor of the bill which has been perfected and reported by the Committee on Finance and which is before the Senate at this time. That committee have performed a very great labor, having done in six weeks what they might have been properly allotted six months to do. That bill is here; it is a good bill. I am very much in favor of it, although I should perhaps desire and expect at the proper time to ask for a change or two in the bill. However, I think we could go ahead until the 27th, and relieve the Senate of a certain number of speeches that will have to be made some time. My friend, the Senator from Alabama [Mr. MORGAN], whose speech is phenomenal, both as to its duration and its quality, has unwound himself a little. I should hope before the end of next week he would be unwound still further, and then, if we should come back here on the 12th, we should have an easier time until the commencement of the next session, and I think we would make very decided progress.

I think it would gratify the country if we would undertake to push this measure as rapidly as we can. If we adjourn on the 27th, that will give all of us, Senators from the remotest as well as those from the nearer States, an opportunity to get home in time to rest a little before the election on the 6th day of November, and the date I suggest for the reassembling will give them sufficient time to return. Then if we can possibly fix a date so early as the 12th of December to vote on this question, it would be in order, and it would be very proper, that there should be a long holiday recess afterwards. We might take a recess from the 15th of December or somewhere there to the 6th of January, which would ease us up a little after the enormous amount of time and labor we will have put in by that date, and indeed have already put in.

This is my view. I think it would be better to do as I suggest. I think the country would be better satisfied with it, and I think it would be well for the Senate to take that course. Of course I know perfectly well, as every Senator does, that the bill can not be passed in the short time to intervene between this and the 6th of November, when of course we shall have to take a recess.

Mr. COCKRELL. Is the Senator from Nebraska in earnest?

Mr. PADDOCK. The Senator from Nebraska will answer that he is terribly in earnest.

Mr. COCKRELL. I should think he was terribly in earnest in trying to make the people believe that which does not exist. Now look! Hold up your fingers and count them. Talk about business!

Mr. TELLER. You will not get a quorum if you count.

Mr. COCKRELL. I have not said anything about that. I am simply calling the attention of the Senator from Nebraska to what he might count on his fingers. Talk about transacting business! If the Senator wants to pass that bill before the 6th day of November, we will stay here. If that is the object, we will stay here.

Mr. PADDOCK. Of course the Senator knows that is an absurdity. The bill certainly ought to have a month's consideration. It is patent of course to everybody that it ought to have a month's consideration, and it can have that under my plan.

Mr. COCKRELL. A month's consideration! How do you mean to act upon it?

Mr. PADDOCK. I mean to discuss it so far as it may be desired to discuss it up to the 27th, and when my friend from Missouri comes back on the 12th of November he will very likely be prepared himself to make another speech.

Mr. COCKRELL. Every Senator who has desired to speak has had an opportunity, and we have three days longer really before Saturday in which to talk. The claim of the Senator from Nebraska is perfectly farcical. If you want to pass that bill before the election, we will stay here with you. You can not do it. It is a farce to undertake it, and you know it.

Mr. PADDOCK. The Senator knows the primary trouble about the matter, and that is that the other House has not had a quorum for six weeks.

Mr. COCKRELL. That does not make a particle of difference. The House has nothing to do with this bill now; it is the Senate, nothing more and nothing less and nothing else.

The PRESIDENT *pro tempore*. The Chair hopes Senators will cooperate with the Chair in preserving order.

Mr. COCKRELL. We will do so most heartily. It does not make a bit of difference, as to the action of the Senate, whether there is a quorum in the House or not. The House has disposed of the tariff bill. It is here in the Senate. It is for the Senate to dispose of it. The House ought to have gone home long ago. There is no use for any of them here. Wait until you pass your bill. It will be time enough to talk about a quorum in the House when the bill is passed by the Senate. If it is before the 6th of November, or any other time, there will be a quorum in the House. Don't trouble yourselves about that.

Mr. GEORGE. They will be here promptly.

Mr. COCKRELL. They will be here in time to act immediately upon the bill. Now, pass it. It does not make a bit of difference when you pass that bill, there will be a quorum of the House here. Get the Senate in a condition to work. That is your business. You are in control of the Senate and not of the House. Here is the place for you to act. Do not commence complaining about the House. You are not responsible for the House. The Democratic party is responsible for that, not the Republican majority of the Senate. Let every tub stand on its own bottom, if it has any bottom.

Mr. PADDOCK. The Senator can certainly charge no laches to this side of the Chamber in the consideration of the bill. There has never been so much labor performed by any committee of the Senate upon any measure in so short a time as was performed by the Committee on Finance that perfected and reported this bill, in the consideration of the same and the preparation of its very able report. There has been no moment lost that could have been utilized on this side in the discussion of the proposition.

Now, if the Senate wishes to quit, it is all right, but so far as I am concerned, although I am not disposed to take up any time of the Senate in the discussion of the proposition—I am not much in the habit of doing that sort of thing—at the same time I am ready to stay here and listen to my friend from Missouri, and to my friend from Alabama, and the others who I know will speak on this question. If we were to stay here until the 17th we would have plenty of speeches, which we shall have to have later if we do not stay.

Mr. COCKRELL. The Senator talks about the haste with which the Finance Committee has disposed of this bill. Why, it is a farce. What did you do in 1882 and 1883? You took a little internal-revenue bill in December, 1882, and you referred it to the Committee on Finance, and you reported that back in less than thirty days, and you passed it in less than thirty days after that, and then forced a conference upon it, and you got the present tariff law. How does that compare? This is the longest time the Senate Committee on Finance has ever considered a tariff bill in the history of the United States Congress.

Mr. PADDOCK. What about the House committee in this year, 1888?

Mr. COCKRELL. That does not make any difference. Do not trouble yourself about the House. The House will take care of itself. Take care of the Senate. Here is your responsibility.

Mr. ALDRICH. I suppose the Senator from Missouri desires to make a correct statement?

The PRESIDENT *pro tempore*. Does the Senator from Missouri yield?

Mr. COCKRELL. As a matter of course he yields.

Mr. ALDRICH. The Senator must have forgotten that in 1883 the bill to which he alludes passed the House of Representatives at the long session, and was referred to the Finance Committee during the long session.

Mr. COCKRELL. Why do you trouble yourself about the House? We are talking about the Senate.

The PRESIDENT *pro tempore*. Senators will please address the Chair.

Mr. ALDRICH. If the Senator will be patient with me for a moment so that I may make my statement, I will state when the Senate met at the short session of 1882–'83 the bill already prepared by the Tariff Commission was presented to them for consideration, and all the committee had to do in the consideration of the question was to consider the Tariff Commission bill, which was a complete and perfected measure. In this case it became necessary for the Senate committee to prepare a new and original measure, which took a very much longer time, of course, than was taken in 1883 for the consideration of the measure which was prepared by the Tariff Commission.

Mr. COCKRELL. You did not follow the Tariff Commission report at all in 1883. You never pretended to follow it. They told you to reduce the revenues from 20 to 25 per cent. Instead of that you raised them. The Tariff Commission report did not help you at all. It was not your guide, it was not your standard. You had it at this time. If it was of any benefit to you then, it could have been of benefit to you now. You had all the investigations. All the members of Finance Committee but one were members who considered the bill of 1882–'83. Every one of you is perfectly familiar with it. The other member of the committee, the junior Senator from New York [Mr. HISCOCK], was a member of the Ways and Means Committee of the House then. So all the members of your committee are men who considered that bill.

I say the Senate committee has taken a longer time in the consideration of this bill than has ever been consumed in the Senate of the United States in the consideration of any tariff bill.

Mr. FRYE. We have got the best bill.

Mr. COCKRELL. The best bill?

Mr. FRYE. Yes.

Mr. COCKRELL. Wonderful it is! It catches the breeze from whatever point of the compass it comes. It is an admirable bill to report on the eve of an election, to "fry the fat" out of those who are interested in manufactures!

I have the record here in regard to all these matters. Let us understand ourselves distinctly now. If the Senator from Nebraska, if the majority of the Senate on that side of the Chamber say they can pass this bill before the 6th of November, we will stay here with you. If you can not pass it before the 6th of November, then I say you know, and every intelligent, thinking, conservative man knows, that to meet here on the 12th of November or on the 19th of November will not facilitate the final disposition of the bill. That is all there is in it. It is a perfectly patent matter. Understand me. If they want to pass the bill before the 6th of November we will stay here. If they will come and confess that they can not do it before that time, then we say to them, you know as we know that merely taking a recess until the 12th of November or until the 19th of November or any other day in November will not hasten final action on the bill one particle, and will be of no service in the final settlement of it.

I gave the reasons yesterday for this view. You will not have a quorum of the Senate here if you meet on the 12th or the 19th of November. You can not take votes upon the various amendments. Nothing will be decisive. You may get through the Committee of the Whole with the bill, and then when you go into the Senate you will have to do the work all over again. Therefore, I say, taking your position, if you can not pass the bill and do not intend to pass it before the 6th of November, in the interest of early action upon the bill the Senate should adjourn and meet on the regular day in December, and then we should have no adjournment for the Christmas holidays, no holiday recess, but should go on continuously working upon the bill regularly, just as if we were in the midst of a session, or on the heels of it. That is the only sensible, practical plan, and it is all you can do. You have got to do one or the other of these things.

Mr. ALDRICH. It is a matter of little consequence, but in regard to the statements made by the Senator from Missouri as to the action of the Finance Committee in 1883, I must say that each one of those statements is a misstatement of fact. The Committee on Finance did take the Tariff Commission bill as the basis of their work, and they reported it with very few exceptions as the bill came from the commission; and whenever changes were made they were made in the nature of reductions; and the bill as reported from the committee and as passed by the Senate made more and greater reductions than the Tariff Commission bill itself.

The PRESIDENT *pro tempore*. Is the Senate ready for the question upon agreeing to the amendment proposed by the Senator from Georgia [Mr. BROWN]?

Mr. MORGAN. Was that accepted by the Senator from Iowa?

Mr. ALLISON. I said I was going to vote for it.

Mr. MORGAN. I thought you said you were going to accept it.

Mr. ALLISON. I will vote for it.

Mr. COCKRELL. It is not worth while to have any vote on these questions. Unless it can be done by unanimous consent it can not be done at all.

Mr. ALLISON. Very well; I accept the amndment.

Mr. DOLPH. I object to it.

The PRESIDENT *pro tempore*. The Senator from Oregon the Chair did not understand. The Chair understands the Senator from Iowa to accept the amendment.

Mr. DOLPH. I do not know that I am here to accept everything that is offered from the other side.

The PRESIDENT *pro tempore*. The amendment, then, being accepted, will be read as an original resolution.

The Chief Clerk read as follows:

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives declare their respective Houses adjourned without day, on Saturday, the 20th day of October, at 1 o'clock p. m.

The PRESIDENT *pro tempore*. Is the Senate ready for the question on agreeing to the resolution? [Putting the question.] The ayes appear to have it. The ayes have it. The resolution is agreed to.

BILLS PASSED OVER.

The PRESIDENT *pro tempore*. The Chair lays before the Senate the first bill on the Calendar under Rule VIII.

The CHIEF CLERK. A bill (H. R. 5080) for the relief of C. B. Wilson.

Mr. DOLPH. Let that go over.

The PRESIDENT *pro tempore*. The bill will be passed over to the Calendar under Rule IX. The next bill on the Calendar will be stated.

The bill (H. R. 593) for the relief of James Albert Bonsack was announced as the next bill on the Calendar.

Mr. COCKRELL. Let that go over.

The PRESIDENT *pro tempore*. The bill will be passed over under Rule IX.

EXECUTIVE SESSION.

Mr. MORGAN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After six minutes spent in executive session the doors were reopened.

WAGONS MADE BY PRISON LABOR.

Mr. TELLER. I submit the following resolution:

Whereas it is reported that the Secretary of the Interior has purchased a large number of wagons for the Indian service that were manufactured with prison labor in the State of Tennessee, thus putting the honest labor of the country in competition with such prison labor: Therefore,

Resolved, That the Committee on Indian Affairs be authorized and directed to inquire as to the truth of such report, the number of wagons so purchased, the price paid for the same, whether the price paid was the fair market price thereof, and whether legislation is or is not required to protect the honest labor of the country from such prison convict-labor competition.

The PRESIDENT *pro tempore*. Is there objection to the present consideration of the resolution?

Mr. COCKRELL. Let it go over.

Mr. TELLER. If the Senator will withdraw his objection a moment——

Mr. COCKRELL. I will withdraw it.

Mr. TELLER. I will state why I offer the resolution.

Mr. President, my attention has been called to this fact by several people who are interested in the labor of the country. My attention was first called to it by the following, which I cut from a newspaper:

A GOVERNMENT CONTRACT.

The firm of Cherry, Morrow & Co. has secured a Government contract for the building of four hundred army wagons, or wagons to be used in the Territories occupied by Indians. The contract was secured over the competition of many of the leading wagon manufacturers in the United States.

I understand that the firm of Cherry, Morrow & Co. are the lessees of the convict labor of the State of Tennessee and are manufacturers of wagons at Nashville, Tenn. I have here their advertisement in which they allege themselves to be manufacturers of wagons, and they have on their advertisement the words "No imported pauper labor employed." I am told that this firm does its work by convict labor and that their bid for wagons—it is at least so reported—was below the bids of other persons not employing convict labor, and so low that they could not compete with them.

I myself do not believe that the Government of the United States should encourage this system of leasing convict labor, nor do I believe that the Government of the United States by its purchases should give a preference to the products of involuntary labor that underbids necessarily the honest independent labor of this country. I do not object to the employment of convicts in a proper manner, so that they may maintain good health, that they may in some degree relieve the State of the burden of their support by the manufacture of such things as are necessary for them within the prison walls, or the production, where they can work on farms, of such articles as may contribute to their own support; but I do object to a system that encourages this class of labor, involuntary labor, in the hands of corporations and individuals at a nominal rental, thus enabling a corporation at a place where criminals are kept to compete to the disadvantage of the people who are employed in the honest manufactures of the country.

I find in the President's message of 1886 a rather remarkable statement, which, it seems to me, may probably have been acted on by the official who purchased these wagons, nominally the Secretary of the Interior, but really and practically, of course, the Commissioner of In-

dian Affairs; for while the Secretary must be held, I suppose, technically accountable, it was a matter not brought to his attention, and if complaint is to be made against any official it is against the Commissioner of Indian Affairs and not against the Secretary; but of course the purchase is made in the name and by the authority of the Secretary. The President, in his message to Congress in 1886, said:

With prisons under its own control, the Government could deal with the somewhat vexed question of convict labor, so far as its convicts were concerned, according to a plan of its own adoption, and with due regard to the rights and interests of our laboring citizens, instead of sometimes aiding in the operation of a system which causes among them irritation and discontent.

Upon consideration of this subject it might be thought wise to erect more than one of these institutions, located in such places as would best subserve the purposes of convenience and economy in transportation. The considerable cost of maintaining these convicts as at present, in State institutions, would be saved by the adoption of the plan proposed; and by employing them in the manufacture of such articles as were needed for use by the Government, quite a large pecuniary benefit would be realized in partial return for our outlay.

I desire to enter my dissent from that suggestion. I desire to say here that I do not believe the Government of the United States should, for the purpose of saving a few dollars in supporting its criminals, be purchasing convict labor products or using convict labor products.

Mr. President, in the Forty-ninth Congress the House of Representatives sent to this body House bill 5541, entitled "A bill to prevent the employment of convict labor and alien labor upon public buildings and other public works, and convict labor in the preparation or manufacture of materials for public buildings or other public works, and to regulate the manner of letting contracts therefor."

It provided—

That in all advertisements for the erection or construction of public buildings or other public works, or for materials to be used in their erection, construction, or completion, and for all supplies of every description to be furnished to or for the use of any of the Departments, and in all contracts made under or in pursuance of such advertisements, there shall be inserted a condition that no convict or prison labor whatsoever, or the product thereof, shall be employed or used upon any public building or other public work, or in the preparation or manufacture of any of the articles, materials, or supplies contracted to be furnished therefor; and there shall also be inserted in said contract the further condition that no person who is not a bona fide resident within the limits of the United States, and who has not declared his intention to become a citizen thereof in the manner provided by law, shall be employed in the erection, construction, or completion of any public building or other public work.

SEC. 2. That any willful breach of any of said conditions by any contractor shall authorize and work a forfeiture of the contract, and shall constitute a complete defense in bar against any claim or action against the United States for the recovery of any sum or sums under said contract; and it shall be the duty of the officer letting any such contract, upon being advised that any contractor has knowingly violated the terms of such contract, to declare the same forfeited.

This bill passed the House of Representatives July 15, 1886, coming to the Senate just about the close of the session, and passed the Senate on February 28, 1887. It then went to the President of the United States, and was disposed of by what is commonly called a pocket veto. The bill never came back to the House in which it originated, was not signed by the President, and did not become a law. Here was a legislative declaration, as far as it was competent for a legislative declaration to be made without the approval of the President, that hereafter the United States would buy materials that were the products of honest labor and honest labor alone. The Senator from Delaware [Mr. SAULSBURY] asks me if that was not confined to public buildings. I will read it again for him:

That in all advertisements for the erection or construction of public buildings or other public works, or for materials to be used in their erection, construction, or completion, and for all supplies of every description to be furnished to or for the use of any of the Departments, and in all contracts made under or in pursuance of such advertisements, there shall be inserted a condition that no convict or prison labor whatsoever, or the product thereof, shall be employed or used upon any public building or other public work, or in the preparation or manufacture of any of the articles, materials, or supplies contracted to be furnished therefor.

That covers the whole ground. It is a legislative declaration that not only public buildings should not be built by convict or alien labor, but that no supplies on the part of the Government should be bought from any party using convict labor nor from any party who had used convict labor in any degree for the construction of the article sold. This is not the law, I will admit; but it seems to me that in view of this legislative declaration, although it did not meet with the approval of the President, not having been vetoed by him, the Departments ought at least to refrain from purchasing the products of convict labor.

I find that the State of Tennessee has provision—I see one of the Senators from that State here and presume that is the present law, but if not he will correct me—for the hiring out of its convicts in general terms. I will not stop to read it. Under that system I understand that this firm of wagon-makers have become at some price the employers of the convicts of the State. In nine cases out of ten the corporations or individuals who contract with a State for convict labor contract at a mere nominal sum, sufficient to feed and clothe them, and the balance of the proceeds of the labor of the convicts goes into the pockets of the contractors. As a general thing it is a money-making system. It has become in some sections of the country, I am sorry to say, a very general system of disposing of convicts. Especially is that true of the southern part of the United States, and great scandals and great disgraces and great cruelties have grown out of it, and great detriment to the public service and to the honest labor of the country in my judgment.

If I may be allowed to say what I think the Government of the United States ought to do through its executive officers, when they have occasion to purchase supplies, it is to purchase the needed supplies in the market at a fair market price from the men who produce them, and who also, when they are producing are contributing to the support of the Government, national, State, and municipal. I do not think it is becoming to the Government of the United States to employ convict labor or to buy the products of convict labor, a labor that bears none of the burdens of the State; nor do I believe that it is the proper thing for the Government of the United States to employ alien labor in this country or in foreign countries. I do not believe that the Government of the United States is justified, as was done through the War Department very recently, in buying from English manufacturers a very large number of blankets, upon which the only saving of money to the Government was 30 cents each, and then in order to make that they remitted the duty, amounting on that one purchase of blankets to more than $600. In other words, when the manufacturers bid for the blankets they bid within 30 cents of their English competitors who got the contract, and who were notified before they bid that their bids would be received without reference to duty; that the Government of the United States would exercise a privilege given to it to buy of foreign manufacturers less the duty; that it would remit the duty. A newspaper the other morning stated that there had been another consignment of foreign blankets to the United States.

Mr. HALE. The Senator will allow me to suggest that the steamer Aurania on her last trip brought a large number of woolen blankets purchased for the use of our Army, and the newspapers so stated at that time.

Mr. TELLER. Is it the proper thing for the United States Government to send abroad for goods it needs? If it sends abroad and would allow foreign manufacturers to compete with the American manufacturer on the basis that I would compete if I wanted to buy, it might be another case. They do not do that. They exercise a sovereign power and say, "duty off," and save 30 cents on a blanket, or $300 on a thousand blankets. It does seem to me that that is beneath the dignity of this great Government. I think it is beneath the dignity of this great Government to purchase and use as its supplies, because it may get them a few dollars cheaper, the results of convict labor, whether in Tennessee or anywhere else.

Involuntary labor has always been cheaper than voluntary labor. It always will be cheaper, because the involuntary laborer is compelled to labor whether he will or not; he is under the force that is put upon him by his task-master, and it is not fair to put honest American laborers in competition with that class of labor. I am as much opposed to that as I am to buying the product of Chinamen, whether they manufacture their goods in this country or anywhere else, who will manufacture them at prices at which American manufacturers can not manufacture, unless they destroy the prosperity of American laborers in this country. Inasmuch as this bill, which ought to have become a law, which passed both Houses of Congress, as I understand, without a dissent, is not a law by the failure of the President to sign it, I propose to see if at a subsequent session when there is more time we can not enact a law that will compel the administration—not this Administration, but all administrations that may come hereafter—to buy the honest product of honest American labor, whether it be blankets or whether it be wagons, or whatever it may be.

Mr. SAULSBURY. Will the Senator allow me to ask him whether he is not aware that some of the manufacturers of this country employ foreign labor in the production of blankets and other things?

Mr. TELLER. I am quite aware that they do.

Mr. SAULSBURY. I want to say to the Senator that I, myself, in 1877 was in a mill in the city of San Francisco, or in the neighborhood of San Francisco, that was run exclusively by Chinese laborers. I went there about the time that they were at their lunch, and I was invited by the superintendent to go in. There were about two hundred Chinamen who were manufacturing blankets exclusively, and some of the nicest looking blankets I ever saw, and I was told by the superintendent of that mill that by reason of the cheapness of their labor they could compete with the laborers of England in the manufacture of blankets. So, I suppose, it is the custom among manufacturers everywhere to employ the cheapest labor they can get.

Mr. TELLER. I do not deny that when an alien comes to this country he must be an alien for some period; he can not be a citizen at once; and when we open our doors to the aliens of every country to come here, we can not shut the factories and mills against them. The Government might exclude them from its labor; it has the power to do that; nobody else would do it. I understand that the manufacturers of this country will use the cheapest labor they can get. I understand that some of the manufacturers of this country are clamoring for free raw material. I understand that many of them are willing that the sheep industry of the West should go down if they can get free Australian wool. I understand that the manufacturers of California were willing to use Chinese labor, and from the manufacturers of California, and those alone, and the class of men who wanted to employ that labor there in manufacturing something else, came the opposition to the legislation that has finally settled the Chinese question.

I understand that quite well, but that is a very different thing from the Government engaging in this sort of business. I do not say in this

case, because I do not know, that these wagons were offered at a rate so low that the honest manufacturer of wagons in Tennessee could not furnish them; but that is the assertion made in Tennessee; that is what I want this committee to inquire about. I want to find out whether that is so or not. If so, these manufacturers and other manufacturers would take the place of all the honest manufacturers, and after awhile the only wagon-makers in this country would be the convicts. I do not know that there are quite enough convicts to supply all wagons, but they could supply a very large number undoubtedly.

This is not a matter of mere indifference to the public. This is a question that has agitated the public for many years, and I therefore have submitted this resolution.

Mr. FRYE. I want to call the Senator's attention to the fact that Austria has a general law under which the product of all convict labor shall none of it be sold at home to compete with home labor, but all of it shall be for exportation, and a large part of it is exported now to the United States of America.

Mr. TELLER. I was aware of that fact, and I meant to have mentioned it, but it escaped my mind. I understand that is a fact. While in another body recently when this question was up men were clamoring for the passage of the Mills bill, were declaiming against convict labor and denouncing everybody who employed it or bought the products of it, yet they were willing to open the doors, open our ports to the convict labor of Austria and other countries without stint and without restriction.

Mr. BATE. Mr. President, as to the point the Senator from Colorado makes in regard to the purchase of wagons by the Interior Department manufactured in Tennessee, I know nothing of the matter except that I know that there is such a firm as that named by him, and that it is a very reliable firm. I further know that they have a fine reputation all over this country. They do an immense amount of work and ship to all parts of the country. Perhaps no firm of that kind of wagon-makers has a superior reputation. I know further that the Senator is mistaken if he thinks that the sum paid for the labor performed by convicts in Tennessee is merely nominal. I know something personally about that, because I happened to be connected with the executive office of the State at the time the law was passed, and I, as chief executive, accepted the bid, the highest made for convict labor in the United States. That firm to the State of Tennessee gives annually $100,250—at any rate it is upwards of $100,000 that they pay annually—for the labor of convicts, all of which is matter of legislation in Tennessee, and was approved by the Legislature to which it was reported.

I think the Senator will find himself likewise mistaken when he investigates this matter to the bottom as to its being the lowest bid. It is a very large contract, and I have heard it spoken of casually, but I did not investigate it, knowing the character of the firm of Cherry, Morrow & Co., whom I know very well. I know they are responsible, and I furthermore know they are gentlemen of high character and correct in their dealings. They stand very high; perhaps no firm in this country stands higher. I also know most favorably the Commissioner of the Indian Bureau, who had the dealings with them referred to by the Senator, and my understanding at the time was that it was the only firm in the United States that could furnish the particular kind of wagons needed by the time they were wanted. That is to say, the wood had to be of a certain character, and had to be seasoned, which required much time to effect. A large supply of four hundred wagons of the kind wanted within the time specified could be furnished by them. At least I so understood.

I want to say further that neither of these parties has any objection in the world to going into any investigation that may be desired on the part of the Senator from Colorado or of the Senate, and I approve of anything he suggests in regard to an investigation of the case. If there is anything wrong about it, let us know it. I think it will turn out that there is no wrong, and not only that, but that it was the best bargain that could be obtained by the Secretary of the Interior or those who acted under him in getting that particular kind of goods of the amount and quality desired.

So I see no reason why it should not be investigated. If the Senator thinks there is a cat in the meal, let it out; these gentlemen will not object; but do not let us prejudge the case on the eve of an election and at the very close of the session of Congress. Let us have the proof, let us understand it; but right here, on the eve of the election, and at the close of the session nothing can be done now to contradict it. I will join hands with the Senator to have an investigation at the proper time of this matter.

These people are from my State, and I know the character of the gentlemen who made this contract on both sides, and I am persuaded that we could take the Senator as a jury himself, or as a member of the committee to act upon it, and he would indorse what has been done in this regard.

I speak of it from the fact of the character of these gentlemen and of the work that they perform. That is the only point that concerns my constituents and the only one I care to discuss.

Mr. TELLER. I am not attacking the Senator's constituents. I am not finding fault with Cherry, Morrow & Co. I have no doubt they are men of high character, as he says; at least I will take his word for it that they are men of financial responsibility and character. I have no reason to suppose they are not. I will take issue with the Senator, though, when he says that Cherry, Morrow & Co. are the only firm that can furnish that kind of wagons.

Mr. BATE. I understood at the time that they had a very large supply of seasoned timber from Indiana and other States which they have had drying there for years, and the Commissioner required that the wagons should be made of seasoned lumber; and my understanding was that they were the only firm that could deliver within the specified time the large number and the particular kind of wagons to be furnished.

Mr. TELLER. If the number is only four hundred—I have seen it stated as high as eight hundred; but even if it was eight hundred, I will guaranty, having had some observation, that there are many concerns that can furnish eight hundred wagons. They do not furnish the wagons all at once.

Mr. BATE. Pardon me. My understanding was that there was a bid. Whether the wagons were advertised for or not, I do not know.

Mr. TELLER. All such matters must be advertised.

Mr. BATE. Then I think I am justified in saying that they were advertised and that this firm was the lowest bidder for that particular kind of work in the quantity and quality required.

Mr. TELLER. They were the lowest bidders. That is what the other wagon-makers complain of. That is what the honest labor of the country complains of. The Commissioner of Indian Affairs must advertise for bids, and when he had advertised for them, of course he took the lowest bid. He need not have taken the wagons from this concern.

Mr. COCKRELL. You say he need not have taken the lowest bid?

Mr. TELLER. No, sir.

Mr. COCKRELL. Suppose this firm was the lowest bidder?

Mr. TELLER. He is not obliged to take the lowest bidder.

Mr. COCKRELL. Then to whom should he give the contract?

Mr. TELLER. He could give it to any other concern that he saw fit, that was responsible, that made a bid.

Mr. COCKRELL. And not be impeached for violating the law?

Mr. TELLER. Yes, sir.

Mr. COCKRELL. In other words, then, you hold that the laws of Congress are not binding on the Executive Departments.

Mr. TELLER. No, I do not. The laws of Congress do not require the officer to do it.

Mr. COCKRELL. Does not the law of Congress expressly require him to let the contract to the lowest bidder?

Mr. TELLER. He is to be the judge of the fitness and propriety of every bid. He has discretion, and there are a great many bids that are received which are lower than others that are not deemed proper for the Government to accept. The Government rules out a class of bidders and gives them notice, "If you bid here, although you are the lowest bidder, you can not come in." Why? "Because you are a failing bidder; because you have not kept your contracts." The officer was not necessarily compelled to accept the bid. If he was, then there is the more necessity for a change of the law.

Mr. COCKRELL. In other words, if he were compelled to do it, it was a Republican law that compelled him.

Mr. TELLER. That law was on the statute-book long before the Republican party came into power or into existence. I noticed that the Senator from Missouri and some others seem to think when any complaint is made of mal-administration anywhere, if they can just find that it was done under Republican administration, that is all right and they are justified.

Mr. BATE. Will the Senator pardon me if I ask him a question? He has been connected with the Interior Department in an official capacity. Was it the custom when he was there to allow contracts to go to any other than the lowest bidder?

Mr. TELLER. These contracts are made by a board of commissioners. A board in New York makes these contracts, a board of distinguished philanthropic gentlemen, and many and many a time they report in favor of giving contracts not to the lowest bidder, because they think it to the advantage of the Government to take some other.

Mr. BATE. Then this whole thing is justifiable according to the Senator's own suggestion, as those distinguished philanthropic gentlemen, as a board, approved it.

Mr. TELLER. I am talking about the administration of public affairs. I am saying that if that is the law, if they are compelled to do it, I want the law changed and I want some legislation. We have proposed legislation and we have passed a bill in both bodies of Congress which would have been the law but for the action of the President.

Mr. BATE. The Senator wants legislation. Does he expect to have it at the close of this session here?

Mr. TELLER. I do not, but I want it at the next. There is a bill pending now which can be so amended as to cover the whole ground. I want to know what the facts are. I want to know something about them. We have submitted this question to the Commissioner of Labor. He made a report in 1886.

Mr. BATE. What committee is this resolution directed to?

Mr. TELLER. The Committee on Indian Affairs. On the 2d of August, 1886, the following resolution was approved by the President:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Commissioner of Labor be, and he is hereby, authorized and directed, under the direction of the Secretary of the Interior, to make a full investigation as to the kind and amount of work performed in the penal institutions of the several States and Territories of the United States and the District of Columbia, as to the methods under which convicts are or may be employed, and as to all the facts pertaining to convict labor and the influence of the same upon the industries of the country, and embody the results of such investigation in his second annual report to the Secretary of the Interior: *Provided*, That the investigation hereby authorized can be carried out under the appropriations made for the expenses of the Bureau of Labor for the fiscal year ending June 30, 1887.

Under that the Commissioner of Labor made an exhaustive report which, I submit to the Senator from Tennessee, it would be well for him or any other Senator to study who believes that convict labor is the proper thing, who believes that the honest labor of this country should be put in competition with convict labor, and that the Government should be the patron of convict labor. I do not believe in it. The Commissioner reports that it is hostile and injurious, as did the commissioners of various States. Mr. Louis D. Pilsbury, the superintendent of prisons of New York, in 1879 reported against putting the free laborers of New York in competition with convict labor. I want so far as I can that the Government of the United States shall give no aid or encouragement to what is considered a degradation of American labor that is prevailing all over the Southwest and South. No such thing can be done in the North.

Mr. BATE. The Senator will permit me to say that I looked into that matter formerly to some extent, and the very system in vogue in Tennessee in regard to the management of the prisons, which involves necessarily the leasing of the convicts and the work that they do, is taken from the report of James G. Blaine, of Maine, when he was in the Legislature there as chairman of a committee.

I want to state further in regard to the convict labor question, that I am not discussing it now, but only looking to the matter brought out by the Senator which concerns my State and my constituents.

Mr. TELLER. If there is any wicked thing that has occurred in this country that the Democrats do not lay to James G. Blaine I should like to know what it is.

Mr. BATE. It seems whenever we do we hit the nail on the head every time.

Mr. TELLER. If he ever made a mistake, they are ready to follow him, but they are not ready to follow him in any good work. They do not adopt his principles of protection to American labor, and all that.

Mr. BATE. I hope they never will.

Mr. TELLER. But if he should come out in favor of convict labor they would regard it as good authority and they would consider themselves absolved from the slightest criticism if they could only cite him as a witness.

Mr. BATE. The Senator follows him in other things; but he does not propose to follow him in this, as it does not suit todo so just now on the eve of a national election.

Mr. TELLER. I was a protectionist and I knew something about these things before I ever heard of James G. Blaine. I am as old in years as he is, if not older. I do not follow him when I think he is wrong. I follow him when he is in accord with my ideas. I do not know whether he recommended convict labor or not. If the Senator means to say that he is in accord with him on that let him produce his authority. I do not know whether he is in favor of doing work of this kind with convict labor or whether he is opposed to it. I only speak for myself, and I am not condemning or criticising Tennessee. I have nothing to do with it. I am simply stating that, as a member of the legislative department of this Government, I want, if I can, to say ot the Executive Departments of the Government, "You shall not do this thing;" and if they reply that they think they are compelled by law, then they may be absolved until we pass new legislation, and I shall inquire of the Executive then, when they come back with that reply, "Why did you not put your signature to that bill passed in 1887? Why did you not, when the legislative department of the Government said they would protect the honest labor of the country against convict competition, say that you agreed with us?" When the Commissioner of Indian Affairs sets up his defense, that it was the positive enactment of law that compelled him to make this purchase, that is the answer I propose to make to him.

Mr. BATE. There is no objection to the inquiry on the part of either the Commissioner of Indian Affairs, the Secretary of the Interior, or the parties to the contract. I join with the Senator in asking for the investigation.

The PRESIDENT *pro tempore*. Under the objection interposed by the Senator from Missouri [Mr. COCKRELL], the resolution lies over until to-morrow.

Mr. COCKRELL. I withdrew the objection to enable the Senator from Colorado to make his remarks.

Mr. President, this resolution recites that:

It is reported that the Secretary of the Interior has purchased a large number of wagons for the Indian service that were manufactured with prison labor in the State of Tennessee, thus putting the honest labor of the country in competition with such prison labor.

And therefore a committee of investigation is to be appointed. There is no allegation here that this alleged action is in violation of law. There is no allegation here that there was any criminality in letting this contract. There is no allegation that the Secretary of the Interior has, directly or indirectly, transgressed or violated or evaded or in any manner avoided the operation of the laws in force. Then, why ask for a committee? What do you want to inquire into? Do you want a smelling committee to take testimony and publish it on the heels of the election? Is that the object?

Mr. TELLER. No, Mr. President, if the Senator will allow me to say a word. I have not any idea that there will be any testimony taken before the election. It has nothing to do with the election. The committee will probably not touch the question until the next session.

Mr. COCKRELL. Then why introduce it here now? Why not wait until next session? No, Mr. President, this is purely political; and as such I meet it.

I say that if the Senator wants information from the proper Department in regard to this, a resolution of inquiry addressed to the Department will be answered, and that is legitimate.

Mr. TELLER. The Senator will allow me to say that I do not need any. I assert here that they have bought these wagons, if that is what the Senator means.

Mr. COCKRELL. Do you assert that it was done in violation of law? I say that they were compelled to buy them if they followed the law.

Mr. TELLER. Then I want to change the law.

Mr. COCKRELL. Then bring in a bill to change the law. Do you want a committee to inquire whether the law should be changed or not?

Mr. TELLER. We passed a bill through the Senate and through the House, and the President pocketed it. That is why the trouble now exists. But for that pocket veto the bill would have been a law.

Mr. COCKRELL. When was that bill sent to the President?

Mr. TELLER. It passed this body on the 28th day of February, 1887. I will venture to say one hundred bills that passed later than that got his signature.

Mr. COCKRELL. That may be. When did it pass the House? When did it reach the President?

Mr. TELLER. It was a House bill, and went from here to the President.

Mr. COCKRELL. That was on the 28th of February, and Congress adjourned on the 3d of March. Any honest President who knows what he is doing is compelled when a multitude of bills are passed at the close of a session to withhold his signature from a few.

Mr. President, this is the law, and I assert that the distinguished Senator from Colorado, when he was Secretary of the Interior, never permitted one of his subordinate bureau officers to reject the lowest responsible bidder for a proper article when the law required bids to be invited. He would not have risked his reputation as an honest man and as an honest official before the people of this country by compelling one of his subordinate officers to accept a higher bid than was put in by another responsible bidder, and he knows it. These bids were made in the same way that they have been and under the same law for years and years.

This is only in keeping with what I saw some time ago in the CONGRESSIONAL RECORD. My attention was not called to it in the RECORD, but was called to it by an editorial article in the St. Louis Globe-Democrat, which, as I now recollect, was almost *verbatim* the speech of a distinguished Republican member of the House of Representatives, and it was headed "A brilliant financial exploit," and goes on to state:

In 1887 the Federal Government advertised for bids for 2,000 blankets for the Medical Department of the Army. The specifications were plain as to the texture and quality of the fabric, and the weight was to be 4 pounds. The lowest bids were one from an American manufacturer for $2.56 and one from an English maker for $2.25. There was a difference, therefore, of only 31 cents between the bids, the British figures being the price delivered in this country minus the duty. Under such circumstances, the natural inference would be that the Government would give the contract to the American manufacturer, and keep in this country the money which they would cost, so that this money would go to the benefit of domestic labor.

Now, the Senator from Colorado is trying to draw the same conclusion, that the natural inference would be that the official would disregard the lowest bid and give the contract to somebody else. No, Mr. President, no honest official could do it. My attention was called to that charge, and I addressed a letter to the Secretary of War for the facts in the case. I have his reply in my hands, and I am very glad of the opportunity to read it and spread it upon the record:

WAR DEPARTMENT, *Washington City, August* 7, 1888.

SIR: I have the honor to acknowledge the receipt of your letter of the 2d instant, inclosing a clipping from the St. Louis Globe-Democrat relative to the purchase of blankets for the Medical Department of the Army, and requesting to be furnished with a statement of the facts in the case.

In reply, I beg to state that on March 4, 1887, the Medical Department advertised for proposals for medical and hospital supplies; among the articles were 2,000 white all-wool twilled blankets. The letter of advertisement (copy herewith) informed all bidders that two prices might be given to any proposal for any item, one for delivery in bond, the other for delivery duty paid. The number of blankets purchased was 2,000. The price was $2.252 each. The only proposals received were from American bidders.

Not British bidders.

The lowest bid for a blanket of domestic manufacture, to be made of imported wool, was $2.56. The contract was awarded to C. W. Hayes, of Washington, D. C., at $2.252, in bond at the port of New York.

2,000 blankets, at $2.56, would have cost	$5,120
2,000 blankets, at $2.252, cost	4,504
Amount saved to the Government	616

The blankets supplied by Mr. Hayes were superior in quality and weight to any of the samples submitted by the other bidders, and exceeded the standard weight of 4 pounds by 2½ to 4 ounces each. They were all wool, as reported by the Army chemist after examination, while none of the other samples submitted exceeded the standard weight; and in the matter of quality some were of inferior wool or manufacture and others were not all wool. The principle acted upon by the Medical Department has been to buy the best article that could be had from the lowest bidder, this being in strict compliance with paragraph 1534, Army Regulations, which provides that "except in the rare cases where the United States may elect to exercise its reserved right to reject proposals, contracts will be awarded to the lowest responsible bona fide bidder, who, when required, produces a proper article and whose proposal therefor is not unreasonable in amount."

Mr. TELLER. Will the Senator read that sentence again, going back to where the Government reserves the right to reject?

Mr. COCKRELL. I will read it again:

This being in strict compliance with paragraph 1534, Army Regulations, which provides that "except in the rare cases where the United States may elect to exercise its reserved right to reject proposals, contracts will be awarded to the lowest responsible bona fide bidder, who, when required, produces a proper article, and whose proposal therefor is not unreasonable in amount."

That is always reserved in all proposals for contracts, not that you can reject the lowest bid and take the second or third, but you have got to reject them all and advertise again. That is what is meant by the rejection of proposals.

Section 2505, Revised Statutes of the United States, provides that articles imported for the use of the United States shall be admitted duty free if the price of the articles did not include the duty. Various articles of foreign manufacture, such as quinine, morphine, olive oil, linen sheets, and pillow-cases, as well as books, meteorological instruments, plate-glass, and Portland cement, have for many years past been purchased, in bond, from American bidders for use in the Medical Department, the Signal Corps, and for river and harbor works. Such articles as are enumerated herein were purchased in bond under the administrations of Presidents Grant, Hayes, and Arthur. Under the administration of President Grant the number of purchases of articles made abroad for the Signal Service was largely in excess of those for any corresponding period. Under President Hayes's administration there were forty permits granted for free entry for the Signal Service. Under President Arthur's administration there were sixty-one permits, and under the present Administration the number has fallen to nineteen.

The newspaper clipping is returned herewith.

Very respectfully,

WM. C. ENDICOTT,
Secretary of War.

Hon. F. M. COCKRELL,
United States Senate, 1518 R street, northwest, Washington, D. C.

This was published as a direct charge against this Administration; the intention was to make the impression that it was doing something that had never been done before, that it was violating the law, that it was giving British manufacturers the advantage in our own home market over our home manufacturers, and was purchasing British goods to the exclusion of American goods. It was published as a departure from the settled practice. That was the reason the article was published as a criticism upon the Administration. Now this record shows what? It shows that the officers of the Medical Department were only pursuing the policy which has been pursued invariably; that the same thing was done under the administration of President Grant to a greater extent, under President Hayes to a greater extent, and under President Arthur to a greater extent, and was in compliance with law and with Army regulations, and instead of being a discrimination against American manufacturers or American goods, the invitations were to American bidders, and Americans bid for furnishing the supplies.

Mr. TELLER. I should like to ask the Senator a question, now that he has got through with that.

Mr. COCKRELL. Certainly, I yield.

Mr. TELLER. I ask the Senator if he approves of this system of doing business, whether it was done under Grant or Arthur or anybody else?

Mr. COCKRELL. Yes, sir; when the Congress of the United States passes a law and requires the executive branches of this Government to purchase everything upon invitations or bids for contracts, and directs them to be let to the lowest responsible bidder, I say that the officer who acts must do as the law prescribes. He has no discretion.

Mr. TELLER. That is not the question I asked the Senator. I asked whether he favored and approved the principle of buying of foreigners when we could buy at home? I want to know if he is not in favor of so modifying the law that the Government shall buy of American manufacturers and American producers.

Mr. COCKRELL. My opinions are not in discussion, and it is not anybody's business what they are so far as this point is concerned. I say so without wishing to answer the Senator shortly; but it is a question of fact with which my opinions have nothing to do. I have not time to give my opinion on that question when I am discussing another. Here is the law which has been on the statute-books during twenty-odd years of Republican administration.

Mr. TELLER. Are you in favor of changing it?

Mr. COCKRELL. You have been in power; you were Secretary of the Interior; and where is your recommendation to change the law, sir? If you were in favor of it, when did you recommend it?

The PRESIDENT *pro tempore*. Order.

Mr. COCKRELL. The Chair will pardon me. When did the distinguished Senator from Colorado when he was Secretary of the Interior send to the Congress of the United States through his chief executive officer a recommendation to repeal this law which he and his subordinates carried out?

Mr. TELLER. I think if I had done so, the Senator would have regarded it as a very remarkable performance on my part to send in such a recommendation.

Mr. COCKRELL. It is the duty of the Department officers and the President to communicate to Congress their views in regard to necessary legislation.

Mr. TELLER. Not at all.

Mr. COCKRELL. And the Senator, when Secretary of the Interior, was derelict if he did not do it.

Mr. BATE. That is one of the just criticisms to be made, that while the Senator was in office seeing all these evils, that he did not recommend a remedy in his official capacity, and that he has not heretofore done it, but waits till the close of the session, and right upon the heels of an election, and then makes his suggestions.

Mr. TELLER. If the Senator will allow me, I have not recommended it now.

Mr. BATE. But the resolution does.

Mr. TELLER. I have not attacked the Commissioner of Indian Affairs. The Senator says there is no charge of an illegal contract. Of course not. I did not intend to make any. I simply say this thing has been done, and I want a committee to inquire whether any legislation is necessary. We know that the House of Representatives and the Senate thought it was, and if the Senator from Missouri is right it was necessary, but the President did not approve of that kind of legislation.

Mr. COCKRELL. I am perfectly astonished at one thing, that the distinguished Senator from Colorado gets up here and frankly admits that he has not even given his opinion on this question when he has been trying to incite me to give mine.

Mr. TELLER. Why, Mr. President, I said distinctly what my views were. The Senator could not have listened to me.

Mr. COCKRELL. It may have been in the Senator's first remarks, but not in the last.

Mr. TELLER. I said distinctly that I was opposed to anything of that kind, but if legislation was necessary, as both Houses seem to have thought it was at one time, I was in favor of that legislation, and I want the committee to report whether it is necessary or not.

Mr. ALLISON. Mr. President——

Mr. COCKRELL. I dislike extremely to be annoyed in the midst of my discourse, but I will yield to the Senator from Iowa.

Mr. ALLISON. I desire to interrupt the Senator about this very matter. I am gratified myself to hear the letter read from the Secretary of War. That seems to disclose the fact that the only difference between a 5-pound blanket produced in this country and one produced abroad, irrespective of duty, is 31 cents per blanket. In Iowa we have been taught for a good many years that the duty is added to the price of all domestic productions. But it seems from the letter of the Secretary of War that that is a great mistake, that our domestic producers produce blankets within 31 cents for a 5-pound blanket of the cost abroad, irrespective of duty. That is a very gratifying letter to me, and I hope the Senator will have it printed in the RECORD.

Mr. COCKRELL. I hope the distinguished Senator from Iowa will listen again and refresh his multiplication powers, and he will ascertain that he is very much mistaken. He must go back to the elementary arithmetic.

Two prices might be given to any proposal for any item, one for delivery in bond, the other for delivery duty paid. The number of blankets purchased was 2,000. The price was $2.252 each. The only proposals received were from American bidders. The lowest bid for a blanket of domestic manufacture, to be made of imported wool, was $2.56. The contract was awarded to C. W. Hayes, of Washington, D. C., at $2.252 in bond at the port of New York.

Duty free. The Government pays no duty.

Mr. ALLISON. Certainly; that is to say, the price of the domestic blanket is within 31 cents of the price of the foreign blanket. So this old idea about duties seems to be dissipated by this letter.

Mr. COCKRELL. "Dissipated!" Not at all.

Mr. ALLISON. That is the point I make.

Mr. COCKRELL. Not at all. If they had been of the same quality it would have been a different matter; but here was imported wool upon

which the home manufacturer had paid a duty, but then the home manufacture was not all wool.

Mr. ALDRICH. Did the Secretary of War require that these blankets should be made from imported wool as a part of the specifications?

Mr. COCKRELL. Congress required it.

Mr. ALLISON. Oh, no.

Mr. ALDRICH. To be made from imported wool?

Mr. COCKRELL. Congress requires any woolen blanket if it has the right kind of wool in it, by virtue of the very law they passed to have the imported wool.

Mr. ALDRICH. I should be glad to have my attention called to that law.

Mr. COCKRELL. The law imposing duties on imported wool.

Mr. ALLISON. That statement of the Secretary of War is in a little addendum there. It is perfectly absurd to suppose that he issued proposals for American blankets to be made of imported wool. That is a little *lapsus* of the clerk who wrote that letter and for the purpose of making a point. There is no such thing possible as that the Secretary of War, certainly not a Democratic Secretary, would require a domestic manufacturer of blankets to bid to furnish only blankets made of imported wool. That would be an absurdity that I would not suppose the Secretary of War would be guilty of.

Mr. ALDRICH. I guess he did not do that.

Mr. ALLISON. That can not be so.

Mr. COCKRELL. The letter speaks for itself. The letter shows exactly what the transaction was, and it shows the meanness and the desperation of a political party that undertakes to censure the action of Democratic officials for what it did for twenty-odd years itself and what was done under its laws; and when it criticises a Democratic official in that act, to make the impression that it is the first time in the history of the country that such a thing was ever done, there is where I say the censure is.

Mr. ALLISON. I am not on that point.

Mr. COCKRELL. I am on that point, and I am going to grind it in.

Mr. ALLISON. I am on the other point.

Mr. COCKRELL. That is the point I am on. Here a distinguished Republican member of the House of Representatives gets up on the floor and makes that statement to produce the impression that the Democratic party has deviated from the law and from the policies of former administrations, and has given preference to a British manufacturer over an American manufacturer, and it is in consonance with the hypocrisy of the so-called "foreign British policy" when applied to our revenue policy; it is in keeping with that.

Mr. President, the statement was made for the express purpose of deceiving the people. It was made to create the impression upon the people of the United States that this Democratic Secretary of War had done a thing that never had been done in the history of this country; done a thing which a Republican administration would have scorned to do; done a thing which ought to deter the honest American voters from voting for it; and it is spread upon the record and sent broadcast throughout the country. Now, the facts are what? That the Secretary of War pursued the law exactly. The facts are that the Republican administrations of Grant, of Hayes, and of Arthur, every one of them, did the same thing, and did it when the Secretaryship of the Interior was held by the distinguished Senator from Colorado.

Mr. TELLER. We did not buy any blankets from Great Britain.

Mr. COCKRELL. They were bought precisely in the same way under the administration of Arthur, of which the Senator was a member. There were sixty-one permits then—more than under any other administration.

Mr. TELLER. For blankets?

Mr. COCKRELL. To buy articles of foreign manufacture for the Signal Service and other services, and it makes no difference whether they were blankets or not.

Mr. TELLER. Olive-oil, and instruments not made in this country.

Mr. COCKRELL. Not at all; nothing of that kind. They were precisely the articles manufactured here, and now the Senator comes in when he knows his resolution can not pass——

Mr. TELLER. I do not see why it should not. The Senator may possibly know.

Mr. COCKRELL. Simply because I say to you frankly that I do not propose that you shall have any smelling committees to put forth just what they please before the election. You can call upon the Secretary for any information in regard to this matter, and he will give it to you. I am speaking plainly now. There is no deception about the matter. That is all of it. We have no objection to the investigation, none in the world, but you can not make it now. You can not have your committee sitting here between now and the election to put out any kind of report it chooses. You can call on the Secretary of the Interior for information, and he will furnish it immediately; but I will not consent to this kind of a process. It is not fair nor honest nor just.

This is an attempt to censure the Secretary of the Interior and the administration of the Indian Office, for what? For precisely what has been done, and for precisely what the law requires and what was done under the administration of the distinguished Senator from Colorado when he was Secretary of the Interior, and what was done under all his Republican predecessors when they were honest, in every instance. They had the law before them. They were compelled to take the lowest responsible bidder, and they had no right to inquire whether these wagons were made in Ohio, in Pennsylvania, in Missouri, in Kansas, or in any other State. Where they were manufactured had nothing to do with the wagons themselves, but their character and fitness for the work desired was the point. And why does the Senator introduce this resolution? It is to make an impression upon the voters of the United States that the Democratic administration of the Interior Department has been acting against American labor and in favor of convict labor. It is not fair, it is not just, it is not right.

Mr. TELLER. Mr. President, the Senator from Missouri seems to be offended because I did not attack the Commissioner of Indian Affairs or the Secretary of the Interior. That is rather remarkable. I suppose if I had done so, he might have got up more indignation than he has now over this thing. I did not pretend to attack the Secretary of the Interior. I said this was what was being done. I said I was opposed to it, that I wanted the committee to see if it could be stopped either under existing law or by other laws to be enacted. The Senator says it can not be stopped under existing law. So much the worse, then, for the Executive of this country who declined to sign the bill sent to him from the legislative branch of the Government without a dissent, everybody being in favor of it.

The Senator from Missouri will not stand in his place and say that he is in favor of the Government buying convict-labor products in this country to-day. Of course I understand he is in favor of our buying the products of foreign convict labor from Austria, because he can not be otherwise if he is in favor of free goods, which he is whenever the necessities of the Government do not compel it to have revenue from duties.

Mr. President, the Senator says that this thing has been done, and was done under my administration of the Interior Department. The Senator does not know as much about the administration of the Interior Department as I do, especially while I had charge of it. I know we never bought any wagons made by convict labor. I know, what is more, that I never would have bought them. He knows and everybody knows that there is a discretion in every public officer that he may exercise, and he is only amenable when he abuses the exercise of that power. The very notice that the Senator reads here shows that the officials may reject the proposals made, and it is not, as he says, necessary to reject them all. They may reject any man's proposal if they think he will not furnish a good article, or that he will not furnish it according to the contract. There is a list in every Department of the Government of what are called "failing bidders," who are prohibited from bidding; that is to say, the Departments, when they come to their bids, throw them out.

The Senator has seen fit to read a very remarkable letter of the Secretary of War, which I am very glad he has submitted.

Mr. DOLPH. I ask the Senator before reading the letter to yield to me a moment to see if I understand this matter of the purchase of foreign blankets.

The PRESIDENT *pro tempore*. Does the Senator from Colorado yield?

Mr. TELLER. Certainly.

Mr. DOLPH. It is asserted here that there is a law which requires supplies for the Army and other Departments to be purchased by advertisement and that the contract must be let to the lowest bidder. I can not believe that there is any law which requires the acceptance of the lowest bid from a foreigner of goods delivered in bond if the price of the goods delivered in bond is less than the price of the home manufactured article. Take this instance. I understand that the blankets which were furnished were 5-pound blankets. The price of the foreign article delivered in bond was $2.25. The lowest bid for blankets of American manufacture, as I understand, was $2.56; but we are told that the duty upon 5-pound blankets would be 12 cents a pound or 60 cents, with an addition of 35 per cent. ad valorem, which would make a total duty of $1.37, which, added to $2.25, would make the actual cost of the English blanket $3.62, as against the cost of a blanket of American manufacture $2.56, or a difference of $1.06, or a little over a dollar's difference in the price of the 5-pound blankets.

If there is a law that requires the acceptance of a bid for a foreign article delivered in bond without payment of duty to be received, if it is less than the price of the domestic article, I shall be very glad to learn it. I can not believe there is any such law in existence. I shall be glad to be informed on a subject of which I am ignorant, and I shall be sorry to learn that we have such a law on the statute-book by which an executive officer would be authorized to purchase blankets and to actually pay—because it amounts to that—a dollar apiece more for the foreign than for the domestic article. If I understand this matter, that is this exact case, because if the blankets had paid the duty every blanket would have paid to the Government $1.37, to be added to the price.

Mr. TELLER. The Senator from Missouri, as I said a little while

ago, regards himself as justified and the Administration as justified for anything it does if he can find that it has ever been done under a Republican administration. The trouble with this Administration and the Democratic party is that they have only adopted our vices. Whenever we have been doing things that we ought not to have done they follow quickly in our wake to do the same thing, and if anybody criticises the action they say "You did the same thing." When we attempt to make any reform in these things we shall be met with Democratic opposition upon the theory that it was done under Republican administration. That is not the question. The question is whether it is right. When I ask the Senator whether he approves it, he says it is of no consequence what his opinion is. That is not the question. He is justifying the Administration, and says they did right.

This letter is a remarkable letter, and I agree with the Senator from Iowa that it is a valuable addition to the literature of this age on the tariff question. It is remarkable in several respects. It is an admission that the charge made was true. It is remarkable because it attempts to justify the transaction on the ground that somebody else had done the same thing. And yet it does not say that any Republican administration ever bought a blanket of this character. Olive oil and some other things were bought for the Signal Service, perhaps some instruments, something, nobody knows what. The Senator says that the Department got a superior article at a gain of 31 cents per blanket. When the Departments advertise for an article they specify what that article shall be. If they want an all-wool article it must be all wool, and if a man bid for an all-wool article and did not send the right sample, all wool, of course his bid was not accepted. Now let us see what this says:

In reply I beg to state that on March 4, 1887, the Medical Department advertised for proposals for medical and hospital supplies. Among the articles were two thousand white all-wool twilled blankets. The letter of advertisement (copy herewith)—

I wish the Senator, if he has that letter, would produce that—

informed all bidders that two prices might be given to any proposal for any item, one for delivery in bond, the other for delivery duty paid. The number of blankets purchased was two thousand. The price was $2,252 each. The only proposals received were from American bidders.

The Senator emphasized that. He thinks he has escaped the charge that we are buying foreign products because an American go-between, a middle-man, was making a profit, was bringing these blankets in and selling them to the Government, an American importer, who of course in the nature of things agrees with the Senator from Missouri in his views of the political economy of the country which would justify the buying of everything from abroad and making nothing at home. That has nothing to do with it. The question is not who sold them to the Government, but who made them? Were they of American or of foreign manufacture? It is admitted here that they were foreign blankets.

The lowest bid for a blanket of domestic manufacture, to be made of imported wool, was $2.56.

Other American manufacturers might have bid and not suggested in their bid that the blanket was to be of imported wool. This foreign Administration could not get along unless they had imported blankets or blankets made of imported wool. The good old-fashioned wool of American sheep would not do. The Senator undertook to say that we could not make any blankets out of American wool, and that if they were suitable blankets they had to be made of imported wool. Does not the Senator know that we have produced the finest blankets ever made in the world on the American continent? There has been no blanket made under the light of the sun that is superior to blankets which have been made on the American continent, and I think they were made of American wool. Does not the Senator know that there has been no finer wool raised anywhere than we have raised in this country? The high-bred sheep of this country have sold for more money in America than any other place in the world. If the Senator does not know it, he ought to look up the sheep industry and he would find it out.

Evidently the Senator has a copy of the advertisement. If he will produce it, we shall find out whether this was a call for blankets made of imported wool or not. I do not know, I can hardly believe that we have reached that state of affairs where the Secretary of War would advertise for blankets that must be made of imported wool. I know that they have gone very far in those things, but that is going further than I think any Secretary of War would ever do, or anybody else. I do not think the Senator from Missouri would justify that.

The contract was awarded to C. W. Hayes, of Washington, D. C., at $2.252 in bond at the port of New York.

2,000 blankets at $2.56 would have cost	$5,120
2,000 blankets at $2.252	4,504
Amount saved to the Government	616

I am glad of the correction. It has gone all over the country that the amount was $16 less—$600 instead of $616.

The blankets supplied by Mr. Hayes were superior in quality and weight to any of the samples submitted by the other bidders—

Of course they were. They were made of imported wool, and made abroad, and of course they were better because they were made abroad. I know a great many gentlemen who would not buy an article of American manufacture for their clothes. They think if they are not made in Great Britain they are not good, and half the time they are wearing American cloth under the supposition that they are wearing English goods. Not long ago a gentleman in New York wanted to fit his house with carpets, and he went up to one of the distinguished carpet manufacturers of the country and looked over his stock, and said that there was nothing there at all that would suit him, that he must have an English carpet. Then he went to another establishment where he purchased what he supposed to be an English carpet, but it was really an American carpet, and he was entirely content to pay 50 per cent. more for what he supposed was an English carpet. There is a good deal of that sort of feeling in this country, but I did not know that it had got into the War Department to the extent that it seems to have got there by this letter. But let me read on—

and exceeded the standard weight of 4 pounds by 2½ to 4 ounces each.

There was a fraud on every American bidder. What right had they to give any preference because the blanket weighed more? They said: "Bring us a blanket of this kind." If they wanted 4 ounces more, or half a pound more, it was their place to ask for it. The American bidder had a right to suppose that he was to bid for the blankets they had advertised for, and no others. However, we have not got the blankets, and, seeing this thing through British eyes, it may be that the quality and the weight are both superior because of the origin of the blankets.

They were all wool, as reported by the army chemist after examination, while none of the other samples submitted exceeded the standard weight.

Of course not. Why should they? Naturally they would not, and naturally men would bid for the quality of blankets that were described in the advertisement calling for bids. If the Department wanted a 4-pound blanket men would bid for a 4-pound blanket. If they wanted a 2½-pound blanket they would bid for a 2½-pound blanket.

And in the matter of quality some were of inferior wool or manufacture and others were not all wool.

If they were not all wool they did not come within the provisions of the advertisement, and of course they would be rejected.

The principle acted upon by the Medical Department has been to buy the best article that could be had from the lowest bidder, this being in strict compliance with paragraph 1534, Army Regulations, which provides that "except in rare cases where the United States may elect to exercise its reserved right to reject proposals."

So that they do reject proposals. The Senator says—and I know he has the power to do it—that this resolution shall not pass, that there shall be no smelling committee, there shall be no secrets of this Administration exposed on the eve of the election which might exhibit the fraudulent pretenses of the Senator's political associates when they say that they are in favor of the protection of American labor, and that their system of economy will not injure American labor. It is possible that an examination might disclose something. The Senator says it will be harmless after election; we must wait until after election. If the Senator's theory is correct, that there is a statute which makes it imperative on the Administration thus to buy the product of convict labor, then the greater guilt rests upon him who pocketed a bill that we had passed with entire unanimity to prevent that very thing.

The PRESIDING OFFICER (Mr. FRYE in the chair). The consideration of the resolution is objected to by the Senator from Missouri, and it goes over under the rule.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the House had passed the following joint resolutions, in which it requested the concurrence of the Senate:

Joint resolution (H. Res. 231) authorizing the Secretary of the Senate and Clerk of the House of Representatives to pay to the officers and employés of the Senate and House of Representatives borne on the annual rolls their respective salaries for the month of October on the 20th day of said month; and

Joint resolution (H. Res. 232) making appropriations to enable the Secretary of the Senate and Clerk of the House of Representatives to pay to session employés of the Senate and House for the full month of October.

The message also announced that the House had non-concurred in the amendments of the Senate to the bill (H. R. 7843) granting to Citrous Water Company right of way across Papago Indian reservation in Maricopa County, Arizona; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. HUDD, Mr. PEEL, and Mr. NELSON the managers at the conference on the part of the House.

THE REVENUE LAWS.

Mr. ALDRICH. Mr. President, in the report of his speech made day before yesterday, the Senator from Missouri [Mr. COCKRELL] incorporated a letter from the Commissioner of Internal Revenue, in

which the Commissioner said he inclosed a letter which had been addressed to Hon. JAMES B. BECK, on the subject of methylation of spirits. The inclosure was not printed with the Commissioner's letter, and I should be very glad, if the Senator has a copy of it, if he will have it inserted.

Mr. COCKRELL. I have it at my room. I have not got it here. I will bring it in the morning. There were five or six inclosures which I never read in full, and, as the Senator will remember, I had finished my speech before I discovered that I had not read this letter, and simply handed it in. The others I will have here in the morning. I forgot to give to the Reporter the other letters. There were quite a number of them. I will bring them and have them put in the RECORD in the morning. I do not remember what he says about the letter spoken of, but there were, I think, three or four other communications. I will let the Senator see them in the morning just as if they were printed. I regret that I did not think of it. I see I have not got them here, and I remember now that there were a number of them.

I move that we take a recess for fifteen minutes. There may be some communications from the President, and I should like to have a short recess.

Mr. ALDRICH. Make it half an hour.

Mr. COCKRELL. Thirty minutes, then.

The PRESIDING OFFICER. The Senator from Missouri moves that the Senate take a recess for thirty minutes.

The motion was agreed to, and the Senate thereupon took a recess for thirty minutes. At the expiration of the recess the Senate reassembled, at 2 o'clock and 50 minutes p. m.

REPORT OF PRODUCTION OF PRECIOUS METALS.

Mr. ALLISON. I should like to take this occasion, if there is nothing pressing before the Senate, to call attention to two or three matters for the convenience of the Senate and to ask the consideration of several House resolutions in regard to printing.

Mr. ALDRICH. Are they resolutions reported from the Committee on Printing?

Mr. ALLISON. I will say to the Senator from Rhode Island that these are not reports from the committee. They are resolutions which have been handed to me by the clerk of the Committee on Printing. I ask the Senate to consider the concurrent resolution of the House of Representatives for printing the report of the Director of the Mint on the production of the precious metals of the United States for the year 1887.

The PRESIDENT *pro tempore*. If there be no objection, the Committee on Printing will be discharged from the further consideration of the resolution. The resolution will be read.

The resolution was read, as follows:

Resolved by the House of Representatives (the Senate concurring), That the report of the Director of the Mint on the production of the precious metals in the United States for the year 1887 be printed, and that 9,000 extra copies be printed, 4,000 copies for the use of the House of Representatives, 2,000 copies for the use of the Senate, and 3,000 copies for the use of the Director of the Mint.

The PRESIDENT *pro tempore*. The Senator from Iowa asks unanimous consent for the present consideration of the resolution just read.

The Senate, by unanimous consent, proceeded to consider the resolution.

Mr. ALLISON. The estimate of the cost of this printing is $2,484.

The resolution was agreed to.

REPORTS OF COMMISSIONER OF LABOR.

Mr. ALLISON. I ask that the Committee on Printing be discharged from the further consideration of the concurrent resolution of the House of Representatives to print copies of the first and second annual reports of the Commissioner of Labor, with a view to its present consideration.

The PRESIDENT *pro tempore*. The Committee on Printing will be discharged from the further consideration of the resolution, if there be no objection.

The resolution was considered by unanimous consent, and agreed to, as follows:

Resolved by the House of Representatives (the Senate concurring), That there be printed 5,000 copies each, in cloth binding, of the first and second annual reports of the Commissioner of Labor for the use of the Department of Labor.

AGRICULTURAL REPORT FOR 1888.

Mr. ALLISON. I ask that the Committee on Printing be discharged from the further consideration of the joint resolution (H. Res. 229) to print the Agricultural Report for 1888.

The PRESIDENT *pro tempore*. If there be no objection, the Committee on Printing will be discharged from the further consideration of the joint resolution. The Chair hears none.

Mr. ALLISON. I ask for the present consideration of the joint resolution.

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution (H. Res. 229) to print the Agricultural Report for 1888, which was read, as follows:

Resolved, etc., That there be printed 400,000 copies of the annual report of the Commissioner of Agriculture for the year 1888: 70,000 copies for the use of the members of the Senate, 300,000 copies for the use of the members of the House of Representatives, and 30,000 copies for the use of the Department of Agriculture, the illustrations for the same to be executed under the supervision of the Public Printer, in accordance with directions of the Joint Committee on Printing, said illustrations to be subject to the approval of the Commissioner of Agriculture; and the copy for the illustrations of said report shall be placed in the hands of the Public Printer not later than the 20th day of December, 1888, and the copy of the text not later than the 1st day of February, 1889.

Mr. ALLISON. I believe the division as between the Senate and the House of Representatives is the usual division. The House are to receive 300,000 copies and the Senate 70,000 copies, and 30,000 copies will be for the use of the Department of Agriculture. I ask the Senator from Missouri if that is not the usual division.

Mr. COCKRELL. I wanted to make an inquiry in regard to that matter. We have a rule as to documents which I think we have pretty well established, that the Senate shall have in the proportion of one-third and the House two-thirds, but, as I understand, it has been the rule of the Committee on Printing, and also a rule acquiesced in by the Senate for some years, to let the House members have a larger proportion of the Agricultural Report than of the other documents. I understand from the clerk of the Committee on Printing that this is the usual ratio. If it is, I have no objection to it.

Mr. TELLER. I think that gives us the usual ratio of about eight hundred that we have had, or something in that neighborhood; but it has always seemed to me that it was folly to go to the great expense of publishing a large book like this and then limiting us to so small a number of copies. When the book is once published the few thousand additional copies that the Senate and House would get more would be a mere nothing. I have never been able to get enough copies of the Agricultural Reports to meet the demand in my State, which is not considered an agricultural State.

Mr. ALLISON. I think it might be well to allow the joint resolution to pass. This volume will not be printed until after we convene again, and if we desire additional copies they can be ordered then.

Mr. TELLER. I do not desire, of course, to interfere with the passage of the joint resolution, but it seems to me that we ought to take steps to give the people more of these volumes. I get 800 copies and attempt with my colleague to go through the farmers in the State, and we can not do it. One man gets a copy and another man does not get it. There should be enough of these volumes to give every farmer who would make practical use of it a copy. There should be no distinction in giving a few men here and a few men there, but there should be a general distribution, and the additional cost would be merely nominal. I have felt myself, from time to time, compelled to buy copies, as I know others have done when they could be bought at second-hand.

Mr. PADDOCK. I ask that the joint resolution be again read.

The PRESIDENT *pro tempore*. At the request of the Senator from Nebraska the joint resolution will be again read.

The joint resolution was again read.

Mr. PADDOCK. I should like to inquire of the Senator from Iowa if this is the usual number that has been allowed in times past?

Mr. ALLISON. This is the usual number, I believe. I am not quite sure as to the exact proportion, but the clerk of the Committee on Printing states that it is about the proportion usually given as between the two Houses.

Mr. PADDOCK. If the joint resolution does not give the usual number, I should like to have it amended so as to print at all events as many copies as it has been the custom of Congress to print. In fact, I think the number ought to be increased. I indorse fully all that the Senator from Colorado has said in respect to making the aggregate number of these reports larger. I myself have been compelled to make purchases largely during the past session of these reports in order to supply the demand of my constituents, who are almost exclusively an agricultural people. I think if the number named in the joint resolution were even doubled we should then need more.

Mr. TELLER. It will give about 900 copies apiece. That would give to the State of Colorado a little over 2,700 copies, which is totally inadequate if you attempt at all to supply the live farmers of the country.

Mr. COCKRELL. I rather agree with the Senator from Iowa that we had better pass this joint resolution. It will be a short time until the meeting of the next session, and then we can pass a resolution for the printing of additional copies. My impression is that this is about the number that we have printed for the last three or four years.

Mr. REAGAN. Each Senator was given about 800 copies last year, and this gives 900 copies.

Mr. PADDOCK. I have just been informed by the clerk of the committee that this is the usual number, and I withdraw the objection, hoping that hereafter Congress will make provision to increase that number.

Mr. ALLISON. I will say to the Senator from Nebraska that next winter a resolution can be introduced to print additional copies. This volume will not be printed until after the convening of Congress in December.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

WASHINGTON AQUEDUCT TUNNEL.

The PRESIDENT *pro tempore*. Under the concurrent resolution of

October 9, authorizing the appointment of a joint committee to investigate work upon the Washington Aqueduct tunnel, the President *pro tempore* designates as members on the part of the Senate the Senator from Vermont [Mr. EDMUNDS], the Senator from Massachusetts [Mr. DAWES], and the Senator from West Virginia [Mr. FAULKNER].

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had agreed to the concurrent resolution of the Senate providing for the adjournment of the two Houses of Congress without day on the 20th instant.

ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair-shop, and for other purposes; and it was thereupon signed by the President *pro tempore*.

THE REVENUE LAWS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. ALDRICH. Mr. President, among the criticisms which have been made upon the bill reported from the Finance Committee, there are two which, on account of the source from which they emanate, rather than their gross inaccuracy, seem to the committee to be worthy of attention.

The first of these is what purports to be an official statement and estimate of the effect of the Senate substitute, made by the Bureau of Statistics of the Treasury Department and signed by the Chief of that bureau. This table was submitted to the Senate by the Senator from Missouri [Mr. VEST], now absent, and is found on printed pages 10448 and 10449 of the RECORD. It purports to show in detail what the effect of the Senate bill would be upon importations under the different tariff schedules, and the different items in the schedules, if that bill should become a law. This official statement further illustrates the absurdity of attempting to prove by elaborate statements of average ad valorem rates and percentages the character or effects of a tariff bill.

For instance, the promoters of the House bill claim great credit for having put sawed lumber and other articles in the lumber schedule upon the free-list. Yet it appears from an examination of this statement of the Bureau of Statistics that the average rate of duty imposed by the House bill upon articles in the lumber schedule (Schedule D) is 29.32 per cent., while the average rate imposed by the Senate substitute is 18.88 per cent. In other words, the House bill levies an average ad valorem duty on lumber according to this table greater by 55 per cent. than the Senate substitute, and yet a large proportion of the articles in that schedule are placed on the free-list by the House bill.

Mr. COCKRELL. I did not catch the Senator's statement about the first item, if it will not interrupt him to say so.

Mr. ALDRICH. I said that the House bill, according to this statement, imposes an average rate of duty upon all articles in the lumber schedule of 29.32 per cent., while the Senate bill imposes but 18.88 per cent., and therefore, to follow the reasoning adopted by the Senator from Missouri [Mr. VEST] in relation to the remaining portion of the table, the House bill imposes 55 per cent. higher rates upon lumber than the Senate bill.

Mr. FRYE. As a matter of course this statement of the Treasury Department is an entire mistake as to that item?

Mr. ALDRICH. It is not a mistake. The figures are accurate, I think. I have had the figures compared, but I think they are accurate. I only mention it to show the utter worthlessness and absurdity of attempting to show the character either of this bill or the House bill by a system of ad valorem rates and percentages.

Mr. ALLISON. That is to say, if a man were to pick up this table and look at it and consider it a verification he would say that the House bill levies a duty on lumber 55 per cent. higher than the Senate bill.

Mr. ALDRICH. Yes; 55 per cent., and he would have this official statement of the Bureau of Statistics of the Treasury Department to prove it.

Mr. ALLISON. On the stump.

Mr. FRYE. What I meant to say was that it is an entire mistake. The House bill has not increased the duty, nor has the Senate bill increased it.

Mr. ALDRICH. The deductions which the gentlemen on the other side of the Chamber seek to make from this table would lead to a great mistake in this case, although the statement itself is not incorrect.

The Senator from Missouri in submitting this table to the Senate stated that it disclosed the fact that the Senate bill had very greatly increased the duty upon certain necessaries of life. Among these he cited woolen and cotton cloths, the rates upon which he claimed were largely increased.

The fact is, as was stated by the Senator from Iowa [Mr. ALLISON] in his opening speech upon the bill, that the rates of duty imposed upon the lower grades of woolen cloths and cotton cloths are not increased by the Senate bill. Upon all the lower grades of woolen cloths the rates fixed by the bill are 35 cents a pound and 35 per cent. ad valorem, which is exactly the same rate as that imposed on the same class by existing law.

On the other hand upon all the grades or classes of cotton cloths which could by any possibility be called necessaries of life—those which are used by the great masses of our people—the bill instead of increasing the rates of duties decreases them. Yet this official statement is brought here for the purpose of trying to prove to the people of this country that we have largely increased the duties upon all cotton and woolen cloths.

Mr. REAGAN. Will the Senator allow me to ask him a question?

Mr. ALDRICH. Certainly.

Mr. REAGAN. I ask if the Senator from Ohio [Mr. SHERMAN] did not state in his opening address on the subject of the Senate bill that it did increase the duty on woolens to some extent?

Mr. ALDRICH. Yes; on the higher grades of woolens, and the Senator from Iowa also made the same statement. It is also true that upon the higher grades of cotton cloths and of fine cotton yarns the bill increases the rates. There never has been any attempt at concealment on the part of the committee of the fact that it proposes an increase of rates on these goods, and in every other case where an American industry required additional protection, or where the working people engaged in any pursuit were suffering from inadequate rates. That has been the avowed purpose of the framers and promoters of this bill.

The criticism which Senators make is not that these duties are greater than different industries require, but they content themselves with the general statement that we have largely increased the duties upon the necessaries of life.

This statement is misleading and inaccurate in its general features and in its details. I am not surprised that partisan newspapers or members of Congress should assail the Senate bill and misrepresent its provisions; but I am surprised that the Bureau of Statistics, which, above everything, should be fair and non-partisan, and to whom we have always looked for mathematical accuracy, should put forth an official paper which is not only grossly inaccurate in its mathematics, but is entirely unfair and misleading in the application of the information in its possession in a matter of great public importance.

The first item in the table before me to which I shall call the attention of the Senate is woolen cloths. The rate fixed by existing law upon woolen cloths is upon all cloths below 80 cents a pound 35 cents a pound and 35 per cent. ad valorem, and upon all cloths exceeding 80 cents a pound in value 35 cents a pound and 40 per cent. ad valorem. The rates fixed by the Senate substitute are upon woolen cloths valued at below 40 cents a pound 35 cents a pound and 35 per cent. ad valorem, the same it will be borne in mind as upon the lower class under existing law; on those valued between 40 and 60 cents a pound 35 cents a pound and 40 per cent. ad valorem, and exceeding 60 cents a pound 40 cents a pound and 40 per cent. ad valorem.

It will be observed that in order to make an accurate comparison between results to be effected by the rates fixed by the Senate substitute and existing law, based upon the importations of 1887, it would be necessary to ascertain how many pounds of woolen cloths valued at below 40 cents a pound were imported in 1887 and what amount of duty was collected upon them. This would also be true of the grade between 40 and 60 and above 60.

When the statement which I now have under consideration was first brought to my attention in the columns of a Democratic newspaper several days before it was submitted to the Senate, I immediately addressed a note to the Chief of the Bureau of Statistics and asked him to furnish me the data upon which this estimated effect of the Senate substitute upon woolen cloths was based. Late on Monday night I received by special messenger a statement from him, in which he says that as all the woolen cloths imported valued at less than 80 cents per pound averaged 63.8 cents per pound in value, therefore he had concluded that all woolen cloths were valued above 60 cents a pound, and had computed them all at the highest rate of duty assessed by the Senate bill.

Some Senator upon the other side may ask, are there any woolen cloths imported that are valued below 60 cents a pound? I will answer this by reading from a statement made by the Commissioner of Labor in his first annual report to Congress, which I venture to say has appeared and reappeared in many scores of Democratic speeches in this body and in the other branch, as to the effect of a tariff upon woolen goods. In this statement he details twenty-eight different grades of woolen cloths, valued at less than 80 cents per pound, to illustrate the effect of the act of 1883. Of these twenty-eight, twenty-seven are below 60 cents a pound, thirteen are below 40 cents a pound, fourteen between 40 and 60 cents, and one from 60 to 80 cents.

This table, I say, has been in constant use in both Houses to illustrate the effect of the act of 1883, and it is certainly fair to assume that a considerable proportion of the goods imported in 1887 which were valued at less than 80 cents a pound were invoiced at less than 60 cents per pound. The Chief of the Bureau of Statistics, instead of saying frankly to the Senator from Missouri and the Senate I have no data—as he had none and could have had none—upon which to base an estimate of the effect of the Senate bill upon woolen cloths, computes all importation at the highest rate of duty and forwards this inaccurate

statement without an explanation, to be made the basis of the charge that we have largely increased the duty on woolen cloths.

This is also true as to rates on woolen shawls, which are included in the same clause in the present law and in the Senate substitute. In a speech recently made in Wall street, in the city of New York, the Speaker of the House of Representatives was reported by the New York World of the next day to have said:

The tariff taxes upon the cheaper grades of shawls and woolen cloths are increased to more than 100 per cent., and the duties on knit goods, the underwear of the people, by a change of classification, are increased to more than 200 per cent. I know these may seem to be extravagant figures, but I am prepared to substantiate the truth of every one of them.

I do not mean to impeach the intelligence of the Speaker of the House of Representatives, but if he had read the Senate substitute at all or had any knowledge of its provisions he would have known that it not only does not increase the duty on the lower grades of woolen cloths and woolen shawls to 100 per cent., but that it does not increase these rates at all; that they remain in the Senate bill word for word, letter for letter as in the existing law.

Let us also examine for a moment Mr. CARLISLE'S statement in regard to knit goods, which he says are increased by the Senate substitute to 250 per cent., and compare his figures with those which are furnished by the Bureau of Statistics. According to the report of the bureau the duty on knit goods in 1887 was 62.80 per cent., and by the Senate bill it would be 71.90 per cent.

Mr. COCKRELL. What is the Senator on now?

Mr. ALDRICH. On knit goods. I am showing that by this Bureau of Statistics table which I have before me the duty under the present law is 62.80 per cent., while under the Senate substitute it would be 71.90 per cent., instead of 250 per cent., as stated by the Speaker of the House of Representatives.

Before leaving Mr. CARLISLE'S speech, I should say that by the Bureau of Statistics table the duty on woolen shawls in 1887, under the existing law, was 63.50 per cent., while their estimate of duty under the Senate substitute would be 68.27 per cent. This same Bureau of Statistics, by another table, shows that the duty on woolen shawls in 1887 was 88.44 per cent., and 65.41 per cent. as against an estimated duty under Senate bill of 68.27 per cent.; so that instead of increasing the duty according to Mr. CARLISLE to the extent of 100 per cent. upon the lower grades of woolen shawls the evidence of the Bureau of Statistics, whatever it may now be worth, shows that we have reduced the duty from 88.44 per cent. to 68.27 per cent.

This bureau table estimates that the Senate bill increases the rate of duty on yarns 64.71 per cent. above existing rates. By another table, prepared by the Treasury Department, which was submitted to the Senate on yesterday by the same Senator from Missouri who submitted the statement now under consideration, and which was intended to show the effect of the Senate bill upon all wool and woolens, the rate of duty on woolen and worsted yarns was stated at 102.38 per cent., while the table which I have before me estimates that the duty would be 113.83 per cent. The second table shows that the amount of duty collected under the Senate bill would be $1,789,000, while the first table shows $1,989,000.

Mr. COCKRELL. I do not see where the Senator gets his figures.

Mr. ALDRICH. If the Senator from Missouri will turn to page 10500 of the RECORD he will find under the first classification of yarns——

Mr. COCKRELL. Will the Senator just bear with me a moment? I am at it.

Mr. ALDRICH. He will find in the second table submitted by his colleague to the Senate as to the effect of the Senate substitute, that there would be collected upon the yarns $1,789,236; and if he looks at the first table submitted by him he will find that the amount is given one million nine hundred and some odd thousand dollars, or a difference of $200,000 between the two statements. Then if he will look at the amount which it is estimated would be collected from dress goods in the second statement, on page 10501, he will find the estimate to be $13,893,028.20, while under the first table the estimate is $13,419,025.95, or a difference of $474,000 in the single item between these statements submitted on successive days by the Senator from Missouri.

I understood the Senator when he presented these tables to say that they both came from the Treasury Department, and I infer that they were both prepared at the Bureau of Statistics.

It is true, as was stated by both the Senator from Ohio [Mr. SHERMAN] and the Senator from Iowa [Mr. ALLISON], that upon the higher grades of woolen goods and upon worsted goods of all kinds we have proposed an increase of rates by the Senate bill. The committee had three reasons for making such an increase. The first was the inadequate duties which were imposed in 1883 upon many classes of woolen and worsted goods. That is evidenced, as the committee show in their report, by the large and rapidly increasing importations from year to year of woolen and worsted manufactures.

The second was the anomalous duties which, under the decision of the Treasury Department, are now levied upon worsted goods. The Secretary of the Treasury, in his last annual report, calls the attention of Congress to this inequality, and says:

There is much reason to believe that the manufacture of worsted cloths must soon cease in this country, unless the tariff law in this regard is amended.

I shall not stop to read the whole of his statement, but it is conclusive upon this point.

Under existing law worsted goods, and the yarns imported in 1887 were largely worsted yarns, pay 10, 12, 18, and 24 cents a pound compensatory specific duty, while scoured wool from which the yarns and cloth are made pays 30 cents a pound specific duty. Based upon the estimate that it takes 1 pound and one-third of scoured wool to make a pound of worsted yarn, the specific duty upon the wool is 40 cents a pound, while the duty upon the yarn cloth is only 10, 12, 18, and 24 cents a pound as I have stated.

This is a direct discrimination against the worsted manufacturers of the country, and it is not surprising that the Secretary of the Treasury should call the attention of Congress to it. But by providing a remedy for the inequality and by fixing the same rates of duty upon woolen and worsted cloths and woolen and worsted yarns we are unjustly subjected to the charge that we have increased duties 100 per cent. Instead of manfully saying that the increase is right, and that it is necessary for the preservation of important industries, the Senator from Missouri says "You have increased the duties upon necessaries of life more than 100 per cent. by this provision of the bill."

The Committee on Finance in the Senate substitute have divided cotton cloths into five classes for the purpose of assessing duties; the first class includes cloths containing not exceeding 50 threads to the square inch, the second containing above 50 and not exceeding 100, the third above 100 and not exceeding 150, the fourth above 150 and not exceeding 200, and the fifth exceeding 200.

Upon the first and second classes the committee recommend a reduction of one-half cent per yard upon those goods upon which a specific duty is levied, and on those upon which an ad valorem rate is assessed a reduction from 40 to 35 per cent. ad valorem.

On the third class, between 100 and 150 threads to the square inch, the duties remain the same in the Senate substitute as in existing law. In the higher classes, the fourth and fifth, we have increased the rate upon those which bore a specific rate half a cent a yard, and we have increased the ad valorem rate from 40 to 45 per cent. ad valorem.

It will be observed that under the existing law all cotton cloths not exceeding two hundred threads to the square inch and above a certain limit in value pay an ad valorem rate of 40 per cent. The committee propose that two-fifths of these shall pay 35 per cent., one-fifth 40 per cent., and one-fifth 45 per cent. By the statement under consideration all classes are computed at 45 per cent.

The cotton cloths, between one hundred and two hundred threads to the square inch, upon which a specific rate is now levied, pay a duty respectively of 3, 4, and 5 cents a square yard. Under the Senate substitute one half of these, say from one hundred to one hundred and fifty threads, pay the same rate. The other half, from one hundred and fifty to two hundred, pay an additional half cent a yard. In this Treasury estimate they are all computed at the highest rate.

The allowance is made for the reductions in duties which are effected, but additions are always made in case of an increase. The effect of the table, therefore, if it had any, would be to convince the people of this country that we had increased the duty upon all cotton cloths, while we have reduced the duty upon the two lower grades, left it without change upon one, and increased it only on the two higher grades.

I have already stated that the goods upon which we have made the reductions in duty are the goods largely in use by all classes of our people, while the classes upon which we have made an increase are described in a report of the Treasury Department as "articles of cotton which are so elaborately manufactured as to become more articles of luxury than many articles of silk which are classed as luxuries." They are goods bought largely by the wealthier classes of our people. They are a class of goods of which the importation is constantly increasing, and owing to the large percentage of labor employed in their production the present rate of duty is inadequate.

The Senator from Missouri, following in the footsteps of other Senators, took occasion to say that these high rates on cotton goods were for the benefit of New England manufacturers.

Mr. COCKRELL. I wish the Senator would explain that he is referring to my colleague, who is now absent.

Mr. ALDRICH. Yes, I am referring to the junior Senator from Missouri [Mr. VEST], who is not now in the Senate, I am sorry to say.

If I had the time, I should like to make a comparison between the rates of duty fixed upon these fine cotton cloths and the rates fixed by the Senate bill upon some crude products of Missouri.

I would even like to compare them with the rates fixed by the House bill upon lead, lead ore, zinc, plate-glass, and half a dozen of the leading products of Missouri. The House bill, for instance, levies 152 per cent. upon plate-glass, while the highest rate of duty fixed by this bill upon cotton goods is 45 per cent.

I will put into the RECORD as part of my remarks a statement showing the great reduction which has taken place in the rates upon cotton cloths by the act of 1883 and those proposed by the Senate substitute; and I will say supplementary to it that there is not one schedule in

the whole tariff where the rates have been so greatly reduced by recent legislation as in the schedule of cotton cloths.

Table showing the duties prior to 1883, *the reductions made in* 1883, *and the changes in the cotton schedule proposed by the Senate substitute to House bill* (*H. R.* 9051), 1888.

	Duties prior to 1883.	Reductions made in 1883.		Changes proposed by the Senate substitute, 1888.		
		Rate.	Reduction.	Rate.	Reduction.	Total reduction.
Not exceeding 50 threads to sq. in.:		Cents.	P. ct.	Cents.	P. ct.	P. ct.
Brown	5 to 6 cts	2½	55	2	20	75
Bleached	5½ to 6½ cts	3½	42	2½	28	70
Printed, etc	5½ to 6½ cts., and 10 per cent.	4½	30	4	11	41
50 to 100 threads:						
Brown	5 to 6 cts	2½	55	2½	10	65
Bleached	5½ to 6½ cts	3½	42	3	14	56
Printed, etc	5½ to 6½ cts. and 10 per cent.	4½	30	4	11	41
100 to 150 threads:						
Brown	5 to 6 cts	3	46	No change.		46
Bleached	5½ to 6½ cts	4	33	do		33
Printed, etc	5½ cts. and 20 per cent. to 6½ cts. and 15 per cent.	5	29	do		29
					Advance per cent.	
150 to 200 threads:						
Brown	5 to 6 cts	3	46	3½	16⅔	29½
Bleached	5½ to 6½ cts	4	33	4½	12½	20½
Printed, etc	5½ cts. and 20 per cent. to 6½ cts. and 15 per cent.	4	29	5½	10	19
Over 200 threads:						
Brown	5 to 7 cts	4	33	4½	12½	20½
Bleached	5½ to 7½ cts	5	23	5½	10	13
Printed, etc	5½ cts. and 20 per cent. to 7½ cts. and 15 per cent.	6	25	6½	12½	12½

Reductions in 6 clauses = 15.66 per cent. Advances in 6 clauses = 12.36 per cent. No changes in 3 clauses.

I will also put in the RECORD a statement showing the increasing importations of fine cotton cloths since 1883.

Importations of cotton cloth, in yards, under present tariff.

Description.	1883, before present tariff.	1884.	1885.	1886.	1887.	Totals.
BROWN.						
Not over 100 threads to square inch	140,434	28,780	62,121	245,835	160,118	496,854

The next item referred to in this wonderful table is "brown and bleached linens, etc.," by which the Bureau of Statistics undertake to show that $2,138,412.78 more duty would be assessed under the Senate substitute than under the House bill. The chief of the bureau has already called my attention to a clerical error in this item of $100.000, but this is of slight consequence compared with the error in the classification which the statement contains.

Under the Senate substitute all brown and bleached linens exceeding one hundred threads to the square inch are dutiable at the same rate as by existing law, namely, 35 per cent. ad valorem, while classes counting below one hundred threads to the square inch are dutiable at 40 per cent. ad valorem.

The committee were led to believe by men who are most thoroughly acquainted with the manufacture of flax—and upon this point the evidence was regarded as conclusive—that but a small proportion of the brown and bleached linens which are now imported would be advanced in rate by the provisions of the Senate bill. Yet the Bureau of Statistics, without any data before them whatever, compute all importations at the highest rate of 40 per cent.; this upon $13,589,000 in value increases estimated duties over $650,000 in one item alone, and all for the purpose of establishing an increase of duties which does not exist.

The next item of necessaries of life which, according to the bureau table, the Senate bill increases the rate upon is "linen laces and embroideries," upon which we have increased rates from 30 to 50 per cent. The Secretary of the Treasury in a communication within a year, I think—the Senator from Iowa reminds me that it was a statement made by Secretary Manning—called the attention of Congress to the anomalous rate of duties which was fixed upon linen laces and embroideries, which was 10 per cent. less than the rate fixed upon cotton laces and embroideries, and advised Congress to increase the rate.

The next item is steel in forms not specified. Under the present law all steel not specifically enumerated, valued at less than 4 cents a pound, pays an ad valorem rate of 45 per cent. By the Senate substitute we have fixed six different classes of specific rates, depending upon the value of the steel, to take the place of the one ad valorem rate of 45 per cent.

There can not be any evidence in the hands of the Treasury Department or of the Bureau of Statistics to show what number of pounds of any of those grades were imported in 1887, or what the effect of the Senate substitute would be upon importations, and yet we are confronted by a statement assumed to be mathematically accurate and which states that the Senate bill would increase the duties $873,695.09.

I think the mathematical character of this bureau table is best exemplified by the last two items on the list, "tin-plates" and "needles," which are placed by the House bill upon the free-list. Under the head of the excess of duties by the Senate substitute over the House bill, showing the percentage of increase of the Senate rates over the House rates, we have:

Duties under the House bill on tin-plate and needles, nothing.
Percentage of increase by the Senate bill, 100 per cent.

Why "100 per cent.?" Why is $5,706,000 100 per cent. of nothing? Why not say a thousand per cent., or 10,000 per cent.? The average rate of increases effected by the Senate substitute would have been much larger. Our Democratic friends could then have shown that the rates on the necessaries of life had been increased to an indefinite extent. Yet the table is presented in the Senate of the United States with the stamp of official approval by the Chief of the Bureau of Statistics. It is evident that the mathematical expert of the bureau must have been absent when the table was prepared. It bears the impress of the same blundering hand that prepared the House bill.

The Speaker of the House of Representatives in the same speech to which I have alluded called attention to the fact that we had increased the duty on Havana cigars, and this statement was repeated by the senior Senator from Missouri [Mr. COCKRELL], who is now in his seat. He stated that the Senate bill increased the duty upon Havana cigars worth $10 per thousand. It is a favorite—I was going to say trick, but I think that would be a little too harsh—but it is a favorite device of tariff reformers and free-traders to assume some impossible low value for imported goods, and to claim that the specific rate imposed would be equivalent to some very high ad valorem rate.

For instance, I noticed recently in a free-trade newspaper a statement that among the enormities which the Senate substitute proposed was a duty of 300 or 400 per cent. upon shotguns. In order to establish this they assume double-barreled breech-loading shotguns worth $3.25 each, and that the Senate rate of duty is more than 300 per cent. on this value. Why say three dollars and a quarter? Why not say $3 or $2 or 25 cents? If double-barreled breech-loading shotguns were worth 25 cents each, the duty fixed by the Senate bill would be an enormous one; the equivalent ad valorem rate would be among the thousands. The assumption is just as fair and equally as reasonable in one case as in the other.

But I think it unnecessary to pursue this subject further. I was desirous that the people who might read the Treasury statement which I hold in my hand and the remarks which were made by the Senator from Missouri in presenting it, or who might have heard or read the speech of the Speaker of the House of Representatives, might not be misled by the character of the statement, and I felt it due to the Senate and due to the people that the utterly worthless and inaccurate character of what purports to be an official statement of the effects of the Senate bill should be exposed.

Mr. FRYE. Mr. President, I do not wish to make a tariff speech, but I desire to correct one impression which seems to prevail very ex-

tensively among the Senators and Members of the House from the South.

I took occasion last night to look over quite a number of Democratic speeches, and I found the burden of the song to be the enormously rich manufacturers of New England, the fearful monopolies they owned and carried on, and the enormous profits they produced at the expense of labor.

I found in one speech a statement that cotton-mills were making 35 per cent. net profit, and I found it to be proven by figures from the census of 1880. For instance, the capital of all the cotton-mills in the country was given, then the cost of all the raw material, then the cost of wage labor, then the value of the product. Then the wages and the material were added together, subtracted from the value of the product, and it left a balance that was the net profit.

I have heard that stated in the United States Senate by Senators from the South over and over again. I have heard as distinguished and intelligent a Senator as the Senator from Kentucky [Mr. BECK], who is now absent, make that same statement here on the floor of the Senate. I was at the time in the chair presiding. I heard the other Senator from Kentucky, now retired, Mr. Williams, make the same statement. At this very Congress it has been made twice in the National House of Representatives by Southern members.

Why can not Senators from the South see the utter absurdity of that statement? It figures out anywhere from 25 to 35 per cent. net every time you try it. You may try it on woolen goods, on cotton goods, on silk, on linen, and it will prove every time the net profit our manufacturers are making to be from 25 to 40 per cent.

Is there a Senator from the South who makes this statement who really believes it? It certainly would be unkind to charge that he made it on the floor of these two Houses and did not; but look at the utter absurdity of it.

There are over a billion of dollars to-day in the saving-banks of the North not drawing over 4 per cent. interest. Do you suppose this money would remain in these savings-banks drawing 4 per cent. interest if you could invest it in a cotton mill or in a woolen mill or a linen or a silk mill and draw your 35 per cent. or 30 per cent. or 20 per cent. net? There are millions and millions of dollars invested in United States bonds drawing not over 3 per cent. interest. Does any Senator dream that the Secretary of the Treasury would have the slightest difficulty in redeeming United States bonds if a man could take his money and invest it in manufacturing in New England and make 25 per cent.? I should think the absurdity of this statement itself would be its own refutation in the mind of any gentleman, and it is beyond my conception how a Senator or a Member of the House can in his place in either of these bodies make such an egregious and absurd statement.

What is left out in the statement of those gentlemen? Let me show once for all. There is the power. It is either steam or water. In almost every large manufacturing city there is a water-power which is owned by a separate corporation, and the other corporations hire it at so much a horse-power. They pay so much a year. Where it is steam, of course it is created by coal or by wood, and must cost something. That in that statement is left out entirely. What next? Fuel is left out entirely. What next? Gas. What next? Insurance. What next? Taxes. What next? All supplies.

Mr. COCKRELL. Supplies, not material?

Mr. FRYE. Supplies outside of materials. What next? All salaried officers are left out entirely. It is only the wage labor included. Not a single salary goes into that senseless computation. What next? Commissions on sales left out. What next? Freight truckage, storage, insurance, and like charges. What next? Salary of the treasurer, who is hardly ever a resident of the city where the factory is running. What next? Interest. What next? Depreciation of the mill property. What next? Depreciation of machinery.

The items left out in every single instance, whether relating to cotton, wool, or silk, equal the item named for wages in this computation.

Mr. DOLPH. And bad debts.

Mr. FRYE. "Bad debts" is suggested, but I leave that out as an uncertainty. I can make what I am saying absolutely certain.

I have in my hand a transcript from the books of a cotton mill running from 51,000 to 54,000 spindles, about which there can be no mistake whatever. I will give the items for a year, and I trust that after this I shall not hear repeated in the Senate any such statements as I have heard so many times before.

The capital stock of this mill is $1,000,000. The value of the product is $679,644.73. This is for the year 1882, an average good year for the last ten, less the cost of bleaching, which, of course, the statement does not deal with, $42,643.40, making net value of the product $637,-001.33.

Cost of wage-labor, $148,890.81.

Power, $2,762.51.

No power costing less than that can be found in the United States, within my certain knowledge. It is water-power, and the cheapest in America to-day, a great deal cheaper than steam.

Fuel, $4,652.54.

Gas, $2,503.05.

Insurance, $6,714.35.

Taxes, $15,901.89.

Sundries, including supplies, ordinary repairs, salaried officers' pay, $47,770.04.

Cotton, $297,289.83.

Commissions on sales, $10,420.68.

Freight, truckage, storage, insurance, and other charges on goods, $7,037.09.

Treasurer's salary and office expenses, $8,625.32.

Interest, $9,018.13.

Net profits for the year, exclusive of any allowance for depreciation, $75,415.09.

Now, what is the depreciation in machinery alone in this mill? The best cotton manufacturers allow for this 50 cents a spindle to a dollar. Some say that 50 cents in a well-conducted mill will cover the depreciation in machinery; others insist that it will take a dollar a spindle. I call it 75 cents a spindle. At that rate it leaves the net profit of this year, 1882, in this mill—one of the best conducted ones of this whole country—$39,000. That is 3.9 per cent. on the capital, and the capital has not been watered; it is actual money paid in.

Now, the free-trade formula would state the case of this mill for 1882 as follows: Capital, $1,000,000; labor, $148,890; materials, $297,289; making in all for labor and material $446,179; product, $637,000. Deduct the material and labor from the product and it leaves $190,821, leaving for the year's profit a little over 19 per cent. As a matter of fact it was 3.9 per cent.

There is no escape from that statement. I am a stockholder myself, to a very small amount, in that mill. I know that the average net profits for the last ten years have not been over 5 per cent. annually. I know that there is one cotton-mill in my city which has failed, and has been lying still for three years. I know there is another cotton-mill, as good a mill as can be found, that has not run an hour for over six years. I know that the average net profits of well-conducted cotton-mills in my city, paying less for power than any other mills in this country, have not netted 5 per cent. annually for ten years. One of our largest mills has not paid a dividend for ten years, and its stock is 60 per cent. below par.

Mr. PUGH. What kind of goods do they manufacture?

Mr. FRYE. Common goods. Nearly all nice bleached sheetings. A variety of goods, neither the coarser grades nor the finer embroideries, laces, etc.

I know further, that the woolen mills of this country have been worse off the last ten years than the cotton. I know that nearly one-half of the worsted mills in the United States to-day are idle, doing nothing absolutely. I know that you may take it through New England, and for ten years the woolen mills have not netted 4 per cent. profit—I mean 4 per cent. per annum for ten years.

There should not be these gross misstatements made in a matter of this kind where reasonable certainty can be arrived at.

Mr. TELLER. I should like to supplement what the Senator from Maine has said by calling the attention of those Senators who believe that the manufacturers are making so much money to the character of securities that are sold now and the prices at which they are sold. It must be apparent to everybody that if our manufacturers are making anywhere from 15 to 45 per cent. as claimed, the money of the country would go into manufactures, because we have not reached the point in manufactures where we entirely supply the American market. Of course things like woolen goods and cotton goods and hardware and iron and glass ware and earthenware and things of that kind for ten years, $237,000,000 a year has been the importation of that class of goods—goods that can be manufactured by almost any class of labor. I hold in my hand the Commercial and Financial Chronicle of October 13, 1888, authority, as a standard everybody knows, which gives the securities dealt in, their prices, the interest they bear, etc., and there will be found in this about three hundred classes of railroad bonds—I now speak of railroad bonds particularly—that are selling at 100 or above. In about three hundred there are only three that sell for less than 100. Of course I do not mean to say that a great many bonds do not sell for less, but any bond that bears 7 per cent. interest or 6 per cent. interest, where the road is in good condition, will sell for above 100.

The bonds of the Chicago and Northwestern Railroad Company, whose road leads from Chicago to the Northwest, due in 1915 and bearing 7 per cent. interest, are worth 130¾, or were last week, on the 12th instant. Another bond of the same company, their sinking-fund bonds, due in 1929 and bearing 6 per cent. interest, are worth 117.

The Chicago, Rock Island and Pacific 6 per cent. bonds, due in 1917, were worth 131½ on the 5th of October, and on the 12th they were worth 132½. During the month of June they were up to 134.

You may take also the Chicago, St. Paul, Minneapolis and Omaha Railroad, and their 6 percents are worth 120½ to 121¾, and they were as high as 123½ last May.

The Cincinnati, Columbus and Cleveland 7 percents were selling on the 5th of this month for 131, and in May and July they sold for the same.

The 7 per cent. bonds of the Denver and Rio Grande Railroad Company, due in 1900, are bringing 120.

The Erie first consolidated, gold, 7 percents, due in 1920, are worth 136, and sold in August for 138½.

The Houston and Texas 7 percents were worth on the 5th instant

123¼, and on the 12th, 123½. Several of their bonds of different classes all run above 100.

The Lake Shore consolidated coupon first seven percents, due in 1900, are worth 127¾; and the second seven percents, due in 1903, are worth 125½. So you might go through the list until you strike some others that are still higher.

The Delaware and Hudson Canal seven percents are worth 146¾ to 149.

Mr. EUSTIS. How does that happen?

Mr. TELLER. I will tell the Senator how it happens.

Mr. EUSTIS. How does it happen that so many of these securities are owned in New England?

Mr. TELLER. I will tell the Senator why they are owned in New England if he wants me to tell him. It is because the people of New England, living upon a soil not particularly attractive to agriculture, turned their attention to something else than the farms of New England, and it is owing to that fact that New England became a manufacturing country. The farms there will not produce one-fourth of the crops that the farms of the State the Senator represents will produce, but they are worth from three to five times as much per acre, and why? Because they have got the market at their doors, and the Senator's State has got its market somewhere else. The Senator prefers to buy his goods in Europe and transmit the products of his soil to Europe to pay for them. The people of New England propose to manufacture their goods on their own soil and to feed the manufacturers with the products of their home farms, and invariably that has made a rich people; and the history of the world is, without exception, that a purely agricultural people have always been a poor people.

Mr. FRYE. We made a good deal of money in New England in manufactures during the war.

Mr. EUSTIS. Does the Senator admit that?

Mr. TELLER. I admit that they have made money by manufacturing. If they had not made money by manufacturing I should not be so particularly anxious that manufactures should be continued. It is because I want the manufacturing done in this country, because whoever manufactures, whether he be capitalist or whether he be laborer, he receives compensation from it that he can not get from the pursuit of one class of labor alone.

Mr. ALDRICH. I think it should be stated that where the people of New England have made a dollar in manufacturing they have made at least a hundred dollars, I think, and probably a thousand dollars, in building railroads and in conducting enterprises in Louisiana and in Iowa.

Mr. EUSTIS. I ask the Senator where did they get the money to build all these railroads in the West and in the South?

Mr. ALDRICH. They earned it and they saved it while the people in some other sections were doing neither.

Mr. EUSTIS. How did they earn it?

Mr. ALDRICH. They earned it by the sweat of their brows in an honest and proper way.

Mr. TELLER. Why, Mr. President, it is very simple. Of course, the New England manufacturers made a great deal of money during the war. There is no question about that. Prices went up very greatly in this country. While the Senator and his associates and his citizens were engaged in other pursuits not so profitable, while they were practically engaged in destroying, not simply the Government, but the property of the country, the New Englander with his thrift, furnishing his full quota of people for the field, as he always did, was engaged in producing and in saving and in creating.

Mr. DOLPH. Will the Senator from Colorado yield to me for a moment?

Mr. TELLER. Certainly.

Mr. DOLPH. I think it ought also to be stated that the money that is made by New England in manufacturing is not made alone by the stockholders who own the plant, for instance, of a cotton-mill similar to those just referred to by the Senator from Maine. I asked the Senator from Maine how many persons were employed in the cotton-mill he referred to and he told me there were probably two thousand persons there employed. While the cotton manufacturer, while the company that owns the mill, were making less than 5 per cent.——

Mr. FRYE. Three per cent.

Mr. DOLPH. Say less than 4 per cent. for themselves on the capital invested, they were making money for every one of these two thousand employés by giving them steady employment the year round at remunerative wages; and I will guaranty that if you go into this New England town you will find that these two thousand employés own more of these railroad bonds than the stockholders in that company. Therefore the manufacturers of New England are making money for the common people, for the laborers of the country.

While I am up I desire, if the Senator from Colorado will permit me, to make a further suggestion.

Mr. TELLER. Go ahead.

Mr. DOLPH. In regard to the bonds of the Northwestern Railroad Company, I believe the Senator said they were drawing 7 per cent. interest and selling for 130, payable several years from now. I have just made a computation to find out how much interest that would be on the present cost of the bonds as they are selling from day to day in the markets. I find it would be a little under 5.4 per cent. on the cost of the bonds—that is to say, you pay $130 for a hundred-dollar bond drawing 7 per cent. At that price the investor would receive a little less than 5.4 per cent. interest on his money. But we must take another thing into consideration, and that is that the bonds are taxable, and not only is the bond itself taxable, but the interest upon it is taxable, and the taxes, including State, municipal, and county taxes, are probably from 2 to 3 per cent. You may take that as the average, and certainly they are all taxed to the extent of 2 per cent. So the net income upon that investment would be less than 3.4 per cent., which is less than the amount received by the manufacturer on his money.

Mr. TELLER. If the Senator from Louisiana, when he asked why these New England people loaned the money, supposed that I meant in reply to say that the manufacturers owned these securities, I beg to assure him that I did not.

Mr. EUSTIS. I did not mean to criticise or anything of that sort. The Senator from Maine was representing that they were making no money from manufactures. For instance, take the State of Massachusetts. That State has no shipping.

Mr. TELLER. She has some shipping.

Mr. EUSTIS. That State has no coal mines, no iron mines; that State has no agricultural wealth whatever, and yet there is such enormous wealth in that State that it is almost impossible to make an estimate of what it is.

I know that in regard to one railroad the other day the fact was disclosed that five hundred thousand shares of stock of that railroad were owned by capitalists of Boston. We know that a large majority of the stock of the Union Pacific Railroad is so owned. What puzzled me was, inasmuch as they have no other source from which wealth is created if they are not making money by their manufacturing, where in the world do they get the money?

Mr. TELLER. Let me tell the Senator where they get the money. In the first place he says Massachusetts has no shipping. Why, the people of Massachusetts made immense fortunes in the China and the West India trade and other trades.

Mr. EUSTIS. At the present day, I mean.

Mr. TELLER. They laid the foundation of their great fortunes, many of them, in the foreign trade.

Mr. EUSTIS. The Chinese trade is in the hands of a few families.

Mr. TELLER. Comparatively few. That is true. Then they went into manufacturing. Then when they got money they saved it. Then they put it into these enterprises in the West and all over the country. They are a saving, frugal people, and they make more money out of the sterile hills of New England, acre for acre, than the Senator's constituents make in the fertile lands of the Mississippi Valley.

Mr. EUSTIS. The Senator is mistaken when he makes that statement.

Mr. TELLER. They do, acre for acre, the State over. There are exceptions of course, but they have made it by their home market. They have got valuable products, but they can not compete with the world in the products of their gardens, their hay, vegetables, and such things; and so they have diversified their industries in New England.

It does not follow that the manufacturers get this money. There are more than $1,000,000,000 in the banks of New England belonging to the men who toil. The State of Connecticut, little as it is and small as its population is, as I understand, as stated here on the floor the other day, has more than $300,000,000 in its savings-banks, largely the property of men who labor. They own their own houses and their own gardens. They are the most independent laborers in the world.

The trouble with the Senators who are advocating a departure from the economic plan of the American people is that they are unacquainted with the laborers of this country. They are not familiar with their habits, with their methods. That is the trouble.

Does the Senator suppose when money is going begging, as it is now in this country, that if the manufacturers were making such immense profits there would not be a rush to build up manufactories all over the country? When you can sell railroad bonds that bear 7 per cent. interest for 145 to 149, when that is considered good investment, does not the Senator suppose, if it could be shown that the manufacture of cotton goods or of woolen goods paid 10 per cent., everybody would put his money in it? Why not? Of course they would.

Mr. EUSTIS. Why should they not put their money into the brewery business, which is enormously profitable?

Mr. TELLER. There is a limit to the brewery business.

Mr. EUSTIS. And there is a limit to manufacturing.

Mr. TELLER. We have not reached the limit; that is the trouble. I know that some of the free-traders have asserted that the machinery of the United States was capable of producing in six months enough to supply all the wants of the people for a year. I tell you that in ten years on the coarser materials we have paid out for European products $2,237,000,000. If that had been paid to labor in this country, according to the lowest computation made even by free-traders who are honest and intelligent, it would amount to $1,700,000,000, or it would have given labor to four hundred and fifty thousand people year in and year out, at a dollar and a half a day for every day that they worked.

That is what we have been buying abroad, and the trouble with the Senator from Louisiana is that he wants to buy more abroad. He is not satisfied to send across the water $200,000,000 and more per year

to build up foreign manufacturers and support foreign labor, but he wants to open the door for all foreign productions and put all the American laborers where Mr. MILLS recently asserted they would be put, on an equality with European laborers.

Mr. EUSTIS. Will the Senator allow me a word?

Mr. TELLER. Certainly.

Mr. EUSTIS. I do not believe that protection protects American laborers.

Mr. TELLER. I know the Senator does not. That is where his fallacy lies.

Mr. EUSTIS. I did not expect the Senator to pass such hasty judgment on my convictions as that.

Mr. TELLER. I will reserve my judgment then.

Mr. EUSTIS. The reason why it does not is—perhaps the Senator is not acquainted with the statistics on the labor quesion——

Mr. TELLER. Possibly not.

Mr. EUSTIS. Does he know that in the city of Boston, which is a manufacturing city and the center of manufacturing interests, there are 89,783 more children of foreign parentage than of Massachusetts parentage? So long as your doors are open to the lowest pauper class of labor of Europe, whether it be the Russian Jew or the Polish Jew or the Scandinavian or the Irishman or the Englishman—and when I use the words "pauper labor" of course I do not intend to cast any reflection upon any class of people; I mean those people who in their own countries work for small wages—how can protection protect American laborers? How can it do so when in the city of Boston itself you find that enormous aggregation of foreigners? There is nothing to attract foreigners to Boston that I know of.

Mr. TELLER. I can tell you why.

Mr. EUSTIS. Certainly it is not their Sunday laws. There is nothing but the simple fact that that is a manufacturing city.

Mr. TELLER. That is it.

Mr. EUSTIS. And your doors are wide open, and they not only admit, but they invite that cheap labor from Europe; and I say it is absolutely incredible to suppose that such a fact is correct. When I repeat to the Senator that 89,783 children of Boston are children of foreign parentage in excess of the children of Massachusetts parents, I should like to have the Senator explain to me how it is that protection protects American artisans and American operatives. I will add that that does not include the enormous immigration from Canada into the State of Massachusetts.

Mr. TELLER. The trouble with the Senator from Louisiana is that he proposes to consider in his treatment of public affairs as Americans only those who were born on American soil.

Mr. EUSTIS. No, I do not.

Mr. TELLER. That may be possibly some of the old, lingering know-nothing notion of Louisiana, that several years ago was pretty powerful in that State.

Mr. EUSTIS. I deny that.

Mr. TELLER. I do not say he participates in it, but he treats the matter in that way. I, myself, treat every man who comes to this country and intends to make his home with us, and to cast his lot with us, as an American whenever he so decides. I consider the Irishman, the Englishman, the German, the Russian, the Scandinavian, or any man who comes here to make this his home, comes here by the invitation extended to him years and years ago before the Republican party came into power, comes here rightfully, and when he comes here he is entitled to the same consideration and the same protection as if he had been born here.

I consider all such persons entitled to the same protection that I am who boast of as long a line of American ancestry as any man in this country, having no foreign blood that has come into my family since the landing of the Mayflower. I say that they have the same right that I have, and when I legislate I legislate for them as I would for my own children; and I am astonished that the Senator should suggest to me that the fact that there are eighty-nine thousand children in Boston of foreign parentage has anything to do with the question. I will tell the Senator that in one of the Southern States of this Union 70 per cent. of the entire population are either foreign born or the children of foreign-born parents, a State where they have sent out one of their executive officers to seduce men from the Republican ranks upon the theory that free trade will give to the laboring men of Wisconsin more comfort, more happiness, than the protective system under which they have been prospering and the blessings of which he admits himself they came here to enjoy. Because protection raises the price of labor in this country, it undoubtedly induces immigration; but can any man say that we have suffered by immigration? It may be possible that the time has come or may come when it will be necessary to restrict immigration; but the 9,500,000 men who have come here since 1860 have added immensely to the strength and to the wealth of this nation. One of the great causes of our prosperity is that we have been able to absorb and take into our community and assimilate them with ourselves and furnish them employment. We have furnished nine and a half millions of men employment in twenty-seven years.

There is not in the annals of history any such remarkable thing as that. No other nation was ever able to receive such a great flow of people, provide them labor, provide them homes; and every one of them to-day is a hundred per cent. better off than when he landed on our shores, if he has been here any length of time, not only in money, but in manhood, in intelligence, and in virtue. That is what we have done for the people of the world, and we have taken good care of our own people at the same time.

The Senator says protection does not protect. Sir, it has protected us and protected nearly the whole world that wanted to come to us. We to-day pay more to labor than any other people in the world. We give to our laborers more comfort, more independence, a better position, than any people ever did in the history of the world. No man can point to any time, or any period, or any country where laborers were so well rewarded, so honestly treated, so respectable, so powerful, as they are here. To what do you attribute it if not to the system that has enabled every man who came here to get labor at remunerative wages? The Senator knows and everybody knows that the American laborer demands what no other laborer ever gets, comforts, pleasures, luxuries, leisure, opportunities for his children and for himself, such as no other laborers get anywhere else in the world.

Mr. PUGH. Will the Senator allow me to ask him if the employers of the laborers in this country do not make more money out of them than the employers anywhere else in the world?

Mr. TELLER. They do, Mr. President. This prosperity is not confined to one class of people in this country. That is the beauty of it. It pervades all classes of society. The distribution of wealth in this country is the most equal in the world. We have some very rich men, but we have millions and millions of men in this country who are comfortably off. We have, I repeat, the best fed and the best clothed and the best housed and the most independent labor on the face of the earth. What does the Senator propose, and what do the advocates of free trade propose? That we shall open the doors of this country not simply to the men to whom he objects, but to the products of men abroad? He complains that we open the door to every man who desires to make a home on American soil, but he is willing to open the door to the product of every man abroad who will stay at home and who will manufacture for us. He denies that the men should come here and should enter into our society, should pay part of our own taxes, and support our churches and schools and society, and become part and parcel of our nation. He would deny to them that privilege, but he would say "if you stay at home in Europe, live on coarse fare and wear coarse clothing, live as you have been accustomed to live, and work cheaply, we will buy your products." What will become of the American laborer then, whether he be foreign born or whether he be native?

Mr. President, protection does protect. You may argue, you may bring a Daniel Webster here against that proposition, but there is before the American people the patent fact, which can not be denied, that there is prosperity in all our borders; that we have grown in wealth, we have grown in intelligence, we have grown in moral worth and virtue under this system, and why should we want to abandon it? To-day we are the richest people in the world, the happiest people in the world, the freest people in the world, the most intelligent people in the world, the strongest and most powerful nation on the face of the globe; and all this has been accomplished within a hundred years. Why should we want to change a policy that has more than trebled our wealth in twenty-five years, notwithstanding the ravages and wastes of war? We have advanced from $14,000,000,000 to $62,000,000,000 within twenty-seven years, and we put into the field immense forces of men to destroy and not to create. We destroyed before we began this career of prosperity nearly one-half of the accumulated wealth of this country, and in twenty-seven years we have not only resuscitated ourselves, but we have added immense stores of wealth. I repeat all that would go for nothing to me, I do not care whether the wealth was piled mountain high, if with it there had not come other blessings greater than money—comfort, happiness to the laboring men, independence, strength, manhood, intelligence, and virtue.

I repeat that it has no parallel in the world, and yet the Senator tells me that protection does not protect. Where do you get this great and growing prosperity, this increasing prosperity, if it does not come from our system of political economy? The proof is in our prosperity.

Mr. EUSTIS. Mr. President, I did not intend to take part in this discussion, but I shall be perfectly frank with the Senator from Colorado.

The most extraordinary spectacle that I have witnessed in my legislative career is to hear a Senator who represents an agricultural and a non-manufacturing constituency make a protection speech. I can understand that Senators from New England, who represent the true interests of their constituencies, are in favor of the protective system existing to-day. It has inured to their benefit; it has increased their wealth; it has increased their prosperity. They may pretend to be paupers.

I was very much moved by the statement read by the Senator from Maine [Mr. FRYE] as to the very small dividends that one particular company in one particular year had been able to declare. I admire the political sagacity of the representatives of New England. If I were not afraid of using an offensive term, I would say that I also admire their audacity, their coolness, and their complacency under the circumstances, when since 1862 they have been taxing the remainder of the people of the United States for their own enrichment, hav-

ing succeeded in creating in this country a system so artificial that even a suggestion from the President of the United States or any high authority that there should be revision of that system in order to know whether the tax-payers of this country have not sufficiently long endured this oppressive and onerous taxation, creates an alarm. Who ever heard in the history of the civilized world where a monarch or a President announced to the people that it was time to reduce taxation, that that proclamation should not be received with universal rejoicing by the people who were taxed? Why, sir, it would be almost equal to the declaration of one of the crowned heads of Europe that the time for disarmament had arrived and that the monarch was to relieve the people who had been oppressed by these large standing armies. We know what gladness and what rejoicing such tidings would bring to every heart in the land; and yet in this country, I say, so artificial has the system become, with all its ramifications and with all its enticements, that, incredible to believe, we hear protection speeches from the Senator from Colorado telling his people that they ought to thank God that they have the opportunity of being taxed for everything that they wear, and everything that they use, and everything that they consume, in order to pour their earnings into the rich coffers of the wealthy capitalists of Boston and New England!

Does the Senator doubt, does he not know that that is a simple operation, taking place annually, that so long as this system of taxation exists in this country his people are the sufferers and the people of New England are the beneficiaries? Why, Mr. President, if old Tom Benton could rise from his grave and appear in this Chamber and hear a protection speech made by a Western Senator he would be glad to get back into that grave as soon as possible.

There is not an article that is used by a Western man for the purpose of making his cabin, of building his fence, of cultivating his farm, which that man is not taxed for the privilege of using, for the benefit of some New England manufacturer. And this, Mr. President, is the more incredible from the fact that when the Senator from Colorado, as he has often done with such power and eloquence, has appealed in this Chamber for financial measures of relief upon the silver question and other financial questions, he has found the Southern brigadier shoulder to shoulder with him upon those questions of affording relief to the great agricultural constituencies of this country, but he has found every time every New England Senator voting "No!" "No!" "No!" on those questions.

So it was when he asked that by legislation he should be protected from Chinese immigration. The Southern Democrats voted with him and his colleagues to exclude the Chinese, and until this last vote was given every New England Senator had always voted to allow the Chinese to overrun his constituents notwithstanding his protest.

Mr. MITCHELL. Mr. Blaine was one of the greatest champions we ever had in this Chamber.

Mr. EUSTIS. He was an exception, of course. We all understand how disinterested his vote was.

Mr. MITCHELL. He was a Senator then.

Mr. EUSTIS. Therefore, Mr. President, I was glad to hear the Senator from Colorado give his reasons why he is a protectionist, because protection protects American labor. I wish that I could believe that. I know perfectly well that it will be impossible for a great many years to reduce duties on imports so that there shall be any conflict between American labor and European labor; that the difference between the wages in the two countries will have to be maintained on account of the great expenditures of the Government, and so on; but when I asked the Senator to explain to me why the protection system as a system protects American labor, he simply made an anti-Know-Nothing speech. I am not a Know-Nothing.

Mr. TELLER. No; I did not mean to say so.

Mr. EUSTIS. The reason why I asked the question was this: In the testimony taken before the Ford committee in New York City, which I regret has not been published yet for the information of the country, a large number of witnesses testified there, and the most startling evidence was given upon this question.

Now you take the poor American sewing girl. Certainly no persons in this country ought to excite or do excite as much sincere sympathy as that class of people. No matter whether a man is a free-trader or a protectionist, I say that that class of people are deserving of not only personal but legislative sympathy.

What was the evidence before that committee with reference to those poor women? Why, sir, they are engaged in making all sorts of underclothing. They are engaged in making shirts, they are engaged in sewing clothes, and so on, and they all testified that within the period of five years their wages had been decreased 50 per cent. Mark you, everything that they made was protected by law. There was a high duty on everything that they worked upon. Their wages were reduced 50 per cent., and what was worse, even at those starving wages one-half of them were not able to get employment at all, because the Polish and Russian Jews were landed by the thousands at Castle Garden, and because those Polish and Russian Jews, who can live on probably 10 or 15 cents a day, have taken the place of those unfortunate women. That is not my impression; it is not my opinion; it is the positive testimony of witnesses before a committee of Congress.

Mr. ALDRICH. If the Senator will allow me just a moment——

Mr. EUSTIS. Wait one moment. I am dealing with the Senator from Colorado. What I want him to explain is, how does protection protect, when, under your system of protection—which Heaven knows is high enough—such a condition of things can be brought about? In other words, although you may make a law prohibiting the introduction of pauper labor, what does that law amount to, or what does your protection amount to, if the moment these people land in this country the manufacturers can employ them and do employ them? That is the reason I give you those figures about Boston in Massachusetts. It was not to reflect on any class of people. It was merely to show that, in my judgment and according to my conception, protection *per se*, what you call protection, does not necessarily protect the American laborer, and now a new field of cheap labor has been discovered—I refer to Southern Russia and to Poland—what is to prevent these people from superseding and driving out of the factories the American operatives?

Mr. TELLER. If the Senator will allow me, I should like to ask him what remedy he proposes? Is it free trade?

Mr. EUSTIS. That is not the question. You tax the people of the United States under the pretext that you are accomplishing protection to the American laborer. I do not believe it. I am in favor of relieving them of that tax, because I do not believe that protection does protect. From what I have said the Senator seems to admit now that protection does not protect.

Mr. TELLER. No, I do not.

Mr. EUSTIS. Explain, then, to me how it does protect. That is what I want to know.

Mr. TELLER. The Senator seems to be very much astonished that a Senator, representing a Western State, a non-manufacturing State, should be a protectionist. Mr. President, I have not the same reason for being a protectionist that the Senator has for being a free-trader. He was brought up under free-trade influences and in a free-trade atmosphere undoubtedly, and so was I just exactly as he was. I am a protectionist from conviction. I represent the youngest State in the Union, a State composed of people from every State in the Union, and from every country under the sun where civilized men live. I doubt whether it would be possible to select any civilized country on the face of the earth that does not have its representative in Colorado.

At the coming election when they vote in November the number of men who were born on the soil of Colorado will be comparatively insignificant. They will be unnoticeable. The people of Colorado are people who understand their wants and their wishes, and they are people broad enough in their sympathies to look beyond their State lines. They recognize the fact that what is for the general good of the people is for their good; what promotes happiness all over the country promotes happiness in Colorado; what promotes wealth all over the country promotes wealth in Colorado.

I want to say to the Senator from Louisiana now that the issue will be made in Colorado on this tariff question as sharply as it will be made in Connecticut or in Massachusetts or in any State of the Union with a people that, I think, I can safely say on this floor have no superiors in the world for intelligence, for aggressiveness of character, for independence of thought, and they will give in proportion to their vote a greater majority in defense of American protection than any other State in the Union, Pennsylvania not excepted. They will give a bigger percentage, I repeat, than any State, and they will do it not upon the theory that it is solely for their benefit, but that it is for the benefit of all the country.

The Senator complains that there are sewing women in New York who do not get employment. Why, Mr. President, no country will be without something of that kind, but we have less of it than any other country. That is what I contend.

Mr. EUSTIS. Their wages have decreased 50 per cent.

Mr. TELLER. Their wages may have decreased in the city of New York owing to the influx of labor.

Mr. ALDRICH. Will the Senator from Colorado allow me to make one statement right here?

Mr. TELLER. Certainly.

Mr. ALDRICH. The Senator from Louisiana has referred to testimony taken before a House committee in New York. I want to refer to testimony taken before the Senate committee of which I am a member. The representatives of an association of people engaged in the manufacture of clothing appeared before the Senate Committee on Finance and stated that the rates of duty fixed by the present law upon clothing were entirely inadequate for their protection, and they asked us to increase the rates; and this statement was supplemented by a further statement that they had asked the committee of the House of Representatives to give them a hearing on the subject, which that committee refused to do. They stated to us that they believed this House committee thought the rates were altogether too high now. The House committee so stated, and these people attributed the condition of affairs to which the Senator from Louisiana is now alluding to the fact that the present duties upon clothing are inadequate.

Mr. EUSTIS. Who testified to that?

Mr. ALDRICH. Some ten or twelve different people.

Mr. EUSTIS. Operatives?

Mr. ALDRICH. Operatives and manufacturers of clothing.

Mr. EUSTIS. Of course if these people now work at present wages it is because your protection does not protect them.

Mr. ALDRICH. Nobody ever pretended that inadequate duties protected them.

Mr. EUSTIS. How much higher would you make them?

Mr. ALDRICH. We have added 5 cents per pound and 5 per cent. ad valorem. If we find that is insufficient we will make it higher, if we can.

Mr. EUSTIS. There is no doubt of that.

Mr. TELLER. I was about saying when interrupted by the Senator from Rhode Island that it was possible that an influx of a large number of laborers of a particular kind in a city may disturb for a time the course of trade; but in a country like ours, where labor is well rewarded, it always, like water, seeks its level, and if it is dammed up in New York City too much, it will flow off into other sections of the country in a little while, and we shall have a uniform rate.

I admit that there are isolated cases; but what will the Senator say to me if I tell him of the want and the destitution and the distress in free-trade England? Is the Senator aware that one-fifth of the population of Great Britain in one single year have received assistance from public charity? Is he aware that a country having half the population, or about that, of ours has eight times as many paupers and poor all the time as we have? It is a startling statement to be made. Is he aware of the fact that every fifth man who dies in the city of London goes to a grave paid for by the public authorities? Is he aware that a distinguished Englishman recently declared that one-fifth of the whole population were toeing the line of pauperism? Did he hear the statement made here by the Senator from Wisconsin [Mr. SPOONER] the other day, taken from the official publications of Great Britain? If he did not, I commend him to look at a later report, to look at a report that came out in June, of the royal commission now in session, where they report as to the destitution, the poverty, and the lack of business. Let him look at that report and go over it and see the different societies that testify that they are supporting their poor in Great Britain, their associates who are out of labor—not paupers, but members of associations. The proof before that commission was, as the Senator from Wisconsin stated the other day, that one society had paid $400,000 in a year to keep its members who were unable to get work. It was in proof before that commission that some of these societies had been compelled to double their rates; it was in proof that a number of the societies had been compelled to disband because so many of their members were out of employment, and they were absolutely compelled to surrender and to cease to make any efforts to protect their associates who could not get labor.

Does the Senator from Louisiana believe that the poor sewing-women of New York will get more labor when he puts them in competition with all the world? They are in competition now only with Americans practically, or would be if this duty was what it ought to be. When they are put in competition with Americans they find it sharp and difficult to live. The Senator says, put them in competition with all the world. Will that cure the evil? How absurd, Mr. President. I do not mean to be offensive when I say "absurd," but I mean to say that can not possibly relieve the difficulty of which the Senator complains.

Mr. President, the Senator inquires how much you would raise the duty. I should like to tell the Senator how much I would raise the duty. I would start by a duty on the importation of everything that could be made in this country. That is protection. I would take my chances that the manufacturers would get no more than fair profits. When money can be borrowed in the markets of New York, as it can to-day, for 2 per cent. per annum, I would risk that they would not make any great amount of money by the manufacture of woolens, or cotton cloths, or any other article. When the manufactories can be built and a profit returned of 4 or 5 per cent. to men who are now willing and glad to get 2 per cent. on their money, they do not rush to manufacturing. Five per cent. is regarded as a profitable and fair investment anywhere now in this country.

There was a time when we did not have money and when a tariff so high as to be prohibitory might have been used by the few manufacturers to extort from the people. There is no danger of that now. I would give this $2,237,000,000 of money that I spoke about that has gone out of the country in ten years and divide it up, and I would divide it amongst American laborers who get 72 per cent. of it. I would give the Government 5 per cent. more, for that is the rate of taxation of the whole, and then I would let the capitalists have the balance, and I think it would be better for the country than to send it abroad to support foreign laborers and foreign capitalists.

Mr. EUSTIS. Does the Senator know the profit of the manufacturer on the suit of clothes the Senator himself now wears?

Mr. TELLER. The Senator inquires if I know how much profit the manufacturer makes on the suit of clothes I have on. I do not. I simply know that the man who made this suit of clothes got at least three times as much as he would in almost any other country in the world, and in any other country save Great Britain. That I know. I know that the man who raised the sheep off whose back the wool came that made the coat I have on was protected in his industry. I know that the men who sheared the sheep and the men who carded the wool and who spun it and who wove it, all got from 50 to 100 per cent. more than they get in other countries where they have cheap clothes. I do not want to repeat a trite thing, but cheapness is not the main thing; cheapness is not the great desideratum of life.

What good does it do to have cheap clothes if you do not have the money to buy them? What good is it to the laborer if he can say, "I can buy the supplies of my family for a week for a dollar, but I have not a nickel?" He will not have the nickel unless he has labor. I do not want cheap goods at the expense of cheap labor in this country, and there is where we part with our brethren from the South. They have got cheap labor. They want cheap labor, and I have no doubt that very many men in the North want cheap labor. I have no doubt that very many of the manufacturers want cheap labor, but it is our duty to see that they do not get it at the expense of the laboring men of this country.

Mr. COCKRELL. Mr. President——

The PRESIDENT *pro tempore*. Will the Senator from Missouri yield while the Chair lays before the Senate a joint resolution from the House of Representatives?

Mr. COCKRELL. Certainly.

PAY OF EMPLOYÉS.

The PRESIDENT *pro tempore*. The Chair will lay before the Senate a joint resolution from the House of Representatives, the title of which will be read.

The joint resolution (H. Res. 232) making appropriations to enable the Secretary of the Senate and Clerk of the House of Representatives to pay session employés of the Senate and House for the full month of October, was read twice by it title.

Mr. ALLISON. I ask that that may be immediately considered.

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDENT *pro tempore*. The Chair lays before the Senate another joint resolution from the House of Representatives, which will be read by its title.

The joint resolution (H. Res. 231) authorizing the Secretary of the Senate and Clerk of the House of Representatives to pay to the officers and employés of the Senate and House of Representatives, borne on the annual rolls, their respective salaries for the month of October on the 20th day of said month was read twice by its title.

Mr. ALLISON. I ask that that joint resolution may be considered at this time.

By unanimous consent, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

REVENUE LAWS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. COCKRELL. Mr. President, I confess I am very much astonished at the onslaught that has been made by the Senator from Rhode Island [Mr. ALDRICH] upon the Chief of the Bureau of Statistics touching the tables presented to the Senate by my colleague [Mr. VEST], now absent, and printed in the RECORD of October 16.

I happen to know something about those tables. Before the Senate bill was reported I had a table prepared in the Bureau of Statistics, having made out myself the headings so as to show the information I desired. I hold the table in my hand now. It shows opposite each schedule the value of merchandise dutiable under the present law, the value of merchandise dutiable under the House bill, and the rates of duties, etc.

About the time that was completed the Senate bill was reported, and I requested that it should be included in the statement, so that we should have a statement showing the value of the dutiable merchandise imported in 1887 under the existing law, the value of that same merchandise that was dutiable under the House bill, then the value that was dutiable under the Senate bill, then the average ad valorem rate of duty under the existing law on the whole importation, and then the average ad valorem rate of duty under the existing law on the articles that were dutiable under the House bill, and also upon the articles dutiable under the Senate bill, and then the average ad valorem rate of duty with the amount on the free-list.

I requested also that the table "woolens, cotton, flax, hemp, iron, and steel," should be made out for a special purpose. It was made out and furnished to me before it was ever in print. These tables were made by Mr. Emil J. Keferstein, who was born in Prussia and was appointed in the civil service of the Government from the District of Columbia.

I have not gone further back than 1879 to ascertain the date of his appointment. His name appears in the Official Register of the Treasury Department for 1879. He has been there ever since that time. He made this table as all tables are made. As to the beginning of it, I gave him the headings or points that I wanted, and he went to his house and made it, and it is a correct table, and the figures are correct,

except that there are one or two errors in the calculations and one error that he pointed out and one that he did not point out.

Mr. ALDRICH. I have no doubt there are many that have not been pointed out.

Mr. COCKRELL. No, there are not. The Senator criticises in regard to wood and woodenware. He says that the average ad valorem rates of duty are under the present law 18 per cent., under the House bill at the House rates 29.32 per cent., and under the Senate substitute at the Senate rates 18.88 per cent. There is no trouble about that. There is no conflict there, and there is no error. There it is, a plain mathematical proposition.

Mr. ALDRICH. I did not say there was any error.

Mr. COCKRELL. You criticised that, and that was one of the matters you pointed out as a humbug in the figures to show that there was nothing in them, and you tried to create the impression that the figures were wrong.

Mr. ALDRICH. I did not. I stated distinctly that the figures were right, but that the deductions that were drawn from them were wrong.

Mr. COCKRELL. The deductions are not wrong. The first column under the present law is the average ad valorem rate of duty upon all wooden wares dutiable under the present law, and that is 18 per cent. The House bill puts a large number of those articles dutiable under the present law on the free-list to the value of $6,679,202.12. There is the amount of existing dutiable merchandise put on the free-list.

Now take the merchandise that is left and apply the existing rates to it, and it makes the 31 per cent., because the dutiable articles having the highest rates of duty are left on by the House bill. Lumber is taken off and other articles, and that makes it. Now, then, you apply the House bill rates of duty to those articles now dutiable and still left on the dutiable-list by the House bill, and the average is 29.32 per cent. It is a considerable reduction.

Now take the Senate substitute. I have not compared the articles, but the same rate of duty exists under the Senate bill on the dutiable articles that exists under the present law. There is no change in that respect, but the Senate rates increase the duties to 18.88 per cent., and the Senate puts nothing on the free-list from that schedule.

So you may take any of the other schedules, and the figures are correct and are made upon a correct basis. They show just what they pretend to show and nothing else, and there is no misrepresentation about them, and any one who will look at them in a fair and candid light can see that there was no intention in the preparation of these figures to mislead or deceive anybody, but to get at the truth, and they do give the truth.

That table shows in the first column the dutiable merchandise under the present law imported in 1887 belonging to each schedule. That is not disputed, is it? In the next column it shows the value of the dutiable merchandise under the House bill which was imported in 1887. In the next column it shows the value of the merchandise dutiable under the Senate bill imported in 1887.

Now, what is the basis? The basis is that all these laws were in existence and applicable to the importations of 1887. You may say that is an incorrect basis. It is the only kind of a basis that you have to go upon. It is the only basis by which you can compare a law that exists or has existed with one that you propose. It may not be in every respect mathematically correct. Why? Because the Senate substitute proposes confusion. You have been afraid yourselves to make a calculation upon it. You take an article dutiable in 1887 at a specific rate and you make an additional ad valorem rate.

Nobody but your manufacturers, who are interested in this bill, who have caused it to be framed in the way it has, know the exact values of these articles upon which you lay a specific duty. The Government has not got them, and they have not been imported by values. They have been imported as specific articles, and the Government has taxed them accordingly under the existing law. Now you put on a compound duty. You not only maintain and retain the specific duty, but you add an ad valorem duty besides. The Government has nothing there by which it can tell exactly what would be the prices of these articles, and consequently can make no calculation, and the notes to this table explain this.

Mr. ALDRICH. I will say to the Senator from Missouri, to avoid any misapprehension on his part, that there is not a case of that kind in this bill, and he can not find one.

Mr. COCKRELL. These notes explain exactly how this table was made. There was no deception and there is none in it and it is correct, with very few mistakes, which have been made, probably, some in printing and some in other ways; but not nearly as many as in the statement which the committee have submitted.

The next column is duties collected on merchandise dutiable under the present law. There is the amount of duties paid. How do you tell what would be collected under the House bill and under the Senate bill? You take the rates proposed in the Senate bill and take the rates in the House bill and apply them to the merchandise imported in 1887. You take the rates proposed in the Senate bill and apply them the best way you can. There is confusion there in the rates, as I have said, and for that reason there may be inaccuracies in getting at either the rates of duty where compound or the value of the article. But these figures are based upon that and are correct.

Then we take the House bill and the duties under that. Take the present law, at the present rates, then under the House bill, and then the Senate substitute at present rates. Now, we have all the figures upon which you can take the percentages.

Mr. MITCHELL. May I ask the Senator a question?

Mr. COCKRELL. Certainly.

Mr. MITCHELL. Does your table show the difference in the percentage of the duty between that now levied under existing law and that levied by the House bill? Does your table show that?

Mr. COCKRELL. Certainly.

Mr. MITCHELL. What is the difference, according to your table?

Mr. COCKRELL. They are all in there.

Mr. MITCHELL. The Senator can state.

Mr. COCKRELL. No, I can not, without sitting down and making a calculation.

Mr. MITCHELL. You can not state?

Mr. COCKRELL. The rates are all given, and it is supposed any intelligent man can add or subtract, as the case may be.

Mr. MITCHELL. Can you or not now from your table state the difference in the per cent. of duty between the present duties under existing law and the Mills bill?

Mr. COCKRELL. You mean the total of the bill?

Mr. MITCHELL. Yes. What is the difference?

Mr. COCKRELL. I can tell you. You take the present law applied to the imports of 1887, and the average ad valorem rates of duty were 47.10 per cent.

Mr. MITCHELL. Under what law?

Mr. COCKRELL. Under the present law.

Mr. MITCHELL. The existing law?

Mr. COCKRELL. Wait a moment. I will give you the figures. You take, then, the articles dutiable under the existing law and also the articles dutiable under the House bill and apply the present law to those articles, and the average ad valorem rates of duty are 50.60 per cent. Now, you take the House bill and apply it to the same articles, and they are 42.77 per cent.

Mr. MITCHELL. But take all the articles.

Mr. COCKRELL. That is all there is.

Mr. MITCHELL. Take all the articles that are now subject to duty under existing law, and what is the difference between the per cent. of duty on those articles and the per cent. of duty on all those articles under the House bill?

Mr. COCKRELL. I never made that calculation, because there is $70,443,012.64 placed upon the free-list under the House bill.

Mr. MITCHELL. In other words——

Mr. COCKRELL. Wait a moment. I apply the average ad valorem rates to the articles dutiable under the existing law and the House bill.

Mr. MITCHELL. Is it not the fact, then, that in all the statements made in the Senate on the other side of the Chamber, to the effect that the difference is only very slight between the duties under the Mills bill and under the existing law, you leave out of consideration the free-list?

Mr. COCKRELL. Not at all. I have here the free-list; 28.7 per cent. is the present average rate on that. Here are the figures for that, and any man can see them; $70,443,012.64 of dutiable merchandise under the existing law are placed on the free-list by the House bill, and the present average ad valorem rates on those articles are 28.7 per cent. As a matter of course, you put them in and it would reduce and make it applicable to the others, which would make a less average all around. There is no doubt about that. But they are taken off the dutiable-list and put on the free-list. The only controversy is, shall they go on the free-list? That is the question of the hour.

Then what are the duties levied by the House bill on the other articles that are dutiable under the present law? That is the controversy. We have nothing to do with what has gone on the free-list. We do not propose to retain them on any average ad valorem rates. We put them on the free-list and take them out of the dutiable list entirely. The controversy is as to whether they shall go on the free-list. That is the point.

Then what is the controversy as to the other matter? The controversy is as to the reduction of duties upon those articles. We say that taking the goods imported in 1887 and dutiable under the present law and applying the House bill to them, the average ad valorem rates would be 42.77 per cent. We say apply the present law and it will be 50.60 per cent.

Mr. ALLISON. I would like to have the Senator state what his investigation shows the average ad valorem under the Senate substitute to be?

Mr. COCKRELL. I have stated that it would be 42.75 per cent.

Mr. ALLISON. Just the same practically.

Mr. COCKRELL. Practically the same. There is .02 per cent. difference only.

Mr. ALLISON. So that the bills are practically the same thing?

Mr. COCKRELL. Certainly. There is no doubt about that. The figures here show it. There is no concealment about it. You have made enormous reductions on some articles, but you have made large increases on others.

Now, Mr. President, I want to make the statement in regard to these tables that they are correct and the percentages are correct and the basis of the calculation is correct, and it is the only kind of a calculation that you or anybody else can make. That is all there is about it.

In regard to the second table, that is part of the same calculation. While this first table was made out just as it was finished and furnished to be copied by Mr. Keferstein and his assistants, who were detailed for that purpose—and whom I never saw until they commenced working on these tables—under no instructions, who were asked for nothing, and they made them out just as they would have made them ont for the Senator from Rhode Island or the Senator from Iowa, and I suppose both those Senators know these employés better than I do. I never saw them before we commenced on this work that I have any knowledge of. Mr. Keferstein has been employed there ever since 1879.

The other table, as to the percentages, is on page 10448 of the RECORD, and was also submitted by my colleague. When that was furnished to me I ran over the figures myself to see that the calculations were correct, and to see the principle upon which the figures were made, the basis on which the percentages were derived. I found that on yarns, under the schedule of "woolens," according to my calculations and the figures which I had, the percentage in the last column under the House bill ought to have been 184.57 instead of 186. That is the way I made the division. The other figures were correct.

I have been furnished by the chief of the Bureau of Statistics a letter, which gives an explanation of the basis upon which these figures were made and which was furnished to the Senator from Rhode Island, and which he did not take the liberty of reading. This comes from the Bureau of Statistics. This is a copy of the explanation that was furnished to the Senator from Rhode Island, and I will now read it.

Notes explanatory of bureau table of October 11, 1886, *showing the operations under the present tariff laws, under House bill* 9051, *and under the Senate substitute on importations of certain manufactured articles.*

[Prepared in reply to inquiries by Hon. N. W. Aldrich, of the Committee on Finance, United States Senate.]

	Quantity.	Value.	Value per unit.
1. Woolen cloths:	*Pounds.*		
Imported	1,117,564.40	$713,315.94	$0.638
	7,689,699.02	9,309,054.73	1.24
Total	8,807,263.42	10,022,370.67	1.138

Paragraph 354, Schedule K, Senate substitute, provides the following rates of duty on woolen cloths valued at above 60 cents per pound, 40 cents per pound plus 40 per cent. ad valorem.

That is paragraph 354, Schedule K, which I read:

354. Woolen cloths, woolen shawls, and all manufactures of wool of every description, made wholly or in part of wool, worsted, the hair of the goat, alpaca, or other animals, not specially enumerated or provided for in this act, valued at not exceeding 40 cents per pound, 35 cents per pound, and in addition thereto 35 per cent. ad valorem; valued at above 40 cents per pound, and not exceeding 60 cents per pound, 35 cents per pound and 40 per cent. ad valorem; valued at above 60 cents per pound, 40 cents per pound, and in addition thereto 40 per cent. ad valorem.

The same applies in regard to flannels, etc.

All of the above being over 60 cents per pound, the amount of estimated duty in the table of October 11,* is placed at	$7,531,853.64
House bill 9051 provides 40 per cent. ad valorem, which computes on above	4,008,948.26
Showing excess under Senate substitute as	3,522,905.38

There is no record of the importation of any woolen cloths valued at less than 60 cents per pound.

Mr. ALDRICH. Does the Senator think that a fair statement, or does he understand that the Chief of the Bureau of Statistics meant to be understood that there were no importations of any woolen goods below 60 cents a pound?

Mr. COCKRELL. The Chief of the Bureau of Statistics, as the Senator well knows, can have no personal knowledge of all these details of business; no human being can; he acts upon what his subordinates in the office furnish him after they have gone through with all these details. He says that there is no record in his office of the importation of any woolen cloths valued at less than 60 cents per pound.

Mr. ALDRICH. I only speak of the chief of the bureau as the responsible head of the office. What I asked the Senator is whether he himself believes that is a fair statement. Here are the importations of woolen goods valued at below 80 cents a pound under the classification of the present law.

Mr. COCKRELL. We have nothing to do with that. This is 60 cents a pound.

Mr LDRICH. Then the Senator does not understand the statement from which he is reading. The present law makes a division line at 80 cents a pound, and all goods valued below 80 cents a pound are subject to a rate of duty of 35 cents a pound and 35 per cent. ad valorem, and the average value of the goods imported in 1887 was 63 cents and a fraction a pound. The Chief of the Bureau of Statistics says, as there is no record in his office of any below 60 cents a pound, he therefore assumes that there were no importations below 60 cents a pound, and he puts them all at the higher rate. I say that statement or computation was made in the most dense ignorance or else it was purposely made unfairly.

Mr. COCKRELL. I can say that the statement was made by the gentleman I have referred to, and was made from the information he had that was furnished to that bureau, and I have no reason to believe, and do not believe, that he had any interest, directly or indirectly, or remotely, to make any misstatement about it, because he knew the statement would be relied upon; he knew it would be quoted here; he knew it would be subject to criticism, and there could be no motive in the world for any misrepresentation.

Mr. ALDRICH. It must be apparent to the Senator from Missouri, if it was not to this clerk that he speaks of in the bureau, that there were large quantities of woolen goods imported in 1887, upon which there was a value of less than 60 cents a pound placed.

Mr. COCKRELL. I am not familiar with that question, I say frankly, and I have not given any opinion on it. I am simply going by the statement here. The letter of the Chief of the Bureau of Statistics proceeds:

2. Brown and bleached linens, etc.
3. Steel, in forms not specified.

The titles used in bureau table of October 11, 1888, "Brown and bleached linens, etc.," and "Steel, in forms not specified," are not intended to apply to any special class of articles enumerated in Senate substitute, but are abbreviations of classes of articles well known in the publications of this bureau, namely:

"Brown and bleached linens, etc.," stands for brown and bleached linens, ducks, canvas, paddings, cot-bottoms, diapers, crash, huckabacks, handkerchiefs, and lawns, of flax, jute, or hemp, or of which flax, jute, or hemp shall be the component material of chief value.

"Steel, in forms not specified," stands for steel ingots, cogged ingots, blooms and slabs, by whatever process made; die blocks or blanks; billets and bars, and tapered or beveled bars; steamer, crank, and other shafts; shafting; wrist or crank pins; connecting rods and piston rods; pressed, sheaved, or stamped shapes; saw-plates, wholly or partially manufactured; hammer molds or swaged steel; gun-barrel molds, not in bars; alloys used as substitutes for steel tools; all descriptions and shapes of dry-sand, loam, or iron-molded steel castings; sheets and plates not specially enumerated or provided for; steel in all forms and shapes not specially enumerated or provided for.

The proviso of paragraph 335, Schedule J, Senate substitute, for "brown and bleached linen cloth containing not less than one hundred threads to the square inch, counting the warp and filling," is not contained in the present law, and for this reason no record exists of the importations of this class of linens. All brown and bleached linens were, therefore, with the other commodities named, classed as dutiable under the provisions of paragraph 333, Schedule J, Senate substitute.

Mr. ALDRICH. If the Senator will pardon me——

Mr. COCKRELL. Let me read this paragraph. I read paragraph 333:

333. All manufactures of flax, hemp, jute, or other vegetable fiber, except cotton, or of which flax, hemp, jute, or other vegetable fiber, except cotton, is the component material of chief value, not specially enumerated or provided for in this act, valued at 5 cents per pound or less, 2 cents per pound; valued above 5 cents per pound, 40 per cent. ad valorem.

Mr. ALDRICH. That paragraph does not apply to the articles under consideration at all.

Mr. COCKRELL. Paragraph 335 is as follows:

335. Brown and bleached linen cloth containing not less than one hundred threads to the square inch, counting the warp and filling, 35 per cent. ad valorem.

He says that they have no importations under this paragraph.

Mr. ALDRICH. He does not say they have any importations.

Mr. COCKRELL. He does not say they have any importations, but they have no description of that kind in the present law, and therefore the imported merchandise that may be included in that paragraph is not designated in the present importations. Then he says that he places them under the paragraph which I read, paragraph 333.

Mr. ALDRICH. Before the Senator leaves that point I wish to suggest to him the effect of that. The Chief of the Bureau of Statistics not having the information upon which he can base an intelligent judgment as to how much of one or the other of these articles would be imported, places them all at the highest rate. That is what I find fault with in this statement. If the Chief of the Bureau of Statistics had appended to the table which the Senator from Missouri presented a statement that it was simply a guess as to how much of one kind or how much of another was imported, if he had ever made the partial explanation which he makes in the letter the Senator is now reading, I should have had no occasion to rise in my seat and find fault with that officer. But he sends it here as though it were positive information based upon facts, and he now says that he knows nothing about it himself, and not knowing anything about it he has placed the whole of these importations at the highest rate of duty, which is certainly manifestly unfair.

Mr. COCKRELL. The Chief of the Bureau of Statistics accompanied these tables with a full explanation, for which the Senator will not give him credit. I read from the notes printed here in the CONGRESSIONAL RECORD, page 10449. He says:

Notes: This table shows a deficiency of $380,050.37 in the value of, and $220,791.41 in the duty collected on dutiable merchandise in 1887, as reported in the

* Prepared by this bureau in regard to the present tariff law, House bill, and proposed Senate substitute.

annual report of the Chief of the Bureau of Statistics. This difference is principally due to the omission from this table of dutiable merchandise ($177,909.59) withdrawn free of duty from warehouse and of merchandise not dutiable under any of the schedules. If these amounts had been included, the average ad valorem rate of duty under the present laws would be 47.10 instead of 47.07 per cent.

The interpretation of House bill 9051 is that of the Committee on Ways and Means, House of Representatives, as published by the clerk of that committee, and of the Senate substitute that of the Senate subcommittee on tariff.

The values and duties under both House bill and Senate substitute are computed on the importation of 1887, without speculating upon any possible increase or decrease consequent upon a decrease or increase in the rates of duty imposed by the proposed bills. The computations have been made as accurate as practicable, but in many cases under the Senate substitute a calculation was made impossible by the change from an ad volorem to a specific rate of duty. In such cases no account has been taken of the proposed change.

WM. F. SWITZLER,
Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics, October 9, 1888.

Mr. ALDRICH. The last statement the Senator read shows conclusively that the chief of the bureau did not intend to be understood as the Senator now understands him in regard to his explanation. He says where these changes have been made no account has been taken of them. That is why I find fault with him, that where a change was made so that neither the bureau nor anybody else could tell the exact provision of law, he sends that statement here as though no change had been made, and as though he had accurate information on which to base it, and accompanies it by no explanation and no statement that it was simply an estimate.

Mr. COCKRELL. I proceed to read the explanation of the Chief of the Bureau of Statistics. He says:

The amounts of duty carried out in bureau table of October 11, as estimated under House bill and Senate substitute, are correct, but the excess of Senate bill printed as $2,138,412.78 should read $2,038,412.78—per cent., 60.

Which is an excess, according to this table, of just $100,000, and the increased percentage is reduced to 60 instead of 62.94.

4. Attention is called to a typographical or other error on page 107 of the volume entitled "Comparison of Tariff Schedule, etc., prepared under the direction of the Senate Subcommittee on Tariff." The quantity of steel rails dutiable under the present law at $17 per ton (on first line of page 107) reads 40,509.863 tons instead of 49,509.863 tons.

That is, that much dutiable was imported in 1887. The correction of this error will change it to 49,509.863, only an error of 9,000 tons in the amount of the dutiable importation of steel rails in 1887.

The correction of this error will change the bureau table of October 11 on line "railway bars" to read—

This is not the fault of the bureau in getting the column opposite "railway bars" wrong. It was the fault of the committee that those figures were made incorrectly.

Mr. ALDRICH. We are not engaged in carrying on a bureau of statistics.

Mr. COCKRELL. That is all very true; but the calculation was made upon your own figures.

Mr. ALDRICH. So far as railway bars are concerned.

Mr. COCKRELL. As to railway bars, and you made a mistake.

The correction of this error will change the bureau table of October 11, on line "railway bars," to read—

	Amount.	Per cent.
Duties collected—		
Under House bill	$545,853.04	54.57
Under Senate bill	777,672.29	77.74
Excess of duties—		
Over present laws	65,675.20	7.79
Over Senate bill	231,819.25	42.47

W. F. SWITZLER, *Chief of Bureau.*

TREASURY DEPARTMENT,
Bureau of Statistics, October 15, 1888.

I desire to state that I made that correction yesterday. I discovered it yesterday and I made that correction in this table of percentages as it was published in my remarks.

Mr. ALLISON. It was undoubtedly an error in printing, making an 0 instead of a 9.

Mr. COCKRELL. I desired simply to make these statements. The Senator complains of the percentages on woolen cloths. There is an increase and a decrease. So it is in cotton cloths. That necessarily changes the percentages; but I insist that these figures are correct, based upon the best interpretation that could be given to the law.

INVESTIGATIONS BY FINANCE COMMITTEE.

Mr. ALLISON. I ask unanimous consent to offer a resolution for present consideration.

The PRESIDENT *pro tempore*. The resolution will be read.

The Chief Clerk read as follows:

Resolved, That the Committee on Finance be authorized and directed to continue, during the recess of Congress, the investigation of such revenue matters, including House bill 9051, as have been referred to it by resolutions of the Senate, subject to the authority conferred by said resolutions.

Mr. ALLISON. I will say briefly——

Mr. COCKRELL. Let that go over until to-morrow. I will see the Senator about it.

Mr. ALLISON. If the Senator will allow me——

Mr. COCKRELL. Oh, certainly. Make your explanation.

Mr. ALLISON. My explanation is simply this. There are some matters that the Committee on Finance desire to investigate further respecting trusts. Two or three investigations we could not complete before reporting the bill, and that is one of them. Then the plate-printing matter is only half finished. The subcommittee hope to take testimony before we convene here again. The resolution is for the purpose of authorizing these two things to be done.

Mr. COCKRELL. Let it come up in the morning. I will see the Senator and talk with him about it.

Mr. ALLISON. Very well.

Mr. COCKRELL. I wanted to ask the Senator about the testimony that has been taken. I have been furnished with one volume. Will there be another volume out soon?

Mr. ALLISON. I think the whole is in print now.

Mr. ALDRICH. Two volumes are now ready.

Mr. ALLISON. It will all be ready for distribution in a very short time, probably to-morrow.

Mr. COCKRELL. I am exceedingly anxious to get it so as to send it to the public bindery to have it bound.

Mr. ALDRICH. It is in the folding-room of the Senate to-day.

Mr. ALLISON. I can assure the Senator that he will get it to-day or to-morrow.

Mr. COCKRELL. The resolution goes over.

The PRESIDENT *pro tempore*. The Senator from Missouri objects to the present consideration of the resolution. It lies over under the rules.

Mr. ALLISON. I move that the Senate adjourn.

The motion was agreed to; and (at 5 o'clock and 55 minutes p. m.) the Senate adjourned until to-morrow, Friday, October 19, 1888, at 12 o'clock m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate October 12, 1888.

PROMOTIONS IN THE NAVY.

Medical Inspector Michael Bradley, a resident of Pennsylvania, to be a medical director in the Navy, from the 19th of June, 1888.

Surg. Theoron Woolverton, a resident of New York, to be a medical inspector in the Navy from the 19th of June, 1888.

Passed Asst. Surg. Howard Wells, a resident of Pennsylvania, to be a surgeon in the Navy from the 19th of June, 1888.

Medical Inspector Adrian Hudson, a resident of the District of Columbia, to be a medical director in the Navy from the 10th of July, 1888.

Surg. Charles H. White, a resident of Massachusetts, to be a medical inspector in the Navy from the 10th of July, 1888.

Passed Asst. Surg. James H. Gaines, a resident of Maryland, to be a surgeon in the Navy from the 10th of July, 1888.

Medical Inspector Newton L. Bates, a resident of New York, to be a medical director in the Navy from the 1st of September, 1888.

Surg. George W. Woods, a resident of California, to be a medical inspector in the Navy from the 1st of September, 1888.

Passed Asst. Surg. Daniel N. Bertolette, a resident of Pennsylvania, to be a surgeon in the Navy from the 1st of September, 1888.

Surg. Frank L. DuBois, a resident of Pennsylvania, to be a medical inspector in the Navy from the 15th of September, 1888.

Passed Asst. Surg. Ezra Z. Derr, a resident of Maryland, to be a surgeon in the Navy from the 15th of September, 1888.

Surg. George H. Cooke, a resident of Pennsylvania, to be a medical inspector in the Navy from the 15th of September, 1888.

Passed Assist. Surg. Frank B. Stephenson, a resident of Massachusetts, to be a surgeon in the Navy from the 15th of September, 1888.

Paymaster George A. Lyon, a resident of Pennsylvania, to be a pay inspector in the Navy from the 15th of September, 1888.

Passed Assistant Paymaster John W. Jordan, a resident of Florida, to be a paymaster in the Navy from the 19th of June, 1888.

Assistant Paymaster R. T. Mason Ball, a resident of Virginia, to be a passed assistant paymaster in the Navy from the 19th of June, 1888.

Lieut. Commander John K. Winn, a resident of Massachusetts, to be a commander in the Navy from the 31st of March, 1888.

Lieut. Clifford H. West, a resident of New York, to be a lieutenant-commander in the Navy from the 31st of March, 1888.

Lieut. Frank J. Milligan, junior grade, a resident of Tennessee, to be a lieutenant in the Navy from the 31st of March, 1888.

Ensign Philip V. Lansdale, a resident of Maryland, to be a lieutenant, junior grade, in the Navy from the 31st of March, 1888.

Lieut. John P. Merrell, a resident of Michigan, to be a lieutenant-commander in the Navy from the 28th of May, 1888.

Lieut. Albon C. Hodgson, junior grade, a resident of Georgia, to be a lieutenant in the Navy from the 28th of May, 1888.

Ensign Horace W. Harrison, a resident of the District of Columbia, to be a lieutenant, junior grade, in the Navy from the 22d of May, 1888.

Ensign William S. Benson, a resident of Georgia, to be a lieutenant, junior grade, in the Navy from the 28th of May, 1888.

Lieut. James M. Helm, junior grade, a resident of Tennessee, to be a lieutenant in the Navy from the 1st of June, 1888.

Ensign William V. Bronaugh, a resident of Kentucky, to be a lieutenant, junior grade, in the Navy from the 1st of June, 1888.

Lieut. Joseph G. Eaton, a resident of Massachusetts, to be a lieutenant-commander in the Navy from the 19th of June, 1888.

Lieut. William G. Cutler, junior grade, a resident of Nevada, to be a lieutenant in the Navy from the 19th of June, 1888.

Ensign Frank M. Bostwick, a resident of Wisconsin, to be a lieutenant, junior grade, in the Navy from the 19th of June, 1888.

Lieut. Cameron McR. Winslow, a resident of Massachusetts, to be a lieutenant, junior grade, in the Navy from the 1st of July, 1888.

Ensign Walter M. Constant, a resident of Indiana, to be a lieutenant, junior grade, in the Navy from the 1st of July, 1888.

Lieut. Charles Laird, a resident of Ohio, to be a lieutenant, junior grade, in the Navy from the 28th of September, 1888.

Ensign James H. Oliver, a resident of Georgia, to be a lieutenant, junior grade, in the Navy from the 28th of September, 1888.

Passed Assistant Engineer George E. Tower, a resident of New York, to be a chief engineer in the Navy from the 30th of June, 1887.

Passed Assistant Engineer Hugh H. Cline, a resident of Maryland, to be a chief engineer in the Navy from the 2d of December, 1887.

Assistant Engineer Theodore F. Burgdorff, a resident of New Jersey, to be a passed assistant engineer in the Navy from the 22d of June, 1886.

Assistant Engineer William R. King, a resident of Maryland, to be a passed assistant engineer in the Navy from the 17th of March, 1887.

Assistant Engineer Frank H. Eldridge, a resident of Ohio, to be a passed assistant engineer in the Navy from the 30th of June, 1887.

Assistant Engineer Charles C. Kleckner, a resident of Pennsylvania, to be a passed assistant engineer in the Navy from the 30th of June, 1887.

Assistant Engineer Edgar T. Warburton, a resident of Pennsylvania, to be a passed assistant engineer in the Navy from the 1st of July, 1887.

Assistant Engineer William B. Dunning, a resident of New York, to be a passed assistant engineer in the Navy from the 2d of December, 1887.

Assistant Engineer Robert I. Reid, a resident of Pennsylvania, to be a passed assistant engineer in the Navy from the 19th of June, 1888.

Executive nomination confirmed by the Senate October 18, 1888.

UNITED STATES CONSUL.

E. P. Earle, of Alabama, to be consul of the United States at Cognac.

HOUSE OF REPRESENTATIVES.

THURSDAY, *October* 18, 1888.

The House was called to order at 12 o'clock m. by Hon. S. S. COX, who directed the reading of the following communication:

WASHINGTON, D. C., *October* 18, 1888.

SIR: Hon. S. S. COX is designated to preside as Speaker *pro tempore* at the session of the House to-day.

J. G. CARLISLE, *Speaker.*

Hon. JOHN B. CLARK,
Clerk House of Representatives.

Prayer by Rev. J. H. CUTHBERT, D. D.

THE JOURNAL.

The SPEAKER *pro tempore.* The Clerk will read the Journal of the proceedings of yesterday.

Mr. FARQUHAR. Mr. Speaker, before the Journal is read, I desire to call the attention of the Speaker *pro tempore* to paragraph 1 of Rule I.

The SPEAKER *pro tempore.* The Chair will direct the Clerk to read the paragraph of the rule referred to by the gentleman from New York.

The Clerk read as follows:

The Speaker shall take the Chair on every legislative day precisely at the hour to which the House shall have adjourned at the last sitting, immediately call the members to order, and on the appearance of a quorum cause the Journal of the proceedings of the last day's sitting to be read, having previously examined and approved the same.

Mr. FARQUHAR. Mr. Speaker, I merely call the attention of the present occupant of the chair to the language of the rule, in the absence of the Speaker of the House, that on the appearance of a quorum the Journal of the preceding day shall be read. I am unwilling that certain members of this House shall absent themselves from its sessions while other members, like myself, have sat here and been in attendance day after day since the session began in last December. We have had one or two motions presented looking to the adjournment of this body. They have been treated somewhat captiously, I take it; and I think it is now time that we should come to some reasonable arrangement and definite conclusion as to whether we shall be parties to a waiting political game or adjourn the House properly and in order, there being no quorum present.

I believe the Speaker of the House, whatever his engagements elsewhere—and there is no reason because of illness for his absence—ought to preside over the deliberations of this skeleton House as long as the members present are willing to sit here doing a skeleton business.

Mr. RICHARDSON. I rise to a question of order.

Mr. FARQUHAR. I feel, and I state that it is not only a disgrace, but it is an affront to the intelligence of the Congress, to have two insignificantly attended bodies, as are now in session, kept in attendance here waiting patiently on the movements of parties.

The SPEAKER *pro tempore.* The gentleman from Tennessee rises to a question of order, and will state it.

Mr. RICHARDSON. I make the point of order that the gentleman does not present a question of privilege. There is nothing to disclose the absence of a quorum, and I make the point of order that he is out of order.

Mr. FARQUHAR. Mr. Speaker, with all due deference, I think I do present a question of the very highest privilege. The Chair will bear witness——

Mr. RICHARDSON. I demand the regular order.

Mr. FARQUHAR. The Chair will bear me witness——

Mr. RICHARDSON. I call the gentleman from New York to order. I have demanded the regular order.

Mr. FARQUHAR. I have called the attention of the Chair to the rule.

Mr. RICHARDSON. I ask a decision of the point of order I have made.

The SPEAKER *pro tempore.* The Chair will decide the question.

Mr. FARQUHAR. Very well.

The SPEAKER *pro tempore.* The Chair does not count the House, and can not tell officially whether a quorum is present or not.

Mr. FARQUHAR. But, Mr. Speaker, when the attention of the Chair is called to the fact that a quorum is not present, is it not the duty of the Chair to determine that question before the Journal is read?

The SPEAKER *pro tempore.* There is no record to disclose the absence of a quorum, attention having been merely called to the rule, and no objection being made to the reading of the Journal. The present occupant of the chair would not like to rule upon such a question to change the uniform custom and practice of the House. If the gentleman from New York would make that point of order when Mr. Speaker CARLISLE is present perhaps he would entertain the question.

The regular order is demanded, which is the reading of the Journal. The Clerk will read the Journal.

Mr. FARQUHAR. Do I understand that the Chair has not the affirmative right to determine whether a quorum is present by a count of the House?

The SPEAKER *pro tempore.* The Chair would not undertake to decide upon such a question under such unusual circumstances and adversely to the usage.

Mr. BAYNE. But is it not the duty of the Chair, when the question is raised, to count the House for himself and ascertain officially whether a quorum is present?

The SPEAKER *pro tempore.* The regular order is demanded, which is the reading of the Journal.

Mr. BAYNE. But when the attention of the Chair is called to the fact, is it not the duty of the Chair to count the House before the Journal is read?

The SPEAKER *pro tempore.* The Chair would not undertake to change the uniform custom of the House.

Mr. FARQUHAR. Is custom entitled to greater consideration than the rule of the House?

The SPEAKER *pro tempore.* The custom of the House is sometimes a rule unto itself, and controls in the absence of a rule.

Mr. BAYNE. But the custom of the House can not stand in the face of the rule where attention is called to the rule. If the custom has permitted the reading of the Journal in the absence of a quorum, and the rule prohibits it, if attention is called to the rule, the question should be decided.

Mr. MCMILLIN. Mr. Speaker, on the point of order raised by the gentleman, I would state that the presumption is in favor of the presence of a quorum until the contrary is shown affirmatively by the record. Furthermore, as to the criticisms of the gentleman from New York, I will state that in ten years of service in this House, or nearly that length of time, I have seen no such question raised, although there is frequently no quorum present in the morning when the Journal is read, even when there is a full attendance of members in this city. Members are often tardy about coming in in the early morning.

The gentlemen themselves will admit that their proceeding is unheard of and their criticism unprecedented.

Mr. FARQUHAR. I will take my own means of criticising my own motives and my own——

Mr. MCMILLIN. I do not criticise the gentleman's motives.

Mr. RICHARDSON. I call for the regular order.

Mr. FARQUHAR. I do not intend anything captious in this matter, but we had better bring it to a decision at once.

Mr. MCMILLIN. It is not my purpose to be captious.

The SPEAKER *pro tempore.* The Clerk will proceed to read the Journal.

The Clerk read the Journal of yesterday's proceedings.

The SPEAKER *pro tempore.* Without objection, the Journal will be approved.

Mr. EZRA B. TAYLOR. There is objection.

Mr. FARQUHAR. I object.

The SPEAKER *pro tempore*. For what purpose does the gentleman object?

Mr. EZRA B. TAYLOR. I object to the confirmation of the Journal.

The SPEAKER *pro tempore*. Does the gentleman move to amend the Journal?

Mr. EZRA B. TAYLOR. I simply object; and I suppose that makes it a matter for a vote.

Mr. BAYNE. There must be a motion to approve the RECORD, as it has been done by unanimous consent.

The SPEAKER *pro tempore*. The Chair will put the question on the approval of the Journal. [After putting the question.] The ayes seemed to have it.

Mr. EZRA B. TAYLOR, Mr. FARQUHAR, and Mr. BAYNE. Division.

The House divided.

The SPEAKER *pro tempore*. The Chair will announce the result as ayes 15, noes 9, but——

Mr. EZRA B. TAYLOR and Mr. FARQUHAR. No quorum.

The SPEAKER *pro tempore*. On consideration, the Chair would say that the Speaker should approve the Journal; and in the opinion of the Chair it was unnecessary to submit formally to a vote of the House the question of approval, no error being suggested and no correction proposed. The Clerk will read the rule relating to that matter. [Laughter.]

The Clerk read clause 1 of Rule I, as follows:

The Speaker shall take the chair on every legislative day precisely at the hour to which the House shall have adjourned at the last sitting, immediately call the members to order, and on the appearance of a quorum cause the Journal of the proceedings of the last day's sitting to be read, having previously examined and approved the same.

Mr. FARQUHAR. "On the appearance of a quorum." The Chair will not rule on custom which is opposed by the law and the rules. As I understood the Chair, he ruled that the custom should be carried out. I call attention to a positive rule, and now the Chair takes the rule as against the custom.

The SPEAKER *pro tempore*. The Chair did not decide as to the rule. The Chair thought the custom was uniform, and did not undertake to change it. No member objected formally to the reading of the Journal, and the want of a quorum had not been disclosed by any proceeding of the House prior thereto.

Mr. FARQUHAR. I make it as a broad assertion that there is not a quorum here, and it has been evidenced by this vote. I care nothing about the discussion of it.

Mr. RICHARDSON. I rise to a question of order, Mr. Speaker.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. RICHARDSON. I understand the Chair to decide that the Journal is approved by the Speaker.

The SPEAKER *pro tempore*. The rule seems to require it and the Chair so holds. No attempt has been made to change or amend the Journal.

Mr. RICHARDSON. Then I call for the regular order.

The SPEAKER *pro tempore*. There is no question before the House, and the regular order is demanded, which is the call of committees for reports.

The committees were thereupon called for reports.

CITROUS WATER COMPANY.

Mr. HUDD. Mr. Speaker, I was absent when the Committee on Indian Affairs was called, and I ask unanimous consent to non-concur in the amendments of the Senate to a House bill in relation to a right of way across an Indian reservation.

The Clerk read the title of the bill, as follows:

A bill (H. R. 7843) granting to Citrous Water Company right of way across Papago Indian reservation in Maricopa County, Arizona.

Mr. HUDD. I ask unanimous consent that the amendments of the Senate be non-concurred in, and that a conference be requested.

The SPEAKER *pro tempore*. The question is on non-concurring in the Senate amendments, and agreeing to the conference asked. Is there objection?

There was objection.

The question was put, and the Speaker *pro tempore* announced that the ayes seemed to have it.

Mr. FARQUHAR. Division.

The House divided; and there were—ayes 23, noes 1.

Mr. FARQUHAR. No quorum. I simply want to emphasize that, Mr. Speaker, and not to discuss it any further.

The SPEAKER *pro tempore*. The Chair will appoint as tellers the gentleman from Wisconsin [Mr. HUDD] and the gentleman from New York [Mr. FARQUHAR].

The tellers reported—ayes 10, noes 1.

Mr. FARQUHAR. I call for the yeas and nays.

After the count,

Mr. HUDD. The other side. [After a pause.] I withdraw the call for the other side.

The SPEAKER *pro tempore*. The yeas and nays are ordered, a sufficient number having arisen.

The Clerk proceeded to call the roll; but before the completion of the call, by unanimous consent, the demand for the yeas and nays was withdrawn, further proceedings under the yeas and nays were dispensed with, and the motion of Mr. HUDD to non-concur was agreed to.

The SPEAKER *pro tempore* appointed as conferees on the part of the House on the disagreeing votes of the two Houses on the bill H. R. 7843 Mr. HUDD, Mr. PEEL, and Mr. NELSON.

EXTRA COMPENSATION TO HOUSE EMPLOYÉS.

Mr. MILLIKEN. I ask unanimous consent to take up the resolution providing for an extra month's pay to the employés.

The SPEAKER *pro tempore*. The Clerk will report the resolution, after which the Chair will ask for objections.

The joint resolution was read, as follows:

Resolved by the Senate and House of Representatives, etc., That the Secretary of the Senate and Clerk of the House of Representatives respectively are hereby directed to pay to the officers and employés of the Senate and House of Representatives (including the Capitol police), who are now borne on the annual and session rolls of their respective Houses, one month's extra pay at the compensation now paid them by law; and a sum sufficient to pay the same is hereby appropriated out of any money in the Treasury not otherwise appropriated, which sum shall be immediately available.

The SPEAKER *pro tempore*. Is there objection to the present consideration of the resolution?

Mr. MCMILLIN. Mr. Speaker, I think the resolution should be limited to the House employés. Not that I would do injustice to any other class, but resolutions so limited have been passed heretofore, the limitation being put upon the ground that the Senate employés are already paid a larger compensation than the House employés. Then, too, the resolution just read embraces a class of employés who have not been embraced heretofore in such resolutions. The gentleman has made his resolution broad beyond precedent in that regard, and therefore I suggest that it be modified. I can realize that, from the great length of this session, there is a class of our employés who would be done injustice to if we did not allow them some extra compensation, but I think the resolution should be properly guarded. Then, as to another class of officers of the House, we have already, I believe, made an appropriation of $1,000 extra to each of the Official Reporters by way of reimbursement of extra clerk hire, and I do not think they ought to be included now. The resolution seems to me quite loosely worded, and, if the gentleman will pardon the criticism, I suggest that be make it conform to resolutions heretofore passed concerning extra compensation for employés of the House.

Mr. MILLIKEN. I suggest that the gentleman offer an amendment.

Mr. MCMILLIN. As the gentleman has moved in the matter, I suggest that he modify his resolution himself.

Mr. HOOKER. I think that the gentleman who offers this resolution in regard to extra compensation for employés of the House ought to make the amendments suggested by the gentleman from Tennessee, and it seems to me particularly appropriate that it should be amended so as not to include that very worthy corps of officers for whom extra compensation has already been provided. I mean the Official Reporters of the House.

Mr. MCMILLIN. All of them except one have been voted $1,000 each. One has not, but he has not been here during the whole session. I have no suggestions to make beyond stating the facts.

Mr. HOOKER. Well, if these officers have received extra compensation, it seems to me that they should not be included in a general resolution of this kind. I say if that be so, because although I know there was a proposition before the House to make them such an allowance, I do not know whether it became a law or not. This has certainly been a very protracted session; and as to the other officers and employés of the House, especially the reading clerks, the journal clerk, and all the other clerks of the House who have necessarily been in attendance at the night sessions which have been so numerous during this Congress, I think it is very appropriate that we should pass a resolution of this character giving them some extra compensation. If there ever was a time when it would be appropriate for the House to grant additional compensation, this seems to me to be the time. I know that when I had the honor to be here as a Representative from my State some years ago, it was not an infrequent occurrence to adopt a resolution of this character even at the end of an ordinary session.

It has been announced elsewhere, and I believe it is true, that this is the longest session of Congress that has ever occurred since the organization of the Government. Hence, if there ever was a time when the employés of the House who have not already been compensated on account of their extra service, should be provided for in a resolution of this kind, it seems to me this is such an occasion. I heartily sanction the purpose of this resolution, and hope it will meet the concurrence of the House.

Mr. MILLIKEN. I have sent up an amendment which I desire the Clerk to read.

Mr. FARQUHAR. Will the gentleman permit a remark in reference to the compensation of the stenographers?

Mr. MILLIKEN. Certainly.

Mr. FARQUHAR. Mr. Speaker, attention has been called to the fact that in one of the appropriation bills $1,000 was voted to each of the stenographers of this House. The remarks made this morning by

the gentleman from Tennessee [Mr. McMILLIN] would seem to imply that this was a bonus or gratuity. I wish to say that instead of this appropriation of $1,000 being anything in the nature of a bonus to these stenographers, it will barely pay, and possibly will not pay, the extra expenses which have been imposed upon them at this session for clerk-hire in the copying of their notes, etc.

Mr. McMILLIN. I was not criticising the action of the House in making that appropriation, but only calling attention to the fact that already two months' extra pay, or a little more than two months' extra pay, had been given to that class of officers, whereas no such provision had been made for these other officers.

Mr. FARQUHAR. All I desired was simply to call attention to the fact—and I know the gentleman from Tennessee on examination must concur with me—that the excessive length of this session has caused to the official stenographers extra expenses which the $1,000 voted to each of them in a bill which has not yet become law will not cover.

I wish to say further that when Mr. Edwards, one of the corps of Reporters, died, I did all I could to have some little compensation voted for the family of that man who gave his life in the service of this House during our protracted debates on the tariff bill; but not one dollar of appropriation could I get into the appropriation bill. I hope at the short session we will make amends for our omission in this matter.

Mr. HOOKER. I ask the gentleman from New York whether the family or legal representatives of Mr. Edwards were not included in the proposition giving additional compensation to the stenographers?

Mr. FARQUHAR. As I understand, the proposition I have in mind was met by way of objection by the suggestion that there had already been this $1,000 appropriated.

Mr. WHITE, of New York. The amount voted to the Reporters was not in fact extra compensation for their services, but mere remuneration for excessive outlay of money to which they were subjected.

Mr. SOWDEN. I would like to have this resolution reported again. I am not sure that I understood it correctly.

The resolution was again read.

Mr. SOWDEN. I would like to know the exact amount of money this resolution involves in the event of its adoption.

Mr. MILLIKEN. If the resolution passes in the form in which it was originally offered it will involve an expenditure of about $40,000.

The SPEAKER *pro tempore*. The amendment sent to the desk by the gentleman from Maine [Mr. MILLIKEN] will be read.

The Clerk read as follows:

Add to the resolution the following:
"Not to include the Official Reporters, whose compensation for extra services is provided for in the deficiency bill now pending in conference."

Mr. SOWDEN. I did not exactly catch the statement of the gentleman from Maine as to the amount involved in his resolution, on account of the confusion prevailing.

Mr. MILLIKEN. I said that if the resolution should pass as originally presented the amount involved would be about $40,000.

Mr. SOWDEN. Then, if it involves that sum, I shall have to object to its present consideration.

Mr. MILLIKEN. I hope the gentleman will allow me a moment before he objects. There is an amendment pending excluding the Official Reporters, and I propose to accept the amendment suggested by the gentleman from Tennessee [Mr. McMILLIN], which will exclude from the resolution everybody except employés of the House.

Mr. McMILLIN. That has been the custom.

Mr. HOOKER. If the gentleman from Maine [Mr. MILLIKEN] will allow me a moment, I wish to make a remark in connection with what I said a few moments ago, in order that this matter may be properly understood. The sum which was attempted to be provided in the deficiency bill for the stenographic corps (it has not yet become a law, I understand) was intended to reimburse to that corps the expenditures they are required to make, they being the only officers of the House who make personal expenditures in connection with the discharge of their official duties. They are required to pay the expenses of transcribing their short-hand notes, the expenses connected with attendance on their rooms, etc., and, as I understand, the sum heretofore voted by the House was designed simply to reimburse the actual outlay necessarily incurred by the reporters in reducing the short-hand notes to the form in which they appear in the RECORD. If, therefore, we vote, as I think we should, this additional month's pay, I do not know that there would be any justice in excluding the stenographers from the operation of the resolution. I deem it proper to make this remark in view of the suggestion I made before.

Mr. MILLIKEN. Mr. Speaker, I wish to say that when I drew this resolution I understood the circumstances just as they have been stated by the gentleman from Mississippi, and that is why the language included the Official Reporters. If I could have my own way, I would be glad to have the resolution passed in the shape in which I originally presented it; but if it can not be passed without the amendments indicated by gentlemen who have spoken, then, rather than have the resolution defeated, I will accept their amendments.

Mr. McMILLIN. I wish to restate, Mr. Speaker, my original proposition, which was to the effect that a custom had originated, by reason of a difference in pay between the employés of the House and the Senate, to make some such provision as this at the close of the sessions of Congress for the House employés.

Mr. MILLIKEN. I so understood.

Mr. McMILLIN. That custom, however, ceased or fell into disuse in the last Congress; and I believe in the preceding Congress, too, it was refused when it was proposed to pay the month's extra compensation.

I realize, however, that this has been a most extraordinary session. I also take great pleasure in bearing testimony to the uniform efficiency, vigilance, untiring service, and courtesy of our officials in this most trying session. I called attention, first, to the fact that the custom has been, where this has prevailed at all, to make the appropriation proposed by this bill, not a month's extra compensation to the Senate and House employés, but to the House employés, in order to cover the difference between the pay of the two bodies, that being the original foundation of this action; secondly, I thought it but proper to direct the attention of the House to the fact that an appropriation has been embodied in the deficiency bill to reimburse the stenographers of the House for actual payments made by them; third, that it had not been the custom heretofore for the House to inaugurate a proposition providing payment for a class of employés that belong neither to the Senate nor to the House, but who are controlled by joint action.

Having made this statement I am willing to leave the question to the House to determine, and merely suggested to the gentleman from Maine to include only the employés of the House, as has been the custom heretofore.

Mr. BRECKINRIDGE, of Kentucky. I desire to offer an amendment in the nature of an additional resolution, if that is now to be considered.

The SPEAKER *pro tempore*. The Clerk will report the amendment.

The Clerk read as follows:

Resolved also, That the Clerk of the House be, and he is hereby, authorized and directed to pay out of the contingent fund of the House to John Prater, for services rendered in the House cloak-room, at the rate of $50 per month for the present session of Congress.

Mr. BRECKINRIDGE, of Kentucky. I am informed that he has performed services without compensation; and we all know, at least on this side of the House, that he has performed his services exceedingly well. Having received no pay, if the resolution proposed by the gentleman from Maine passes, I think it only right and proper that he should be paid for the services actually rendered by him.

Mr. SOWDEN. Mr. Speaker——

Mr. MILLIKEN. Will the gentleman from Pennsylvania allow me a moment, and I will afterwards yield the floor to him?

Mr. SOWDEN. Certainly.

Mr. MILLIKEN. I offer what I send to the desk as an amendment to the amendment already offered.

The SPEAKER *pro tempore*. Two amendments are now pending, and this would not be in order at this time. It may be read, however, for information.

The Clerk read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Clerk of the House be, and he is hereby, authorized and directed to pay to the officers and employés of the House borne on the annual and session rolls on the 30th day of September, 1888, one month's extra pay at the same compensation then paid them by law, said sum to be immediately available.

Mr. MILLIKEN. I offer that as a substitute for the resolution and amendment already offered.

The SPEAKER *pro tempore*. Is there objection to the present consideration of the resolution?

Mr. SOWDEN. Mr. Speaker——

The SPEAKER *pro tempore*. The Chair hears no objection.

Mr. SOWDEN. I object.

The SPEAKER *pro tempore*. Then there is nothing before the House.

Mr. SOWDEN. I desire to be heard.

The SPEAKER *pro tempore*. The Chair will recognize the gentleman for that purpose.

Mr. SOWDEN. As I understand, Mr. Speaker, the amendment or substitute offered by the gentleman from Maine [Mr. MILLIKEN], providing for an additional month's pay to the annual as well as the session clerks or employés of the House, involves some $20,000 now, instead of $40,000 or more under the original proposition. It seems to me, sir, whether this has been the custom in the past or not, that it is a vicious one, and that the time has come when it should be broken up. Here we have a number of annual clerks or employés whose salaries are fixed by law, every one of whom on receiving an appointment to the office he holds knew in advance exactly what the law provides for the services he is called upon to perform.

Under the law he receives a compensation for twelve months' service, for an entire year's service, and the proposition now is not only to pay him for the twelve months' service when he renders less than eleven, but to pay an additional month's compensation, or, in other words, to give him pay for thirteen months, when as a matter of fact he rendered less than eleven months' service.

Again, so far as the session employés are concerned, instead of being a hardship upon them they are to be congratulated, for they are largely

benefited by the prolongation of the session. I know that the pages of the House, these little boys, who are receiving $2.50 a day while the session lasts, are greatly benefited by its unusual length, and there is no reason, and certainly no argument has thus far been advanced by the gentleman from Tennessee or any one else, that furnishes any ground for giving additional pay to these employés as proposed. Every employé of the Senate and the House should be gratified, and would no doubt be pleased if the session continued for the full twelve months, since he would be correspondingly benefited. So, I repeat, I can see no good reason why we should make this additional plunge into the public Treasury and abstract therefrom $20,000 to $30,000 to pay for services which were never rendered and the Government never received. I repeat, therefore, that the time has come when we should put a stop to it, and I think this is as good a time as any to break up this custom. Let us break up this vicious and expensive system. Let us give every man every dollar that he honestly earns, and pay them the salaries legally due them, but do not let us take the people's money and vote a gratuity to them that is unwarranted by law and pay them for services never rendered.

Mr. MILLIKEN. Mr. Speaker, I desire to say this resolution is offered for the very purpose of paying to the employés of this House what they have earned, and what they have richly earned. As I suggested in some remarks I made a few days ago upon this subject, we have kept them here. We could have got up and gone at any time we chose; but they have not the slightest control over the time; they are required to stay here.

Now, I have further to say, Mr. Speaker, that extra pay has been given for extra service to the employés of the Government Printing Office; and extra pay has been given for extra services in the Adjutant-General's Office. Clerks in the Departments are allowed a month's vacation with pay during the time they are gone. Now, these young men, and these old men who are at work here, as my friend from Tennessee [Mr. MCMILLIN] suggested, have been doing an unusually large amount of work; and we have caused them to do it. This thing is not done without precedent. On the contrary, until last Congress, just such a resolution as this has passed at every session since I have been in Congress, and for a long period prior to that. The gentleman from Pennsylvania [Mr. SOWDEN] suggests that these employés knew beforehand what they were to receive, because the law fixed the rate of compensation.

They also knew beforehand that it had been the custom to vote them this extra month's pay, and that that custom had existed so long that it had really become almost a law; and considering the amount of work they have done and the length of time they have been confined here I think it is nothing more than just. I have heard gentlemen stand up in the House time and again during this session and talk of the hardships of laboring men and say we should liberally compensate the laboring men. Now, if there are anywhere in this country any men who labor more assiduously than the men whose names are included in this resolution, I should like to see them produced.

Mr. SOWDEN. I object to the consideration of this resolution at this time, for the reasons already given by me why it should not pass.

Mr. MILLIKEN. I hope the gentleman from Pennsylvania will let them have consideration of their bill, and that they should have the voice of the House upon its passage.

The SPEAKER *pro tempore*. Does the gentleman insist upon his objection?

Mr. SOWDEN. I insist upon the objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. JOHNSON, one of its clerks, announced to the House that the Senate had passed a resolution fixing the date of final adjournment on Saturday, the 20th day of October, 1888, at 1 o'clock p. m., in which it requested the concurrence of the House.

EXTENSION OF LEASE OF BUTLER BUILDING.

Mr. SHAW. I ask unanimous consent for the consideration of the resolution now in the hands of the Clerk.

The Clerk read as follows:

Resolved, That the Select Committee on Indian Depredation Claims and the Committee on the Eleventh Census be authorized to continue the occupancy of the rooms now used by them in the Butler Building during the remainder of the present Congress, and that the Clerk of the House is hereby directed to pay rent for the same out of the contingent fund of the House at the rate now being paid.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. NEWELL, one of its clerks, informed the House that the Senate had passed without amendment a bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair shop, and for other purposes.

The message also announced that the Senate had agreed to the report of the conference committee on the disagreeing votes of the two Houses on the amendments of the House to the bill (H. R. 8074) to provide for allotment of land in severalty to United Peorias and Miamies in the Indian Territory.

EXTENSION OF LEASE OF BUTLER BUILDING.

Mr. SHAW. Mr. Speaker, in explanation of that resolution I will state that the House some time ago authorized the lease of these rooms for these respective committees during the present session of Congress, and the lease, unless it be extended by the House, will terminate with the present session. The House also authorized the furnishing of these rooms, which has been done at an expense of $400. The rooms were carpeted and provided with the necessary furniture. Of course, if this lease is not extended the furniture will have to be removed; and the Clerk has informed me that he has no place to store it. In addition to that, these committees will have duties to discharge during the next session of this Congress; and it seems to me it would be good policy to extend the lease, as there is but a short time intervening.

The SPEAKER *pro tempore*. Is there objection to the present consideration of this resolution? The Chair hears none.

The resolution was agreed to.

ORDER OF BUSINESS.

Mr. MCMILLIN. I call up the resolution just received from the Senate.

Mr. HOOKER. Before you do that I want to ask leave of absence for my colleague——

The SPEAKER *pro tempore*. The Chair will recognize the gentleman from Kentucky [Mr. STONE].

PAYMENT OF EMPLOYÉS FOR OCTOBER.

Mr. STONE, of Kentucky. I ask unanimous consent for the present consideration of the resolution I send to the Clerk's desk.

The Clerk read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Senate and the Clerk of the House of Representatives be, and they are hereby, instructed to pay the officers and employés of the Senate and of the House of Representatives, including the Capitol Police, for the month of October, 1888, on the 20th day of said month.

The SPEAKER *pro tempore*. Is there objection to the present consideration of this resolution? The Chair hears none.

The resolution was adopted.

Mr. STONE, of Kentucky, moved to reconsider the vote by which the resolution was adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

COMPENSATION OF EMPLOYÉS.

Mr. FARQUHAR. I ask unanimous consent for the present consideration of the joint resolution (H. Res. 232) which I send to the desk.

The resolution was read, as follows:

Be it resolved, etc., That the Secretary of the Senate and the Clerk of the House of Representatives be, and they are hereby, authorized and directed to pay to the session employés of the Senate and the House of Representatives salaries for the full month of October, and that the amount of money necessary to carry out the provisions of this resolution be, and the same is hereby, appropriated out of any money in the Treasury not otherwise appropriated.

Mr. FARQUHAR. Mr. Speaker, this simply covers the unexpired portion of the present month. The amount required to make the payment will be quite small, and I do not believe there can be any objection to the resolution.

The SPEAKER *pro tempore*. Is there objection to the consideration of this joint resolution?

Mr. SOWDEN. I would like to hear the resolution reported again

The joint resolution was again read.

Mr. SOWDEN. I see no objection to that.

The joint resolution was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

Mr. FARQUHAR moved to reconsider the vote by which the joint resolution was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

COMMITTEE ON APPROPRIATIONS.

Mr. FORNEY. I ask unanimous consent for the present consideration of the resolution which I send to the desk.

The resolution was read, as follows:

Resolved, That the Committee on Appropriations, or such subcommittee as they may designate, are hereby authorized to sit during the vacation, for the purpose of considering and facilitating the business of the committee in advance of the next regular session, to be convened at such time as the chairman of such committee may order.

The resolution was agreed to.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. WALKER, indefinitely, on account of important business.

To Mr. PEEL, indefinitely, on account of important business.

To Mr. BARRY (on motion of Mr. HOOKER), indefinitely, on account of indisposition.

ENROLLED BILL SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled a bill of the following title; when the Speaker signed the same:

A bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair-shop, and for other purposes.

ADJOURNMENT SINE DIE.

Mr. McMILLIN. Mr. Speaker, I call up for present consideration the resolution which has just been received from the Senate, and ask that it be reported by the Clerk.

The SPEAKER *pro tempore*. The Chair will lay before the House the concurrent resolution on final adjournment, which will be read.

The resolution was read, as follows:

IN THE SENATE OF THE UNITED STATES, *October* 18, 1888.

Resolved by the Senate (the House of Representatives concurring), That the President of the Senate and the Speaker of the House of Representatives declare their respective Houses adjourned without day on Saturday, the 20th day of October, at 1 o'clock p. m.

Mr. WHEELER. I desire to offer an amendment.

The SPEAKER *pro tempore*. The gentleman from Tennessee [Mr. McMILLIN] has the floor.

Mr. McMILLIN. Let the amendment be read for information.

The amendment was read, as follows:

Resolved, That this Congress take a recess from Saturday, October 27, at 5 p. m., until 12 o'clock noon, November 12, 1888.

Mr. McMILLIN. Mr. Speaker, the resolution received from the Senate and just read looks to the closing of this extraordinarily long session of Congress, and I think that a few remarks concerning the session, the work that was before it, what has been proposed by the House, and what by the Senate, are not inappropriate on this occasion. I shall therefore ask the indulgence of the House briefly.

One of the great questions that came before this body on its assembling was the reduction of taxation, a reduction which the business interests of the country demanded, which the people themselves, in their individual capacity as tax-payers, demanded, and which the best interests of the Government, in every sense, demanded. More revenue was being collected than was necessary, and how to reduce that revenue was the question to which the House addressed itself until it passed the bill reported from the Committee on Ways and Means, and is the question to which the Senate has addressed itself since that time. Each body has proposed a measure of relief, or what it claims to be a measure of relief. Those members of the Ways and Means Committee who were here thought it necessary to make an investigation into the merits of the proposition reported by the Senate so as to determine what relief it would probably afford and what its real effect would be. Through the very efficient work of the clerk of that committee, Mr. Henry Talbot, and Mr. Doyle, of the Treasury Department, aided by such other assistants as were deemed necessary, we have come to a conclusion as to what the effect of the Senate bill would be; and with the indulgence of the House I will now make a very brief comment upon it, taking as the basis of what I say the results developed by this investigation.

The Senate bill has changed the rates of duty and the classifications so extensively and in such ways that it is difficult to make the calculations as to what will be its operations; but from the best data that can be obtained and the most accurate calculations that could be made the following may be given as a summary of the effect of that bill upon the revenues, should it pass.

There are fourteen of these schedules, and out of these fourteen schedules the duties on eleven will be increased by the Senate bill, according to the importations of the last fiscal year. Taking these as a basis of calculation the changes proposed by the Senate would increase the duties on eleven of these fourteen schedules.

Mr. EZRA B. TAYLOR. The gentleman will allow me to ask this question: Is not the increase of duties liable to reduce revenue?

Mr. McMILLIN. I will state to the gentleman that it is possible to make import duties absolutely prohibitory, and thereby increase the taxes of the people and utterly cut off revenue for the Government. That can be accomplished; and if the gentleman confesses that to have been the object of the Senate, there is no doubt that they have accomplished their object in a wonderfully successful degree.

Mr. EZRA B. TAYLOR. Mr. Speaker, I deny that it has been the object of the Senate to increase the taxes of the people. This whole business has been gone over so much that if the gentleman favors the passage of this resolution he had better make his remarks short.

Mr. McMILLIN. If it does not increase the revenues and does not increase taxation——

Mr. EZRA B. TAYLOR. I mean just what I have said.

Mr. McMILLIN. Now, Mr. Speaker, what will be the effect or these proposed changes? I think it proper the country should know. Take, first, chemicals——

Mr. BAYNE. Mr. Speaker, I desire to inquire of the gentleman whether an opportunity will be given this side of the House to reply to the observations he is now making?

Mr. McMILLIN. I will state to the gentleman that I do not propose to occupy all the time of the House. It is, of course, at all times within the discretion of the House to determine what course it will take with any resolution which may be offered.

Mr. BAYNE. I have no objection whatever to the gentleman elaborating his views upon the question of adjournment; but, of course, I shall insist that this side of the House shall be given an opportunity to reply.

Mr. PETERS. I will simply state now for the information of the gentleman, that unless——

Mr. McMILLIN. I can not yield further; the gentleman will have his time.

Mr. PETERS. I was going to make this suggestion——

Mr. FARQUHAR. I rise to a parliamentary question: Is the gentleman from Tennessee speaking in his own time for an hour?

The SPEAKER *pro tempore*. The gentleman has an hour to discuss the resolution. If the previous question should not be ordered, the Chair, at the conclusion of the gentleman's remarks, will recognize some gentleman on the other side for an hour.

Mr. McMILLIN. In chemical schedule A, according to the importations of 1887, the values imported were $5,041,574.54; the duties were $1,489,211.31. The estimated duties under the Senate substitute would be $1,409,932.01. The present rate of duty is 29.53 per cent.; under the substitute it would be 27.96 per cent. In that case there is a reduction of the revenues of less than $100,000.

In the earthen and glass ware schedule, the importations of 1887 were $6,322,000, the duties $3,516,000. The estimated duties under the Senate substitute are $3,282,000. The present rate is 55.60 per cent.; the rate under the substitute would be 51.92 per cent. But it is proper to say concerning this schedule that both the House bill and the Senate bill fix duties upon the coverings containing the importations, which, according to the Tariff Commission's report, amount to at least 9 to 11 per cent.; so that when you consider the change made as to coverings to meet the decision of the Supreme Court of the United States, there is actually no reduction, although I have given credit for a reduction in the statement just made.

In the metal schedule the importations were $17,660,000; the duties, $8,115,000. The estimated duties under the Senate substitute would be $9,743.000. The present rate is 45.89 per cent.; the proposed rate, 55.17 per cent. So that on the metal schedule, instead of the people getting that relief which they are entitled to receive, they get an increase of taxation to the extent of about 10 per cent. and an increase of revenue of over a million and a half of dollars.

In the woodenware schedule the importations were $1,060,000; the duties, $302,000. The estimated duties are $371,000. The present rate is 28.49 per cent.; the proposed rate, 35 per cent. This is the relief which is given on woodenware.

We come now to sugar, upon which there is a real reduction made. The importations were, in round numbers, $68,000,000; the duties, $56,000,000. The estimated duties will be $28,000,000. The present rate is 81 per cent.; the proposed rate, 41 per cent. But by a change of the schedule a greater benefit proportionally is given to the manufacturers who are engaged in the sugar trust than is given under existing law.

Mr. FARQUHAR. I will state to the gentleman that that matter was answered yesterday in the Senate quite thoroughly and effectually.

Mr. EZRA B. TAYLOR (to Mr. McMILLIN). Your speech has been printed before.

Mr. McMILLIN. With my friend's permission, I will take care of my speech. It is truth that I am uttering, and I do not care how often it is repeated. The Commissioner of Statistics has made computations, and arrives at substantially the same reductions stated here. The difference between the sugar duty and that on other things is that about nine-tenths of the increase of price added to sugar goes into the Treasury, whereas in some of these other schedules where there is an increase four-fifths of it goes into the pockets of the manufacturers, and not more than one-fifth into the Treasury.

Mr. FARQUHAR. It goes to Havemeyer & Co.; that is where it goes.

Mr. McMILLIN. I have just explained. I am glad my friend is aroused on that subject. Under the Senate schedule a greater benefit is given to the manufacturer than under the existing law or the Mills bill.

Mr. FARQUHAR. I wish to state that after an examination of all the reports made by the Committee on Ways and Means of the House and now reviewed by the Senate Finance Committee that the figures he gives are too old, having been corrected by later statistics.

Mr. McMILLIN. I can not yield to my friend, as I see some impatience manifested on the part of some members of the House as to the time I shall occupy. Therefore I decline to yield.

Tobacco: Importations, $10,955,123.03; present duties, $9,127,758.26; estimated duties under the Senate substitute, $11,507,718.23—an increase of rate from 83.31 to 105.04.

Provisions: Importations, $24,315,089.97; present duties, $6,192,126.83; estimated duties under the Senate substitute, $6,831,383.95, an increase of rate from 25.46 to 28.09. The increase of duties is over half a million.

Liquors: Importations, $2,549,662.24; present duties, $1,929,508.77; estimated duties under the Senate substitute, $2,396,231.96, an increase of rate from 75.06 to 93.98.

Cotton: Importations, $24,726,037.70; present duties, $10,152,993.44; estimated duties under the Senate substitute, $10,356,856.42, an increase of rate from 41.06 to 41.89.

It will be observed on comparison of the schedules which have been prepared and which have been printed that the increase has been greater upon the cheaper goods worn by the people in the ordinary avocations of life than on the finer commodities.

Hemp, flax, and jute: Importations, $17,301,413.04; present duties,

$5,858,031.30; estimated duties under the Senate substitute, $6,785,-723.10, an increase of rate from 33.85 to 39.22.

Wool and woolens: Importations, $46,212,247.11; present duties, $29,938,893.68; estimated duties under the Senate substitute, $34,322,-845.84, an increase of rate from 63.48 to 74.27. Some of these duties are raised so high they go from 100 to 225 per cent., the greater increase being on the ordinary and the lesser on the finer grade of goods. So, instead of giving cheaper woolen goods, the Senate bill proposes to increase the cost, and instead of allowing the manufacturer to have his wool at 10 cents a pound, as he gets it now, the Senate proposes to make the duty 11 per cent.

Silk goods and silk: Importations, $31,264,276.48; present duties, $15,540,300.70; estimated duties under the Senate substitute, $16,002,-094.04, an increase of rate from 49.73 to 51.18.

Books and papers, etc.: Importations, $35,724,436.31; present duties, $818,583.21; estimated duties under the Senate substitute, $893,-109.88, an increase of rate from 22.91 to 25.

Sundries: Importations, $10,568,347.25; present duties, $2,948,-510.12: estimated duties under the Senate substitute, $3,104,501.84, an increase of rate from 27.89 to 29.37.

I have gone through the schedule and the aggregate stands in this way: Total importations, $270,489,951.42; present duties, $152,456,-739.14; while under the proposed law, including sugar, there would be received $135,291,638.10; taking out sugar and computing the balance of the schedule there is an increase instead of a decrease of duties, so making the deductions of duties estimated by the Senate bill of $17,-165.101.04.

The duties remitted by the free-list on this bill are $5,828,074.65, and the duties remitted by the prohibitory features of the bill are $600,020, making in all a tariff reduction (instead of the bill we sent to the Senate), a proposed reduction of $23,593,195. And adding to that, Mr. Speaker, the free alcohol in the arts, the whole bill—that is if no more alcohol is used in the arts than is used at present—the whole relief afforded by the Senate bill in round numbers will not exceed $30,000,000, while in their report they themselves admit that the people are entitled to relief of from sixty-five to seventy-five millions of dollars. Instead of this they give but $30,000,000.

Mr. FARQUHAR. They make it the amount of the surplus.

Mr. McMILLIN. No, it is not. It disposes of the accumulations, but what becomes of the vast sum in the Treasury that ought to be gotten out, and the accumulations?

Mr. PETERS. Why, pay that out on the public debt.

Mr. McMILLIN. I admit that the only remedy, if the accumulation now in the Treasury is used in the demands of the Government and the increase hereafter, is in the payment of the public debt. But, Mr. Speaker, the people have a right while they are paying their honest debts to be exempt from additional payment of $29,000,000 for every $100,000,000 that is paid.

Mr. PETERS. But we have the 4½ per cent. bonds falling due in 1891, and they are only one-eighth.

Mr. FARQUHAR. And I hope the gentleman from Tennessee will not take away from the Secretary of the Treasury the credit for the saving he has made in bond purchases.

Mr. McMILLIN. But the people ought not to be required to pay $29,000,000 more as bonus on each $100,000,000 bonds paid for.

Mr. FARQUHAR. It is only a question whether you will continue the interest to coming generations or whether you will pay it off now when you have the money. Every business man who conducts his business properly will take up his notes and pay them off whenever he has the means in hand to do so.

Mr. McMILLIN. But the people ought not to be taxed at this high rate for the privilege of paying their debts. The remedy I was going to suggest is to stop the tax, and upon that question we join issue with gentlemen on the other side.

Mr. FARQUHAR. I hope the gentleman will not take issue with the Secretary of the Treasury in paying off the bonds.

Mr. McMILLIN. I hope the gentleman will permit me to proceed in my own way.

Mr. FARQUHAR. Certainly.

Mr. McMILLIN. The gentleman will have his own time.

I have stated that there was no remedy left to the Secretary of the Treasury with the present taxation system taking more money from the pockets of the people than ought to be required for the purposes of the Government; but I have also said that the real remedy ought to be applied here by a reduction of taxation.

Now, Mr. Speaker, the House of Representatives proposed to give to the workingmen of this country $6,000,000 of tin-plates free. It does not interfere with any industry in the country; it does not throw any laborer here out of employment. But the Senate say, "Oh, no; the tin-plates shall be taxed." By an artful change they are put into another schedule where, while they do not pretend to increase the duty, they do very largely increase it. Again, we said to the people by the House bill that they should have free lumber. The Senate say no, that the lumber manufacturers shall continue to derive their thirty millions from increase of cost while the Treasury gets but one million. And so I might go on through all of these schedules and show that the masses of the people get no benefit while the same remarkable state of affairs exists in the bill.

I will simply cite one illustration. Take the change in the tobacco schedule, or the proposition for a change there. Under the provisions of this bill reported by the Senate there is an increase of the tax on cigars worth $10 a thousand of $12.50, while on finer cigars, smoked by wealthy people, worth $250 a thousand, there is a decrease of the tax of $47.50. Then you take the ordinary table-ware. Take a poor article of knives worth 50 cents a dozen. The tax is increased from the present rate, 35 per cent., up to 70. Take knives worth $5 a dozen and the rate of duty is less, while on a knife worth $20 a dozen there is a still less reduction of duty; and when you come to the fine pearl-handle knives worth $40 a dozen, the duty remains as it is to-day.

Mr. FARQUHAR. Now will the gentleman allow me?

Mr. McMILLIN. If the gentleman will pardon me, I can not yield. I might go on through all of these schedules in the same way. The gentleman from New York will have his time to make such statement as he desires.

I have cited facts, Mr. Speaker, which show this remarkable state of things, that this bill increases the taxation upon articles of necessity rather than upon luxuries.

I call the attention of the House to the following detailed statement showing the increases made by the Senate over the existing law. Leaving out the sugar schedule, the increase on the others is unprecedented, considering the circumstances surrounding us demanding a reduction instead of an increase.

The main effort of the Senate seems to have been to raise the rates of duty instead of lowering them. When the average tariff rate in 1882 was only 42 per cent., a tariff commission was appointed composed of men favorable to a protective tariff—most of them selected because they were the representatives of some one of the protected industries.

That commission recommended a reduction of 20 per cent., and said that a reduction of 25 per cent. could be safely made; but now, when the average rate of duty is more than 47 per cent., the Senate proposes an increase on all the schedules except three. Leaving out the sugar schedules, the revenues would be vastly increased by the Senate bill.

The recommendation of President Arthur and Secretary Folger for a reduction of taxes has not been heeded; the recommendation of President Grant for free raw materials has been disregarded; the recommendation of the Tariff Commission for a reduction of 20 per cent. on existing rates, which amounted to over 42 per cent., has been wholly disregarded; the promises made by the Republican platform adopted at Chicago in 1884 have been thrown to the winds, and above all and beyond all, the just demands of the people for a reduction of the revenues of the Government and the interests of an economical administration have been disregarded. And we are told that instead of reducing taxes they will increase them. The Senate say that instead of simplifying and reducing them, they will complicate them; instead of giving the people relief from tariff taxation of about $50,000,000, confessed to be right, their whole tariff reductions, as I have said before, amount to only about $23,500,000, including the free-list.

They seem to have adopted the idea that the way to increase prosperity was to increase taxation. The people have waited long for relief; they can be no longer deluded; they no longer believe that $47 is paid to labor for every hundred dollars' worth of goods manufactured; nor will they agree to this increase of the tax on the necessaries of life, while no corresponding increase, and in many cases a reduction is made on luxuries. With the utmost confidence in the intelligence of the people to see the right, and their integrity to do it, we place our cause in their hands, and are willing to abide the decision they may make. [Applause.]

Estimates of effect upon the annual customs revenues of Senate substitute for bill H. R. 9051.

[Prepared, by direction of the Committee on Ways and Means, by the clerk.]

SENATE TARIFF BILL.

To the Committee:

Your direction to examine the tariff rates of the substitute for House bill 9051, reported by the Committee on Finance to the Senate, has been complied with so far and with as much exactness as the limited time, numerous interruptions, new and involved classifications, and insufficient information would permit. It is believed the estimate is far too liberal in the computation of reductions, and that if an occasional reduction has been estimated at less than the facts justify, or an increase reckoned as yielding more revenue by the changed rate than further inquiry would have done, that ten may be found which err in the other direction, and that a strict investigation with the command of fuller data would demonstrate that the actual reductions effected by the proposed amendments to our present tariff legislation would not reach $15,000,000 on the dutiable-list.

Out of fourteen schedules under which all dutiable articles are arranged, eleven have rates increased, and of the other three, one, namely, earthenware and glassware, has been already explained to have been left practically with the same rates as under the present law, the reductions having been considered to be offset by the re-enactment of the dutiable-package clause, and by many it is claimed the package clause will increase rates in this schedule 10 per cent. while the reductions are but 5, which would in effect be an increase of 5 per cent. in this schedule. Without a more certain basis for calculation it was considered best to estimate the reduction as shown on the face of fixed rates, and it is so done in the tables. (See Tariff Commission Report, page 13, where it is claimed that a rate of 40 per cent. on these goods, with a duty on the packages, etc., is equal to a rate of 50 per cent. without such dutiable charges.)

In one other schedule, chemicals, a slight reduction is shown of $80,000, and even this would be lessened if various increased rates in paints and some other items could be calculated with any certainty.

The last schedule, and the only one of the fourteen which, taken as a whole,

shows any material reduction, is E, sugar, on which $28,000,000 are reduced, the raw sugars being reduced one-half and the refined sugars not quite so much.

In further explanation it may be said that the accompanying tables were taken from the schedule published by the Finance Committee, except that on wool, as explained elsewhere; and that their interpretations of rates and items imported under the various sections were, so far as possible, followed in this estimate. Where a striking difference was apparent, as in leaf-tobacco, now dutiable at 35 cents, which is shown by their schedule to be reduced to 20 cents, of course the true rate was used in the estimate. So far as possible articles and rates not affected were eliminated from the calculation.

SCHEDULE A.—*Chemicals.*

1. Acetic acid below 1.047 s. g. is reduced 25 per cent., while that above 1.047 is reduced 60 per cent., or to 4 cents per pound.

2. Boracic acid, pure, is left at the present rate, 59 per cent., while commercial boracic acid is raised to 100 per cent. ad valorem; and the importations of the commercial acid are ten times as much as the pure.

7. Perfumery is reduced from 63.25 per cent. to 38.25.

10, 11, 12. Ammonia is increased from 25 to 50 per cent. higher than in present law.

Roman and Portland cements are raised from 20 per cent. to 8 cents per cwt. The Wallkill Portland Cement Company, of New York, in a letter in 1884 and in 1888, said if the duty of 20 per cent. was retained and the package duty restored "it is probable that this industry will as rapidly increase here as in other countries."

This the House bill does.

The rate is not excessive on Portland cement, but putting the same specific rate on Roman cement worth only half as much (or less) than Portland makes the rate on Roman cement 50 per cent., nearly. It has sold in this country at 75 cents per barrel. Tax 32 cents by the substitute.

23. Oxide of cobalt for bleaching pottery is increased from 20 to 27 per cent. We import nearly three times as much as is manufactured here.

35. Glue is increased from 20 to 25 per cent.

33. Inks, writing, are changed from 30 per cent. to 40, 50, and 60 cents per gallon; decreasing rates on some inks and much increasing rates on cheaper kinds. Without data no difference is estimated in the tables.

45. Orange mineral is increased from 70 to 80 per cent.

59. Olive oil, increased from 25 to 38 per cent.

63-70. Paints, several new classes are named and rates changed from ad valorem to specific; some increased, but no data for calculation.

75. Plaster of Paris, increased from 20 to 21 per cent.

Castile soap also raised from 20 to 21 per cent.

98. Spirit varnishes are changed from $1.32 per gallon and 40 per cent. to $2 per proof gallon and 40 per cent. No data at hand from which to calculate the per cent. of increase which is evident.

SCHEDULE B.—*Earthenware and glassware.*

99. Brown earthenware is reduced from 25 per cent. to 20 per cent., a reduction reckoned at 20 per cent. in the Senate report on the House bill.

100. Chinaware, plain and decorated, and all other earthenware is reduced 8 to 9 per cent., counting the same way, while the re-enactment of the dutiable-package clause more than compensates for the reduction, but in the estimates no account is taken of the package clause and credit given for full amount of reduction claimed.

102. Encaustic tiles, now 35 per cent., are raised to 45 per cent., and all fire-brick or common brick, when glazed, also raised to 45 per cent.

107. Bottles, if holding less than 1 pint, are made dutiable at 1½ cents per pound, and none to pay less than 40 per cent.

112. Cylinder and crown glass, polished, 10 by 15, raised from 2½ to 4 cents per foot.

117. Beveled or ornamented glass, increased 10 per cent. in addition to rates fixed on plain, of the same kinds.

118. Plain flint or lime glassware, made 1 cent per pound whenever 1 cent per pound exceeds 40 per cent.; otherwise to pay 40 per cent. Taken together, there is an evident increase in duties to be received under this schedule; but not taking into account the package clause, and for lack of more certain data in other items, credit is given for the decrease as shown.

SCHEDULE C.—*Metals.*

134. Chains, less than ¾ inch in diameter, as trace-chains, etc., are raised from 44.37 per cent. to 53.57 per cent.

137. Cotton-ties and hoops for baling, .2 cent more than the hoop-iron from which it is made (1.1 cents), increasing the revenue over $240,000 and raising the duty from 35 per cent. to 108 per cent.

144. Sheets of iron or steel thinner than No. 9 and taggers iron are raised from 30 per cent. to above 60 per cent., more than doubling the duty, the increase following the thin sheets through the various processes of pickling, cold-rolling, etc.

146. Cold-rolled steel sheets, thinner than No. 29 wire-gauge, are increased from 41.60 per cent. to 75 per cent. ad valorem, and taggers iron, pickled, etc., from 39.18 per cent. to 61.11 per cent.

150. Fence wire rods of steel now paying 45 per cent. duty, smaller than No. 5, are raised to .6 cent per pound or 54 per cent. if No. 6, and 1¼ cents if smaller than No. 6.

151. Iron and steel wire, worth over 10 cents per pound, are raised to 45 per cent. They now bear specific rates, but the rate proposed is ad valorem and higher in all cases.

153. Steel ingots, cogged ingots, blooms, slabs, die blocks or blanks, billets, now 45 per cent., are made five-tenths of a cent per pound when valued at 1 cent or less, an increase from 45 to 60 and 80 per cent., according to the value of the various descriptions. When the value reaches 4 to 7 cents the rate is left at 2 cents, above 30 per cent. on importations of 1887, but above 13 cents in value the rate is changed again to ad valorem, and made 45 per cent., more than doubling the present rate of 3½ cents per pound.

159. Circular-saw plates are increased from 37.32 per cent. to 45 per cent. (from 4 to 7 cents in value), though circular saws are left with only 30 per cent. duty.

163. Bronze powder, now 15 per cent., is made 15 cents per pound, equivalent to about 30 per cent. ad valor m. (See Appendix, House bill 9702, first session Forty-ninth Congress.)

172. Table knives, now 35 per cent. duty, are made 20 cents per dozen, when valued at $1 or less; valued at $1 to $3, to pay 50 cents per dozen; and valued at $3 to $8, to pay $1 per dozen; and valued over $8 per dozen, to pay $2 per dozen, and in addition 30 per cent. on all. It is impossible to accurately calculate the effect of this new classification, but it will be seen that knives worth 50 cents per dozen will under this provision pay 70 per cent.; those worth $1.50 per dozen will pay 63 per cent.; worth $5 per dozen, pay 50 per cent.; worth $20 per dozen, pay 40 per cent.; and after $40 per dozen value is reached the rate is less than at present. On the cheapest cutlery imported the rate will be far beyond 100 per cent.; the effect has been estimated at an increase of one-half or 52 per cent.

173. Penknives and pocket-knives, rate changed from 50 per cent. to 50 cents per dozen blades and 25 per cent., which leaves the rate unchanged when the import value is $8 per dozen on four-blade knives, but increased on lower grades. A boy's 10-cent knife of two blades would have the duty quadrupled; a cheap three-bladed knife would be raised 200 per cent., and the average knife in common use be much increased. It is estimated the duties on average imports are increased by this provision to 65 per cent., instead of 50 per cent.

181. Double-barreled breech-loading shotguns, rate changed from 35 per cent. to $10 each and 25 per cent. A $10 gun would thus pay 125 per cent. instead of $3.50, as now, while a $300 gun would pay $85 instead of $105 duty, as under present law. If average importations be valued at a little over $35 each, the increase in duties would be one-half, and on this basis the estimate is made.

191. Small screws, one-half inch and less, are increased from 44.59 per cent. to over 52 per cent.

194. Type metal changed from 20 per cent. ad valorem to 1½ cents per pound. In Senate majority report is a statement which would indicate an increase to more than 50 per cent. ad valorem. The estimate is based on the strength of statement in report, at 50 per cent. duty, an increase of 150 per cent., as calculations were made in same document on reductions in House bill.

SCHEDULE D.—*Wood and wooden ware.*

213. Manufactures of wood not especially enumerated. The principal increase in this is rattans, now paying 10 per cent., are raised to 35 per cent.

215. Sawed boards, of mahogany, rosewood, etc., made 15 per cent., and

216. Veneering and briar-root or briar-wood made 20 per cent.

SCHEDULE E.—*Sugar.*

217. Sugar below No. 16, Dutch standard, is reduced in rates one-half; and molasses below No. 56° polariscopic test is made free, which practically places all molasses on the free-list, and sugar drainings and sweepings, now 20 per cent. ad valorem, are made to bear the same rate as sugar or molasses, according to relative test. By reduction by adulteration these, too, may be included in free molasses.

All sugars above No. 16, Dutch standard, are reduced less than one-half, leaving the margin on refined sugars above raw sugars higher than at present. For instance, the rates on sugar of 90° below 13 Dutch standard and that on sugar above No. 20 are within a fraction of 84 per cent., while under the substitute the 90° sugar will be reduced to 42 per cent. and that above No. 20 to 47 per cent.

SCHEDULE F.—*Tobacco.*

226. Cigars, cheroots, etc. Rate changed from $2.50 per pound and 25 per cent. to $3.50 per pound; a reduction of $273,097 on importations of 1887. By this change cigars worth $10 per thousand, which now pay $2.50 per pound, or an average of $37.50 and 25 per cent., equal $40, would pay $3.50 per pound, or an average of $52.50 per thousand—an increase of $12.50 per thousand; while cigars costing $250 per thousand, which now pay $100 duty per thousand, would pay $52.50 per thousand under the substitute, the same as the cheap cigar—a reduction of $47.50 per thousand.

227. Leaf-tobacco, for wrappers, made 75 cents per pound, now pay 35 cents per pound, if less than 85 per cent. run one hundred leaves to the pound (Sumatra leaf). Under the substitute any leaf fit for wrappers condemns the whole package or bulk to 75 cents rate.

In 1885, 15,238,637.81 pounds of leaf-tobacco were imported, paying $5,333,523.25 duty. There are no returns to indicate the proportion of wrappers imported, but Mr. Hammerstein, editor of the United States Tobacco Journal, told the Committee on Ways and Means, in March, 1886, that 10,000 bales out of 50,000 bales of the Havana tobacco imported in 1855 were wrappers, or about 2,000,000 pounds Havana, and the same authority gave over 4,000,000 pounds importations of Sumatra wrappers. This would be a total of over 6,000,000 pounds wrappers out of a total of 11,000,000 pounds leaf imported in 1885.

With the same proportion 8,000,000 out of the 15,000,000 pounds of leaf in 1887, at 35 cents, would pay 75 cents, or a duty of $6,000,000, while the rest of the 15,000,000 pounds would be reduced to 20 cents, yielding a revenue of $1,447,000, a total of $7,447,000, or an increase of over $2,000,000 on leaf alone; and this would be much increased by the provision which makes any package or bulk subject to 75 cents duty if it contains any wrapper leaf.

SCHEDULE G.—*Provisions.*

232. Horses are made dutiable at $20 per head, cattle at $5 per head, and sheep and hogs at 50 cents per head.

Animals for breeding purposes have been free since 1816 through all tariffs, even including the war period. This provision would lay duties to the amount of nearly $400,000 on importations in 1887 of free breeding animals.

254. Extract of meat, now 20 per cent., is made dutiable at 35 cents per pound if solid, and 15 cents per pound if fluid, and the tin can made also dutiable at 15 cents per pound.

255. Grapes, from 20 per cent. to 1 cent per pound, or about 25 per cent., as estimated in Appendix to House Bill 9072, introduced by Mr. RANDALL, first session, Forty-ninth Congress.

260. Ginger and citron preserved, raised from 35 per cent. to 4 cents per pound. In Secretary Manning's Report on Revision of the Tariff, page 217, James A. Hays & Co., of Boston, say 2 to 3 cents is better than 35 per cent., and 4 cents is estimated in the table at 45 per cent.

273. Hops are increased from 42 per cent. to 53 per cent.

276. Macaroni and vermicelli, made free in 1883, are again placed on the dutiable-list at 2 cents per pound, or 35.40 per cent.

SCHEDULE H.—*Wines, liquors, etc.*

302. Still wines, etc., in casks are raised from 50 cents to 60 cents per gallon, or from 71 to 85 per cent. Champagnes which pay 51 to 54 per cent. are not increased. Still wines in bottles are in effect increased by making bottles and jugs dutiable at 3 cents each, an increase of over $90,000 on importations of 1887.

303. Compounds containing 50 per cent anhydrous alcohol, rate changed from $1 to $2 per proof gallon, as suggested by the Secretary of the Treasury.

311. Cherry juice or prune juice is increased from 20 per cent. to 55.97, if not over 24 per cent. alcohol; above that made $2 per proof gallon.

312. Lemonade and soda water increased from 20 per cent. to 25 cents per dozen, an increase of over 87½ per cent., as reductions are figured on House bill in Senate report.

The total increase of duties effected by the changes in this schedule on wines, bottles, alcoholic compounds, cherry juice, lemonade, soda water, etc., will, as nearly as may be estimated from data at hand, aggregate $466,723.19.

SCHEDULE I.—*Cotton manufactures.*

313. Cotton yarns worth from 25 to 60 cents per pound are increased 3 cents per pound, raising the rates to slightly over 50 per cent. in each class.

315. Cotton cloths are classified into five instead of three divisions, as in the present law—not exceeding 50 threads to the square inch, from 50 to 100 threads, 100 to 150 threads, 150 to 200, and above 200. Without returns as to nature of average imports, it is impossible to make anything like accurate calculations. In the table of estimates it is assumed that one-half the importations of each class divided will be entered in the new class.

321. Stockings, hose, half-hose, etc., fashioned by machinery, are changed from 40 per cent. to a compound rate of 60 cents per dozen pairs and 20 per cent., a reduction on the finer grades and an increase on the cheaper. It is believed it will increase the revenues, but to what extent it is impossible to calculate, and no increase is estimated in the tables.

322. Ready-made clothing is increased from 35 to 40 per cent.

323. Hamburg edgings and Egyptian and oriental laces are changed from 40 per cent. to 45 cents per pound and 15 per cent. ad valorem in a provision recommended by Secretary Fairchild to the Committee of Ways and Means in 1886, and estimated by him at prices of that date to be approximately the same rate as under the present law. The other section, covering other laces, lace window-curtains, etc., recommended by him at the same time, is omitted in the Senate bill, by which it would seem these articles are intended to be provided for in the basket clause at 35 per cent., instead of 40 per cent. as under the present law.

SCHEDULE J.—*Hemp and flax.*

333. Flax yarns, hemp yarns, and jute yarns, brown and bleached linens, grass cloth, sheetings, and all manufactures of flax, etc., are raised from 35 to 40 per cent., sail duck from 30 to 40, and seines and gilling twine from 25 to 40 per cent.

336. Linen, laces, embroideries, etc., are increased from 30 per cent. to 50 per cent.

337. Collars and cuffs for men's wear, if cotton, are raised from 35 per cent. to 15 cents per dozen pieces and 35 per cent.; if in whole or part of linen, 30 cents per dozen pieces and 35 per cent.

340. Oil-cloths for floors, now 40 per cent., are made dutiable at a compound rate not much higher as applied to the importations of 1887.

SCHEDULE K.—*Wool and woolen goods.*

The changes in classification and the aggregation of items bearing similar rates in the Senate schedule made it so difficult to compare rates that for the only time in the tables of estimates their arrangement is departed from and one exhibiting details of items substituted.

The names of articles are taken from the home-consumption statement and rates proposed by the substitute are added, so that the descriptions are those of the present law and the schedule numbers not consecutive, but the items affected are all included.

346. Clothing and combing wools are made 11 cents if in the grease, 22 cents if washed, and 33 cents if scoured, without distinction as to value.

348. Carpet wools, valued over 12 cents, are raised to 6 cents, making a total increase in raw wools of more than a half million of dollars with reckoning.

350. Top waste, garnetted waste, etc., made dutiable at 30 cents per pound, the present rate on most of the classifications.

352. Noils to pay duty as washed wool of the same grade, under ruling of the Secretary of February 25, 1887. They now pay duty as washed or scoured, according to condition.

354. Woolen cloths.—A new subdivision reducing the dutiable-value line to 40 cents per pound, at present rates, but raising those from 40 to 60 cents per pound in value to 35 cents per pound and 40 per cent.; that is, if valued at 42 cents per pound to pay 123 per cent. duty.

Valued over 60 cents per pound, to pay 40 cents per pound and 40 per cent., thus raising the average importations of all woolen cloths imported in 1887 of the class below 80 cents in value to 102 per cent. duty; total increase on woolen cloths, $476,000.

Shawls raised, the cheapest grade to over 100 per cent., and duties on all shawls increased nearly $50,000.

Woolen manufactures, the cheaper grades over 100 per cent. by the proposed rate, and nearly $60,000 increased duties.

355. Flannels increased over $30,000.

Blankets and hats changed in classification and rate; a blanket worth 65 cents per pound would under the proposed rate pay 100 per cent. duty.

358. Knit goods are classified with ready-made clothing at 40 cents per pound and 45 per cent., and the cheaper grade, which now pays 10 cents per pound and 35 per cent., is thus raised to 258 per cent., an increase of 193 per cent., as reductions of the House bill are counted in the Senate report. On this item of knit goods the increase in duties is $180,000. Balmorals are classed in the same way, and the rate on the cheaper grade raised to 154 per cent.

355. Yarns are not mentioned by name, and would seem, therefore, to fall in the basket clause; but in the Senate schedule they are classed as not changed, save in the higher grades; but even with this construction adopted, in the estimates over a quarter million increase is realized and the rate on yarns, between 60 and 80 cents per pound, raised to above 98 per cent.

354. Worsted goods are increased to 180 per cent. on the cheapest grade to 76 on the better, and the duties to be realized from the proposed rate over $1,000,000 above the present law.

356. Dress goods, etc., are increased in rate to yield over $700,000 above present duties, if composed partly of wool or worsted; and

357. Dress goods wholly of wool, etc., increased in rate to over 90 per cent. on the cheaper goods, and yield, by proposed rate on importations of 1887, $750,000 more than the present law.

358. Clothing, ready made, is increased in rate; as also

359. Cloaks, dolmans, etc., the latter to 45 cents per pound and 45 per cent., effecting an increase of over $100,000. The total increase upon the manufactures of wool alone aggregate nearly $4,000,000. The importations of manufactured woolen goods in 1887 has been repeatedly estimated at considerably less than one-third the consumption. If the theory that the domestic price is raised by the duty on all articles on which we depend for any considerable portion of our supply from abroad, then the augmentation of price of woolen goods effected by the proposed rates would aggregate $12,000,000, or about 20 cents per capita, or $1 to the head of each family of five persons.

SCHEDULE L.—*Silk and silk goods.*

The changes in the silk schedule involve a revolution in the system of classification and imposition of duty, and embodies in the main a schedule submitted by the then acting and present Secretary of the Treasury June 14, 1886, to Hon. William R. Morrison, chairman of the Committee on Ways and Means. This, the Secretary announced, was the result of a series of conferences at the Department with representative manufacturers, a committee of the Silk Association of America, and of the Dry Goods Importers' Association.

He further suggests:

"These rival interests were unable to agree as to rates or the basis of their adjustment."

These schedules were submitted to the appraisers of the leading ports, and on their views the Secretary further says:

"From their replies * * * it will be seen that these officers found objections more or less serious to each of the schedules submitted."

And commenting on the disagreement the Secretary said:

"I confess to much disappointment at the failure of the efforts thus made by the Department to secure the co-operation of the business interests most directly concerned in formulating a satisfactory measure for the imposition of specific duties on silk."

At the prices of silks at that date the rates were estimated to equal 40 to 50 per cent. As silks fall in price the rate would correspondingly increase. Schedule No. 376 is new and 377 also, the latter an increase to 60 per cent., including wearing apparel, etc., and taking the Senate schedule would increase the duties $461,793.34 on this item alone.

Books, papers, etc.

379. Blank-books and drawings are raised from 20 to 25 per cent. Books exclusively in any foreign language but English put upon the free-list will effect a decrease of revenue, and a definition of limitation on what shall constitute periodicals—already free—will have a tendency towards an increase.

380. Envelopes, now 25 per cent., are made 25 cents per 1,000—a reduction on the finest grades so low as to be nearly equivalent to placing on the free-list, but not on the cheapest grades. An average reduction is evident, and yet no data from which to determine how much, so it was left unchanged in the table, being so many times covered by the increase in

382. Surface-coated papers and lithographs and photographic papers from 15 and 25 per cent. to 35 per cent., for which evident increase no estimate is made, except as contained in manufactures of paper, which are only counted at 25 per cent.

It is believed that the increase will aggregate $75,000 upon this schedule at rates as fixed.

SCHEDULE N.—*Sundries.*

389. Brooms are increased from 25 to 30 per cent.

398. Ostrich feathers, and other feathers, birds, etc., reduced from 50 to 40 per cent.

399. Fire-crackers changed from 100 per cent. ad valorem to 8 cents per pound, about the same rate.

412. Calf-skins, tanned, and all other not enumerated are increased in rate, and

417. Leather manufactures increased from 30 to 35 per cent.

418. Shell manufactures increased from 25 to 40 per cent.

422. Matches changed from 25 per cent. to 10 cents per gross or 1 cent per thousand, but no data as to import prices from which to calculate effect of new rate.

429. Pipes, bowls, and cigar-holders have added 72 cents per gross to present rates, but no number of these articles imported returned from which to calculate increase.

432. Buttons, except silk, have added 2 cents per line per gross to present rates.

435. Freestone, granite, etc., rough, from $1 per ton to 14 cents per cubic foot; and

436. Dressed stone from 20 per cent. to 25 per cent.

FREE-LIST.

The principal items added to the free-list by the substitute are—

630. Molasses testing not above 56 degrees, yielding in 1887, $1,496,690. Sugar drainage and sweepings made dutiable as sugar or molasses, according to test, may in part, if not all, come in free under this provision.

487. Braids, laces, etc., for hats, bonnets, etc., paying, in 1887, $822,704 duties, are also made free.

678. Opium, crude, yielding a revenue of $468,153 is made free and opium prepared for smoking is prohibited, still further reducing the revenue by $600,000, as measured by the importations of 1887.

550 to 556. Jute, manila, and other fibers, and floor matting made free, decrease the revenues about $2,000,000.

544. Ostrich and other feathers paying $311,000 are made free.

510. Coal-slack or culm is placed on the free-list. Some controversy seems to have risen as to whether this would make all coal free, but in the copy furnished this committee, only culm or slack could be construed to be made free, and only $10,000 is estimated as the reduction effected by this section, and even this would be undisturbed if, as is announced, it is the purpose to restore all coal to the dutiable list.

Recapitulation.

Mr. BAYNE. I did suppose, in view of the fact there had been a long discussion of the tariff question in the House of Representatives and the matter had gone over to the Senate, that we should have forborne on an occasion of this sort when unanimity is so necessary in order to effect an adjournment. [Laughter.] But it seems the gentleman from Tennessee [Mr. MCMILLIN] is anxious to discuss the tariff question even when the proposition before the House is whether we shall adjourn or not; and he has devoted his remarks mainly to the measure which is now pending in the Senate.

The first proposition of the gentleman from Tennessee, as I caught it, was that the Mills bill simply made a reduction of existing duties of between 5 and 6 per cent. The argument of the advocates of that bill in the House of Representatives was directed to that end, and it was assiduously asserted on that side of the House that the total reduction made was about 5 or 6 per cent. Like some of the propositions of the bill, this argument is a deception and a snare calculated to deceive the public who could not fully investigate the bill. Taking the entire bill and eliminating from the calculation the duties which were stricken entirely from existing law, such a calculation was possible, but that conclusion is erroneous.

In order to ascertain how far the Mills bill reduces the duties on imports, all articles under existing law which are not touched by the bill should not be taken into consideration. Articles which are put on the free-list, and which now pay a duty, should be counted as a 100 per cent. reduction. If sugar, an industry which flourishes in a certain section of the country be left out, and if the calculation be made on the basis of the proposed free-list, coupled with the articles on which the duties are reduced, it will be found that the Mills bill makes an average reduction of duty of from 40 to 50 per cent.

Mr. WHEELER. May I ask the gentleman a question—one question.

Mr. BAYNE. In a moment. And yet the argument on that side of the House has been that the reduction of duties has only been between 5 and 6 per cent.

Mr. WHEELER. The question I want to ask is, what would be the effect of the reduction on sugar——

Mr. BAYNE. I will come to that presently. The gentleman from Tennessee [Mr. MCMILLIN] has said that the iron schedule of the bill prepared by the Senate increases the duty upon the whole about 10 per cent.

How he arrives at that conclusion I can not understand. The duties on soft steel and cotton-ties are raised by the Senate bill. They are simply put upon the level they should occupy in a properly graduated metal schedule. Unless these duties raise the percentage 10 per cent. on the iron schedule, there is no such increase as he asserts. But cotton-ties are a commodity consumed in a certain section of the country, not produced like sugar, and therefore they were put upon the free-list by the Mills bill. The Senate did not see fit to discriminate in favor of the Southern section of this country as against the consumers of hoop-iron throughout the West and throughout the entire North. It sought to draw no line of discrimination as to production or consumption, but aimed to treat both the producers and the consumers of the country equally, equitably, and alike.

The gentleman has undertaken to show that the Senate bill, notwithstanding its reduction of the duties on sugar of 50 per cent. yet raised the duty on sugar and gives advantage to the sugar trust. I aver that the Mills bill as it passed the House was under the direction and inspiration of the sugar trust. It has sufficiently appeared that a leading Democrat of New York and the president of that great trust, appeared either directly or indirectly before the Ways and Means Committee of the House and secured from that committee such protection as would enable that trust to flourish.

Mr. TURNER, of Georgia. Will the gentleman from Pennsylvania [Mr. BAYNE] allow a suggestion there?

Mr. BAYNE. Yes, sir.

Mr. TURNER, of Georgia. The gentleman has probably forgotten that he has just stated a fact that has been denied by all the gentlemen who constitute the majority side of the Ways and Means Committee; and if he persists in that statement I would be greatly obliged to him if he would state the evidence upon which he makes that allegation.

Mr. BAYNE. I shall treat the gentleman from Georgia [Mr. TURNER] fairly. It was denied by gentlemen of that committee that Mr. Havemeyer appeared before the Committee on Ways and Means; that is, that he appeared in one of its official sittings. But it has been admitted by members of the Ways and Means Committee that Mr. Havemeyer and his attorney had conferences with them respecting duties upon sugar.

Mr. TURNER, of Georgia. May I have the attention of the gentleman just a moment on a matter of fact?

Mr. BAYNE. I must decline to yield now.

Mr. TURNER, of Georgia. I will take only a moment of the gentleman's time.

Mr. BRECKINRIDGE, of Kentucky. The gentleman from Pennsylvania will have plenty of time, because the statement he has made is absolutely untrue, and the facts must go into the RECORD.

Mr. BAYNE. Very well; if plenty of time is accorded I will yield for any interruption.

Mr. MCMILLIN. The statement the gentleman has made is one that can not be substantiated in any way in the world, because it is absolutely devoid of all fact.

Mr. EZRA B. TAYLOR. I think that statement is true; because there was no investigation or hearing before the Committee of Ways and Means, but only before a fraction of it.

Mr. BAYNE. It was admitted in a colloquy on this floor that Mr. Havemeyer and his attorney were here in Washington. It was admitted, if I recall the facts correctly, by the gentleman from Kentucky [Mr. BRECKINRIDGE] that he had had a conversation with Mr. Havemeyer.

Mr. BRECKINRIDGE, of Kentucky. On the contrary, the gentleman from Kentucky expressly stated that he had had no conversation with Mr. Havemeyer, though he thought that he had been introduced to him. The gentleman from Kentucky also stated that he had had no conversation with Mr. Parsons, the attorney of Mr. Havemeyer, on the question of the sugar schedule, but had had conversation with him on other subjects, and that those gentlemen were here before the Committee on Manufactures under subpœna from that committee. Instead of making any admission that I had had any conversation with Mr. Havemeyer on the subject of the sugar schedule, I expressly disclaimed it; and as to the statement that I had had any conversation with his attorney on that subject, I explicitly said it was not true, and that I now repeat. There was no foundation of truth in it.

Mr. BAYNE. These two gentlemen deny that they had any conversation with Mr. Havemeyer or his attorney respecting the duties on sugar, but I say that the Committee on Ways and Means, whether they did it consciously or unconsciously, changed the sugar schedule in the Mills bill after that visit of Mr. Havemeyer. The original bill reported by the committee drew the line at No. 16 Dutch standard, and the bill was amended so as to draw the line at No. 13 Dutch standard, and the object sought by the sugar trust was to have the line drawn at No. 13 Dutch standard, because it would give them an advantage. The two events were coincident, namely, the visit of Mr. Havemeyer and his attorney to the city of Washington and these changes made in the Mills bill.

Mr. TURNER. I beg the gentleman from Pennsylvania [Mr. BAYNE] to allow me to make a statement of a minute or two at that point, because the gentleman has, no doubt unintentionally, done an injustice. The statement of fact which he has made is untrue, Mr. Speaker. The change in the sugar schedule to which he adverts occurred prior to the visit of Mr. Havemeyer to which he refers; and, in regard to the visit of Mr. Havemeyer, I beg leave to make this statement.

That gentleman came here in answer to a summons from the Committee on Manufactures, as the gentleman from Pennsylvania [Mr. BAYNE] is aware, in order to testify in regard to the sugar trust, and while here he brought into the room of the Committee on Ways and Means samples of sugar which he had with him to illustrate the different grades and standards. Those samples were brought to Washington for use before the Committee on Manufactures, and while engaged here as a witness before that committee, Mr. Havemeyer appeared in the room of the Committee on Ways and Means and displayed his samples on a table there; on which occasion there were present, according to my recollection, one Republican gentleman and two or three Democratic members of the committee. None of us had any conversation with Mr. Havemeyer. He simply made his statements in regard to the colors and grades and standards of sugar as illustrated by the samples which he exhibited. There was no discussion of our bill.

It was merely an informal affair, and nothing beyond what I have stated took place. No propositions were made on either side, but the matter ended there. Out of that transaction have grown the extraordinary statements repeated here to-day by the very fair and courteous gentleman from Pennsylvania [Mr. BAYNE], who, I believe, usually means to be just; and on that slight foundation has arisen also the extraordinary statement made by Mr. Blaine the other day in Indiana. All of these statements, whether that of the gentleman from Pennsylvania [Mr. BAYNE], or that which was made on the floor of the Senate on a recent occasion by a gentleman managing the Senate bill, or the statement made by the gentleman from Maine, Mr. Blaine, in his discussion of the sugar question in Indiana—all of the statements are untrue.

Mr. MILLIKEN. Will the gentleman allow me to make a suggestion at this point, as Mr. Blaine's name has been mentioned?

Mr. BAYNE. Mr. Speaker, I beg that I shall be allowed to occupy a little of the time that is allotted to this side of the House.

Mr. BRECKINRIDGE, of Kentucky. I want to add that I was not present at the conversation of which my friend from Georgia [Mr. TURNER] has just spoken.

ENROLLED BILL SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled a bill (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair-shop, and for other purposes; when the Speaker signed the same.

Mr. BAYNE. The gentleman from Georgia [Mr. TURNER] has stated what took place between Mr. Havemeyer and certain gentlemen of the committee; and I of course accord due credit to any statement that gentleman may make. But, whether consciously or unsconciously, the Mills bill promotes the sugar trust. If the gentlemen disclaim any intention to promote the interests of that trust, they should amend the Mills bill so as to conform it to the Senate bill.

Mr. TURNER, of Georgia. Is the gentleman from Pennsylvania aware——

Mr. BAYNE. I must decline to yield.

The SPEAKER *pro tempore*. The gentleman from Pennsylvania is entitled to proceed without interruption.

Mr. TURNER, of Georgia. Of course I will not persist in interrupting the gentleman if he declines to yield; but I wanted to call his attention to a fact which he has forgotten.

The SPEAKER *pro tempore*. The gentleman declines to yield.

Mr. BAYNE. I must beg to decline, because I can not state connectedly the facts and propositions I wish to submit if I am constantly interrupted.

The SPEAKER *pro tempore*. The gentleman is entitled to proceed without interruption.

Mr. BAYNE. By the House bill the duty on sugar of 75 degrees saccharine strength is fixed at 1.15 cents per pound, and upon refined sugars between 13 and 16 Dutch standard the bill as amended here in the House makes the duty 2.20 cents per pound. The difference between the two was 1.05 cents per pound. That gave to the sugar "trust" an advantage of thirty-eight one-hundredths of a cent per pound, an aggregate amount to the refiners of $11,400,000 per year. The Senate bill puts raw sugars of 90 degrees at 1 cent and the duty on sugar between 13 and 16 at 1⅜ cents per pound, the difference being three-eighths of a cent per pound in favor of the Senate bill. The aggregate reduction of duty on sugar by the Mills bill was only about 20 per cent., from 82 per cent. to 62 per cent., while the aggregate reduction by the Senate bill is from 82 per cent. to 41 per cent., a reduction of 50 per cent. How anybody knowing anything about figures and comprehending at all the situation can aver, in view of these facts, that the Senate bill is favorable to the sugar "trust" is a mystery to me.

But more. This House bill, right in the teeth of the recommendation of Hon. Daniel Manning, late Secretary of the Treasury—a man of ability and an able financier—placed one duty after another, so far as it practically could, upon an ad valorem instead of a specific basis. Secretary Manning had in his report admonished Congress that specific duties should be substituted for ad valorem in order to prevent undervaluations, evasions, and frauds upon the revenue; yet in the preparation of this bill the advice of that great financier was disregarded and a multitude of duties now specific were relegated to the ad valorem class. The Senate, taking up that very subject, has adopted a specific duty wherever practicable, and applied in the preparation of its bill the suggestion of the late Democratic Secretary of the Treasury, Mr. Manning.

Now, when it is claimed on the one hand that the reduction of the rates of duty made by the Mills bill is only between 5 and 6 per cent., when in point of fact it is between 40 and 50 per cent. upon the articles embraced in the reduction, leaving out sugar, and when in connection with that the door to undervaluation, to evasion of the law, to fraud, is open wider and wider so that the importers may break the law, how can gentlemen on the other side say that they desire a full, fair collection of the revenues of this country? How can they claim that there is not a sinister aim underlying this Mills bill to render the protective system of this country odious in the eyes of the people and to render evasions of it so frequent that the law will become difficult of execution?

Mr. HOOKER. Will the gentleman allow me to ask a question just there?

Mr. BAYNE. Yes, sir.

Mr. HOOKER. What do you do with the argument your people have made that the Mills bill, instead of reducing revenue, is going to add to it?

Mr. BAYNE. I reply by stating the simple proposition that as you reduce duties you swell importations, and thereby the revenue is increased. The tariff act of 1883 reduced duties, but it increased the revenue of the Government. The Mills bill reduces rates of duty, but it would swell the revenues of the Government. It is a logical inference, and one borne out by experience, that if you reduce duties and swell importations the aggregate revenue is increased.

The gentleman who preceded me has spoken of tin-plate. Sir, tin-plate was manufactured successfully in this country for a number of years. Up to the year 1878 an excellent quality of tin-plate was manufactured here, there being four establishments in this country engaged in that manufacture. Before those establishments started tin-plate was selling at $12 to $14.75 per box of 112 pounds. After these establishments were started in this country the effect was that the price of tin-plate was reduced year after year until it ran down to $6 per box. The tin-plate "trust" of Great Britain maintained high prices until it found that American manufacturers were going to produce tin-plate; when this was discovered the British manufacturers brought down their selling price so low as to compel the American manufacturers to close their establishments.

There are now in this country four establishments fully equipped and ready to manufacture this article; and if we authorize a duty of 2.2

cents per pound they will manufacture all the tin-plate that may be required by the consumers of this country at prices as low as those at which tin-plate is now selling; they will give employment to $30,000,000 of capital and to twenty thousand men, and will keep within the borders of our country the $16,000,000 now annually paid to foreign manufacturers for this article.

Mr. HOOKER. Why have you not done that before?

Mr. PETERS. We have not had the power.

Mr. BAYNE. No, we have not had the power. When we get the opportunity we propose to do it; and we propose to have an opportunity after the November election.

Mr. HOOKER. That will be a "deferred hope."

Mr. BAYNE. I do not think so. There is nothing more certain politically under the sun than that the next House of Representatives will be Republican, and it follows almost as certainly as night the day that General Harrison will be elected President of the United States. You mark that prediction, and see if it is not verified by the facts in a short time.

The gentleman from Tennessee [Mr. MCMILLIN] has seen fit to speak of cutlery, and he goes on to say the Senate bill maintains a higher rate of duty on the very low grades of cutlery than it does on the higher and better grades. That is an effect of specific duties to put a higher rate of duty on inferior articles and a lower rate of duty on superior articles. It is a consequence of specific duties, but it is a consequence which inures to the advantage of the American consumer. If the ad valorem duty be low on cutlery, or woolen goods, or cotton goods, or anything else, the most inferior character of goods will be imported, whereas if the duty be specific and be graduated as low as can be in the matter of specific duties, the specific duty, when it invites importation at all, invites a better quality of goods from abroad, and thus the American consumer has a better article for the money he pays. And that is one of the reasons at least why the Senate has seen fit to put specific instead of ad valorem duties.

Now, Mr. Speaker, under our protective system in this country we have prospered beyond all precedent. During the three hundred and fifty years of our occupancy of this continent, including the hundred years of our existence as a nation, the aggregate wealth of this country up to 1860 amounted to about $16,000,000,000, while from 1860 to 1880, a period of twenty years, the aggregate wealth of the country, as shown by the census of 1880, reached the enormous aggregate of $45,000,000,000. Thus in twenty years of protection the people of the country made nearly $30,000,000,000, or to be accurate, $29,000,000,000 in aggregate wealth. That result was attributable to our protective system.

From 1860 up to the present time is the only period in our history when we have had a fair test of the protective system. At no other period has that system been permitted to endure longer than eight or ten years. Since the beginning of the Government in 1789 we have had over one hundred and thirty modifications of our protective system; tariff enactment after tariff enactment, tinkering with the tariff all the time; but during this last period we have had a continued protection for twenty-four years, and during that twenty-four years this country has prospered more and gained more in wealth by 200 per cent. than in all the three hundred and fifty years of its antecedent history.

It is claimed by the gentleman from Tennessee the Senate bill will not reduce the revenue of the Government. It is shown beyond all peradventure that bill will reduce the revenues about $75,000,000.

Mr. HOOKER. Then if the taxes were doubled the revenues would be increased as much more.

Mr. BAYNE. Yes, if the tariff were doubled it would increase the prosperity of this country. There is no doubt about it. [Laughter.] There is no question about that. The Senate bill was framed with a view to reduce the revenues of the Government. It will have that effect because it will not increase importation. It will have that effect because the duties are made specific, and there will not be undervaluations and evasions of the law.

The Senate bill is the most perfect piece of tariff legislation ever presented to or ever enacted by Congress. It is the most perfect system which has ever been framed. One advantage of it is that it divides the various classes of goods into thirteen different schedules, placing the different articles in alphabetical order in each schedule.

So framed is that bill that the administration of it by the Treasury Department and customs officers will be easy. Evasions of that plan will be difficult, and the country under the system proposed by the Senate, which will be the law of the country if any legislation be enacted by this or the subsequent Congress, will go on and prosper as it has done during the last quarter of a century.

It has been stated by the gentleman from Kentucky [Mr. BRECKINRIDGE] that the Senate bill puts a duty of 258 per cent. on a certain class of knit goods, and I believe he referred to a computation made by Mr. Switzler, Chief of the Bureau of Statistics, as his authority. The allegation is founded on paragraph 358 of the Senate bill. That paragraph is as follows:

358. Clothing ready made, and wearing apparel of every description not specially enumerated or provided for in this act, balmoral skirts and skirting and goods of similar description, or used for like purposes, knit goods, all goods made on knitting-frames, and plushes, and all pile fabrics, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, 40 cents per pound and in addition thereto 45 per cent. ad valorem.

Now, it so happens that in the year 1887 there were imported 48 pounds of some kind of knit goods, valued at $9, and the duty of this peculiar and exceptional class, under paragraph 358 of the Senate bill, would probably be 258 per cent. What kind of goods these are I have been unable to ascertain, and the reports of Mr. Switzler do not show.

But should this isolated and exceptional fact disparage paragraph 358 of the Senate bill?

The woolen goods imported in the fiscal year ending June 30, 1887, were—

Cloths	$10,022,370.67
Dress goods	17,199,141.02
Knit goods	1,980,453.74
Shawls	1,029,998.19
Yarns	1,747,562.09
Making a total of	31,979,525.71

That vast importation ought to satisfy the veriest free-trader, especially in view of our abundant capacity to produce all these things. And this very Mr. Switzler makes the Senate bill levy duties on these articles as follows:

	Per cent.
Cloths	75.15
Dress goods	78.02
Knit goods	71.90
Shawls	68.27
Yarns	113.83

Now, why was a change of existing law in regard to woolens necessary? For reasons that are obvious to those who understand the situation. Under existing law a pound of clean wool pays a far higher amount of duty than a pound of cloth. It takes, I am informed, 18 ounces of wool to make a pound of cloth. The 18 ounces of wool pay 33.75 cents duty, while the pound of cloth pays but 12 cents duty. I am indebted to the gentleman from Rhode Island [Mr. ARNOLD] for this information.

It is obvious that the duties on articles in the woolen schedule should be raised if the manufactured product should pay its relative proportion of duty. And inasmuch as there are vast and increasing importations of woolens, and for the further reason that many of our people, including large numbers of working women, are engaged in manufacturing them, the Senate committee doubtless foresaw that the duties they have fixed would diminish importations and thus decrease the surplus revenue on the one hand and stimulate home production and employ home labor on the other. The Senate's proposition is not only just and well founded from an economic standpoint, but it is as well humane and patriotic.

The Mills bill puts a straight ad valorem of 40 per cent. on all woolens. Its effect in this regard would simply be to flood our markets with the cheapest, meanest shoddy that the poorest-paid labor of Europe can produce.

Mr. Speaker, I did not anticipate this debate. It is scarcely appropriate to the occasion or to the subject under consideration. But the debate is a good thing, for the more this great subject of protection is discussed, the more certain will be the victory which the friends of American industries will achieve.

I yield ten minutes to the gentleman from Ohio [Mr. EZRA B. TAYLOR].

Mr. EZRA B. TAYLOR. Mr. Speaker, in view of the extraordinary statement of the gentleman from Georgia [Mr. TURNER] and the more extraordinary statement of the gentleman from Kentucky [Mr. BRECKINRIDGE], in reference to the matter of interview between the members of the Ways and Means Committee and Mr. Havemeyer and those interested with him, I wish to take the time allotted to me in reading from the RECORD of July 10 last a colloquy which will be found on page 6563. The gentleman from Maryland [Mr. MCCOMAS] was on the floor, and asked this question:

Mr. MCCOMAS. Mr. Chairman, I desire to ask a question of the majority of the Committee on Ways and Means for information. I desire to ask the gentlemen of the majority of the committee (and I see three of them present), whether or not on the 26th of March last, Mr. Havemeyer, of New York, did not have a hearing by a majority of the committee, or by four members of the majority, with respect to sugar? I know that on the 12th of March there was a hearing and an examination of Mr. Havemeyer before the Committee on Manufactures, but I want to know now whether, on the 23d of March, the day of the adjournment of this House by reason of the decease of the lamented Chief-Justice of the United States, the members of the majority of the Committee on Ways and Means did not, individually or collectively, some of them, give a hearing to Mr. Havemeyer on this subject?

To which this response was given:

Mr. BRECKINRIDGE, of Arkansas. Mr. Chairman I do not believe that anybody ever came to Washington to confer with the Democratic members of the Committee on Ways and Means but what he had ample opportunity to talk over the business he came here about.

This was a direct answer, a Democratic answer.

Mr. MCCOMAS. Does that include Mr. Havemeyer?

Mr. BRECKINRIDGE, of Arkansas. As regards this particular case, I do not remember dates, but I remember that Mr. Havemeyer talked with me and perhaps a little with some of the other Democratic members of the Ways and Means Committee about the sugar-refining business. It was when he was here summoned as a witness before the Committee on Manufactures.

Mr. McCOMAS. That was on the 12th of March.

Mr. BRECKINRIDGE, of Arkansas. Very well, then, I would say that it was on the 12th. I am speaking now from memory, and I will say that at my request, having developed before the Committee on Manufactures an interesting line of investigation, precisely what the Committee on Ways and Means were engaged upon, I asked him to wait after he was done with the Committee on Manufactures and go with me to the Ways and Means Committee room, as I wanted him to talk there with one or two gentlemen of the committee. It related to some matters of a technical character that I for one wanted information about. That, I suppose, is what the gentleman from Maryland refers to.

Mr. McCOMAS. Now, does the gentleman from Arkansas recall the fact that on the day of our adjournment here on account of the decease of the Chief-Justice Mr. Havemeyer did have a hearing before the Committee on Ways and Means or some of its members?

Mr. BRECKINRIDGE, of Arkansas. I have no recollection of it.

Mr. McCOMAS. Anyhow, you admit that he did have a hearing before the majority on some other day upon your invitation?

Mr. BRECKINRIDGE, of Arkansas. I do not mean to deny it, the facts, as stated, at all. My only recollection on the subject is what I have given you. But suppose he did. Suppose he had come to me or I had met him on the day you say, I would have listened to him with great pleasure.

* * * * * * *

Mr. BRECKINRIDGE, of Kentucky. Nor were some of us present. But this is the fact which the gentleman has disingenuously distorted. No human being came to any member of the majority of the Ways and Means Committee and asked to have a conversation with him when it was not courteously accorded.

Mr. McCOMAS. Did Mr. Havemeyer——

Mr. BRECKINRIDGE, of Kentucky. One moment. When the gentleman says, in antithesis, that we gave a hearing to the "chief of the sugar trust" and refused it to others he is intentionally disingenuous.

Mr. McCOMAS. Let me ask the gentleman this question. If he wants to be fair and frank, does he deny specifically that Mr. Havemeyer on March 12 or 23, individually conferred, informally if you please, on this subject with a number of gentleman of that committee?

Mr. BRECKINRIDGE, of Kentucky. I do not deny it.

Mr. McCOMAS. Ah, that is my point.

Mr. BRECKINRIDGE, of Kentucky. I do not deny it. [Applause on the Republican side.] And the gentlemen who applaud, applaud a disingenuous statement.

Mr. McCOMAS. My statement is as fair as yours. My assertion was that members of that committee, men who happen to be on that committee, a number of the gentlemen in the majority on the committee, had, informally or formally, I care not which, given time and had conversations on this question with this gentleman at the head of the sugar "trust," and within a few days thereafter reported this bill making the change from 16 to 13, Dutch standard.

Mr. BRECKINRIDGE, of Kentucky. Indubitably, if Mr. Havemeyer asked an audience, he got it.

Mr. TURNER, of Georgia. The gentleman does not read the whole of that answer.

Mr. BRECKINRIDGE, of Kentucky. Certainly not.

Mr. EZRA B. TAYLOR. Mr. Speaker, in our part of the country we do not pride ourselves about being particularly chivalrous, but we have an appreciation of what honesty is and fair-dealing, and when Mr. MILLS tells Mr. Blaine that the Committee on Ways and Means had no audience with Mr. Havemeyer, he tells the absolute truth in words, but I think he should have stated an interview was had with certain members of the committee and Mr. Havemeyer.

Mr. BRECKINRIDGE, of Kentucky. Go on and say it; say what you intended to say. Have the courage as well as the malignity to use the term you design to imply.

Mr. EZRA B. TAYLOR. I say nothing more than that. I say it was a truth in language, because the Committee on Ways and Means never existed as a committee in formulating that bill. It was only a fraction of the Committee on Ways and Means.

Mr. BAYNE. I now yield ten minutes to the gentleman from New York [Mr. FARQUHAR].

Mr. BRECKINRIDGE, of Kentucky. Before the gentleman from New York proceeds will he permit an interruption?

Mr. FARQUHAR. Certainly.

Mr. BRECKINRIDGE, of Kentucky. I want to say to the gentleman from Ohio that I intend to respond to what he has said, and I desire that he shall be present when I do so. I want to point out the disingenuousness of the original conversation as carried on, with the disingenuousness of the gentleman himself in his garbled extract from it.

Mr. EZRA B. TAYLOR. I will be here.

Mr. FARQUHAR. Mr. Speaker, I do not know that I can throw any light on this aftermath of tariff discussion. At the close of the great tariff debate which took place in this House there was a speech of one hour made by the gentleman from Texas [Mr. MILLS], the whole burden of which speech was that the entire reduction of taxation proposed by the Mills bill, from the present rate of tariff duty, amounted to from 5 to 7 per cent. There was no opportunity for further debate after that speech had been delivered, and hence no chance of contradicting the statements in open House that were then made. I see those statements still repeated all over the country. The speech rests on the statement embodied in the arguments then delivered, first that the 47 per cent. claimed to be exacted by the present law was a robbery on the part of the manufacturers, and that the Mills bill proposes merely a lesser robbery. But I want to go beyond that. The Democratic platform of 1884, as well as the reaffirmation of the platform in 1888, held out to the wage-earners of America the hope that whatever tariff legislation should be enacted, or internal-revenue laws, that the wage-earner of the country should be cared for.

Now we have sufficient data, and they credible, too, I believe, from the Bureau of Statistics itself, to show that the wages of the American wage-earners are from 65 to 67 per cent. greater than in any competing country in the world, and especially have these figures been used by the chiefs of the Bureaus of Statistics and of Labor in respect to the wages of English workmen as compared with our own. So if we are to take the message of President Cleveland, and take the Democratic platforms, and then take the figures furnished to us by these bureaus, indicating 67 per cent. difference between the wages here and abroad, and that the Democratic party is determined in its legislation to save, to protect, to make independent the American wage-earners, we ought naturally in all of our tariff measures to bear out this same relative rate by making our dutiable list 67. But there is a deduction to be made from it. The Chief of the Bureau of Labor in his well-considered figures shows that there is an advantage to the English workmen of 17 per cent. in the matter of living.

That fairly would leave the general tariff scale of America at 50 per cent. That is the proposition that the President holds out in his message; that is the proposition that has been made in repeated speeches from the Democratic side; but I find by the Mills bill that instead of holding it at 50 per cent. for the protection of American labor, it is stated to have gone down to 42 per cent. Now, on this floor, and I am willing to stand by the figures here and elsewhere, I present to this House what I regard as a mathematically correct tabular comparison of the present tariff rates and the Mills bill, to which I desire to call the attention of the House, as a side note. At the same time I will say that I am very sorry Mr. MILLS or any one else has seen fit on the stump and elsewhere in this country to persist in playing on the intelligence of our people with the fact or the statement that there is only 5 per cent. of reduction in his bill from the present tariff.

Now, sir, here are the averages in the various schedules:

Schedules.	Present rate.	Proposed rate.
A.—Chemicals	41.28	26.23
B.—Earthenware and glassware	60.61	50.90
C.—Metals	52.57	43.97
D.—Woodenware	34.60	29.25
E.—Sugar	78.14	63.41
G.—Provisions	46.62	37.38
I.—Cotton	50.89	39.40
J.—Hemp, flax, jute	34.40	23.64
K.—Wool and woolens	69.49	40.15
M.—Books, papers, etc	24.40	18.19
N.—Sundries	44.78	35.06
Total	64.84	48.28

The difference between 64.84 and 48.28 is 16.56, and 16.56 is 25.53 per cent. of 64.84, not counting the free-list.

So the actual reduction according to this tabulated statement of the duty, which will pass uncontradicted by the Bureau of Statistics, and which is prepared in this Mills bill itself, is over 25 per cent. on the existing rates, not counting the free-list.

Now let me summarize, as my time is very short. My reasons on this floor, Mr. Speaker, for antagonizing the Mills bill clear through were, first, the opposition that I had to a change from specific duties to ad valorem. The very first position that was taken by any amendment on the Republican side was to bring back the specific rates or to compound the rates.

Now, I have as an authority the present Secretary of the Treasury, where he speaks in his last annual report in respect to the specific and ad valorem duty, which I will ask the Clerk to read. I am willing to take Democratic authority even for the Senate bill. In the action of the Senate in going back to specific duties, I desire to say that it has been at the demand and at the request of all the wage-earners of this country that a specific duty should be allowed, both for the prevention of undervaluation and at the same time to show that the American Congress had taken care specifically of the labor that enters into every product of our industries.

The Clerk read as follows:

Whatever the rates of customs taxation may be, the laws for the collection of the same should be made as efficient as possible. In this the bona fide importer, who wishes to gain only the legitimate profits of his business, the home manufacturer, and laborer are equally interested. They all have a right to demand that the laws be so administered as to give them every possible protection in their business. The high ad valorem tariff of the last quarter of a century has been the fruitful cause of devices to gain improper advantage at the custom-house. It is, therefore, desirable that in revising and reducing the rates of duty they should be made specific instead of ad valorem, so far as the nature of the merchandise will admit. Theoretically considered, ad valorem are preferable to specific duties; but in practice, under such rates as we have had and must continue to have for years to come, the former are the too-easy source of deception and inequality at the custom-house. Congress has it in its power to change, from time to time, as may be advisable, specific rates so as to meet any permanent changes in values.

Now, Mr. Speaker, as my time is limited, I want to summarize in one or two words my whole opposition to the House bill. I find by examination of the tables furnished by the Ways and Means Committee of this House that this bill abolishes one-fourth of all the customs duties. I find also that it puts one-sixth of all these dutiable articles on the free-list, and adds to the free-list products of American industries which employ 300,000 persons and $500,000,000 of capital that are

placed in hazard by its provisions. It reduces the duties on schedules that are the ark of our tariff system, because it strikes immediately at the home industries; and these schedules give protective employment to 1,750,000 Americans, and in this there are employed two thousand millions of American capital.

Mr. BAYNE. I now yield five minutes to the gentleman from Maine [Mr. MILLIKEN].

Mr. MILLIKEN. Mr. Speaker, I do not intend to detain the House more than a few minutes, and I do not intend to get mixed up in the disputes between the gentleman from Kentucky [Mr. BRECKINRIDGE] and other gentlemen on this side of the House. I have simply this to say, since reference has been made to the statement of Mr. Blaine upon the stump in regard to Mr. Hevemeyer having been heard before the Committee on Ways and Means, that he founded his statement upon the record which has been read here to-day, and I think that any man outside of Congress, reading that record, would be warranted in coming to the conclusion which not only he but so many people in this country have come to on this subject. In addition to that, my friend from Georgia [Mr. TURNER], even in attempting to defend the position of the Committee on Ways and Means, has stated this morning that Mr. Havemeyer had a hearing in that committee-room. That is something which I understand nobody else had there.

The gentleman has stated that Mr. Havemeyer had a hearing, that he presented his samples, that he commented upon them, and that he was listened to; and the result seems to show that he was listened to with effect and that what he stated was so far accepted by the committee that the duty on sugar was placed where he wanted it to be. Therefore, taking the record as it stands and the supplementary statement of the gentleman from Georgia [Mr. TURNER], which goes to confirm the position taken by this side of the House upon that matter, I do not think that anybody can reasonably reflect either upon Mr. Blaine or anybody else for anything that has been said about it.

My friend from Tennessee [Mr. MCMILLIN] in his remarks this morning stated that the Senate bill raised the duties upon articles of necessity. I desire to know if there are any articles of greater or more general necessity, any articles that relate more directly to the comfort and welfare of the people generally than the article of sugar, upon which Mr. Havemeyer or somebody else succeeded in leaving a duty of 68 per cent., while fifty-three other articles were put upon the free-list, almost all of them articles produced by our own people in the North. There is a radical difference between the two bills.

As Mr. Harrison so felicitously said the other day, it is not a question of schedules but of wide-apart principle. Mr. MILLS took the position here, they who supported the Mills bills took the position, and the President took the position, that in every instance the duty is added to the cost of the article, even though it be an article of domestic production. We take issue upon that proposition, and the facts show that it is not correct. I heard a little illustration of this given once by a distinguished gentleman who was formerly a Democratic Senator from Connecticut, and afterwards a Representative on this floor, Mr. Eaton. He said that on one occasion a distinguished college professor came down to a manufacturing community in his State to make a free-trade speech, and got along very nicely until he saw a farmer standing up beside the wall, and thought he would be a specially good man to talk to. So he told the farmer how the tariff had swindled him, and stolen from him, and robbed him, and impoverished him. The farmer said, "I don't know about that, Mr. Professor. I came down here five years ago with only $500 in money; I bought a farm, agreeing to pay $3,000 for it. I paid $500 down, mortgaged it for $2,500, and in five years I have paid for that farm, and I have a little money in bank. So I don't think I have suffered much from these protectionists." "Ah!" said the professor, "you are probably one of those shrewd, hard-working, industrious, thrifty men who would save money anywhere, and you would have done what you have done in spite of the tariff; but don't you know that this tariff robs you at the rate of 6 cents a yard for every yard of cotton that is in your shirt?" "Now," replied the farmer, "you probably think that is true or you would not say it, but you can't prove it by anything that you teach up in that school of yours, because I pay only 5 cents a yard altogether for that cotton." [Laughter.]

Mr. BAYNE. I yield now to the gentleman from Kansas [Mr. PETERS]. I have only a few minutes remaining, and before the gentleman from Kansas proceeds I would like to inquire whether he will not be allowed ten minutes, if so much time is to be occupied on the other side.

Mr. BRECKINRIDGE, of Kentucky. I have no objection, except that I have an engagement which will take me away from the House soon, and I prefer that the ten minutes should not be occupied at this time.

Mr. PETERS. Then I will yield to the gentleman from Kentucky [Mr. BRECKINRIDGE].

Mr. BRECKINRIDGE, of Kentucky. Mr. Speaker, I did not intend to participate in this debate, and I would not have done so, but for (to use his own words) the extraordinary exhibition which the gentleman from Ohio [Mr. EZRA B. TAYLOR] has made to-day, and which seems to render necessary a statement from me. The gentleman from Ohio said he would occupy his ten minutes in reading from the RECORD, and then he read that RECORD in such a way as to give a false coloring to it, which I might be justified in saying was intentionally done, because he suppressed such parts of it as would show that the coloring which he gave was a false coloring. As, for instance, he reads a sentence from the gentleman from Maryland [Mr. MCCOMAS] and then takes one word from my response as if I had approved of what Mr. MCCOMAS had said, and suppresses the remainder of my sentence, though the gentleman from Georgia [Mr. TURNER] called his attention to it immediately.

Mr. EZRA B. TAYLOR. Mr. Speaker, I deny that statement, and I call for the proof of it.

Mr. BRECKINRIDGE, of Kentucky. The denial of the gentleman is now utterly useless, when he could have made the correction immediately upon Judge TURNER'S calling his attention and my attention to his use of the word "indubitably," which he read and then stopped.

Mr. EZRA B. TAYLOR. I did not stop at the word "indubitably." I read the whole sentence: "Indubitably, if Mr. Havemeyer asked an audience, he got it."

The gentleman from Kentucky must make no mistake when he charges me with anything that is dishonorable.

Mr. BRECKINRIDGE, of Kentucky. I did not catch the last sentence of the gentleman from Ohio.

Mr. EZRA B. TAYLOR. I say the gentleman from Kentucky must make no mistake when he charges me with anything that is dishonorable.

Mr. BRECKINRIDGE, of Kentucky. "The gentleman from Kentucky" will make no mistake when he makes that charge against the gentleman, after his exhibition this morning.

Mr. EZRA B. TAYLOR. I do not understand the gentleman.

Mr. BRECKINRIDGE, of Kentucky. I suppose he is the only person present who does not understand the response. Judge TURNER was sitting close to the gentleman from Ohio, and instantly, when he used the word "indubitably," Judge TURNER ejaculated, "You have not read the whole sentence."

Mr. EZRA B. TAYLOR rose.

Mr. BRECKINRIDGE, of Kentucky. Wait a moment; I will give you plenty of time. And then Judge TURNER turned to me and said, "He has read only the word 'indubitably;' he has not read the whole sentence." I said "Certainly;" and the gentleman from Ohio went on with his comment—a very fair comment indeed. He said, "We do not profess in my country to have any chivalry, but we do profess to admire fair dealing"——

Mr. EZRA B. TAYLOR. Mr. Speaker——

Mr. BRECKINRIDGE, of Kentucky. Which is exhibited by their sending this gentleman to Congress; it exhibits their desire for fair dealing.

Mr. EZRA B. TAYLOR. Mr. Speaker, I will say that I did not stop at the word "indubitably." I marked it on my RECORD for the gentleman from Pennsylvania [Mr. BAYNE] to read; and I marked the whole sentence. If I did stop there it was unintentional. I intended to read the whole sentence. I did read the whole sentence.

Mr. BRECKINRIDGE, of Kentucky. I will not follow the example of the gentleman in what he has done this morning, and say that he did intentionally suppress a part of the sentence. If he says he intended to read it, I will let the matter go. I will not even go on and say that it would have sounded much more as if he were now accurate if he had done that when Judge TURNER called his attention and my attention to it. We were both sitting close to him, and attention was called to it.

Mr. EZRA B. TAYLOR. Will the gentleman allow me?

Mr. BRECKINRIDGE, of Kentucky. Certainly.

Mr. EZRA B. TAYLOR. The record at the Reporter's desk will show that I read the whole sentence at once.

Mr. BRECKINRIDGE, of Kentucky. I can not say how the record is; but I know the gentleman did not read the whole sentence——

Mr. EZRA B. TAYLOR. I know I did.

Mr. BRECKINRIDGE, of Kentucky. And Judge TURNER called his attention to it.

Mr. EZRA B. TAYLOR. May I ask to have the Reporter read——

Mr. BRECKINRIDGE, of Kentucky. I am not to be called off into any discussion with the Reporter.

Mr. TURNER, of Georgia. I will state, in confirmation of what the honorable gentleman from Kentucky has said, that his recital just made of the facts as to what I stated, and as to my understanding of the reading the gentleman from Ohio made, is correct. As I understood, the gentleman read the word "indubitably," and then either said "etc." or stopped altogether and read no other word. If the Reporter has got the other words it is not because the gentleman from Ohio read them, but because, according to what is the usual practice here, he handed the language to the Reporter.

Mr. EZRA B. TAYLOR. Mr. Speaker, I handed not a word to the Reporter.

Mr. TURNER, of Georgia. But the Reporters know how to go to the different pages of the RECORD and get a passage which is referred to.

Mr. EZRA B. TAYLOR. Does the gentleman, for the purpose of condemning me, condemn also the Reporters of this House?

Mr. TURNER, of Georgia. I do not, sir. Let the gentleman un-

derstand me. When the gentleman took his seat he ceased that quotation with the word "indubitably."

Mr. EZRA B. TAYLOR. If I did I made a mistake——

Mr. TURNER, of Georgia. I have no disposition to challenge that last statement. I acted on the instant upon my understanding of what the gentleman read, and called the attention of gentlemen around me to it.

Mr. EZRA B. TAYLOR. If you had called my attention to it, so that I could have understood——

Mr. TURNER, of Georgia. If the gentleman from Ohio had then used the courtesy which he ordinarily observes in these cases he would have yielded to me and I would have called his attention to it.

Mr. EZRA B. TAYLOR. Mr. Speaker, at this moment I am not aware that the gentleman from Georgia asked me to yield or said a word to me.

Mr. TURNER, of Georgia. But I did, sir.

Mr. EZRA B. TAYLOR. I was not aware of it.

Mr. HOOKER (to Mr. TURNER, of Georgia). I heard you; you certainly did.

Mr. TURNER, of Georgia (after conferring with Mr. BAYNE). The gentleman from Pennsylvania [Mr. BAYNE] was sitting by the gentleman from Ohio and heard me. The gentleman from Ohio, no doubt, did not hear me, if he says so.

Mr. EZRA B. TAYLOR. I did not.

Mr. TURNER, of Georgia. I will not contradict the gentleman's statement in that regard.

Mr. BAYNE. Mr. Speaker, I heard the gentleman from Georgia [Mr. TURNER] call the attention of the gentleman from Ohio to the point, but, as I suggested to the gentleman from Georgia, the gentleman from Ohio probably did not hear it.

Mr. EZRA B. TAYLOR. I was so much interested in my own matter that I did not hear it.

Mr. BRECKINRIDGE, of Kentucky. Now, Mr. Speaker, the gentleman read with great emphasis at one part that I had said "I do not deny it" to a statement made by Mr. MCCOMAS. The gentleman was familiar with this whole record, and he knew that in a subsequent part of it I explained that the reason I did not deny the statement was because I was not familiar with the facts, and therefore did not contradict it; that I personally was not present. He read it so as to make the impression upon the House that by that refusal to deny it I had affirmed the statement, when I had expressly said the reason I did not contradict it was because I was not aware of the fact, and therefore did not contradict it.

Mr. EZRA B. TAYLOR. Will the gentleman allow me a single word now?

Mr. BRECKINRIDGE, of Kentucky. Certainly.

Mr. EZRA B. TAYLOR. I understood the gentleman this morning to deny it; and having seen in the RECORD that he once said he did not deny it, I called his attention to that fact.

Mr. BRECKINRIDGE, of Kentucky. Yes, sir; and if the gentleman who has interposed now had not suppressed it he would have found I denied it then. For in answer to it I said to Mr. MCCOMAS, who asked whether he did have a conversation with certain members of that committee—I said this:

Mr. BRECKINRIDGE, of Kentucky. I do not deny it.

I said I did not know. I was not present. The gentleman knew I had said that. He deliberately suppressed it. He read the sentence, "I do not deny it," and read the applause of the Republican members of the House which followed that, with emphasis. Having used the words "in my extraordinary denial this morning," for the purpose of insinuating to this House I had not denied the thing at all in the presence of Mr. MCCOMAS what I had denied this morning, and that is a specimen of the fair play which the gentleman says in his part of the country is admired.

Now, Mr. Speaker, there is one thing in this RECORD to which I do call attention now, although it has been corrected heretofore. I said in that conversation——

Mr. FARQUHAR rose.

Mr. BRECKINRIDGE, of Kentucky. Let me get through. It was an exciting colloquy, a great many persons interposing, persons asking questions and other persons answering questions, interrupting gentlemen on the other side of the House, interrupting by applause and by derisive laughter the reporter, therefore it is not unnatural he should make some mistake; but the mistake he made is so apparent on the face of it I do not think anybody was deceived by it. But I took the liberty of making a correction, so there should be no mistake about the matter:

Mr. BRECKINRIDGE, of Kentucky. Let me get through. The gentleman, judging of me by himself, may think it was improper.

As that gentleman [Mr. MCCOMAS] is absent, I care not to pursue that. I went on:

I had known Mr. John Parsons; he was in the committee-room; we renewed our acquaintance, and had a humorous conversation about the gentleman being before the Committee on Manufactures, and I was introduced to three or four gentlemen, including one or possibly two of the Messrs Havemeyer; but there was no conversation between us either about the sugar schedule or the testimony before the Committee on Manufactures.

Mr. MCCOMAS. I understand that Mr. Parsons is the counsel of the sugar trust.

The colloquy goes backward and forward for some time. I am reported as asking as to the sugar schedule. The corrected RECORD states, and what I said was, I had no conversation with him on the sugar schedule.

I make this as to this correction so there may be hereafter no apparent contradiction. The correction will be found in the permanent RECORD. I state that as the gentleman has not called attention to it so there may be no doubt about it hereafter.

The point has been made again this morning by the gentleman from Maine [Mr. MILLIKEN], of whom I speak courteously because he has shown courtesy in it, and has been made by the gentleman from Ohio, who is entitled to no courtesy after the way he has behaved this morning, that there were hearings before the committee; that is, these gentlemen came into the committee-room and had a hearing when no one else was allowed to come into the committee-room to have a hearing. That has been explained over and over again. I believe the gentleman from Maine [Mr. MILLIKEN] does not mean to use the word "hearing" disingenuously. There was no hearing accorded by the Committee on Ways and Means to any human being during the Fiftieth Congress on the subject of the tariff, with which hearing I was familiar or acquainted, in the sense——

Mr. FARQUHAR rose.

Mr. BRECKINRIDGE, of Kentucky. One moment. In the sense that committee in its organized and formal meeting had anybody with a formal hearing before it. There was no exception. There was no partiality. Nobody was granted time; on the contrary, there was nobody denied a conversation, or, if you choose to use the word, a hearing, with the majority of the Ways and Means Committee, or any member of it, on any subject in which he was interested, who desired to talk to the members of the Committee on Ways and Means—with the committee or any individual member of it on matters before it, so far as I know. Those conversations were during our hours of rest. They were given to any gentleman. One gentleman had a conversation on the cotton schedule. I recollect Mr. Dalton, chairman of the Arkright Club, and the gentleman from Massachusetts is listening to me, and he knows who Mr. Dalton is—the chairman of the Arkright club—Mr. Townshend, and other gentlemen from Massachusetts, who came to talk about cotton with us. A gentleman from Rhode Island, Mr. Merriman, a large woolen manufacturer, Mr. Jesse Metcalf, and other gentlemen came to talk with us on the woolen question.

Mr. Jesse Metcalf and other gentlemen representing the woolen interest were heard with reference to the woolen schedules. We heard gentlemen from Philadelphia representing the great carpet interests, and various other industries there, and there was no secrecy whatever about it. They were of all classes of manufactures. We heard labor committees. We heard gentlemen on glass. I recollect specially one gentleman from Indiana, Mr. Depauw, as well as a delegation from Baltimore, who were heard upon the subject, and there never was any secrecy about it.

Now certain gentlemen have disingenuously used the word "hearing" in a different meaning from that used by myself in this connection, for the word has two meanings, and allege that there was a refusal on the part of the committee to "hear" the workingmen, but at the same time it granted "hearings" to manufacturers. That always was, when intelligently done, a disingenuous statement, and after the explanation was made, and it was repeated, then, of course, it was intentionally disingenuous. There never was any concealment about it.

Mr. BAYNE. Will the gentleman yield to me for a question?

Mr. BRECKINRIDGE, of Kentucky. Certainly.

Mr. BAYNE. The gentleman has enumerated a number of persons who were given hearings by perhaps members of the Committee on Ways and Means——

Mr. BRECKINRIDGE, of Kentucky. Just there I want the gentleman to understand exactly what I did say and the use I make of the word. I say they were given hearings, that is to say that we had conversations with them; that they came to us for information. We talked with them individually. We did not as a committee.

Mr. BAYNE. I understand that. But the gentleman has enumerated a number of persons with whom conversations, if you please, were had by members of the committee.

Mr. BRECKINRIDGE, of Kentucky. Yes.

Mr. BAYNE. And these are mostly identified with the idea of protection. Now, I would like to ask the gentleman whether J. D. Moore had any conversation with members of the committee?

Mr. BRECKINRIDGE, of Kentucky. J. S. Moore, you mean.

Mr. BAYNE. Yes; J. S. Moore.

Mr. BRECKINRIDGE, of Kentucky. He undoubtedly had with me, and with other members of the committee, too, as also did Mr. David A. Wells, on my seeking; and I will not hesitate to say that I went to Boston largely for the purpose of having a conversation with Mr. Edward Atkinson.

I needed certain information that I knew Mr. Atkinson possessed, and I went expressly to see him. I also did what I am not in the habit of doing, got him to invite me to a dinner and asked him to invite to meet me a number of gentlemen representing various industries there with whom I desired to talk. We had at this interview Mr.

Jefferson Coolidge, Mr. W. B. Rice, and other gentlemen representing various industries of Massachusetts. I asked these gentlemen and asked other gentlemen connected with the enterprises and industries of that State to give me an opportunity to have conversations with them on various matters. As to Mr. J. S. Moore, I did seek a conversation with him; as far as I know he never did with me, but I did with him, and I found him one of the most valuable, intelligent, and admirably informed gentlemen.

Mr. BAYNE. So I suppose.

Mr. BRECKINRIDGE, of Kentucky. Just as I did Mr. David A. Wells, Mr. Edmund Atkinson, Mr. James Russell Lowell, and various other gentlemen connected with industries of many kinds throughout the country. I do not hesitate to avow, and in the most public manner, my sense of obligation to these and many other gentlemen for valuable information connected with the industries of the country as relating to the preparation of the tariff bill.

Mr. FARQUHAR. I would suggest to the gentleman that the most of the members who have been named by him are also members of the Cobden Club.

Mr. BRECKINRIDGE, of Kentucky. That may be true—no, I think it is not; but if they were I do not see what difference it could make. The members of the Cobden Club, whose faces I have never seen, are entitled to gratitude for valuable information upon this very subject; and I do not hesitate to acknowledge my indebtedness to Mr. Gladstone and Sir Lionel Playfair, whose contributions to economic questions have great value, if indeed they have been excelled; and I would commend to my friend from New York to read Mr. Gladstone and Sir Lionel Playfair, and try to draw a little of the broad spirit which animates their writings, as well as a little of the liberality with which they deal with a question of this magnitude.

Mr. FARQUHAR. I accept graciously, of course, the recommendations of the gentleman from Kentucky, but I may be permitted to say that for the last twenty years I have perused pretty much all of these economic studies, and the longer I read economic books the more I am confirmed in the opinion that there is an American system which is paramount to and independent of the British system, and is more satisfactory to the American people.

Mr. BRECKINRIDGE, of Kentucky. I confess to some admiration for the learning and erudition that my friend testifies he has, and I give him the meed of my admiration on the modesty that has kept his light under a bushel so many years, so that we had not heard of it before. [Laughter on the Democratic side.]

Mr. FARQUHAR. I am glad of the compliment. I merely wish to suggest that if the wage-earners of the country had been more consulted the gentleman would have had more information than he obtained on this subject.

Mr. BRECKINRIDGE, of Kentucky. I have no doubt, Mr. Speaker, that if we had sat on the inside and heard testimony and on the outside had caught the frying of the fat, it might have been that our bill would have been different to what it is, and the exchequer of our party might have been fuller. That is, on the other end of the Capitol, not on this. [Applause on the Democratic side.]

Now, as to the sugar schedule and Mr. Havemeyer's connection with it, I want to say once for all that so far as I had anything to do with it—and I was perhaps as largely responsible for that schedule as any member of the Ways and Means Committee, as it was originally put in the bill—I thought it was a good thing to make the line of demarkation at 16 and not at 13. The Democratic members of the Ways and Means Committee disagreed with me on that subject, and only after a great deal of hesitation that schedule was adopted by us.

As soon as it was adopted the New York Times came out in a series of able articles demonstrating that the schedule as we drew it up was not in the interest of the American producer. I made personal inquiries as far as I was able to do so of persons who were familiar with the manufacture of sugar in Louisiana, in California, in the Hawaiian Islands, and elsewhere, of gentlemen of all political views, that I might make myself familiar with it. I came to the conclusion that we had made a mistake in the change of that schedule, and while the existing schedule was wholly unsatisfactory, that my change of it was probably equally unsatisfactory; and acting on the principle that controlled me and all that I did on this bill whenever I was in a state of doubt as to what I ought to do, I thought the existing condition of things had better be retained, and so I consented to a change back to the schedule, precisely as the Senate, after full examination, have also done. They left the line of demarkation at 13, precisely as the House did.

Now, in relation to Mr. Havemeyer, he had nothing to do with me so far as the making of that change is concerned. I had no conversation with him on the subject of sugar at all.

Now, as to what ought to be done with the sugar schedule, I then was in doubt; I now am in doubt. In the Senate schedule there are two grave defects, according to my best judgment. One is that it admits molasses not exceeding fifty degrees of saccharine matter entirely free. Thirty-seven million gallons of that class came in during 1887.

By that the refiners can control the introduction of the raw material. I see no reason why under this bill the introduction of raw sugar would not cease, and all would come in in the shape of molasses and the sugar refiner get the entire margin of duty on his refined sugar; and if any gentleman at this time can point out that I am mistaken, I will be glad, because I want to know what is the real merit or demerit of putting molasses on the free-list, which seems to strike at the beet-sugar interests of California and the sorghum industry of Kansas and Louisiana sugars, because the refiner would get the entire margin of duty. Under the schedule as it is in the Senate bill the margin between the duty on raw sugars and the duty on refined sugars is larger than that in the Mills bill. The gentleman from Pennsylvania has not examined the sugar schedule with his usual care or he would have ascertained in the refined sugars the margin of the duty is higher in proportion to the duty on the raw sugar in the Senate bill than it is in the House bill or under the present law.

Mr. BAYNE. Will the gentleman permit an inquiry there?

Mr. BRECKINRIDGE, of Kentucky. Certainly.

Mr. BAYNE. If all raw sugar should be imported in the form of molasses and put on the free-list as in the Senate bill, would it not very largely reduce the revenues of the Government?

Mr. BRECKINRIDGE, of Kentucky. It would. Fifty-six millions of dollars, of course. And, Mr. Speaker, if the gentleman says that that is what his party desires to do, that they desire to have that $56,000,000 taken out of the revenue and not to avoid a plan to prevent the introduction of raw sugar, but to effect the destruction of the hope of Kansas and California to produce sugar from sorghum and beets and the destruction of the sugar interests of Louisiana, it may be a matter which he would himself and I myself might have some remarks to make. If molasses under fifty-six degrees of saccharine is introduced in sufficient quantities to make the refined sugars of the country, the entire $56,000,000 revenue received from sugar will of course cease, and it will go into the pockets of the sugar refiner. That $56,000,000 will be transferred by the gentleman's legislation from the Treasury of the United States to the pockets of the refiner, because the refiner will have the entire duty on refined sugars which is 1⅛ of a cent. Certainly that will be sufficient to exclude all refined sugars, and the reduction of revenue to the Government will mark precisely the increased profit and revenue to the sugar refiner.

There can be no doubt about that, and if the gentleman, with his usual research, will take the subject up and study it he will agree with me, though possibly he may not acknowledge it until after the Presidential canvass is over.

Mr. BAYNE. That will be free raw material.

Mr. BRECKINRIDGE, of Kentucky. Undoubtedly it will be free raw material; but the gentleman seems to have no conception of the difference between a free raw material which increases the amount of product in America and decreases the cost, and a free raw material which diminishes the revenue of the Government, increases the profit of the manufacturer, and leaves the burden upon the consumer precisely where it was before. That is the difference between the gentlemen who advocate free molasses and those who advocate free wool, free leather, free raw silk, free cotton, free lumber, and other free raw materials which have to be made up here.

Now, I did not intend to participate in this debate, but as I am up, there are one or two points in this "perfect" Senate bill to which I wish to direct attention. There is a colloquialism in Kentucky that "you don't need to eat the whole leg of mutton to know that it is underdone;" and I propose to take a sample from this Senate bill. The duty on knit goods is increased by this bill in such a way as to put it at 258 per cent. That is, goods costing $9 will have put upon them a duty of $23.25, by the mere changing of the term "knit goods" from its place in the present statute to another classification in the proposed bill. I understood the gentleman from Pennsylvania [Mr. BAYNE], in the colloquy that he had with the gentleman from Georgia [Mr. TURNER], to approve of that. Does he believe that a prohibitory duty of 258 per cent. upon knit goods is a "perfect" rate of duty? I understand the gentleman to say that that is his doctrine.

Mr. BAYNE. I am not prepared to speak at this moment specifically as to knit goods; but I know that under the existing law there has been a very large importation.

Mr. BRECKINRIDGE, of Kentucky. I took it for granted that the gentleman knew this Senate bill as the Turk knows the Koran, because he said it was "perfect" in all its parts, a sort of divine inspiration which had come down from the heavenly source of the Committee on Finance of the Senate. But may be the gentleman will think that 148 per cent. duty is a proper rate of duty on woolens. On manufactures of worsted, hair of the alpaca, goat, etc., not exceeding 30 cents a pound, or exceeding 30 and not exceeding 40 cents a pound, the duty under the present law is 69 per cent. The Mills bill makes it 40 per cent. and the Senate bill makes it 148 per cent. That is, the Senate bill makes a change of 78 per cent. according to my way of counting; but the gentleman says that is not a proper way; he says that we should reckon the percentage on the duty, not on the price of the article. Well, it is over 100 per cent. of increase on the present duty. Seamless goods that are brought in at over 80 cents pay, under the present law, 64 per cent., by our bill they will pay 40 per cent., by this "perfect" Senate substitute they will pay 69.74 per cent. That is, the duty on costly goods, over 80 cents, is increased 5 per cent., while the duty on the less valuable goods, such as poor people have to buy, is in-

creased 78 per cent. The one increase is 5 per cent., the other is 78 per cent.

Do I understand my friend from Pennsylvania [Mr. BAYNE] to indorse that discrimination by which the duty on the cheaper goods is made 148 per cent., an increase of 78 per cent., while on the more valuable goods the increase is only 5 per cent.?

Mr. BAYNE. I observed in my remarks that specific rates upon knit goods and upon everything else would raise the duty on inferior articles, and I stated that that would be to the advantage of the consumer. A shoddy blanket, for instance, would pay a very small ad valorem duty, but under a specific rate the duty upon it would be comparatively high. The Senate bill encourages the importation of good goods instead of inferior ones.

Mr. BRECKINRIDGE, of Kentucky. In other words, I would say that it gives to the privileged class, who have money and who own the manufactories in which the cheap goods are made, an opportunity to sell those cheap goods at enormous prices to the poor while they import from abroad their own wearing-apparel at a comparatively low rate of duty. I take issue with the gentleman as to whether this is a "perfect" bill for the benefit of the consumer, in view of the fact that of the sixty millions of our people probably fifty-nine millions must wear the cheaper goods, while possibly one million with their wives and daughters may be able to import the more costly goods. That is the equality of citizenship which my friend believes lies at the foundation of the Republican party.

Mr. BAYNE. I have no doubt that the change was made on knit goods in consequence of the fact that in 1887 there were over $60,000,000 of them imported.

Mr. BRECKINRIDGE, of Kentucky. My friend is permitting himself to make a misstatement unintentionally. He is reading the figures of the whole importation of woolen goods and raw material—woolens, worsted goods, and the raw material.

Mr. BAYNE. I have not made a mistake. There is no division in the statement, and I read the whole, intending to eliminate the wool. Eliminating that, $16,000,000, it still leaves about forty-four million as the importation of knit goods.

Mr. BRECKINRIDGE, of Kentucky. Undoubtedly. Now, the point of difference between the gentleman and me is that he wants to put the increase of duty on so much of that forty-four millions as a rich man can buy at only 5 per cent., while upon what the poor man can buy he proposes an increase of 78 per cent.; and I, on the other hand, want to make the duty only 40 per cent. upon whichever article the man's means enable him to buy.

Mr. BAYNE. If my friend will permit me, the object of the Senate bill is to prevent the importation of goods made from the refuse matters of the cities of Europe. I believe that the poor man should have as good a blanket as the rich man, and every poor man in this country is able to buy a good American blanket.

Mr. BRECKINRIDGE, of Kentucky. I am glad my friend believes that, for if he does honestly believe it he will join the Democratic party as soon as his belief takes the form of practical action. [Laughter.] At present the margin between his practice and his opinion is greater than the margin between the rich man's goods at an increase of only 5 per cent. and the poor man's goods at an increase of 78 per cent. of duty. [Laughter.]

This bill is full of just such things. In pocket-knives the case is exactly the same: the man of small means pays an enormous duty; the man of larger means pays less in proportion. And so all the way through.

Mr. BAYNE. Will my friend hear me a moment? A European jack-knife, I believe, sells at something like $2 a gross over there. Its blade is made of iron. The Senate bill will perhaps by a specific duty exclude the importation of iron-bladed jack-knives which sell at about $2 a gross. The American consumer, however, will thereby secure a knife with a steel blade that will be of some value to him.

Mr. BRECKINRIDGE, of Kentucky. The difference between the gentleman and myself is that I think the man who wants to buy a jack-knife ought to have the liberty of doing so—ought not to be deprived of the opportunity, besides paying for the privilege of being deprived of it, while my friend from Pennsylvania believes that if a man wants such a jack-knife he has no right which the Republican Senate ought to regard, and he not only ought not to be allowed to buy the jack-knife, but ought to pay to the gentleman's constituents and others who make knives not only the full price of the knife but a bonus; he ought to pay first for the knife, and second for wanting the jack-knife.

Mr. BAYNE. Then, if I understand the gentleman's proposition, he ought to bring in a bill taking off all tariff duties and raising the revenue of the Government by direct taxation.

Mr. BRECKINRIDGE, of Kentucky. Not by any means. We have to raise a certain amount of revenue—$310,000,000. Direct taxation must be apportioned among the States according to population. It would be an impossibility for us to raise our revenue in that way. Nobody thinks it can now be done—certainly not I. Therefore we must raise this revenue in large part—in much the larger part—by imposts on imports. The difference between the gentleman and myself is that I believe in an honest levying of taxes, each man paying his ad valorem tax on the thing he desires to import; the gentleman believes, as he frankly says, in laying these taxes so that revenue shall not be collected for the Government, which means, as I understand, that it shall be collected for the manufacturer. That is the distinct difference between us; and that is what this bill does—not openly, not frankly, not candidly, but clandestinely—by changes in schedules, by the manipulation of classifications, by the hiding away of words in the midst of unusual collocations, so that nobody, not even an expert, can read this bill and understand what it means except after careful comparison and the most accurate and painful analysis.

Mr. Speaker, I had intended to say some other things about the sugar schedule and the action of certain gentlemen in regard to it, but I do not care to do so. Some of those gentlemen are absent to-day, and I myself have to go away. I wish to say I have felt that the late statement of the gentleman who is at the head of the Ways and Means Committee about the sugar "trust" was absolutely accurate. I have not criticised the statement of Mr. Blaine, because I supposed he was misled by statements made on this floor; but I felt that it was an outrage on decency as well as a violation of truth for the gentleman from Ohio to say that the gentleman from Texas [Mr. MILLS], when he denied the statements of Mr. Blaine, had been accurate as to the letter, but had spoken what he meant to say was a falsehood as to the spirit. That statement was wholly gratuitous; it was absolutely without foundation; and it will stick to the gentleman from Ohio, as all intentionally false statements do, for the balance of his public life.

Mr. EZRA B. TAYLOR addressed the Chair.

Mr. BRECKINRIDGE, of Kentucky. I reserve the remainder of my time.

The SPEAKER *pro tempore* (Mr. SOWDEN). The gentleman from Kentucky has fifteen minutes remaining.

Mr. EZRA B. TAYLOR. I have no disposition to take very much time, Mr. Speaker; but in reference to the strictures which the gentleman from Kentucky has made upon my action to-day I wish to say, without using any adjectives, that I think he is in the wrong and I am in the right. The first statement which he makes is that I garbled an answer of the gentleman in the RECORD by stopping, in reading the answer, at the word "indubitably." My reply to that is, first, that I have no such recollection; second, I had no such intention; third, there is no such fact—it is not true. In this connection I desire the Reporter to have the Clerk read the notes of that matter.

Mr. BRECKINRIDGE, of Kentucky (after a pause). While we are waiting, I will ask, in order to throw light upon this matter, whether the Reporter has to refer to the notes or to the RECORD.

Mr. J. H. WHITE (one of the Official Reporters). I have the notes here, and can read them.

Mr. BRECKINRIDGE, of Kentucky. Read them, if you please, so that we can hear them.

Mr. WHITE read as follows:

Mr. EZRA B. TAYLOR (reading):

"Mr. BRECKINRIDGE, of Kentucky. Indubitably, if Mr. Havemeyer asked an audience he got it."

Mr. TURNER, of Georgia. The gentleman does not read the whole of that answer.

Mr. BRECKINRIDGE, of Kentucky. Certainly not.

Mr. EZRA B. TAYLOR. Now, Mr. Speaker, the report of the RECORD shows that I read the whole sentence; and I know that I did read it. If any man living says I did not, I still know I did. I understand how easy it is to make mistakes in a matter of this kind. I had no reason at all to suppress any part of the extract; I did not suppress any of it; and when the gentleman from Georgia [Mr. TURNER] made his remark, as I am sure he did make it, because the gentleman from Pennsylvania [Mr. BAYNE] heard it, my mind being upon the subject that I was following, I did not hear it; I did not stop to listen. But to say that I read that word "indubitably," and stopped there, is a slander on me that never has been made before, and never must be made here or elsewhere.

Mr. FARQUHAR. I would like to suggest that it was not the intention of my friend from Ohio to read that from the RECORD at all. He carried the book over to the gentleman from Pennsylvania.

Mr. EZRA B. TAYLOR. I will refer to that.

Mr. FARQUHAR. Mr. BAYNE had not risen to read from the RECORD.

Mr. EZRA B. TAYLOR. While the gentleman from Pennsylvania [Mr. BAYNE] was speaking the gentleman from Georgia [Mr. TURNER] made his remarks, and the gentleman from Kentucky [Mr. BRECKINRIDGE] made his. I passed over to the gentleman from Pennsylvania and suggested it would be well enough to get the RECORD. He said: "You get it for me." I went to work, and it was late before I found it. It seemed to be absent from all our desks. I hastily examined it. I was looking only at those two points, one was whether any member of the Committee on Ways and Means had a conversation with Mr. Havemeyer and the other was whether the statement of the gentleman from Kentucky made to-day denying there was any such interview was a matter of correct recollection or not.

Finally I found the RECORD and looked hastily on this page and saw the name of the gentleman from Kentucky [Mr. BRECKINRIDGE]. I

called upon the gentleman from Pennsylvania to read it, but he was closing his remarks at that moment. I looked for a pencil, and the gentleman from Kansas handed me a pencil and I marked the report of the remarks of the gentleman from Kentucky. Then having occupied myself alone on the question of denial whether any such thing had occurred to any member of the committee, whether there had been any hearing at all, I looked over on the next column and I saw the report which I read. I marked that. I marked it, as this paper will show, including the entire sentence said to be suppressed. I marked it not for myself. I did not say a word and do not wish to say a word in this House if anybody will say it for me. But the gentleman from Pennsylvania [Mr. BAYNE] was closing and suggested that I take ten minutes to read this report.

This was the RECORD of the 9th day of July. I did not look over the leaf to see what else was there, and I did not remember what was there. I had no occasion to remember. It was not a question whether the gentleman from Kentucky was present at these interviews, because I did not understand he was by this statement. He simply said he did not deny there had been an interview between Mr. Havemeyer and some member of the committee. I had but ten minutes in which to read this, and eight of the ten minutes was occupied in reading it. I made a remark or two, and had no opportunity either to read the balance of the speech made in the colloquy which occurred or anything else except this matter which I brought to the attention of the gentleman from Pennsylvania.

Now, if I had had the slightest idea the gentleman from Kentucky would regard it as a matter of the least interest, or that it would throw the least light on this subject, or if I had known the fact of his subsequent statement, which I did not know, wherein he said that he was not present, I would have taken more time to explain that whole matter.

Mr. BRECKINRIDGE, of Kentucky. Mr. Speaker, I desire to say, after what the gentleman from Ohio has just said, that what seemed to me to be a statement of his which called for my remarks began with the use of the words "extraordinary denial of the gentleman from Kentucky," after what had occurred at a certain time which he would read from the RECORD. It naturally seemed to me that it was a deliberate charge on the part of a gentleman of long standing in this House that my denial of to-day was a denial which had in it an element wanting in veracity, as would be shown by his reading the extract from the RECORD. I now desire to say, after what the Reporter has read from his notes, and after what the gentleman himself has said in denial, that I regret having said what I did in response to what I believed to be a personal attack upon my veracity and character, and which I believed at the time was attempted to be sustained by an unfair and garbled reading of the RECORD. I think it is due to myself as well as the gentleman from Ohio to say this much.

Mr. EZRA B. TAYLOR. I had no intention, Mr. Speaker, of raising any such question. And I would say here that when anybody attacks me in that way they always apologize. [Laughter.]

I yield now the remainder of my time to the gentleman from Kansas [Mr. PETERS].

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. NEWELL, one of its clerks, announced that the Senate had passed without amendment the joint resolution (H. Res. 229) to print the Agricultural Report for 1888;

Also, that the Senate agreed to the concurrent resolutions of the House of Representatives to print the first and second annual reports of the Commissioner of Labor, to be used in the Department of Labor; and the report of the Director of the Mint on the production of the precious metals in the United States for 1887.

The message further announced that Mr. EDMUNDS, Mr. DAWES, and Mr. FAULKNER had been appointed members of the joint select committee on the part of the Senate to investigate the Washington Aqueduct tunnel.

FINAL ADJOURNMENT.

Mr. PETERS. Mr. Speaker, in the time allotted to me——

Mr. TURNER, of Georgia. Before the gentleman from Kansas proceeds, will he yield to me for a moment?

Mr. PETERS. Certainly.

Mr. TURNER, of Georgia. I would like to call the attention of the gentleman from Ohio to another fact in connection with this subject which transpired during his speech. Of course the statement of the Official Reporter should be conclusive as to whether the gentleman read the entire sentence about which a dispute has arisen or not.

Mr. EZRA B. TAYLOR. I did read it.

Mr. TURNER, of Georgia. If the gentleman read the latter part of the sentence, I certainly did not hear it. But the statement he had already made was satisfactory to me even without the reading of the official record of the Reporter's notes. But I desire to call his attention to the fact that his statement was preluded by an assertion that what I said here was "extraordinary," and I think the gentleman went on to use the statement "disingenuous."

Mr. EZRA B. TAYLOR. I think not. I am certain I did not use the word.

Mr. TURNER, of Georgia. Then I misunderstood the gentleman.

Mr. EZRA B. TAYLOR. I did not use that language.

Mr. PETERS. Now, Mr. Speaker, as the clouds have all been blown away and the sky is once more clear, I want to come back to the original subject-matter before the House.

Mr. RICHARDSON. The adjournment question.

Mr. PETERS. Yes, the resolution providing for adjournment. As the gentleman from Tennessee [Mr. MCMILLIN] has said, this has been an extraordinary session of Congress. It not only has been an extraordinary session by reason of the peculiar circumstances attending the beginning of it, but it seems to-day, from what has occurred, that its closing hours are to be as extraordinary as its opening hours.

We have here a resolution which has been called up in the House providing for an adjournment *sine die* on next Saturday. That means, if adopted, that there will be no other legislation in the Fiftieth Congress until the first Monday in December next. It means more than that. It means that there will be really no further legislation of any consequence or importance until January next, because every member who is familiar with the course of legislation in this House knows that even at the second session but little is accomplished prior to the holiday vacation, and consequently we are met face to face to-day with a proposition to close all further legislation in regard to every matter before the House practically until the beginning days of January, 1889.

On the first Monday in December, 1887, when the Fiftieth Congress met, when Mr. Speaker CARLISLE took the chair, he made some remarks prior to taking upon himself the oath of office, in which he called the attention of the country to the dangerous surplus that had accumulated in the Treasury of the United States and the absolute necessity to the business interests of the country for a revision of the tariff and for a reduction of the duties which had placed that surplus in the Treasury.

He called attention to the stagnation in business and to the great injury to the business interests that was being brought about by the accumulation of this surplus. If there was anything to be deduced from that great Democratic leader's expressions, it was that as soon as the House got under way and the committees were appointed there should be immediate steps taken not only to reduce the surplus already in the Treasury, that had been withdrawn from the circulating medium of the country and the business interests of the country, but more particularly to stop the flow of this surplus into the Treasury.

Now, what is disclosed in relation to this notwithstanding these urgent words of the Speaker, notwithstanding that these remarks were followed by the marvelous and remarkable message of the President of the United States on the following day, in which he depicted the horrors that would overtake the business interests of this country if that surplus was not reduced and if there was no revision of the tariff? Notwithstanding all these warnings, notwithstanding all we were led to expect, what does the record disclose?

The record of the Fiftieth Congress discloses that not a single effort was made towards the reduction of the surplus until the 1st of March, 1888. And it was upon that day that a proposition was offered in this House originating with the Committee on Ways and Means, which was virtually a re-enactment of the law of 1881. It was not a very difficult piece of legislation to draw; it was not a very difficult measure to determine.

But, notwithstanding all this, the surplus that had been allowed from April, 1887, to increase and accumulate in the vaults of the Treasury from that time up to the meeting of the Fiftieth Congress, and to the importance of the reduction of which the attention of the House had been called, no effort was made in this branch of the Legislature until the 1st of March, 1888, for its reduction. And what was done then? We passed that bill which was virtually a re-enactment of the law of 1881, which authorized the Secretary of the Treasury to go into the markets and purchase the bonds of the United States with the surplus in the Treasury. That was sent to the Senate. The Senate amended it and sent it back to the House, and it was referred to the Committee on Ways and Means, and there that bill sleeps and rests to-day. It has not been brought to the light of day. Then what was done? Afterwards a resolution was offered which provided and expressed that it was the sense of each individual member of this House that the law of 1881 was in fact meant to give the Secretary of the Treasury power to purchase bonds with the surplus accumulated in the Treasury of the United States. That resolution, which I say was an expression of the individual judgment of each member of this House, passed this body, and then for the first time since April, 1887, began the purchase of bonds with the surplus in the Treasury of the United States.

Now, is not that remarkable haste shown by the legislative record that has been made by this Congress in the face of the speech made by Speaker CARLISLE, and the remarkable message that was sent to this House on the second day of this session in December, 1887?

Now, then, what further were we led to believe? Not only were we led to believe that there should be an immediate attempt made to reduce this surplus and get this money out into business channels, so that the business interests that had been stagnated by its withdrawal might be relieved, but we were also informed and made to believe that there would be a special proposition to revise or reform this tariff, which has

been charged as the great source of injury to the business interests of the country.

And, now, what is the record in regard to that? It shows that, notwithstanding there was not a single dilatory measure or motion presented in this House, yet the majority of the Ways and Means Committee did not present a tariff bill to this House until, I believe, the 3d day of April, 1888, and there it rested until the 17th day of that month, when it was called up for consideration, and, as gentlemen all remember, that tariff measure was not passed through this House until July 21, 1888, nearly eight months from the time the Fiftieth Congress first met.

Now, if there was such a necessity for a revision of the tariff, if this tariff was robbing the tax-payers of the country, if there was extorted from the labor of the country dollar after dollar of their hard earnings, how does it come that in this remarkable and extraordinary session of Congress eight months should have elapsed before the bill should have been passed by a Democratic House to relieve the people from this burdensome extortion and robbery?

Now, Mr. Speaker, it seems to me, in the light of this record, that this resolution proposing an adjournment, and which seems to be advocated by the majority side of the House, is only in keeping with the studied effort that has been made by the Democratic party to keep open this question of the tariff, to keep it before the people as a great question, not for the purpose of securing a revision, but for the purpose of carrying the elections this fall.

Mr. HOOKER. Why, this resolution comes from the Republican Senate!

Mr. PETERS. I will come to that in a moment, and, if the gentleman will permit me to be unparliamentary, I will refer him to the record of the proceedings in another branch of the legislative body, where he will find that the resolution as first introduced provided for taking a recess, and that it was the objection which came from the Democratic side of that body which prevented the passage of the resolution in that form and led to the introduction and passage of the resolution providing for a final adjournment. If gentlemen on the other side find any comfort in that state of facts, they are welcome to it.

Mr. RICHARDSON. Does not the gentleman know that the time taken by the Senate to prepare its substitute for what is known as the Mills bill has been unprecedented in the history of tariff legislation in this country?

Mr. PETERS. The record shows that the time taken by the Ways and Means Committee of the House in preparing the Mills tariff bill was just twice as long as the time consumed by the Senate in preparing its bill.

Mr. RICHARDSON. If the gentleman will refer to the record he will find that he is mistaken.

Several MEMBERS on the Republican side. Oh, no.

Mr. PETERS. I want to say further that there have never been but two long sessions of Congress, according to my recollection, that have continued as late as the 21st day of July. Now, what was the object in this case? I do not accuse any individual of having any particular motive in view, but I speak of the Democratic party as a body, as a political organization, and I say that the conclusion may be reasonably drawn from the record that that party was not in earnest when it spoke about a revision of the tariff.

If it had been in earnest, or if it is in earnest now, what should be adopted is the resolutions proposed by the gentleman from Alabama [Mr. WHEELER], which was read for the information of the House, and which provides for taking a recess so that this Congress can come together on the 12th day of November for the purpose of carrying out what will then be known to be the will of the people expressed at the polls. If the people in November next re-elect Grover Cleveland President of the United States, it will be an indorsement of the Mills bill. If they elect Benjamin Harrison President of the United States, as I believe they will, it will be an indorsement of the Senate bill, and, whatever may be the result, it is the duty of the party in power in this House, according to my judgment, if it is sincere in its professed desire to reform the tariff, to keep this body in such a position that it can at once address itself to a revision of the tariff immediately after the election.

That, I say, will be the duty of the majority of this House if their position as embodied in the Mills bill is indorsed by the people at the polls; yet, notwithstanding that fact, notwithstanding what seems to be the judgment of every man who gives the subject his unbiased attention, a Democratic member of the Ways and Means Committee calls up here to-day a resolution providing for an adjournment *sine die*.

Mr. MCMILLIN. A resolution brought over from the Republican Senate, which now has the tariff question before it.

Mr. PETERS. I have already alluded to that, and I have perhaps gone beyond the proper parliamentary line in calling the attention of the gentleman from Mississippi [Mr. HOOKER] to what is disclosed by the RECORD as to the proceedings of the other branch of Congress.

Mr. HOOKER. I do not think the gentleman has transgressed very far, because he has the resolution here before him.

Mr. PETERS. I have the resolution here, but I have no right to refer to what occurred in the Senate.

Mr. HOOKER. Well, we will not disagree about that.

Mr. PETERS. That is what you desire to keep out of sight.

Mr. HOOKER. Why so?

Mr. PETERS. Because it shows the inconsistency of your party.

Now, Mr. Speaker, there has been much said upon this question of percentage in relation to the tariff. I have never heard a Democratic orator speak against a protective tariff but what he indulged in this "hifalutin" talk about "per cent." Why do they do it? I mean nothing offensive to any individual speaker; I am referring only to the general style of Democratic orators on the question of the tariff.

I remember reading somewhere the utterance of a speaker or writer on the tariff who said that the poor farmer who rises in the morning puts on a flannel shirt which is taxed 89 per cent., that if he wishes to look at the glorious sunlight he looks out through window-glass that has been taxed 59 per cent., and so on, piling one per cent. upon another. Now, why do gentlemen adopt that style of argument? I can not understand any reason for it, unless it be to invest this whole tariff question with an air of mystery so as to impress the ordinary, average human being with the idea that he is incapable of understanding it. So far as my observation goes, so far as my experience goes, so far as my knowledge goes, this tariff question is a simple, plain, business question, and whoever endeavors to address himself to it upon plain business principles can usually be understood by the masses.

But whenever he wants to talk so that, if possible, he may not be understood, then he commences dealing in "percents." I do not propose to enter into a discussion of the tariff question. I have only called attention to it in connection with this extraordinary resolution, in the light of the past action of the Democratic side, that is now before this House for consideration.

[Here the hammer fell.]

The SPEAKER *pro tempore* (Mr. SOWDEN). The gentleman's time has expired.

Mr. MCMILLIN. I hope the gentleman will permit me to ask him a question; and I will yield him one minute to answer.

Mr. PETERS. Perhaps that may not be long enough to enable me to answer.

Mr. MCMILLIN. Well, then, two minutes. What I want to know is this: The Senate bill puts lumber back on the tax-list; I want to know whether the gentleman favors that.

Mr. PETERS. I will state to the gentleman that I stand now as I stood when the Mills bill was before the House. I am opposed to free lumber.

Mr. MCMILLIN. Then is the Senate bill right or wrong?

Mr. PETERS. The Senate bill does not put lumber on the free-list.

Mr. MCMILLIN. Then the Senate bill is right?

Mr. PETERS. Certainly. Lumber is now free, so far as lumber in the rough is concerned. Logs can now come in from Canada free. It is only when lumber has been touched by the magic hand of labor that protection comes in and says, "We will protect it to a sufficient amount to compensate for the difference between the wages of labor in the United States and the wages of labor in Canada." Although I come from an agricultural State, which has scarcely a stick of timber, yet my people understand that, even if this duty on lumber were taken off, it would not operate to the advantage of the consumer, but would tend simply to benefit the "lumber kings" and the railroad companies that transport lumber from the manufacturer to the consumer.

[Here the hammer fell.]

Mr. MCMILLIN. Mr. Speaker, I desire a vote as early as possible on the pending resolution; but I do not wish to be discourteous to any gentleman. The gentleman from Alabama [Mr. WHEELER], I believe, desires to speak. I yield him fifteen minutes.

Mr. WHEELER. Mr. Speaker, I am delighted to see that the discussion to-day has been so beneficial that even the gentleman from Kansas [Mr. PETERS] has been constrained to rise in his seat and demand a reform in the tariff laws of our country, and I am also glad to see that the conversion has been so complete that he insists we shall remain here, inconvenient as it is to us all, in order to reform the tariff laws and do justice to the people. The gentleman must have heard from home; and he may apprehend that unless the tariff laws are reformed there is danger Kansas may go Democratic. [Laughter.]

Mr. RYAN. That is the way you are going to elect Cleveland!

Mr. WHEELER. We are going to elect Mr. Cleveland, and we can do so without Kansas, though I should rejoice to see that State redeemed. A failure to re-elect Mr. Cleveland, with his wise and pure administration, and his stainless and unassailable record, would be well-nigh equivalent to an admission that the American people are incapable of self-government.

Mr. Speaker, I have sent a resolution to the Clerk's desk to amend the Senate resolution for adjournment. I have done this because I have very emphatic convictions in regard to it. I am as homesick as any man in this House; I am desirous to go home; I have been here constantly since last November; I desire very much to go home, and I would like exceedingly to remain there until December; I do not want to come back here the 12th of November; but I believe it is our duty to do so.

I believe the paramount question before us is the revision of the tariff-tax laws.

Every President and every Secretary of the Treasury since 1865 has emphasized this necessity. Mr. Cleveland, the great champion of the people's rights, has demanded it, and even the Republican Senators have admitted the wisdom of his requirement. In the report they say:

The demand for a careful and thorough revision of our revenue laws is imperative. This revision is necessary:

1. To reduce the national revenues, which are now excessive.

No valid reason can be given why we should, under existing circumstances, continue to collect annually a sum approximating $60,000,000 in excess of the amount required to administer the Government economically and keep the pledges of public faith.

2. To protect honest importers and domestic producers.

3. To remedy the defects, anomalies, and incongruities which have been from time to time discovered in the tariff schedules, or which have been created by erroneous decisions of the Treasury Department.

4. To secure the proper readjustment and equalization of tariff rates rendered necessary by modified business conditions, improvements in methods of production, radical changes in prices, or by new elements or sources of competition.

Some gentlemen say we can complete this great work during the next session, and promise to remain all through the Christmas holidays. I will gladly join them in this commendable resolve, but I am not so sanguine as they, and would much prefer to take no risks in so important a matter. This Congress will cease to exist on the 4th day of March, 1889. There can not be more than sixty working days in the next regular session of Congress. It is impossible for us to get a quorum of members to remain here during the Christmas holidays. They will more certainly come here on the 12th of November and work on this important measure for three weeks before the regular commencement of the session than remain here during the holidays. I express this opinion as the result of my experience in former Congresses, but so far as I am personally concerned I will gladly remain here and work through Christmas and New Year's week.

My resolution provides that instead of adjournment we shall take a recess from Saturday, October 27, until Monday, the 12th of November. This will give us ample time to get through with the election, and then we can put in three good weeks of work before the next session commences.

In order to pass a tariff bill the Senate substitute must be thoroughly discussed, and the time required to properly debate that measure can be easily estimated. Each speech will require at least one hour, and we know it is usual for Senators to speak on such a bill for two, three, and sometimes four hours. Those who are prepared to speak will be here promptly on November 12, and others will gather in, until finally all will be present in time to bear their part in this important legislation.

THE DUTY OF DEMOCRATS.

When I introduced the resolution last Monday, which excited so much opposition on the other side of the House, I was confronted by the fact that every Republican on the floor had by his speeches and votes opposed the course insisted upon by the measure; but the moment I saw a possible indication that a single member of that party was willing to join us in our just, humane, and righteous effort to lift the burdens of the people, I immediately asked to have the word "Democrat" stricken from the first resolution, which I certainly had a right to do, for every member has such a privilege regarding his own measures while they are still in the course of introduction. As thus amended the resolution was as I will read:

Whereas the Senate of the United States has reported a bill to revise the tax laws, which bill is more oppressive to the masses of the people and more in the interests of the monopolists than any measure ever proposed to any legislative body of which we have a record: Therefore,

Be it resolved, That the members of this House pledge themselves to continue their efforts to defend the people against this unequal, unjust, and unwise legislation, which, if enacted into law, must inevitably check and limit the sale of American products in foreign countries, stimulate and strengthen the operations of combinations and trusts, and prolong, if not perpetuate, the subjection of the people to the exactions of accumulated capital; and the members of this Congress will maintain the contest upon this floor until the victory is won or the duties with which they have been charged by the people lapse by constitutional limitation; and

Be it also resolved, That the Senate tariff bill should be discussed upon this floor, to the end that its features may be exposed and made known to the people.

This seemed to make the resolution less satisfactory to our friends on the other side of the House. They were in a dilemma. They were unwilling to go before the country admitting their opposition to so wise and good a line of procedure, and by keeping the resolution out of the RECORD they seemed to think or hope that their unfortunate position on this question could be kept from the people.

Now I will ask the gentlemen who opposed the measure, do they insist that the Senate bill shall not be discussed? I know that the more it is debated and its deformities, its illogical features, and un-American principles exposed the more desperate becomes their cause, but let me tell them that the people of the United States are too intelligent and well informed to be misled with sophistry. We must publish the two bills, we must compare them and point out the respects in which they differ, and the people will readily see that the Democratic House bill is in the interest of the people and the Republican Senate bill is against the people, and in the interest of accumulated capital.

What has occurred here to-day shows the necessity of discussing that Senate bill and letting the people know the merits of the two measures, because, as the gentleman from Kansas [Mr. PETERS] has said, the 6th of November will determine the question, and the happiness of our people demands that it shall be determined in favor of the measure proposed and passed by the House of Representatives.

As the gentleman from New York stated in a few words what his idea was on the subject, I will state in a few words what I said some eleven days ago contrasting the House and the Senate bills:

The effect of the bill prepared and passed by the Democratic House of Representatives will be to lighten the burdens and increase the prosperity and happiness of 20,000,000 people who earn their living by daily toil. The effect of the bill prepared by the Republican Senate will be to perpetuate the privileges whereby a few favored monopolists and corporations have gained enormous individual fortunes at the expense of the comfort and happiness of those by whose toil the wealth of the country is created.

INCONGRUITIES AND INCONSISTENCIES.

As the gentleman from Kentucky [Mr. BRECKINRIDGE] said, the Senate bill from the beginning to the end is one mass of incongruities, which it will take an expert of the Treasury Department who has been studying these questions all his life to unfold and disentangle, so that it can be understood by the people.

The gentleman from Pennsylvania [Mr. BAYNE] repeated more than once in his speech—

As you reduce duties you will swell importations.

The gentleman was very careful to emphasize this assertion, and made it the basis of a large part of his argument.

This has been the theory of many of the gentleman's colleagues, but I find in the Republican Senators' report on the proposed Senate tariff bill, without any comment or explanation, a table which takes quite a different view of this matter.

The table is Appendix B of the Senate report, and is found on page 54 of that document, which the Republican members of the Finance Committee have submitted to Congress and the country as their explanation of their substitute for the bill H. R. 9051 which we passed on July 21 of this year. The table is as I will read:

APPENDIX B.—*Estimates of imports and duties by provisions of Senate substitute to H. R. 9051.*

	Importations, fiscal year 1887.		Estimated imports under the proposed bill.		Estimated decrease of duty by the proposed bill.	Average ad valorem rate of duty.	
	Values.	Duties.	Values.	Duties.		Present law.	Proposed bill.
A.—Chemical products	$15,123,113.72	$4,655,375.27	$14,751,699.54	$4,383,074.79	$272,300.48	30.78	29.70
B.—Earthenware and glassware	13,055,763.49	7,583,953.97	13,042,454.73	7,308,270.25	275,683.72	58.09	56.03
C.—Metals	57,784,719.42	23,090,797.67	51,402,136.87	21,376,664.68	1,714,132.99	39.96	41.58
D.—Wood and woodenware	8,274,012.16	1,518,723.09	8,061,909.70	1,513,440.16	5,282.93	18.35	18.77
E.—Sugar	68,956,335.07	56,530,360.14	68,924,968.35	28,770,576.19	27,759,783.95	83.43	41.02
F.—Tobacco	10,955,125.03	9,127,758.26	10,739,454.24	6,856,875.68	2,270,882.58	83.82	63.85
G.—Provisions, etc	42,593,244.97	11,048,754.66	33,596,588.35	9,040,908.68	2,007,845.98	25.94	26.91
H.—Wines, liquors, etc	10,387,592.40	7,681,031.53	9,761,316.47	7,586,442.73	94,588.80	73.94	77.72
I.—Cotton manufactures	30,207,908.83	12,081,263.03	29,664,007.64	12,049,295.48	31,967.55	40.00	40.59
J.—Flax, hemp, and jute	24,791,662.08	7,868,605.78	24,030,013.17	7,682,125.73	186,480.05	31.74	31.97
K.—Wool and manufactures of wool	60,586,613.61	35,629,534.13	53,658,583.84	34,642,732.88	986,801.25	58.81	64.56
L.—Silk and silk goods	31,264,276.58	15,540,300.70	30,340,689.80	15,447,942.94	92,357.76	49.71	50.92
M.—Books, papers, etc	5,212,152.54	1,154,619.13	4,751,274.82	1,113,825.58	40,793.55	22.15	23.44
N.—Sundries	44,008,079.14	10,810,310.37	43,629,620.50	10,679,774.20	130,536.17	24.56	24.47
Articles, not enumerated—dutiable under section 2513 Revised Statutes:							
Unmanufactured	305,545.78	30,554.61	305,545.78	30,554.61		10.00	10.00
Manufactured	564,001.70	112,800.34	564,001.70	112,800.34		20.00	20.00
Packages, crates, boxes, etc., designed to evade duty	12,340.96	12,340.96	12,340.96	12,340.96		100.00	100.00
	424,082,487.48	204,477,083.64	397,236,606.46	168,607,645.88	35,869,437.76	48.21	42.45

SENATE REPORT ILLOGICAL.

This Republican Senators' report on the bill is almost as remarkable, inconsistent, and illogical as the bill itself.

Referring to Schedule A, the report says the bill will reduce the duty on chemical products from 30.78 per cent. to 29.70 per cent., these Senators' "estimate" that this diminution in the tariff will reduce importations to the extent of $371,414.18.

The report states that in Schedule B the bill will reduce duties on earthenware and glassware from 58.09 per cent. to 56.03 per cent., and, according to the report, it is estimated that this reduction of duty will be followed by a reduction in the value of the importations of these articles to the amount of $13,308.76.

In Schedule E the report states that the bill will reduce the duty on sugar from 83.43 per cent. to 41.02 per cent., and this enormous reduction in the duty—the proposed duty being less than one-half that imposed by the existing law—they claim will cause no increase in the importation, but on the contrary, according to the estimate of the authors of the report, the result will be that the value of sugars imported under the proposed bill will be $31,366.72 less than under existing laws.

In Schedule F the report states that the bill will reduce the duty on tobacco from 83.82 per cent. to 63.85 per cent., and they think this reduction of duty will not increase the importation of foreign-grown tobacco, but on the contrary their estimate is that it will cause a reduction in the annual imports of tobacco to the amount of $215,670.79.

In Schedule N the report states that the bill will reduce the duty on Sundries from 24.56 per cent. to 24.47 per cent., and this reduction in duty, the report estimates, will reduce the importation of the articles embraced in this schedule to the amount of $378,458.64.

Now, it will be remembered that since Mr. Blaine gave the key-note of the Republican campaign in his cablegram of December 8, 1887, the Republican clamor has been that even the least reduction in the tariff tax will flood our country with foreign products, and since this House passed the bill making a reduction of 5 per cent. there has been one resounding chorus—sometimes approximating a howl—that such a reduction in the tariff would glut our markets with the products of foreign labor, stop all of our factories, pauperize our labor, and play the dickens generally.

But when even a greater reduction is made by the unsoiled, sacred hands of Republican Senators, the argument is reversed, and forgetting for a moment the Republican campaign oratory which has nearly deafened the country for the last ten months, the Republicans now assure us that a reduction in the tariff tax on imports, including the great variety of goods in the sundries schedule, will certainly cause a diminution in the aggregate value of importations of that character. And this, too, in the face of the well-known fact that our population, wealth, and requirements are rapidly increasing.

Again: It is clear that a reduction of the duty on an article will lessen the cost of that article and larger quantities be purchased because of the lower price.

Now, if importations are diminished while requirements are increased and the ability to purchase augmented, it is clear the deficiency must be made up from the products of American manufactures, and therefore the Republican Senators contend that a reduction of duties will result in a vast increase in the prosperity, happiness, and comfort of the American people.

If the unflinching partisans be correct in the conclusions they have deduced from their premises, they are entitled to and should receive our hearty thanks for their unexpected co-operation, for, accepting their conclusions, we could not desire a more complete vindication of the Democratic position on the tariff, or a more forcible argument in support of the Mills bill than is found in this report of Republican Senators.

In defending this absurd position I presume it will be said the table is merely a mathematical calculation based upon some theory, but there is not one word in the report to justify this assumption. We must therefore take the table as submitted and assume that the Republican Senators meant what they have said, namely, that the third column in the table is an estimate of what they really believe the importations of the various articles will be should the bill become the law.

ARTICLES ON WHICH TARIFF IS INCREASED.

Let us now examine their estimate of the effect of an increase of the tariff tax. Referring to Schedule C, the Republican report states that the Senate bill will slightly increase the duty on metals, raising it from 39.96 per cent. to 41.58 per cent., but this trivial increase in the duty these Senators estimate will effect a reduction in our imports of foreign metals to the amount of $6,382,582.55 and a diminution in the Government's revenne of $1,714,132.99.

Regarding Schedule D the report states that the Senate bill will increase the duty on wood and woodenware from 18.35 per cent. to 18.77 per cent., and, according to the estimate of the Senators, will effect a reduction in the value of our imports amounting to $212,102.46 and a reduction of $5,282,93 in the amount of duty collected.

In Schedule G, the report states that the increase in the duty on provisions from 25.94 per cent. to 26.91 per cent. will cause a reduction of imports to the amount of $8,996,656.62, and will reduce the revenue by $2,007,845.98.

In Schedule H, the report states that the Senate bill will raise the duty on wines, liquors, etc., from 73.94 per cent. to 77.72 per cent., and it is estimated that this increase in the tariff tax will cause a falling off in imports to the amount of $626,275.93 and a reduction in the revenue of $94,588.80.

In Schedule I the report says that under the Senate bill there will be an increase of the duty on cotton manufactures from 40 per cent. to 40.59 per cent., and it is estimated in the report that this increase of duty will be followed by a reduction of $543,901.19 in the value of our imports and a decrease of $31,967.55 in the customs revenue.

In Schedule J the report says that the Senate bill will increase the tariff tax on flax, hemp, and jute from 31.74 per cent. to 31.97 per cent., which increase in duty will result in reducing the imports of those articles $761,648.91 and decreasing the revenue $186,480.05.

In Schedule K the report says that the Senate bill will increase the tariff on wool and manufactures of wool from 58.81 per cent. to 64.56, and it is estimated by the Republican Senators that this increase of duty will occasion a decrease of importations to the amount of $6,928,-029.77, while the revenue will be reduced $986,801.25.

In Schedule L the report states that the Senate bill will increase the tariff on silk and silk goods from 49.71 per cent. to 50.92 per cent., and the estimated effect of this reduction in duty is that imports will be diminished to the extent of $923,586.78, and the revenue will be lessened $92.357.76.

In Schedule M the report states that the Senate bill will raise the tariff on books, papers, etc., from 22.15 per cent. to 23.44 per cent., and the Republican authors of the report estimate that this increase in duty will diminish the imports to the amount of $460,877.72 and decrease the duty collected to the amount of $40,793.55.

FRAUDS UPON THE PEOPLE.

The gentleman from New York [Mr. FARQUHAR], the gentleman from Ohio [Mr. EZRA B. TAYLOR], and the gentleman from Pennsylvania [Mr. BAYNE] have all advocated and commended those features of the Senate bill by which many articles now subject to an ad valorem tax are required to pay specific duties. The only reason given for the proposed change is that it will prevent fraud by undervaluation.

I insist, Mr. Speaker, that we should prevent fraud, and it can be done, and should be done, by punishing those who commit the fraud. That is our method of dealing with that matter, but our friends on the other side of the House propose to prevent fraud upon the Government by perpetrating a greater fraud upon the people, and the people selected as the victims of this fraud are those of limited means who are compelled to purchase the cheapest commodities.

Take the wool schedule. The Democratic House proposes to tax all blankets 40 per cent. The poor man who buys a two-dollar blanket pays a tax of 80 cents upon it, and the rich man who buys a ten-dollar blanket pays upon it a tax of $4. The Republican bill says the rich man should pay less and the poor man must pay more. To do this the framers of that measure put a mixed or compound duty on blankets, exacting from 35 to 40 per cent. ad valorem, and in addition, from 10 to 40 cents per pound, thus placing the higher tax on the cheap blanket and a heavier burden on the poor man who is obliged to purchase the less expensive class of goods.

In the same way the Senate bill raises the tax on woolen cloths from the 40 per cent. proposed by the House bill to above an average of 75 per cent. And this 75 per cent. is so arranged that the heaviest tax is levied upon the coarse, cheap cloths, and the least exaction falls upon the expensive cloths.

Pursuing the same method the Senate bill increases the tax on woolen shawls from the uniform rate of 40 per cent. provided by the House bill to an average rate of 68 per cent.

Manufactures of worsted, hair of the alpaca, goat, etc., are subjected in the House bill to a tax of 40 per cent., and the Senate bill proposes to make it as high as 148 per cent. On children's worsted clothing the 40 per cent. imposed by the House is increased to 93 per cent. by the Senate. The House bill proposed a tax of 40 per cent. on woolen balmorals, and the Senate bill fixes it at 130 per cent.; and so on through the entire woolen schedule. No, not through the entire schedule, for when the Senate bill comes to deal with goods used most largely by the wealthy the tax is either reduced or removed altogether.

For instance: I find that the Senate bill tranfers bonnet trimmings and other trimmings from the dutiable list to the free-list. This class of imports paid customs duties last year to the amount of $800,000 and the contemplated change will relieve the well-to-do of a tax and the deficiency in the revenue thus created is to be supplied by increasing the taxes which necessarily fall upon those of limited means.

And right here I desire to call the attention of the House to the fact that, in some instances, so adroitly have the framers of the Senate bill managed the wool schedule that it is calculated to mislead any one. Far be it from me to imply that the bill has intentionally been made deceptive, but the fact remains that it is likely to deceive. The bill makes four classifications of woolen cloths and on cloths costing under 60 cents per pound, a lower tax is imposed than on those costing 80 cents per pound, but an examination of the statistics reveals the fact that

but a small quantity of cloths costing less than 60 cents per pound are imported. Our imports of woolen cloths costing less than 80 cents per pound cost an average of between 60 and 70 cents.

SUGAR AND THE SUGAR TRUST.

But let us examine the Senate monstrosity in another schedule. I asked the gentleman from Pennsylvania [Mr. BAYNE] a question he did not answer. I asked if the reduction in the tax on sugar would not all, or substantially all, inure to the benefit of the refiners. The gentleman said he would answer my inquiry and explain the question at issue before he finished his speech, but he forgot to do so.

Now, I insist that this enormous reduction of $28,000,000 will not inure to the benefit of the people.

The members of the sugar trust who control all business in that line will buy the sugar for about $28,000,000 less than they would pay for it if the present law remained in force; but we all know that so long as they can control the selling price they will keep it at the highest point possible, and some of these magnates have admitted that they habitually fix the price of sugar at the highest figures the public will bear.

I believe that if the Senate bill shall become the law, with the sugar trade in its present condition, much of the $28,000,000 which now goes into the public Treasury will find its way into the vaults of this mammoth combination.

Some Republican Senators and some Republican members of this House appear to be quite familiar with Mr. Havemeyer, while our side of the House and the Democratic Senators know very little of this distinguished gentleman.

SECTIONAL DISCRIMINATION.

To my mind it seems reasonable to suppose that he or his attorneys must have had some influence in the framing of this clause of the Senate bill. Two objects are accomplished by the Senate bill. The sugar trust reaps a great harvest and a chastisement is inflicted upon a Southern Democratic State. If the punishment could have been made more severe, without simultaneously injuring Northern industries, I fear the heavier infliction would have been visited upon us. I read from the Senate report, bottom of page 47:

> The high rates of duty which have been levied upon this important article of food have not successfully developed the sugar-producing industry of the United States. The great natural advantages which the producers of cane sugars in the tropical islands have over those of the United States preclude domestic competition upon equal terms.

The existence of these conditions is usually regarded by avowed protectionists as an unanswerable argument for increasing the tariff, but in absolute disregard of all dogmas and former declarations of doctrine the Republican Senators in this instance give it as a sufficient reason for abandoning all further effort to produce sugar in this country, and say further that were it not for other existing conditions a still greater reduction would have been made.

I will read from the Republican Senators' report, bottom of page 47 and top of page 48:

> If it were not for the fact that parties interested in the production of sugar from sorghum or beets are confident of the rapid development of these industries in the United States, the committee would recommend a still greater reduction in the rate of duty upon sugar.

Now bear in mind that in this country sugar from cane is exclusively a Southern product and sugar from sorghum and beets is obtained almost exclusively in the North, and we can appreciate the modesty, consistency, and assurance of these Senators when they denounce the Mills bill as a sectional measure, and these are the gentlemen who insist on raising the tax on cotton-ties, used by the Southern people, from 35 to 118 per cent.

OUR DUTY AS REPRESENTATIVES.

Gentlemen may be wearied with the unusually protracted session, but they should remember we are sent here by the people, not to consider our own comfort or to be governed by our own preferences, but simply and only to guard the interests, promote the welfare, prosperity, and happiness of our constituents by such legislation as we think best adapted to secure these ends. We should remember, also, that it is enjoined upon us by the highest authority "be not weary in well doing," and though the struggle through which we have passed in our effort to relieve the great mass of our people from the oppressive exactions of unequal and unjust tax laws enacted by the Republican party in the interest of a specially favored and privileged few, though this struggle has been trying and exhausting, fidelity to those by whom we have been trusted and honored demands we shall remain at our post of duty, be we never so weary and worn, until all the measures designed to benefit the people have been properly considered and finally disposed of.

There are quite a number of such measures which, in my opinion, should be acted upon before we have the right to seek the repose and comfort of our homes.

I will mention a few which I have reported from the committee of which I am chairman and the consideration of which I have repeatedly but unsuccessfully urged.

There is the bill providing for the establishment of camps of refuge for yellow-fever sufferers, which I regard as of the gravest importance to the whole country; and as at this time "the pestilence that walketh at noonday" is ravaging a portion of my own district, it is of special interest to those I immediately represent on this floor. Under this state of facts I think I would be fully justified in opposing an adjournment until that necessary measure of relief is considered.

Then there is the bill to establish signal stations in the West Indies, the object being to give our people notice of the approach of cyclones. This much-needed legislation has been asked for by the chambers of commerce of nearly all of our maritime cities, particularly by those of New York, New Orleans, and Mobile.

There is the bill providing for the creation of a bureau of tariff statistics, and all who have participated in the recent discussion on our tax laws will admit that we need some such bureau.

There is, too, the bill designed to secure a better class of work in printing the money and securities of the Government, now pending in the other House. No one who has read the evidence secured by the committee which reported that bill will deny that the enactment of that bill into law is imperatively demanded to protect the people from the losses they must sustain if the inferior quality of work we now have is to be continued—a perfect but costly exemplification of counterfeiting made easy.

Then there is, too, the important bill to determine the final balances due to and from the Government which the Treasury officials regard as necessary to a proper system of accounting, and without the sanction of which law they can not close their books.

There is, too, the bill granting leaves of absence to certain faithful and well-deserving employés of the Government, and doubtless many others equally meritorious which it would be tedious to specify.

But, it may be said, we can not possibly transact business in the absence of a quorum. Well, we can at least try, and fix the responsibility for preventing needed legislation where it belongs. I would suggest, however, that we have ample power to compel the attendance of absent members, and with proper authority the Sergeant-at-Arms can use the telegraph, and we can secure a quorum within two days at the outside.

Let us not deceive ourselves. We can not neglect a plain and imperative duty, and then excuse ourselves by the reflection that the neglect was attributable to others than ourselves. Whatever it is necessary we should do can be done, and for one I feel that the effort to perform our duty should not be abandoned—at least it should not be abandoned until we have exerted all the powers with which we are clothed and it has been demonstrated that their exercise was in vain.

THE PRAYERS OF ALL THE PEOPLE.

I was thinking last Sunday that in the churches throughout our land there have been, since Congress began its session, prayers offered up by the people asking that we may take such action as will tend to promote the national happiness, to the increase of industry, and to perpetuate to us the blessings of equal liberty. We have not yet accomplished the work we were sent here to perform, and therefore this Hall is our post of duty.

Mr. MILLIKEN. Will the gentleman yield to me for a question?

Mr. WHEELER. Certainly.

Mr. MILLIKEN. Does the gentleman think it is going to increase the industries of our country by putting them on the free-list? Is not that the very best way in the world to secure their absolute destruction?

Mr. WHEELER. No, sir; I think not. If we put some articles on the free-list and judiciously revise the tax on others it will be better for this country. We would soon have a great foreign trade—a trade which in ten years would make the United States the center of wealth, power, and civilization. Its ships would sail on every sea, and the flag of the country would float and be respected in every port. [Great applause on the Democratic side.]

There will be a demand for labor because of the demand for the laboring man's product, and this demand will be so great that it will necessitate an increase in the laboring man's wages, and it will enable us to get better classes of labor from abroad and keep out paupers and Chinese. [Applause.]

Mr. MILLIKEN. I doubt very much if my friend's ideas could be realized in that manner. I fear the plan he proposes is going to make it impossible ever to be realized.

Mr. WHEELER. The history of the world shows that to be the result. No nation was ever great and wealthy without commerce. The gentleman will hardly claim that people will send empty ships to our country to carry away our products. We have got to trade with foreign countries in order to secure a market for our own.

[Here the hammer fell.]

Mr. MILLIKEN. I hope the time of the gentleman will be extended. If I had known that his time was so brief I would not have interrupted him with questions.

Mr. WHEELER. I am much obliged to the gentleman, but I do not wish to detain the House longer. I have insisted that the Democratic House of Representatives should not take the initiative in the matter of adjournment. This much has been accomplished. We have not sent to the Senate any proposition looking to either adjournment or recess. Rather than consent to that I would have remained here until

the 4th day of March. But as the Republican Senate have sent us a resolution announcing that they would do no more business, I am ready to acquiesce in and accept their proposal.

I have expressed my views, and I trust that when we meet again in December we will all be ready to labor without intermission until we have agreed upon a measure which will relieve the people of their present heavy burdens, and enable them to realize that this is, in fact as well as in name, a land of liberty and equal rights. [Cries of "Vote!" "Vote!"]

Mr. RICHARDSON. Mr. Speaker, I did not intend to participate in this debate at all, and do not rise now for the purpose of indulging in it to any considerable extent. But inasmuch as the gentleman from Kansas [Mr. PETERS] has seen fit to challenge the Democratic party for alleged delay in this matter, and charges the delay in the passage of tariff legislation upon that party, I have risen simply for the purpose of presenting a statement which has been prepared by a member of this House with some care, and which forms part of an interview published in a New York paper some days ago.

I ask to have it read, as reflecting upon this question of delay. One date is not given in the paper; that is the date of the passage of the Mills bill. It is well known that it passed this House on the 21st day of July. The Senate did not enter, so far as the public records show, upon the discussion of the tariff in committee prior to that time; but from some day in May it is well known that the Senate committee was engaged on the tariff bill as a substitute for any bill which might be passed by the House. I ask the Clerk to read this paper:

The Clerk read as follows:

The celebrated tariff bill of 1846 passed the House July 7; July 28 it passed the Senate. The tariff bill of 1857 was adopted by the House six days after it passed the Senate. The tariff bill of 1870 passed the House June 6, and on July 5 it passed the Senate. There has never been any tariff bill that lingered in the Senate anything like the time that it has devoted to this. It is true that all these bills were framed in the House and only amended in the Senate, as the Constitution contemplates. But we have one case that is precisely in point, the tariff bill of 1883. December 8, 1882, the Senate took from the Calendar a little internal-revenue bill, recommitted it to the Committee on Finance, and January 4, 1883, reported to the Senate a tariff bill complete and perfect, which they had manufactured in twenty-seven days. The committee reporting that bill was the same, with one exception, as the present one.

The committee on the bill of 1883 was, MORRILL, SHERMAN, Ferry, JONES, of Nevada, ALLISON, and ALDRICH. The only change is that HISCOCK has been substituted for Ferry. HISCOCK is at least equal to Ferry in ability, and has a great deal more knowledge of this question, because he was for a long time on the Ways and Means Committee of the House, so that with five more years' experience than they had in 1883 the committee has taken one hundred and thirty days precisely to do what they did in twenty-seven days then. This means something. It can only mean these Senators have intended just exactly the result which has followed—to delay the bill until there was no quorum in the Senate and there could be no vote had. A vote would show that in the Senate, just as in the House, no reduction of taxation on the necessaries of life or any of them is to be expected from the Republicans.

Mr. MCMILLIN. I now demand the previous question upon the adoption of the resolution.

The previous question was ordered; under the operation of which the resolution was adopted.

Mr. MCMILLIN moved to reconsider the vote by which the resolution was adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

JOHN PRATER.

Mr. HOOKER. Mr. Speaker, I ask unanimous consent to offer a resolution at this time for consideration.

The SPEAKER *pro tempore*. The resolution will be read, subject to the right of objection.

The Clerk read as follows:

Resolved, That the Clerk of the House be authorized to pay out of the contingent fund of the House to John Prater for services rendered in the cloak-room, from December 1, 1887, to October 31, 1888, at the rate of $50 per month.

Mr. HOOKER. That is the amendment which was offered this afternoon by the gentleman from Kentucky [Mr. BRECKINRIDGE] to another resolution. I offer it now as a separate measure, and hope it will be adopted.

There being no objection, the resolution was considered and agreed to.

Mr. HOOKER moved to reconsider the vote by which the resolution was agreed to; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

BRIDGES ACROSS THE CUMBERLAND AND CANEY FORK RIVERS.

Mr. MCMILLIN. Mr. Speaker, I have a little bill here which I wish to ask consent to take up and consider. It is a bill making no appropriation, but is merely to amend the authority given for the construction of certain bridges. The railroad company is actually at work now, and if this is not done this work must be suspended. It is recommended by the War Department, and the Committee on Commerce have also favorably reported upon it.

The SPEAKER *pro tempore*. The bill will be read, subject to objection.

The Clerk read as follows:

A bill (H. R. 11604) to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee.

The bill is as follows:

Be it enacted, etc., That section 1 of an act approved March 3, 1885, entitled "An act to give the assent of Congress to the construction of a railroad bridge by the East and Middle Tennessee Railroad Company over the Cumberland and Caney Fork Rivers," be amended so as to read:

"That the Middle and East Tennessee Central Railroad Company and the Knoxville Railroad Company, or either of said companies, or any company with which either may consolidate, be, and are hereby, authorized to construct and maintain a bridge, and approaches thereto, over the Cumberland River at the most accessible point in or near the limits of Carthage, county of Smith, and State of Tennessee. Said bridge shall be constructed to provide for the passage of railroad trains across said river, and, in the discretion of said company or companies, wagons, horses, and foot-passengers."

SEC. 2. That section 6 be amended so as to read:

"Said company or companies, or either of them, is hereby also authorized to construct a railroad bridge over the Caney Fork River at such point as may be necessary in the building of their road, subject to the provisions and limitations contained in the preceding sections of this and the act it is intended to amend."

SEC. 3. That said act is hereby so amended as to empower the Secretary of War to use his discretion in the approval of the plans of the bridges therein provided for, as to the height they shall be placed above high water and the length of span that shall be given the main channel-span, whether the bridges be a continuous span or with a draw-span, provided the bridges, or either of them, shall not be so constructed as to limit or obstruct the navigation of said river or rivers.

Mr. MCMILLIN. I will insert a letter from the Secretary of War, and also the report of the Committee on Commerce favoring the bill.

The letter of the Secretary of War is as follows:

WAR DEPARTMENT, *Washington City, October* 16, 1888.

SIR: Referring to the proposed amendment to House bill 9793, "to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee," submitted by you, providing that the height above high water, and the length of the main span of these bridges be left to the discretion of the Secretary of War. I have the honor to state that a copy of the report of the Chief of Engineers on the subject, dated the 15th instant, has this day been handed to you.

Very respectfully,

WM. C. ENDICOTT, *Secretary of War.*

Hon. B. MCMILLIN,
House of Representatives.

The report (by Mr. CRISP) is as follows:

The Committee on Commerce, to whom was referred the bill (H. R. 9793) to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee, have had the same under consideration, and report as follows:

The proposed bill has been submitted to the Secretary of War, meets his approval, does not change any of the provisions of the original bill looking to the protection of the navigation of the rivers, and we recommend its passage.

The SPEAKER *pro tempore*. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to be engrossed, and read a third time; and being engrossed, it was accordingly read the third time, and passed.

Mr. MCMILLIN moved to reconsider the vote by which the bill was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

LEE SWORDS.

Mr. MILLIKEN, by unanimous consent, submitted the following resolution; which was read:

Be it resolved, That the Clerk of the House be, and is hereby, authorized and directed to pay to Lee Swords $40 out of the contingent fund of the House for services as folder in the House folding-room during May, 1877.

The resolution was agreed to.

Mr. MILLIKEN moved to reconsider the vote by which the resolution was agreed to; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

MAJ. GEN. ANDREW J. SMITH.

Mr. WARNER. I ask to take from the Speaker's table the following bill and non-concur in the Senate amendments, and ask a committee of conference.

The Clerk read the title of the bill, as follows:

A bill (H. R. 2579) authorizing the President to appoint and retire Andrew J. Smith, late colonel of the Seventh United States Cavalry, and major-general of volunteers.

The SPEAKER *pro tempore* (Mr. MCMILLIN in the chair). Is there objection to the request of the gentleman from Missouri [Mr. WARNER] that the House non-concur in the Senate amendments and request a conference? The Chair hears none, and it is so ordered.

PUBLIC PARK, TACOMA, WASH.

Mr. MCRAE. I desire to offer for present consideration this bill, which I report from the Committee on Public Lands.

The Clerk read as follows:

A bill (S. 3475) granting the use of certain lands in Pierce County, Washington Territory, to the city of Tacoma for the purposes of a public park.

The bill was read, as follows:

Be it enacted, etc., That there is hereby granted to the city of Tacoma, in the county of Pierce, in the Territory of Washington, a license to occupy, improve, and control, for the purposes of a public park for the use and benefit of the citizens of the United States, and for no other purposes whatever, the following-described pieces or parcels of land, situate in the county of Pierce and Territory of Washington, and described as follows, namely: Lots 1, 2, 3, 4, 5, and 6, and the east half of the southeast quarter, and the northeast quarter of the northwest quarter, and the southwest quarter of the northeast quarter of section 15, township 21 north, of range 2 east, and lots 1, 2, and 3, and the south half of the south-

west quarter of section 14, same township and range, and lots 1, 2, and 3 in section 10 of the same township and range, containing 635 acres, more or less: *Provided*, That the United States reserves to itself the fee of all said lands, and that this license is granted upon the express condition that the United States may take possession of and occupy said lands or any part thereof for military or other purposes whenever its proper officials see fit to order the same, and without any claim for compensation or damage on the part of said city of Tacoma.

The SPEAKER *pro tempore*. Is there objection to the present consideration of the bill? The Chair hears none. The Chair will state to the gentleman from Arkansas that this bill is before the Committee on Public Lands.

Mr. McRAE. I report the bill now and ask for its consideration.

The SPEAKER *pro tempore*. The gentleman's request was to report the bill and consider it now. Is there objection? The Chair hears none.

The bill was ordered to a third reading, and it was accordingly read the third time, and passed.

Mr. McRAE moved to reconsider the vote by which the bill was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

ANDREW J. SMITH.

The SPEAKER *pro tempore*. The Chair will appoint as conferees on the disagreeing votes of the two Houses on the bill H. R. 2579, the gentleman from Illinois [Mr. TOWNSHEND], the gentleman from Pennsylvania [Mr. MAISH], and the gentleman from Iowa [Mr. GEAR].

ARMY AND NAVY BANDS.

Mr. COX. I ask unanimous consent to discharge the Committee on Naval Affairs from the further consideration of joint resolution No. 24, in reference to the employment of Army and Navy bands, and I propose to amend it so as to take away the obnoxious features which were objected to by the chairman of the Committee on Naval Affairs [Mr. HERBERT].

The resolution was read, as follows:

Resolved, etc., That hereafter no enlisted man in the service of the United States, the Army and Navy, respectively, whether a non-commissioned officer, musician, or private, shall be detailed, ordered, or permitted to leave his post to engage in any pursuit, business, or performance in civil life for emolument, hire, or otherwise, where the same shall interfere with the customary employment and regular engagement of local civilians in their respective arts, trades, or professions.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from New York [Mr. COX] to discharge the Committee of the Whole from the further consideration of this resolution and consider the same now? [After a pause.] The Chair hears none.

Mr. COX. I propose to amend it so as to take away the features which were obnoxious to Mr. HERBERT, of Alabama, the chairman of the Committee on Naval Affairs, and limit it entirely to the musicians of the Army and Navy. The practice of employing them is not uniform, and this proposes simply to limit it to the musicians. The bands of the various posts, etc., around the country come down and play for a smaller sum than certain bands, and the other bands are more or less discouraged, as they depend upon their music for a living. Therefore I ask to amend the bill so as to make it apply to musicians only.

The SPEAKER *pro tempore*. The Clerk will report the amendments.

The Clerk read as follows:

In line 3, after the word "enlisted," strike out the word "man" and insert "musician;" in lines 4 and 5, strike out the words "whether a non-commissioned officer, musician, or private;" in line 9, after the word "civilian," insert the word "musicians;" and strike out the whole of line 10.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from New York to discharge the committee from the consideration of this resolution and consider it in the House?

Mr. SHAW. I hope it will be read as it will stand amended.

The Clerk read the resolution as amended, as follows:

Resolved, etc., That hereafter no enlisted musician in the service of the United States, the Army and Navy, respectively, shall be detailed, ordered, or permitted to leave his post to engage in any pursuit, business, or performance in civil life for emolument, hire, or otherwise, where the same shall interfere with the customary employment and regular engagement of local civilian musicians.

The SPEAKER *pro tempore*. Is there objection to the request of the gentleman from New York [Mr. COX]? The Chair hears none.

The amendments were agreed to; and the resolution as amended was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time, and passed.

Mr. COX moved to reconsider the vote by which the resolution had been adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

ORDER OF BUSINESS.

Mr. KILGORE. I move that the House do now adjourn.

The SPEAKER *pro tempore*. The Chair had recognized the gentleman from Iowa [Mr. CONGER].

Mr. CONGER. Mr. Speaker, I ask that the Committee of the Whole House be discharged from the consideration of the bill which the Clerk will read.

The SPEAKER *pro tempore*. The gentleman from Iowa [Mr. CONGER] asks the committee be discharged from the further consideration of a bill, and the gentleman from Texas [Mr. KILGORE] moves that the House do now adjourn.

Mr. BAYNE. I hope the gentleman from Texas will not insist on that motion.

Mr. KILGORE. I want to hear what the bill is.

LAND OFFICE AT FOLSOM, N. MEX.

The Clerk read the bill, as follows:

A bill (S. 2040) to establish a land office at Folsom, in the Territory of New Mexico.

Be it enacted, etc., That all that portion of the Territory of New Mexico bounded and described as follows: Commencing at the northeastern corner of said Territory and running thence west on the northern boundary line of said Territory to the line dividing ranges numbered 24 and 25, thence south on said range line to the principal base-line running east and west through said Territory, thence east on said base-line to the eastern boundary line of said Territory, thence north on said eastern boundary line to the place of beginning, be, and is hereby, constituted a new and separate land district, to be called the Colfax land district, the land office for which shall be located in the town of Folsom, county of Colfax, in the said Territory of New Mexico.

SEC. 2. That the President, by and with the advice and consent of the Senate, shall appoint a register and a receiver of public moneys for said district; and said officers shall reside in the place where said land office is located, and shall have the same powers and shall discharge similar duties and receive the same fees and emoluments as officers discharging like duties in the other land offices of the Territory of New Mexico.

Mr. McMILLIN. I objected to this bill the other day, and it is proper, I think, that I should make this statement. I went to the Land Office, but I was unable to see either the Secretary of the Interior or the Commissioner of the General Land Office. It impressed me when the bill came up that it was a bill which the public demands did not require. I still hold the same opinion. In what purports to be an indorsement of the bill there is rather a peculiar indorsement, and a good portion of the territory embraced in this has been put in a new district since this was introduced. I think it is proper to make that statement to the House.

Mr. CONGER. Permit me to say that the eastern half of the Territory was divided into two land districts; the county of Lincoln, in the southeastern part, is in the bill already passed, and it was the understanding with Mr. JOSEPH that the two bills should go through together.

Mr. McMILLIN. But Mr. JOSEPH is not the only person concerned in the matter, and that is why I made the investigation.

Mr. CONGER. I know, but this applies to the northeastern part, and the other land district organized is in the southeastern part.

Mr. McRAE. If this bill covers any part of the territory covered by the bill I moved for Mr. JOSEPH, I shall object to it.

Mr. CONGER. It does not. The other bill comprises simply the county of Lincoln, and this is north of it.

Mr. McMILLIN. I think the gentleman will find from the report that it does embrace a part of the same territory.

Mr. CONGER. I have the other bill in my desk, and there is no conflict between them at all.

Mr. McMILLIN. Let the report be read.

The report (by Mr. JACKSON) was read, as follows:

The Committee on the Public Lands, having under consideration the bill (S. 2040) to establish a land office at Folsom, Colfax County, New Mexico, report:

That at present there is no land office nearer the northeastern portion of the Territory of New Mexico than Santa Fé; that by reason of the location and completion of railroads there is likely to be in the near future a large emigration to that part of the Territory. The district as proposed in this bill is of a fair size, embraces much good land, and emigrants have no public means of travel by any direct route from this part of the Territory to Santa Fé, the present office. That it would greatly accommodate settlers to establish this office at Folsom, which is on a railroad. The honorable Commissioner of the General Land Office, in a letter answering an inquiry of the Senate committee concerning the propriety of establishing this office, under date of April 5, 1888, says that—

"It may be done without serious inconvenience to the transaction of current business, and I have no objection to interpose."

In a letter of same date, answering an inquiry in regard to establishing a land district by House bill 5048, to be known as the Las Vegas district, the honorable Commissioner of the General Land Office says that—

"The eastern portion of the Territory proposed to be included within its limits is included in Senate bill 2040, upon which this office makes a favorable report. The creation of the (Folsom) Colfax district (bill S. 2040) it is believed will fully answer the public requirements."

The committee, believing that the establishment of this office will tend to promote the acquisition of public lands in the Territory of New Mexico of homestead settlers, recommend the passage of the bill.

Mr. CONGER. The bill has been on the Calendar for some time, and on several occasions I had an opportunity to call it up, but at the request of Mr. JOSEPH it was delayed until this bill should have come over from the Senate.

The SPEAKER *pro tempore*. Is there objection to considering this bill at this time?

There was no objection.

The bill was ordered to a third reading; and it was accordingly read the third time, and passed.

Mr. CONGER moved to reconsider the vote by which the bill was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

The House then, on motion of Mr. MCMILLIN (at 4.30 p. m.), adjourned.

PETITIONS, ETC.

The following petitions and papers were laid on the Clerk's desk, under the rule, and referred as follows:

By Mr. W. C. P. BRECKINRIDGE: Petition of John B. Martin and of estate of James L. Martin, for reference of their claims to the Court of Claims—to the Committee on War Claims.

By Mr. NELSON: Resolution of the Lake Carriers' Association, protesting against the passage of Senate bill No. 2182—to the Committee on Commerce.

By Mr. MCMILLIN: Petition of Eliza O. Prince, and of R. N. Miers, of Sumner County, Tennessee, for reference of their claims to the Court of Claims—to the Committee on War Claims.

PRIVATE BILL INTRODUCED AND REFERRED.

Under the rule a private bill of the following title was introduced and referred as indicated below:

By Mr. MCMILLIN: A bill (H. R. 11606) for the relief of John J. Kelly, of Jackson County, Tennessee—to the Committee on War Claims.

SENATE.

FRIDAY, *October* 19, 1888.

Prayer by the Chaplain, Rev. J. G. BUTLER, D. D.

The Journal of yesterday's proceedings was read and approved.

BILLS INTRODUCED.

Mr. TELLER. I present a petition of citizens of Milwaukee, Wis., praying that a bill be introduced in the matter of the pension claim of Mrs. Helen Lehman, guardian of Jonas Lehman (insane), late of Company H, One hundred and eleventh Pennsylvania Volunteers, and that she be placed upon the pension-roll. The junior Senator from Wisconsin [Mr. SPOONER] has prepared a bill accomplishing that purpose, which I ask leave to introduce for him, and that the bill and petition be referred to the Committee on Pensions.

The bill (S. 3642) granting a pension to Jonas Lehman was read twice by its title, and, with the accompanying petition, referred to the Committee on Pensions.

Mr. HAMPTON introduced a bill (S. 3643) for the relief of the building and mutual loan associations of the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

INVESTIGATIONS BY FINANCE COMMITTEE.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a resolution coming over from yesterday under objection, which will be read.

The Chief Clerk read the resolution submitted yesterday by Mr. ALLISON, as follows:

Resolved, That the Committee on Finance be authorized and directed to continue, during the recess of Congress, the investigation of such revenue matters, including House bill 9051, as have been referred to it by resolutions of the Senate, subject to the authority conferred by said resolutions.

The PRESIDENT *pro tempore*. The question is on agreeing to the resolution.

The resolution was agreed to.

WAGONS MADE BY PRISON LABOR.

The PRESIDENT *pro tempore*. The Chair lays before the Senate a resolution coming over from yesterday under objection, which will be read.

The Chief Clerk read the resolution, submitted yesterday by Mr. TELLER, as follows:

Whereas it is reported that the Secretary of the Interior has purchased a large number of wagons for the Indian service that were manufactured with prison labor in the State of Tennessee, thus putting the honest labor of the country in competition with such prison labor: Therefore,

Resolved, That the Committee on Indian Affairs be authorized and directed to inquire as to the truth of such report, the number of wagons so purchased, the price paid for the same, whether the price paid was the fair market price thereof, and whether legislation is or is not required to protect the honest labor of the country from such prison convict-labor competition.

Mr. TELLER. Let that lie over. The Senator from Missouri [Mr. COCKRELL] objected to it yesterday, and it may lie over.

The PRESIDENT *pro tempore*. The resolution will be placed on the Calendar.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the House had non-concurred in the amendments of the Senate to the bill (H. R. 2579) authorizing the President to appoint and retire Andrew J. Smith, late colonel of the Seventh United States Cavalry and a major-general of volunteers, asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and had appointed Mr. TOWNSHEND, Mr. MAISH, and Mr. GEAR managers at the conference on the part of the House.

The message also announced that the House had passed the following bills:

A bill (S. 3475) granting the use of certain lands in Pierce County, Washington Territory, to the city of Tacoma for the purposes of a public park; and

A bill (S. 2040) to establish a land office at Folsom, in the Territory of New Mexico.

The message further announced that the House had passed the following bill and joint resolution; in which it requested the concurrence of the Senate:

A bill (H. R. 11604) to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee; and

Joint resolution (H. Res. 24) in reference to the employment of the Army and Navy bands.

ENROLLED BILLS SIGNED.

The message further announced that the Speaker of the House had signed the following enrolled bills and joint resolutions; and they were thereupon signed by the President *pro tempore:*

A bill (H. R. 7964) granting to the Aberdeen, Bismarck and Northwestern Railway right of way across a portion of the Sioux reservation, in Dakota Territory;

A bill (H. R. 8074) to provide for the allotment of land in severalty to United Peorias and Miamies, in Indian Territory, and for other purposes;

A bill (H. R. 10735) for the removal of the political disabilities of Theodore Lewis;

Joint resolution (H. Res. 229) to print the Agricultural Report for 1888;

Joint resolution (H. Res. 231) authorizing the Secretary of the Senate and Clerk of the House of Representatives to pay to the officers and employés of the Senate and House borne on the annual rolls their respective salaries for the month of October, on the 20th day of said month; and

Joint resolution (H. Res. 232) making appropriations to enable the Secretary of the Senate and Clerk of the House of Representatives to pay session employés of the Senate and House for the full month of October.

THE REVENUE LAWS.

Mr. COCKRELL. Yesterday the Senator from Rhode Island [Mr. ALDRICH], whom I do not now see in his seat, alluded to some letters referred to by the Commissioner of Internal Revenue in his letter to me presented a few days since, and which were not printed with that letter. It was an oversight that I did not have them handed to the Reporter at the same time that the letter of the Commissioner was submitted. I now have those letters, and if there be no objection I ask that they may be printed in their order in the RECORD.

Mr. ALLISON. I should like to hear them read.

Mr. COCKRELL. They are only copies of letters which have been written heretofore. There are no new letters. The Commissioner in his letter to me inclosed copies of various previous communications from his office. One of them is a letter to Hon. Charles J. Folger, dated December 18, 1882, from Mr. H. C. Rogers, Acting Commissioner. Another is a letter to Mr. Manning, of March 6, 1882, from Mr. Miller, the Acting Commissioner. Another is from Mr. Miller to Senator BECK, dated August 2, 1888, and there is a copy of a letter from Mr. C. A. Bates and Mr. T. A. Cushing, dated January 19, 1887. These are employés of the Department, and this was the report of an investigation that they made, addressed to the Commissioner. The letters can be read, as the Senator from Iowa desires to hear them. He may desire to say something in regard to them. I will have them read from the desk, and I ask that in the publication in the RECORD the Commissioner's letter to me may be republished, the other letters now to be read to follow, so that they will all appear together. I hope there will be no objection to that.

The PRESIDENT *pro tempore*. The Chair hears none.

The letter referred to is as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, October 8, 1888.

SIR: Referring to your request for an expression of my views respecting the proposed exemption from tax of alcohol used in the industrial arts, as provided in the amendment reported by the Senate Finance Committee to House bill 9051, inclosed please find copy of a letter addressed from this office to Hon. JAMES B. BECK, under date of August 2, in response to a similar request pending the consideration of this proposed measure in committee. No copy of the proposed amendment was furnished this office at the time, and this suggested change in the law was considered simply as a proposition, without regard to the conditions imposed, and solely from a revenue standpoint. Notwithstanding the many safeguards now contained in the bill against the fraudulent use of the alcohol so exempt from tax, the proposed measure is, in my judgment, still open to the objections noted in my letter referred to; and as a measure for the relief of the manufacturer and the tax-payer, the amendment, I think, is open to still further objection.

The many requirements contained in the bill respecting the storage, custody, and use of the alcohol in the cases provided, and the large bond security exacted and other conditions imposed for the prevention of fraud, would, in my opinion, prove so burdensome and so difficult of compliance in many instances as to prevent the average manufacturer from availing himself of the proposed exemption.

The quantity of alcohol used in small lots by retail druggists and other small manufacturers in this country for pharmaceutical purposes and in the prepara-

tion of cologne-waters, toilet articles, etc., is very considerable and possibly exceeds, in the aggregate, the quantity used by the large wholesale manufacturers for like purposes. But, in order to obtain alcohol free of tax in the manner provided for in the bill (except in cases where the alcohol has first been methylated) the applicant must first provide a separate and secure room on his premises for the exclusive storage of the alcohol so obtained, and must file with the collector of his district the necessary notices and entries and a bond in a sum of not less than $5,000; and no portion of the alcohol, however small, can be removed from such store-room unless for immediate use and in the presence of the Government storekeeper having the custody of the room and spirits stored therein.

The practical difficulties here involved in the case of a small manufacturer, in providing the required store-room and securing the attendance of a storekeeper at the proper time, are such as would, in my judgment, effectually exclude this class of manufacturers from any benefits under the bill. If such should prove to be the case the business of manufacturing articles where alcohol is used in any considerable quantities would, of course, soon pass into the hands of a few large manufacturers who could easily comply with all the requirements of the proposed law. Such a law would be manifestly unjust; and the benefits which the consumer of the articles so produced would derive under the law would be such as the manufacturers would graciously concede. The provisions made in the bill for the establishment of "bonded alcohol warehouses," into which all bonded alcohol withdrawn from the distiller's warehouse must pass before reaching the manufacturer, would also, in my judgment, be greatly to the advantage of the large manufacturer over his smaller competitor.

The large bond security ($100,000) required of the proprietor of such warehouse would necessarily limit the number of warehouses so established, and would of course effectually prevent the small manufacturer from establishing his own bonded warehouse. By a system of warehouse charges, commissions, etc., the small manufacturer would be entirely at the mercy of the proprietors of these bonded warehouses and the distillers of the alcohol. The opportunity afforded by this bill for a combination of alcohol distillers and large manufacturers to establish these bonded warehouses and control the spirits entered into and withdrawn therefrom is, to my mind, a most dangerous one.

One of the principal objections now urged to the present tax on distilled spirits, especially as to alcohol (on which this tax is nearly five times the cost of producing the article) is that, owing to the high rate of tax and the many onerous restrictions placed on the business, the manufacture of this article is controlled by a few distillers, who, by limiting their production, are able to fix their own price on the article produced. If, as I apprehend, the effect of this proposed amendment to the law imposing this large tax would be to confine the manufacture of articles from alcohol, free of tax, to a comparatively small number of manufacturers, the monopoly feature of the internal-revenue law, if it now exists, would, instead of being lessened, be greatly increased, and the whole system of revenue laws relating to distilled spirits would become so unequal and unjust as to invite their hasty repeal.

In view of this objectionable feature of the bill and the dangers to be apprehended from the fraudulent use of the alcohol as set forth in the accompanying letter, I can not but regard this proposed measure as inexpedient and dangerous in the highest degree.

Recent experiments conducted in this office with methylated spirits (the details of which will appear in my annual report of 1888) demonstrate the fact that such spirits, even when containing a large per cent. of methyl, can by a very simple and inexpensive process be so demethylated or cleansed as to admit of their being used in the compounding of liquors intended as beverages.

The provision found in the bill for the methylation of alcohol in the bonded alcohol warehouses, and the exemption of such methylated spirits from many of the restrictions applicable to pure alcohol, would seem to furnish another dangerous opportunity for fraud, instead of affording an additional safeguard against fraud as intended.

The proposed measure is open to the further objection that the employment of a force necessary to carry out the provisions of the bill, and to properly supervise the business therein authorized, would probably entail upon the Government an expense greater than any similar measure heretofore proposed, and perhaps equal to the present cost of collecting the entire receipts from distilled spirits, and that no provision is made in the bill for this large additional expense, or for the appointment of additional revenue agents, which would be absolutely necessary in case the bill should become a law.

Respectfully, yours,

JOS. S. MILLER, *Commissioner.*

Hon. F. M. COCKRELL,
United States Senate, Washington, D. C.

Mr. COCKRELL. The first to be read is the letter of Commissioner Miller to Senator BECK.

The PRESIDENT *pro tempore*. The letter will be read.

The Chief Clerk read as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, August 2, 1888.

SIR: I have to acknowledge the receipt of your letter of the 25th ultimo in reference to the proposed exemption from internal-revenue tax of alcohol used in the arts and manufactures.

In compliance with your request for references, etc., to similar measures heretofore introduced in Congress, and for my opinion in regard to the effect that the now proposed measure would have upon the collection of the revenue, I have to state:

1. That upon examination of this subject it appears that as early as the Forty-seventh Congress, first session, a bill (H. R. 5082) was introduced providing for the use of free alcohol in the industrial arts.

For debates on this bill, see CONGRESSIONAL RECORD, volume 13, pages 5325, 5360, and 5364.

Similar bills (H. R. 901 and 10415) are also found to have been introduced during the first session of the Forty-ninth Congress, but owing to the fact that the records for that Congress now accessible to this office are incomplete, I am unable to refer you to the debates, if any were had, on these bills.

The position of this office in respect to the various plans heretofore proposed for exempting such alcohol from tax appears from the following letters and reports, copies of which please find inclosed:

a. Letter addressed by this office to the Secretary of the Treasury, under date of September 18, 1882, in reply to Senate resolution of July 26, 1882 (Forty-seventh Congress, first session), directing the Secretary of the Treasury to ascertain under what regulations methylated alcohol is prepared and sold, duty free, in Great Britain; and whether a system based on similar regulations can not be adopted in the United States.

b. Letter addressed by this office to the Secretary of the Treasury under date of December 18, 1882, inclosing printed copy of regulations referred to in Senate resolution of July 26, 1882, with suggestions thereon.

c. Letter addressed by this office to the Secretary of the Treasury under date of March 6, 1886, inclosing copy of House bill 901 (first session, Forty-ninth Congress), providing for the use of methylated spirits (except in certain cases) in the industrial pursuits, with objections thereto.

d. Report prepared in this office under date of January 19, 1887, on House bill 10415, authorizing the use of alcohol free of tax in the arts and manufactures, with objections thereto.

Your attention is also called to the report of the Secretary of the Treasury on the proposed use of methylated spirits (Senate Executive Document No. 24) 547. Also to objections to use of such spirits referred to in my annual report for 1885, pages lii-liii. Also to Senate Miscellaneous Document No. 85, Forty-eighth Congress, first session. Should any other document or report on this subject be found in this office the same will be furnished you.

2. From the inclosures now furnished, it will be seen that the several bills heretofore introduced in Congress on this subject, although mainly confined to methylated spirits, have not received the sanction of this office, and that the objections offered to the bills were more on account of the dangerous opportunities afforded by the proposed plan for the perpetration of frauds on the revenue, even when the exemption from tax was limited to methylated spirits, than from any loss of revenue likely to result from the use of the spirits as contemplated in the bills. If the present proposed measure authorizes the free withdrawal and use of pure spirits as well as methylated spirits for the purposes named, in my opinion the dangers of fraud on the revenue, should the bill become a law, would be greatly increased by this additional privilege. From the best data that this office has been able to obtain, the quantity of free alcohol which would annually be used in the arts and manufactures is estimated at about 7,000,000 proof gallons. This quantity of spirits, if exempt from tax, would, under the present rate of tax, result in a loss of revenue of some $6,300,000. As a revenue measure, therefore, the proposed exemption would be open to this objection. But the most serious objection, I think, that can be offered to the bill is the frauds likely to be committed in the use of such spirits.

Under the present laws relating to distilled spirits the exemption from tax on spirits used and consumed in this country is limited to withdrawals for scientific purposes by regularly constituted scientific institutions or colleges of learning (section 3297, Revised Statutes, and act of May 3, 1878), and for the use of the United States (section 3464, Revised Statutes). The purposes for which the spirits are withdrawn, and the high character of the persons withdrawing the spirits and having the custody thereof in such cases, is of itself a guaranty that the spirits will be used as contemplated by law, and the limited number of applications made for such withdrawals renders it an easy matter for the Department to regulate and supervise.

But should the privilege of withdrawing free alcohol become general, and its use extended to all the arts and manufactures (except as to certain prohibited articles), the business would soon assume such proportions, and would be taken advantage of by so many unscrupulous persons, that I am satisfied that this office, with its present force of local officers and revenue agents, would in many cases be unable to prevent, or even detect, the fraudulent use of the alcohol, in consequence of the great variety of ways by which such use could be accomplished. Indeed, it may be questioned whether with an increased force such a supervision could be exercised over the various kinds of business where free alcohol would be used as would insure the proper use of the spirits in all cases.

One of the principal safeguards now afforded by the law against the fraudulent evasion of the tax on distilled spirits is the bonded warehouse system, under which the product of each distillery is kept in a separate warehouse, in the custody of a revenue officer, and apart from any tax-paid spirits, or any other article or substance which would admit of a fraudulent concealment or removal of the spirits. Under this system, the identity of the spirits as an article upon which the tax is due and has not been paid is preserved; and the continuous custody of the spirits by the Government insures their removal only after the full amount of tax due has been paid. Experience has shown the wisdom of the Government in keeping its hand on the spirits so long as a tax liability attaches to the spirits. A release of the spirits from the Government custody before the payment of the tax would render the tax-lien on the spirits imposed by section 3251, Revised Statutes, of but little practical value, and would naturally encourage a fraudulent disposition of the spirits and the consequent evasion of the tax.

The present system of collecting the revenue on distilled spirits is, as is well known, the result of many years' experience, and an experience which, from both a moral and financial standpoint, is to be avoided in future, if possible; and any radical change in this system would, in my judgment, open the way to successful frauds, and would soon result in general demoralization of the wine and spirit trade.

That the same opinion is entertained by many persons in that trade is indicated by the inclosed slips taken from one of the leading trade journals.

It would, in my opinion, be far better from every point of view to reduce the rate of tax on all distilled spirits rather than exempt from tax, for any purpose not now authorized by law, the very spirits which can assume so many disguises and so easily escape the vigilance of the revenue officers after being removed from the distiller's warehouse.

Respectfully, yours,

JOS. S. MILLER, *Commissioner.*

Hon. JAMES B. BECK,
United States Senate, Washington, D. C.

Mr. COCKRELL. The next one is a letter to Secretary Folger, of September 18, 1882, from H. C. Rogers, Acting Commissioner of Internal Revenue.

The Chief Clerk read as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, September 18, 1882.

SIR: Your letter of 2d ultimo with one inclosure, relative to methylated spirits has been received (initials H. B. J. W.).

The inclosure is a copy of Senate resolution of July 26, 1882, directing the Secretary of the Treasury to ascertain under what regulations methylated alcohol is prepared and sold free in Great Britain, and whether a system based upon similar regulations can not be adopted in the United States in order to supply manufacturing chemists and others with methylated alcohol free of tax.

In reply to your inquiry for such information upon the subjects therein referred to as this office may be able to furnish, I submit herewith a statement showing by collection districts and in aggregate the quantity of alcohol used in the arts and manufactures during the year ended April 1, 1882. Also showing the quantity which would have been used if the tax had been 50 cents per gallon, and also if the use of the alcohol had been permitted free of tax, the quantities given in the last two cases being based as to each district upon an estimate furnished by the collector of the district.

It is understood that the regulations referred to are those which now govern the manufacture and sale of methylated spirits, permission for which was first obtained in 1856 by the late Mr. John Wood, chairman of the board of inland revenue. This methylated spirit is a mixture of 90 per cent. of spirit of wine of density not less than 0.830 specific gravity and 10 per cent. of purified wood spirit; reliance for safety from fraud is placed upon the fact that such a mixture is unfit for human consumption and that the wood spirit can not again be separated from the spirit of wine by any commercial process. (See page 317, volume 3, part 1, Roscoe and Schorlemmer's treatise on Chemistry, Appleton & Co., New York, 1882.)

It is, however, stated on page 172, Wagner's Chemical Technology, also published by Appleton in 1882, that confirmed spirit drinkers had now and then used wood spirit instead of whisky and the like, and, it appears, without bad effects.

On the question of separation of the wood spirit from the spirit of wine, the following statements may prove of value: Dr. Ure's method for detecting the presence of ethyl alcohol in wood naphtha and for detecting the presence of wood naphtha in ethyl alcohol is given on pages 145 and 146 of Muspratt's Chemistry, William Mackenzie, publisher, London, Glasgow, Edinburgh, no date; also on pages 152 and 153, volume 1 of the Encyclopedia of Chemistry, J. B. Lippincott & Co., Philadelphia, dated 1877,

Alexander Wynter Blyth, in his recent highly prized work on the Analysis of Foods and the Detection of Poisons, furnishes (on page 132 of the latest edition, published by William Wood & Co., of New York) a method of determining the quantity of wood spirit in a suspected mixture.

It is stated in Roscoe and Schorlemmer's Chemistry that the unpleasant smell of the methylated spirit is partially removed by the means of acids or oxydizing agents, and that the spirits thus obtained, though still containing methylated alcohol, is sufficiently tasteless for use in adulterating whisky and other alcoholic liquors.

An examination of the methods of determining the quantity of wood-spirits, as set forth in Blyth's work, indicates that the method might possibly be employed as a commercial process for separating the wood-spirit from the spirit of wine.

This office is not in possession of a copy of the regulations under which methylated alcohol is prepared and sold duty free in Great Britain, nor of what are known to be the laws and regulations governing the collection of the excise tax in Great Britain on distilled spirits, and I am therefore unable to state at this time anything more definitely in reply to your request than what is above set forth. If you should procure a copy of these laws and regulations by correspondence with the British authorities through the Department of State or otherwise, and submit them for my consideration, I would respectfully suggest that a complete set of the laws and regulations governing the collection of this tax should be supplied. I am led to make this suggestion through the circumstance that the stamp system in use under existing internal-revenue laws is not employed in Great Britain, and that this fact would doubtless make it necessary to modify the British system in order to adapt it to the method employed in the United States.

Inclosed herewith please find the certified copy of the Senate resolution, transmitted in your letter.

Very respectfully,

H. C. ROGERS,
Acting Commissioner.

Hon. CHARLES J. FOLGER,
Secretary of the Treasury.

Mr. COCKRELL. The next letter which I ask to have read is a letter to Secretary Folger, of December 18, 1882, from the Commissioner of Internal Revenue.

The Chief Clerk read as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, December 18, 1882.

SIR: Your letter of 14th instant (initials H. B. J.), relative to supplying manufacturing chemists and others with methylated alcohol free of tax, has been received.

A set of printed documents referred to in the letter obtained through the Department of State from the United States minister at London, in compliance with request made in my letter of 18th of September last, has also been received.

In reply, I have to say that such portion of Senate resolution of July 26, 1882, as directs the Secretary of the Treasury to ascertain under what regulations methylated alcohol is prepared and sold duty free in Great Britain would be fully answered by submitting to the Senate the printed documents above referred to, and which are herewith returned in accordance with your request.

I would also say in reply to the second branch of the inquiry that, in my opinion, similar regulations can with a few modifications be adopted in the United States and made a part of the laws governing the tax on distilled spirits.

The adoption of the system would involve the creation, under internal-revenue laws, of two new classes of special tax-payers, namely: Methylated spirit-makers to pay a tax, say, of $48 per annum, and of retail dealers in methylated spirit to pay a tax of $2.40 per annum.

It would also be necessary to create officers whose duty would be to witness the mixing of the spirits with the required proportion of wood-naphtha, to exercise certain surveillance, to keep certain accounts, and make certain reports set forth in the regulations, or to devolve those duties on existing officers.

It is noted that samples of naphtha to be used are to be taken by the proper officer and forwarded to the "laboratory" for examination and approval of the board of commissioners of inland revenue. A literal adaptation of this regulation would appear to require such samples to be sent to this office. Owing to the great extent of territory comprised in the United States this regulation would seem to be impracticable. It would seem to be better to have arrangements made for testing naphtha at certain designated points.

Certain methods by which frauds could be committed were referred to in my letter of September 18, 1882, and I would respectfully suggest whether it would not be well to transmit to the committee a copy of said letter.

An examination of the British regulations indicates that they are best adapted to thickly settled countries. It would be necessary, therefore, to frame the law so as to admit of modifications in the regulations adapted to the sparsely settled portions of the United States, or to limit their manufacture and use of methylated alcohol to areas having not less than a certain density of population.

The foregoing crude suggestions are made upon a mere reading of the law and regulations returned herewith.

I can not venture any more definite suggestions without attempting to draught regulations which would provide for the manufacture, sale, and use of methylated spirit free of tax under internal-revenue laws. In this way the necessary legislation could be determined. This, however, would require time, and as the report received from the State Department did not arrive until ten days after the opening of Congress, the date set for the introduction of the bill, I have not deemed it advisable, without special authority, to create further delay in this matter.

No report has yet been received from the Academy of Sciences showing the result of experiments being made by that scientific body, referred to on page 18 of my report for 1882, to determine whether alcohol mixed with wood-naphtha can be restored to its original purity.

Very respectfully,

H. C. ROGERS,
Acting Commissioner.

Hon. CHARLES J. FOLGER,
Secretary of the Treasury.

Mr. COCKRELL. The next is the letter of Commissioner Miller to Secretary Manning, dated March 6, 1886.

The Chief Clerk read as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, March 6, 1886.

SIR: Inclosed please find House bill No. 901, Forty-ninth Congress, first session, referred to this office on the 4th instant for my opinion and suggestions by Hon. W. C. BRECKINRIDGE, Committee of Ways and Means, House of Representatives.

This bill provides for the withdrawal from distillery warehouses without tax of alcohol and other spirits to be used in industrial pursuits. It requires the Secretary of the Treasury to grant permit for the withdrawal of such spirits under certain limitations from distillery warehouses, free of tax, for the sole purpose of use in industrial pursuits.

Two classes of safeguards are provided. One is through the use of methyl or wood alcohol, which applies only to spirits which are not withdrawn for use in tobacco factories or such other industrial pursuits as should entail their complete destruction; the other safeguard is that which may be afforded by rules and regulations which the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall adopt—specific penalties in the sale or use of the spirits withdrawn for any purpose other than that specified in the bill, also for any violation of the rules or regulations made in conformity with the act.

The bill having been submitted for my opinion and suggestions, you may say to Mr. BRECKINRIDGE, if you please, that in my opinion, if the manufacture, compounding, and preparation of medicines are industrial pursuits in the sense in which the term is used in the bill, the benefits of the bill would not extend to such pursuits unless the use of the spirits in the preparation of the medicine would entail their complete destruction. From reports received by this office and published on pages 31 and 32, No. 152, volume 13, CONGRESSIONAL RECORD, it appears that alcohol was more often and more extensively used by chemists, druggists, and pharmacists than by others using it in arts and manufactures. It would seem, also, that it would be more to the interest of the public at large to authorize the use of alcohol, free of tax, in the preparation of medicine than to allow such use in other arts and manufactures.

It is presumed that the safeguard provided by methylation is intended to apply to alcohol to be used as a solvent, as by manufacturers of varnish, hats, chemicals used by photographers, and in the preparation of paints, white lead, etc.

In my report for the year ended June 30, 1885, page 53, the following statement is made: "The methylation also of grain alcohol by the addition thereto of a small proportion of wood-naphtha in order to permit the use of the alcohol in industrial pursuits without payment of tax thereon, as has been proposed, would hardly afford the degree of safety against the use of the alcohol as a beverage which has been attributed to it."

Hon. Abram S. Hewitt, in a speech on the subject of a tax on distilled spirits and tobacco, quotes Dr. Squibb, who says, "spirits may be cheaply methylated." This fact, which Mr. Hewitt, being now in the House, may readily affirm or deny, renders the protection by methylation of little or no value. On the other hand, the experiments made by the National Academy of Sciences at the request of this office, in 1882, indicated to the satisfaction of that scientific body that spirits could not be cheaply methylated.

The report of the committee of the National Academy of Sciences was transmitted to you on the 12th of January, 1883, with the suggestion that the same be forwarded to the Committee on Finance of the Senate.

I would also call attention to office letter to you of September 18, 1882, in answer to your letter of August 2, 1882 (initials H. B. J.), and to office letter of December 18, 1882, with printed documents forwarded pursuant to Senate resolution of July 26, 1882, directing the Secretary of the Treasury to ascertain under what regulations methylated alcohol is sold duty free in Great Britain.

If this bill should become a law, the expense of collecting the revenue would be increased and the receipts would be materially diminished, and I fear that quite a percentage of the reduction would be found to have occurred through frauds perpetrated under the law. Therefore, as an internal-revenue measure, the bill has nothing to recommend it.

Respectfully,

JOS. S. MILLER, *Commissioner.*

Hon. DANIEL MANNING,
Secretary of Treasury.

Mr. COCKRELL. The last is dated January 19, 1887, from C. A. Bates, and concurred in by T. A. Cushing, directed to the Commissioner.

The Chief Clerk read as follows:

To the Commissioner:

I have carefully examined the annexed bill (H. R. 10415) with reference to its provisions for the use of spirits, free of tax, in the arts and manufactures.

Sections 5 to 10, inclusive, provide for the withdrawal of methylated spirits from distillery warehouses, free of tax, for use in the "arts and manufactures."

Sections 11 to 13, inclusive, provide for the withdrawal from such warehouses, free of tax, pure spirits or methylated to be used in internal-revenue manufacturing warehouses of "all articles, preparations, and compounds intended for sale in or use in the United States," except wines, etc., used or sold as beverages.

Sections 14 to 19, inclusive, for the allowance of drawback of tax on spirits "used for mechanical and scientific purposes, or in the manufacture of any article, preparation, or compound," except wines, etc., used or sold as beverages.

In each of these cases special provisions are made for the filing of notices, entries, bonds, etc., and for the assignment of internal-revenue storekeepers (and in the case of drawback for the appointment of special inspectors not exceeding fifty in number) for the issuing of necessary regulations, and also impose fines and penalties for fraud committed or attempted in connection with the withdrawal or use of such alcohol.

The bill bears internal evidence that this portion of it is made up of several distinct bills on the subjects named, and on account of the needless repetitions, as also on account of the seeming inconsistencies in some of its provisions, the bill as now drawn is open to objections on these grounds.

The bill, I think, could be much simplified and shortened by a rearrangement (see slip annexed to bill), and yet contain all its provisions without materially changing its phraseology.

From a revenue point of view the bill, in my opinion, should not receive the sanction of this office.

While I have no very satisfactory data on which to base an estimate of the quantity of spirits that would be used for the purposes named, should the bill become a law, I venture to predict that the annual withdrawals for these purposes would at least amount to 9,000,000 taxable gallons, or about one-seventh of the average withdrawals of spirits for domestic purposes during the past five years.

In addition to this large falling off in receipts from distilled spirits, there would be a very large expense (officers' expenses and salaries) connected with the proper supervision of this business, and this extra expense, when added to the actual cost of collecting the tax on spirits, would make an amount so large when com-

pared with the receipts as would in my judgment furnish another and still stronger argument in favor of the total abolition of the tax on distilled spirits. Besides this, there are grave reasons for apprehending extensive frauds in connection with the proposed withdrawal of free spirits, and frauds of this kind if committed would further decrease the revenue and have a most demoralizing effect on the whisky business generally.

I may perhaps take a rather too gloomy view of this matter, but, as I regard it, the bill is a very dangerous one, so far as the revenue is concerned.

Respectfully,

C. A. BATES.

JANUARY 19, 1887.

I entirely concur in the above.

T. A. CUSHING.

Mr. ALLISON. Mr. President, I desire to say one word respecting these communications. The communications read from the Internal-Revenue Office, dating back in 1882, I think are of very little value as illustrating the matter before us. In the first place, the Commissioner there admits that he did not even have before him or accessible to him the spirit regulations of Great Britain, and therefore he knew practically nothing about the subject, as he himself states.

The subsequent letters relate entirely to a House bill, and are criticisms of a House bill which proposed three methods whereby spirits might be used in the arts, one by means of methylation, another by means of bonding, and another by means of free spirits with drawbacks; and the latter system, the drawback system, is especially condemned in those letters.

The Commissioner, in writing to Secretary Manning under date of March 6, 1886, also criticises the House bill, and does not express an opinion as to what could or could not be done under a proper system. All of the writers seem to think that as a revenue measure such a bill would be a mistake.

The letter of the Commissioner of Internal Revenue, dated August 2, 1888, addressed to the Senator from Kentucky [Mr. BECK], in criticism of the *project* for the measure now in the Senate substitute for the House tariff bill is a criticism that has no real application to that measure. It is a criticism made upon, I think, the second draught of the amendment of the Committee on Finance. That amendment, as it then stood and was submitted to the Commissioner of Internal Revenue, has practically no relation to the amendment as it now stands. Therefore, everything contained in all these letters must be thrown aside in any criticism of the substitute reported by our Committee on Finance.

The Commissioner of Internal Revenue in one of the letters read states that the great safeguard for the collection of the tax on distilled spirits now is the system of bonded warehouses. That is precisely the system of the substitute as it respects alcohol used in the arts. We follow through a bonded warehouse the spirits until they are finally absorbed in the chemical production specified in the amendment. Every safeguard suggested by the Commissioner of Internal Revenue is provided for as respects bonded warehouses. There is no provision in it whereby a drawback is allowed. There are only two methods. One is that of bonding, and the distilled spirits are followed by a Government officer through every stage of manufacture until they are absorbed in the production, whatever it may be; and the Secretary of the Treasury is authorized to say what thing can be produced by this method. Hence, excluding the idea that any production can be made from free spirits except such as can not again be recovered, as respects this provision of the bill, I think there can be no just criticism made upon it.

As to the question of methylation, I agree that there is room for argument. That is to say, there is opportunity for persons to say it can not be done. But I have to say in response that the most eminent chemists in this country were consulted by the subcommittee of the Committee on Finance before we reported the provision, and I do not hesitate to declare that Dr. Squibb, who is mentioned in one of the letters, and the eminent chemists of Philadelphia all agree that the ethyl in methylated spirits can not be recovered except by redistillation; and that is the great point in this case.

Some of these letters allude to the report of the committee of the Academy of Sciences. The question was referred to that committee, consisting of three eminent chemists, who, in 1882, made a report, which is found among our documents, in which they state in conclusion—I will only give the conclusion of their report—

> It is plain from the foregoing that, considering our experiments as final, it is impossible to purify the mixture containing wood naphtha to a sufficent extent to make it palatable without the aid of distillatiou. Hence, apparently, it would be as difficult to carry on the process of purification on the large scale as to carry on the illegitimate manufacture of alcohol. This fact in itself might be a sufficient protection against fraud, though the committee does not feel competent to express a decided opinion on this point.

They show that the only method of recovering the wood alcohol is by redistillation. Every one knows what that is. So if we have now on our statute-books a law which is sufficient to prevent the illegitimate distillation of alcohol, the provisions of the Senate bill applying to that law and making stringent restrictions respecting redistillation will be sufficient to prevent the redistillation of methylated alcohol. The matter is just as plain to my mind as that two and two make four.

It follows that if the Commissioner of Internal Revenue under existing law can prevent fraud in the distillation of alcohol, the same laws, the same regulations, and the same processes will prevent fraud in the redistillation of methylated alcohol.

But all these statements—and they are statements, as these letters indicate, made without any very great examination—have standing against them the fact that since 1853 (not 1856, as stated in the letters) in Great Britain, with a tax of $2.50 per gallon upon distilled spirits of the proof of our distilled spirits, making a much larger tax upon alcohol than we impose, under the regulations of the British Board of Trade methylated spirits have been sold and used in the industrial arts. The Committee on Finance have all these regulations. They are not cumbrous, nor are they difficult of enforcement. Many of them are embodied in our provisions here, and the remainder of them can be embodied in the regulations of the Commissioner of Internal Revenue and adapted to our system. Germany has the same thing under her system of withdrawing spirits not only for methylation but bonded spirits as well for use in the arts.

If that can be done there, why should it not be done in our country? Why should the Commissioner of Internal Revenue set himself up as sponsor of the revenue because he says as a revenue measure it will not be a success? Of course it will not. It is the intention of the bill to reduce the revenue to the extent of the tax on the spirits so used in the arts.

If these spirits can not be recovered except by redistillation, of course the Commissioner of Internal Revenue can easily protect the revenue as to all distilled spirits sold for use as a beverage. Do any of these letters say, is there any suggestion anywhere, that this wood alcohol or wood naphtha can be withdrawn from the spirits so as to enable them to be used as a beverage without redistillation? Nobody pretends that.

The question resolves itself simply into this, whether it is a wise or unwise thing for us to attempt such a revenue measure as will allow the industrial arts of this country to use alcohol without the payment of the tax, and thereby to the extent of such use free of tax reduce the cost of all the articles that are produced in this way? That is the only question; and I will say to the Senator from Missouri that if in the detailed discussion of these provisions he can find any more stringent provisions respecting the use of these spirits, either under our system of bonding or under our system of methylation, I shall be glad to adopt it.

I will add that these provisions have been submitted, I will not say to whom, because perhaps I ought not to state that, but these provisions have been submitted to the highest experts having charge of internal-revenue matters, and many of these stringent provisions are the result of their careful work.

Therefore it is, Mr. President, that I do not wish this question to be clouded or disturbed by the letters which are put in here, showing it is true upon their face that the men who have written them have not given that examination to this subject which they should have given.

Now, I will say to the Senator from Missouri that the clause as to alcohol for use in the arts is a provision that will be open to the criticism of the chemists between now and December. Every man who is familiar with the use of distilled spirits in the arts and the method of methylation, not only in our country but in Great Britain and Germany, will have an opportunity of criticism, and if the judgment of these experts shall show that there is any great opportunity for fraud, and wherein that opportunity exists, I will go hand in hand with the Senator from Missouri in making the bill more perfect in that respect.

But surely when Great Britain collects more tax from distilled spirits than we do, having more than twice the rate of tax that we have, and can furnish these spirits to her industries, we ought to be willing to make an honest attempt to do the same thing, unless we intend to abolish entirely the internal-revenue tax upon distilled spirits, and I do not understand that any proposition of that character comes from any suggestion in these letters.

That is all I have to say now upon this subject.

Mr. COCKRELL. Mr. President, as a matter of course it is almost impossible to determine in advance what will be the result and effect of the practical operation of these provisions in regard to the use of alcohol in the arts. I have no doubt the Senator is entirely sincere in his views with regard to it. There are other gentlemen who are equally as sincere in their views which are directly the opposite to those of the Senator from Iowa. I have not myself made any personal investigation of this matter, and, therefore, can not speak from personal information upon it; but my colleague [Mr. VEST] and others, who have examined it, say that the alcohol can be, as it were, demethylated and made into most excellent brandy. I have seen several times little bottles of it said to be very pure. I can not state whether it was pure or not.

Mr. ALLISON. Nobody denies that this can be done. Of course it can be done.

Mr. COCKRELL. But not by redistillation, as the Senator claims, or not by such a process of redistillation as can be prevented. If a redistillation had to occur of the same character and kind as an original distillation, as a matter of course if you can prevent the original distillation you can prevent the redistillation; but this is not the process that is used in demethylating this alcohol after it has been used in the arts, or after it has been prepared for use in the arts. That is the only difference in the world, as I understand the matter.

I am very glad that the Senator has disclosed the fact that this is only a tentative proposition, like all other provisions of the bill.

Mr. ALLISON. No, sir; it is not a tentative proposition.

Mr. COCKRELL. But it is to be subject to criticism and amendment and change and modification up to the time it is finally acted on.

Mr. ALLISON. Undoubtedly. In response to the intimation or suggestion of the Senator from Missouri that this provision as respects alcohol for use in the arts is like every other provision in this bill, I will say that it is open to public debate and criticism in this body, and to modification and change. This bill of ours is the bill of the subcommittee, and afterward of the Committee on Finance. Nobody claims that it is perfect in any respect. I know myself as regards this very provision that we had five prints of it. It was printed five times, and some of the most important features in it were inserted after the fourth print.

I have no doubt that the Senator from Missouri, putting his sharp eye upon it and having it held up to the public gaze between now and the time when it will be acted on, may be able to suggest some imperfections in it, and therefore the committee is willing to accept them in the spirit of the proposition, and that is to exempt, if we can exempt, this article from tax when it is used in the arts.

Mr. DOLPH. The proposition is not tentative that you propose to remove the tax. It is the method of doing it.

Mr. ALLISON. It is the method. That is all I mean. I mean to say that this measure is open to the just criticism of everybody, and we invite that criticism. The Commissioner of Internal Revenue, in the nature of things, can know very little more about it than we can. He is not a chemist; I assume that he has not studied the question with that care and attention which would be required to make him an expert. Therefore I submit this proposition to the experts of the country, and if they say to us that we can not do in this country what is done in Great Britain and in Germany as respects these spirits, then I will listen to their criticisms, and so far as I can, and I have no doubt other Senators will, act upon them in the direction of the improvement of the bill.

Mr. COCKRELL. The question remains just where it was before. Here are views conflicting. The Senator says they have determined to remove the tax upon alcohol used in the arts. I suppose that is to be regardless of whether it will lead to frauds which can not be prevented or not. That inroad is to be made upon the tax derived from distilled spirits regardless of what may be its results.

Mr. ALLISON. Oh, no.

Mr. COCKRELL. I understood the Senator from Iowa to say, in response to the language of the Senator from Oregon, that this tax had to be removed from alcohol used in the arts; that that was a settled fact, and the question was only as to the method of doing it.

Now, Mr. President, if that is a settled fact, then the tax has got to be removed regardless of whether frauds can be prevented or not.

Mr. ALLISON. I hope the Senator will be a little more candid in his statement.

Mr. COCKRELL. I ask the Senator if that is not what the Senator from Oregon said to him, and if he did not assent to it? I will ask him to say that.

Mr. DOLPH. I do not think that that is a fair construction of what I said or what the Senator from Iowa said.

Mr. COCKRELL. Did you not ask the Senator from Iowa if it had not been determined that that tax should be removed?

Mr. DOLPH. Not if it would result in fraud.

The PRESIDENT *pro tempore*. Senators will address the Chair.

Mr. DOLPH. If the Senator from Missouri will yield to me now, I will make the explanation.

Mr. COCKRELL. Certainly, I always yield.

Mr. DOLPH. I say that I do not think the Senator from Missouri puts the proper construction either on the question I put to the Senator from Iowa or on his reply. Of course if it should be found impracticable to prevent frauds, no one would propose to remove the tax. I supposed that that was understood. That was admitted, as I understood, by the committee.

What I understood the Senator from Iowa to say to the Senator from Missouri was, that the committee were willing to perfect this measure and to listen to any person who would criticise it, and who could suggest any additional provisions which would be a safeguard against fraud, and that the committee of the Senate, so far as he could speak for them, and this side of the Chamber, would be glad to accept them.

Mr. COCKRELL. That was the explanation until the Senator put in the statement that the fact was that that tax was going to be removed. He is entitled to his explanation. I have no objection to his explanation, but my criticism was merely upon the language he used, that it was a fact that this tax had to be removed; and, as a matter of course, if it has to be removed, the consequences of it are immaterial whether frauds can be prevented or not.

As I said before, many persons who have investigated this matter declare that this alcohol can be demethylated and used as a beverage, and that a redistillation process, such as is required in the distillation of spirits in the first instance, is not necessary.

COMMITTEE ON INDIAN AFFAIRS.

Mr. MORGAN submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Committee on Indian Affairs, or a subcommittee thereof, is authorized to sit in the recess of the Senate at Washington, D. C., to complete the examination as directed in resolutions of the Forty-ninth Congress, of the condition of the Indian tribes in the reservations in Minnesota, Dakota, and Montana, and the powers conferred on said committee under said resolutions are continued until the examination is completed, subject to the further orders of the Senate.

HOUSE BILL REFERRED.

The bill (H. R. 11604) to amend an act approved March 3, 1885, to authorize the construction of bridges across the Cumberland and Caney Fork Rivers, in Tennessee, was read twice by its title, and referred to the Committee on Commerce.

ARMY AND NAVY BANDS.

The PRESIDENT *pro tempore* laid before the Senate the joint resolution (H. Res. 24) in reference to the employment of the Army and Navy bands; which was read twice by its title.

Mr. BLAIR. I ask that the joint resolution be read.

The PRESIDENT *pro tempore*. It will be read at length for information, if there be no objection.

The Secretary read as follows:

Be it resolved, etc., That hereafter no enlisted musician in the service of the United States, the Army and Navy, respectively, shall be detailed, ordered, or permitted to leave his post to engage in any pursuit, business, or performance in civil life for emolument, hire, or otherwise, where the same shall interfere with the customary employment and regular engagement of local civilian musicians.

Mr. BLAIR. A bill similar to this joint resolution was introduced a long time since and referred to the Committee on Education and Labor and was somewhat discussed by the committee, but there was never any action upon it. This joint resolution comes to us from the other House, and I move that it be taken up and considered at the present time.

Mr. COCKRELL. I move that the joint resolution be referred to the Committee on Military Affairs, as it affects more largely persons engaged in the military service than in any other. I object to its third reading to-day.

Mr. BLAIR. I suppose that one motion is not superseded by offering another without action upon the first.

The PRESIDENT *pro tempore*. The Senator from New Hampshire will pause. The joint resolution can not be read a third time the same day on which it is read the first and second times except by unanimous consent. The Senator from Missouri has the right, under the rules, to object. The Senator from New Hampshire can only get leave to have the joint resolution considered now by unanimous consent.

Mr. BLAIR. Do I understand, then, that the Senator from Missouri objects?

Mr. COCKRELL. I move that the joint resolution be referred to the Committee on Military Affairs. I think it is a matter that ought to be examined and investigated.

The PRESIDENT *pro tempore*. It will be so referred, if there be no objection. The Chair hears none.

RECESSES.

Mr. COCKRELL. I move that the Senate take a recess for thirty minutes.

Mr. BLAIR. I think there are other bills and resolutions from the House of Representatives.

Mr. COCKRELL. I say frankly that the Senator need not try to pass any bills now. It is just a farce. That is enough to say.

The PRESIDENT *pro tempore*. The Calendar, under Rule VIII, is in order.

Mr. COCKRELL. I move that the Senate take a recess for thirty minutes.

The motion was agreed to; and the Senate thereupon took a recess for thirty minutes. At the expiration of the recess the Senate reassembled, at 1 o'clock and 40 minutes p. m.

The PRESIDENT *pro tempore*. The Secretary will report the first bill on the Calendar under Rule VIII.

The CHIEF CLERK. Order of Business 1996. A bill (H. R. 5080) for the relief of C. B. Wilson.

Mr. COCKRELL. I ask unanimous consent that the further call of the Calendar be suspended or that it be laid aside for the present, and that the Senate do nothing except such business as may be necessary. I think we shall have a message from the President and we may need an executive session. I simply suggest that we remain in *statu quo* without doing any business for a short time. Perhaps, however, it would be better to take a formal recess. I move that a further recess be taken until half past 2 o'clock.

The motion was agreed to; and thereupon the Senate took a recess. At the expiration of the recess the Senate reassembled, at 2 o'clock and 30 minutes p. m.

BILLS BECOME LAWS.

A message from the President of the United States, by Mr. O. L. PRUDEN, one of his secretaries, announced that the following bills, having been presented to the President on the 4th instant and not having been returned by him to the House of Congress in which they originated within the ten days prescribed by the Constitution, have become laws without his signature:

An act (S. 317) for the relief of William A. Bevans; and

An act (S. 2563) to compensate Mrs. Sarah L. Larimer for important services rendered the military authorities in 1864 at Deer Creek Station, Wyoming.

The message also announced that the President had on the 18th instant approved and signed the following acts:

An act (S. 70) to provide for warehousing fruit brandy;

An act (S. 1856) to establish a life-saving station on the Atlantic coast between Indian River Inlet, Delaware, and Ocean City, Md.;

An act (S. 3427) to amend section 4474 of the Revised Statutes of the United States;

An act (S. 1671) for the relief of the heirs of Martin Kenofsky;

An act (S. 741) for the relief of William Tabb;

An act (S. 2742) to incorporate the Brightwood Railway Company of the District of Columbia;

An act (S. 1291) granting a pension to David Heinbach;

An act (S. 2593) granting a pension to Sarah E. McNamara;

An act (S. 3175) granting a pension to Mrs. Caroline Taylor;

An act (S. 3197) granting a pension to Abbie L. Ham;

An act (S. 3230) granting a pension to Martha J. Cole;

An act (S. 619) granting an increase of pension to Leopold Mayer; and

An act (S. 3018) granting an increase of pension to John N. Bovee.

The message further announced that the President had this day approved and signed the act (S. 1089) for the relief of Henrietta M. Sands, widow of the late Rear-Admiral Benjamin F. Sands, United States Navy.

MISSOURI RIVER BRIDGE AT OMAHA.

Mr. ALLISON. I move that the Senate proceed to the consideration of executive business.

Mr. PADDOCK. Mr. President——

The PRESIDENT *pro tempore*. The motion is not debatable.

Mr. PADDOCK. I simply rise to ask the Senator to yield to me for a moment.

Mr. ALLISON. I will yield to the Senator from Nebraska.

The PRESIDENT *pro tempore*. Does the Senator from Iowa withdraw his motion?

Mr. ALLISON. For the moment.

Mr. PADDOCK. I offer the following resolution:

Resolved, That the Committee on the Improvement of the Mississippi River and its Tributaries be authorized to continue during the recess of Congress, the investigation directed by the resolution of this body of October 10, 1888, with all the powers and privileges conferred by said resolution. And all necessary expenses of such committee shall be paid out of the contingent fund of the Senate.

The PRESIDENT *pro tempore*. The resolution will be referred, under the rule, to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. PADDOCK. I desire to ask a suspension of the rules as to the reference order of the resolution which I have presented.

The PRESIDENT *pro tempore*. The Chair does not feel at liberty to entertain a motion to suspend the rules at this stage of the business.

Mr. PADDOCK. I happen to be the only member of the Committee to Audit and Control the Contingent Expenses of the Senate who is present to-day. So far as that committee can give its assent to the resolution through me, that assent is given. I think under the circumstances it might be proper to suspend the rules for the purpose of passing this resolution, which is based upon a resolution of the Senate passed on the 10th day of the month, directing positively and imperatively the Committee on the Improvement of the Mississippi River and its Tributaries to make an investigation and inquire in respect to obstructions of the Missouri River occasioned by the improper construction of a bridge. I hope the Presiding Officer will find it proper and competent for him to allow the rules to be suspended, if the Senate is willing to suspend them.

Mr. BATE. A bill has just come from the other House to amend a previous act so as to enable bridges to be put across the Cumberland and Caney Fork Rivers in Tennessee. I should like very much to get unanimous consent to have that bill passed.

The PRESIDENT *pro tempore*. The Chair understood the Senator from Missouri [Mr. COCKRELL] to announce that objection would be interposed to the transaction of any legislative or other business. If the Senator from Missouri withdraws his objection interposed, the Chair will submit the request for unanimous consent for the consideration of any business that may be asked by any Senator present.

Mr. BATE. It is merely a question of the amendment of a charter that has passed the House so as to put some bridges across the Cumberland and Caney Fork Rivers. My colleague in the House [Mr. MCMILLIN] requested me to secure the passage of the bill here.

The PRESIDENT *pro tempore*. The first request was made by the Senator from Nebraska [Mr. PADDOCK] if business is to be transacted.

Mr. PADDOCK. I desire to state to the Senate that before I introduced the resolution I had a conference with the Senator from Missouri, and I have pursued that course which I understood to be suggested by the Senator from Missouri, and to be agreeable to him. I think he would so indicate.

Mr. COCKRELL. I did not catch what the Senator was saying.

Mr. PADDOCK. I say before presenting the resolution I had a conference with the Senator from Missouri, and I understood him if not exactly to suggest it to concur in the proposition which I have presented.

Mr. COCKRELL. I will state very frankly that I said to the Senator that he must consult his side of the Chamber. This is a question of the expenditure of the contingent fund of the Senate. The Senate is Republican; the Republicans are responsible for it; and they must take the lead in all such matters. Therefore, I have not said a word or interposed any objection. It is for that side of the Chamber to determine what shall be done in such a matter.

I think myself the subject mentioned ought to be investigated, and I suggested to the Senator from Nebraska that the only way for the Committee on the Improvement of the Mississippi River and its tributaries to investigate it was by an extension of the resolution of October 10th. That is the only way it can be done. It is for Senators on that side to determine whether they will at this late day entertain a resolution for incurring that amount of expense, whatever it may be. I do not know that there will be any material expense, but that is what I meant by saying to the Senator that I did not propose to interpose any objection.

Mr. PADDOCK. Then I understand the Senator withdraws his objection. I will state that the resolution is in the interest of economy.

This inquiry will have to be made at Omaha, and it is in the interest of economy that it should be undertaken. The inquiry should be made during the recess of the Senate.

Mr. COCKRELL. I understand, however, the ruling of the Chair to be that a resolution involving payment from the contingent fund of the Senate must necessarily go to the Committee on Contingent Expenses.

The PRESIDENT *pro tempore*. It is the imperative requirement of the rule.

Mr. COCKRELL. So the question of objection or no objection would have nothing to do with it.

Mr. PADDOCK. If it is in order to do so, I move that the committee be discharged from the further consideration of the resolution. As a member and as acting chairman of that committee, I make that motion, if it is in order.

The PRESIDENT *pro tempore*. The Senator from Nebraska moves that the Committee to Audit and Control the Contingent Expenses of the Senate be discharged from the further consideration of the resolution.

Mr. COCKRELL. It has not been referred, has it?

Mr. PADDOCK. It has been referred.

The PRESIDENT *pro tempore*. The Chair announced its reference. The question is on agreeing to the motion of the Senator from Nebraska.

Mr. COCKRELL. I think that is going a long way. As the matter can not be done without a suspension of the rules and all that, I appeal to my friends on the other side of the Chamber that they ought not to undertake to go that far. I think it is hardly right, and I do not think there is one of you but must see that it is a very bad precedent.

Mr. ALLISON (to Mr. PADDOCK). Let it go.

Mr. PADDOCK. All right.

Mr. COCKRELL. I think it is a dangerous precedent.

Mr. TELLER (to Mr. PADDOCK). Withdraw the motion.

Mr. PADDOCK. All right; I withdraw the motion to discharge the committee.

EXECUTIVE SESSION.

Mr. ALLISON. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twenty-five minutes spent in executive session, the doors were reopened, and, on motion of Mr. ALLISON (at 3 o'clock and 5 minutes p. m.), the Senate adjourned until to-morrow, Saturday, October 20, 1888, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate October 19, 1888.

PROMOTIONS IN THE ARMY.

Fourth Regiment of Cavalry.

Second Lieut. Charles P. Elliott, to be first lieutenant, October 2, 1888, *vice* Smith, appointed regimental quartermaster.

Quartermaster's Department.

Lieut. Col. Henry C. Hodges, deputy quartermaster-general, to be assistant quartermaster-general with the rank of colonel, October 19, 1888, *vice* Saxton, retired from active service.

Maj. George H. Weeks, quartermaster, to be deputy quartermaster-general with the rank of lieutenant-colonel, October 19, 1888, *vice* Hodges, promoted.

Capt. Lewis C. Forsyth, assistant quartermaster, to be quartermaster, with the rank of major, October 19, 1888, *vice* Weeks, promoted.

Ninth Regiment of Infantry.

Second Lieut. Albert S. McNutt, to be first lieutenant, October 17, 1888, *vice* Stivers, resigned.

Alfred Pleasonton, late major Second Cavalry, to be major in the Army, October 19, 1888.

Ninth Regiment of Infantry.

Additional Second Lieut. Matthew C. Butler, jr., of the Fourteenth Infantry, to be second lieutenant, October 17, 1888, *vice* McNutt, promoted.

Fourth Regiment of Cavalry.

Additional Second Lieut. John P. Ryan, of the Third Cavalry, to be second lieutenant, October 2, 1888, *vice* Elliott, promoted.

APPOINTMENTS IN THE NAVY.

Patrick H. Bryant, a resident of Tennessee, and Luther Lochman von Wedekind, a resident of Pennsylvania, to be assistant surgeons in the Navy, to fill existing vacancies in that grade.

COLLECTOR OF CUSTOMS.

Charles R. Bisbee, of Florida, to be collector of customs for the district of St. John's, in the State of Florida, to succeed Edward Hopkins, deceased.

POSTMASTER.

Charles J. Ackert, to be postmaster at New Paltz, in the county of Ulster and State of New York, the appointment of a postmaster for the said office having, by law, become vested in the President on and after October 1, 1888.

CONFIRMATIONS.

Executive nominations confirmed by the Senate October 19, 1888.

APPOINTMENT IN THE ARMY.

Alfred Pleasonton, late major Second Cavalry, to be major in the Army.

COLLECTOR OF CUSTOMS.

Charles R. Bisbee, of Florida, to be collector of customs for the district of St. John's, in the State of Florida.

HOUSE OF REPRESENTATIVES.

FRIDAY, *October* 19, 1888.

The House met at 12 o'clock m. Prayer by Rev. Dr. CUTHBERT, D. D.

The Clerk read the Journal of the proceedings of yesterday.

THE JOURNAL.

The SPEAKER. If there be no objection, the Journal will be approved as read.

Mr. FARQUHAR. Mr. Speaker, I object to the approval of the Journal, upon the point of order that I made yesterday morning and which I now renew, and bring to the attention of the Speaker of this House. The Speaker *pro tempore* held yesterday that the custom of the House overruled the rule which requires the presence of a quorum when the Journal is read and approved, and I desire to have a ruling upon that point now from the Speaker of the House, in order that such a decision as was made yesterday shall not stand permanently on the minutes as a precedent. The same point was raised in the second session of the Twenty-seventh Congress, and I desire to call attention to the proceedings upon it and to the action in that case, which sustains the point I made yesterday, that there must be a quorum present and that the Speaker must take cognizance of the fact that there is a quorum present before the Journal of the preceding day is read. I ask the Clerk to read from the Journal of the Twenty-seventh Congress the portion which I have indicated, omitting the votes.

Mr. RICHARDSON. Mr. Speaker, how does this matter come up this morning?

The SPEAKER. The Chair stated in the usual form that unless objection was made the Journal would be approved as read. The gentleman from New York [Mr. FARQUHAR] objects upon the ground, as the Chair understands it, that there is no quorum present in the House, and states that the same objection was made on yesterday morning; and, of course, if that be a good objection, the approval of the Journal yesterday morning would not be valid. The Clerk will read as requested by the gentleman from New York [Mr. FARQUHAR].

The Clerk read as follows:

SATURDAY, *April* 9, 1842.

At 11 o'clock, the hour to which the House stood adjourned, the Speaker took the chair and directed the Journal of yesterday to be read.

Mr. Russell, of Ohio, objected to the reading of the Journal on the ground that a quorum had not appeared.

The Speaker decided that it was in order to read the Journal in the absence of a quorum.

From this decision Mr. Russell took an appeal to the House, and the question was stated, Shall the decision of the Chair stand as the judgment of the House? when

A motion was made by Mr. Steenrod that the question on the appeal do lie upon the table. * * *

The Speaker here stated that his decision had been made hastily and without referring to the rule; that during the call of the yeas and nays he had looked into the subject and found that his decision was erroneous, the first rule providing that, upon the appearance of a quorum, he shall cause the Journal of the preceding day to be read. He therefore recalled his decision.

Mr. FARQUHAR. Mr. Speaker, I respectfully submit that that is a precedent which should govern this question, and I now ask for a decision by the Chair.

The SPEAKER. The first rule of the House provides that the Speaker shall take the chair on every legislative day, precisely at the hour to which the House shall have adjourned at the last sitting, immediately call the members to order, and, on the appearance of a quorum, cause the Journal of the proceedings of the last day's sitting to be read, having previously examined and approved the same. The Chair thinks that if the point is made before the Journal is read that there is no quorum present in the House, it is the duty of the Chair to cause the roll of the members to be called for the purpose of ascertaining the fact; because there is only one case provided for by the rules in which the Chair itself may ascertain by a count whether or not a quorum is present, and that is where the previous question has been ordered upon a measure. The rule provides that in such a case there shall be no call of the roll ordered until the Speaker shall have ascertained by a count that there is no quorum actually present. The rule also provides that the Journal shall have been previously examined and approved by the Speaker, but the Chair thinks that is merely a preliminary examination and approval, and that the proceedings of the House and the question as to whether or not they are correctly or incorrectly recorded by the officers of the House, must always be under the control of the body itself. If this were not the case the reading of the Journal would be an entirely useless proceeding.

In this case the Chair does not understand that the gentleman from New York [Mr. FARQUHAR] made the point of order before the Journal was read, but he makes the point now that the approval of the Journal, when objected to, can not be made by the House in the absence of a quorum; and the Chair thinks that point well taken, because the approval of the Journal is the transaction of business; it is a proceeding which affects the regularity and validity of the proceedings of the previous day. But until a vote is taken, and the fact that no quorum is present is disclosed, or until the roll is called and discloses that fact, the Chair, of course, can not say officially that there is not a quorum present in the House.

There may be no quorum actually on the floor at the present moment, and yet a quorum might appear upon a vote. The question, therefore, is, "will the House now approve the Journal of the proceedings of yesterday?" and in order to prevent any difficulty or misunderstanding hereafter, the Chair thinks the House ought also to approve or disapprove the Journal of the proceedings of the day before yesterday. As many as are in favor of approving the Journals of the proceedings of yesterday and the day before will say "ay."

Mr. RICHARDSON. I understand the gentleman from New York to have made the point this morning that there is no quorum.

The SPEAKER. The gentleman has not made it yet.

Mr. RICHARDSON. I understood the gentleman to state——

The SPEAKER. The Chair has decided that until a vote is taken it can not be determined whether a quorum is present or not; but when the gentleman objects to the approval of the Journal a vote must be taken on that question, as the Chair thinks, because the House alone has the right to approve its Journal.

Mr. RICHARDSON. I understood the Chair to state that he would at once proceed to ascertain whether there is a quorum present by directing a call of the roll.

The SPEAKER. The Chair stated that if before the reading of the Journal the gentleman had raised the point that no quorum was present, the Chair would not have directed the Journal to be read until the presence of a quorum was ascertained. But the Journal having now been read, the question is simply upon its approval; and this must be decided by a vote, which, if the point be made, will disclose whether or not there is a quorum present. As many as are in favor of approving the Journals of the last two days will say "ay."

The affirmative and the negative vote having been taken,

The SPEAKER said: The ayes have it, and these two Journals are approved.

Mr. FARQUHAR. I withdraw the point which I made——

The SPEAKER. The Chair does not understand the gentleman to have made any point since the vote was taken.

Mr. FARQUHAR. I mean that I do not now desire to press any point as to the absence of a quorum.

The SPEAKER. The Chair does not understand the gentleman to have made any such point since the vote was taken. There was a mere suggestion on the part of the gentleman that there was no quorum present, and that the point indicated by him had heretofore been made and decided.

Mr. FARQUHAR. I misunderstood the gentleman from Tennessee.

Mr. RICHARDSON. I misunderstood the gentleman from New York. I thought the gentleman had made the point.

Mr. FARQUHAR. I do not desire to raise any point now in regard to the absence of a quorum.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. NEWELL, one of its clerks, announced that the Senate had passed without amendment House joint resolutions of the following titles:

Joint resolution (H. Res. 231) authorizing the Secretary of the Senate and the Clerk of the House of Representatives to pay to the officers and employés of the Senate and House of Representatives borne on the annual rolls their respective salaries for the month of October on the 20th day of said month; and

Joint resolution (H. Res. 232) making an appropriation to enable the Secretary of the Senate and the Clerk of the House of Representatives to pay all session employés of the Senate and House for the full month of October.

CLAIM OF STATE OF PENNSYLVANIA.

Mr. O'NEILL, of Pennsylvania. Mr. Speaker, I have been requested by the executive authority of the State of Pennsylvania and its accounting officers to call up the bill for the purpose of reauditing an account in which that State is interested, and having the result of that reauditing reported to this House at the next session. This bill passed the Senate in April last, and has been unanimously recommended by the Committee on War Claims, the Senate report having been adopted by that committee and presented to the House by its chairman, the gentleman from Kentucky [Mr. STONE].

I ask in these closing hours of this session that this bill may be taken up by unanimous consent and passed. The probabilities are, Mr. Speaker, that if passed to-day it may, between now and to-morrow at 1 o'clock, receive the approval of the President. The bill provides simply for reauditing—nothing else. It makes no appropriation. It simply requires a report to be made to this House. I ask, therefore, in behalf of the State of Pennsylvania that the bill may be taken up and passed. It is Senate bill No. 2329. I am sure that, if properly understood, it will meet no objection from any quarter.

Mr. TURNER, of Georgia. I would like the gentleman from Pennsylvania to state the character of the claim and its amount, the right to object being meanwhile reserved.

Mr. O'NEILL, of Pennsylvania. Mr. Speaker, many years ago there was settled an account between the Government of the United States and the State of Pennsylvania for expenses which the State took upon itself to pay, expenses incurred in raising and paying certain Union regiments. So far as the principal of that account was concerned, amounting to some hundreds of thousands of dollars, it was paid by act of Congress of April 12, 1866. But the interest, amounting to about $41,000, which the State of Pennsylvania assumed and absolutely paid to the individuals who, in the first place, advanced this money, depending upon the State of Pennsylvania to see that it was settled and upon the assurance of Governor Curtin, then governor of Pennsylvania, that he would see to it that it should be settled, was never paid to the State, though authorized by the same act of Congress, this bill being designed to correct a mistake in the previous audit. The question came before the proper Departments of the Government—before the War Department and ultimately the Treasury Department. The matter was acquiesced in by the then Secretary of the Treasury, Mr. McCulloch, and more recently received some indorsement from the late Secretary of the Treasury, Judge Folger. The State of Pennsylvania now simply asks that there may be a re-examination and a reauditing of that account, and a report to the House of that reauditing. There is no appropriation made by it. It is, I will say in all frankness, preliminary, perhaps, to asking an appropriation. But to-day the State of Pennsylvania, through me, asks only the passage of the Senate bill.

Mr. TURNER, of Georgia. It is very hard to resist an appeal from the State of Pennsylvania; and especially so when made by my amiable friend who now represents the voice of that Commonwealth in this request. But the principle involved in this claim is one that is very far-reaching, as I understand. It is the question of interest on State claims of the character he mentions.

Mr. O'NEILL, of Pennsylvania. Let me interrupt the gentleman to explain there. Some patriotic citizens of the city of Philadelphia advanced certain money during the rebellion, amounting in all to $700,000.

Mr. WASHINGTON. In what year?

Mr. O'NEILL, of Pennsylvania. The State authorities then took upon themselves the repayment of these individuals through Congress; and the money was advanced for that purpose. The interest had been paid by them, and was due for eighteen or twenty months. The money had been paid, I repeat, by these patriotic citizens, and they are out of pocket for that sum, they or their representatives of the State of Pennsylvania up to the present time. The bill for which I now ask consideration does no more than provide for an audit of the amounts so paid.

Mr. TURNER, of Georgia. Why did not the State pay the interest?

Mr. O'NEILL, of Pennsylvania. Because the State had advanced the money, and to pay the principal took all the amount of the repayment that was made by Congress to the State of Pennsylvania. The State paid both the principal and interest, and Congress so provided by the act of April 12, 1866. But the entire amount was not paid. Congress appropriated $800,000, and the State received less than $700,000. The understanding was then that another settlement would be made; and the object of this bill is to carry out that understanding.

Mr. TURNER, of Georgia. As I understand it, then, the State of Pennsylvania has no interest in the question.

Mr. O'NEILL, of Pennsylvania. Oh, yes, it had, because the State undertook to see to the payment originally and the State to-day is seeking to have a reaudit of the account made. I am now simply asking, as one of the members from the State of Pennsylvania, to have this bill taken up and passed, which is at the instance of and in obedience to the desire of the executive authorities of the State of Pennsylvania.

As I said before, this bill passed the Senate unanimously many months ago, was unanimously recommended by the Senate committee, and was unanimously reported by the War Claims Committee of this House through the chairman, General STONE, of Kentucky. The report is very full, setting out all the facts from beginning to end. But I can not say, I will state in great frankness to my friend, what the bill proposes ultimately to do, but suppose, of course, an appropriation will be asked to pay what is due. At present it only authorizes the auditing of the claim. That is all I ask. That is all the bill does. Nothing is proposed by this bill in any respect touching the ultimate payment. It is simply for an examination and report as to the amount remaining due, that being the interest for this many months, which interest was paid by the individuals who advanced the money originally to the Government of the United States. They were told by those in authority at the time that they would be repaid. But Governor Curtin in his patriotic orders of that day took upon himself to have the matter brought before Congress then. That is the entire history of the transaction.

Mr. TURNER, of Georgia. Mr. Speaker, the gentleman from Pennsylvania has suggested considerations which do great credit to his constituents on the score of lofty patriotism on their part; but I respectfully submit to him that if we were to pay them for their patriotism in this way, it would rob them of that credit.

Mr. O'NEILL, of Pennsylvania. This bill does not rob them of any credit.

Mr. TURNER, of Georgia. But in all kindness to the gentleman from Pennsylvania, whose wishes I have been always willing to second, as he knows, I desire to say that the principle of the bill involves a very large sum of money. The State of Massachusetts, as I happen to remember, has a claim of the same character, amounting to hundreds of thousands of dollars, and so with other States; the claims being scattered all over the United States. I think, before we commit ourselves to a principle of that sort, we ought to have more time to examine and a fuller attendance of members than we have now. I therefore feel bound to object.

Mr. O'NEILL, of Pennsylvania. The entire amount involved would not amount to more than $41,000. These patriotic gentlemen, at a time when patriotism was needed in this country, evinced this patriotic spirit, and paid the interest for twenty months or more, and they certainly ought to be remunerated for it, or the State which made itself responsible. It is nothing more than right and proper and just. But that is not the question to-day. The only thing I ask is to pass this bill permitting the re-examination and reauditing of the account. It does not involve, I think, any principle such as the gentleman from Georgia seems to apprehend.

The SPEAKER. Objection is made, and the matter is not before the House.

LABORERS IN CLOAK-ROOMS.

Mr. PETERS. I ask unanimous consent for the consideration of the resolution I send to the desk.

The SPEAKER. The resolution will be read subject to objection.

The Clerk read as follows:

Resolved, That the laborers employed in the cloak-room of the House be retained during the recess and until the convening of the second session of the Fiftieth Congress, at the same rate of compensation they are now receiving; said compensation to be paid out of the contingent fund of the House.

Mr. PETERS. Mr. Speaker, it is well understood that the employés of the House engaged in the cloak-room will have to take up the carpets and clean up the Hall immediately after the *sine die* adjournment, and prior to the beginning of the next session they will have to replace the carpets. They will be engaged here almost constantly during

the recess, and the object of the resolution is simply to give them compensation during the period of their employment.

There being no objection, the resolution was considered and adopted.

Mr. PETERS moved to reconsider the vote by which the resolution was adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

RECONSTRUCTION OF PUBLIC WORKS, MINNEAPOLIS, MINN.

Mr. RICE. I desire to ask consideration of a bill reported from the Committee on Commerce.

The SPEAKER. The gentleman from Minnesota asks for consideration of a bill the title of which the Clerk will read.

The Clerk read as follows:

A bill (H. R. 9768) to authorize the city of Minneapolis, Minn., to repair, alter, and reconstruct certain public works.

The bill was read at length for information.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. KILGORE. I object.

ORDER OF BUSINESS.

Mr. STONE, of Kentucky. I demand the regular order.

Mr. HOOKER. I hope the gentleman will yield to me that I may ask unanimous consent to substitute a resolution for a bill.

Mr. STONE, of Kentucky. I will yield for a moment.

Mr. HOOKER. I ask unanimous consent to substitute the resolution which I send to the Clerk's desk for a bill which was unanimously reported from the Committee on War Claims. The object of the bill was to refer a claim to the Court of Claims, and to accomplish that it would have to go through both Houses, which of course can not now be done. I therefore offer the resolution.

The SPEAKER. The gentleman has the right to offer a resolution. Does the gentleman ask unanimous consent for its present consideration?

Mr. HOOKER. I do.

Mr. STONE, of Kentucky. I will yield for that.

Mr. KILGORE. Let it be read.

The Clerk read as follows:

Resolved, That the claim of J. H. Hurt, of Mississippi, with all the papers and proof in the same be, and the same is hereby, referred to the Court of Claims under the provisions of the act approved March 3, 1883, commonly known as the Bowman act, and the amendment thereto by section 14 of the act of March 3, 1887, commonly known as the Tucker bill.

Mr. KILGORE. Has the bill passed both Houses?

Mr. HOOKER. It has not passed either House. The object is to substitute the resolution for the bill in order to get a reference made of the claim.

Mr. KILGORE. I will be under the painful necessity of objecting; and I must demand the regular order.

The SPEAKER. The regular order is the call of committees for reports.

ENROLLED BILLS.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled bills and joint resolutions of the following titles; when the Speaker signed the same:

A bill (H. R. 7964) granting to the Aberdeen, Bismarck and Northwestern Railway right of way across a portion of the Sioux reservation, in Dakota Territory;

A bill (H. R. 10735) for the removal of the political disabilities of Theodore Lewis;

Joint resolution (H. Res. 231) authorizing the Secretary of the Senate and Clerk of the House of Representatives to pay to the officers and employés of the Senate and House of Representatives borne on the annual rolls their respective salaries for the month of October on the 20th day of said month; and

Joint resolution (H. Res. 232) making appropriations to enable the Secretary of the Senate and Clerk of the House of Representatives to pay session employés of the Senate and House for the full month of October.

ORDER OF BUSINESS.

Mr. STONE, of Kentucky. I move to dispense with the call of committees for reports.

The motion was agreed to.

Mr. WHEELER. I understand that the regular order is to go on with the call of the roll of the House for the consideration of bills on the Private Calendar, in the order that has been followed for several Fridays.

The SPEAKER. Those bills are in Committee of the Whole House, and the present occupant of the chair could not state what the order would be in committee.

Mr. STONE, of Kentucky. I move that the House resolve itself into Committee of the Whole House for the purpose of considering bills on the Private Calendar.

Mr. RYAN. I desire to ask the gentleman from Kentucky whether he intends to have the order of taking up business on the Private Calendar which has been observed heretofore?

Mr. STONE, of Kentucky. I would ask of the committee that we follow the same order that we followed for two private bill days prior to this.

The question was put; and the Speaker announced the "ayes" seemed to have it.

Mr. KILGORE. I ask for a division.

The House divided; and there were—ayes 17, noes 4.

Mr. WHITE, of New York. I move that the House do now adjourn.

The question was put; and the Speaker announced that the "ayes" seemed to have it.

Mr. BRECKINRIDGE, of Kentucky. Is that a motion to adjourn? I hope the gentleman will withdraw it for a moment that I may have an opportunity to correct the RECORD. I had a somewhat warm colloquy yesterday in which I am made to say that I had a certain conversation with Mr. Havemeyer on the sugar schedule, when I expressly stated I had not had such a conversation. The whole connection shows that it is a mistake; but it is about a matter that I prefer thus publicly to make the correction. I ask to do so now, as I have just got into the city.

The SPEAKER. The correction will be made.

Mr. TURNER, of Georgia. Will the gentleman from New York [Mr. WHITE] allow me to make a single remark? By the resolution which passed yesterday the House will adjourn at 1 o'clock to-morrow, and if the House adjourn now to meet at 12 o'clock to-morrow it will hardly give time for the usual committee to wait on the President and report to Congress. I therefore suggest to the gentleman from New York that he withdraw his motion and allow a motion to be made for a recess until some time before 12 o'clock—say half past 11.

Mr. WHITE, of New York. I will withdraw the motion to adjourn for the purpose of permitting that motion to be made.

Mr. O'NEILL, of Pennsylvania. If the House adjourn now, will it deprive us of the usual Friday evening session?

The SPEAKER. It will.

Mr. O'NEILL, of Pennsylvania. Then I hope that the House will not adjourn, because it will deprive the poor people who have pension bills on the Calendar of the last chance to have their pension granted. [Laughter.]

Mr. TURNER, of Georgia. I move that the House take a recess until 12 o'clock to-morrow.

Mr. WHEELER. I move to amend that motion so as to take a recess until 8 o'clock this evening.

Mr. KILGORE. I want to say in reference to what the gentleman from Pennsylvania [Mr. O'NEILL] has said about getting a bill passed so that it might reach the President to-morrow by 1 o'clock, that there is more business now before the President than he can dispose of before adjournment.

Mr. O'NEILL, of Pennsylvania. But to pass the bill is a great gratification to those having bills on the pension Calendar of the House.

The SPEAKER. The question is on the amendment of the gentleman from Alabama [Mr. WHEELER] to the motion of the gentleman from Georgia [Mr. TURNER], that the House take a recess till 11 o'clock to-morrow morning.

Mr. BAYNE. Mr. Speaker, I rise to make a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BAYNE. Would it be competent for the House to take a recess to-night, after the consideration of pension bills, until to-morrow at 11 o'clock?

The SPEAKER. The Chair thinks so.

The question was put on the amendment of Mr. WHEELER, and it was rejected.

The question then recurred on the motion to take a recess until 11 o'clock to-morrow.

The question was put; and the Speaker announced that the noes seemed to have it.

Mr. TURNER, of Georgia. Division.

The House divided; and there were—ayes 19, noes 9.

Mr. O'NEILL, of Pennsylvania. But for the fact that I want to save the voice of the Clerk, I would endeavor to have the yeas and nays called.

Mr. STONE, of Kentucky. No quorum.

The SPEAKER. The Chair will appoint as tellers the gentleman from Georgia [Mr. TURNER] and the gentleman from Kentucky [Mr. STONE].

The House divided; and the tellers reported—ayes 12, noes 5.

Mr. WHITE, of New York. I move that the House do now adjourn.

The SPEAKER. There is a motion pending that has priority over that.

Mr. TURNER, of Georgia. The House is now dividing.

The SPEAKER. If objected to, of course the gentleman's motion can not be made when the House is dividing.

Mr. BAYNE. I ask unanimous consent that when the House adjourn to-day it be to meet at 11 o'clock to-morrow.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania [Mr. BAYNE]?

Mr. STONE, of Kentucky. Mr. Speaker, if that is agreed to by unanimous consent, will it necessarily vacate the taking of the vote upon the present question?

The SPEAKER. If the House decides that when it adjourns to-day it will adjourn to meet to-morrow at 11 o'clock, it makes no decision whatever as to the hour at which it will adjourn to-day. The House is left still in session.

Mr. WHEELER. But the House can adjourn immediately, can it not?

The SPEAKER It can adjourn immediately, in an hour, or at whatever time it chooses. Is there objection to the request of the gentleman from Pennsylvania [Mr. BAYNE] that when the House adjourn to-day it adjourn to meet to-morrow at 11 o'clock a. m.

Mr. WHEELER. I do not wish to object to the motion, but ask indulgence to remind the gentleman from Pennsylvania [Mr. BAYNE] who made the request that he forgot on yesterday to answer my question regarding the sugar trust and the sugar schedule. [Laughter.] The gentleman said he would come to that matter in a moment, but he became so absorbed with other subjects that he forgot to give the desired information.

I also wish to call attention to the apparent severity with which the Senate tariff bill deals with the industries of the three States whose electoral vote was so manipulated in 1876 by the Republican party managers as to enable them to seat Mr. Hayes in the Presidential chair.

Having used those States to carry out their purposes, as illegal as that whereby Louis XIV seated his grandson on the throne of Spain, or Frederick the Great despoiled Maria Theresa of a part of her dominions and annexed Silesia to Prussia, the Republicans now propose a change in the tariff laws which, if their theories are correct, would inflict great injuries upon Florida, Louisiana, and South Carolina.

South Carolina is chastised by reducing the duty on rice from 2½ cents per pound to 1 cent per pound, and rice uncleaned is reduced from 1½ cents to one-half of 1 cent per pound, and tar, pitch, and turpentine are put on the free-list. The industries of Florida are to suffer by having the duty on her oranges reduced from 13 cents to 10 cents, while lemons are reduced from 16 cents to 10 cents, and sponges are placed on the free-list, and poor Louisiana has her sugar duty reduced from 83 to 41 per cent., and molasses below 56 degrees is placed on the free-list, which substantially puts all molasses on the free-list; for statistics show that while we imported 37,000,000 gallons of molasses below 56 degrees, we imported only 2,000 gallons above 56 degrees, and all molasses can be easily diluted to a point below 56 degrees.

Now, it must be borne in mind the Republican party contends that high protection is a cure for all evils. That those industries are specially blessed whose products are protected by a high or prohibitory tariff. They also contend that the tariff law of 1883 reduced the tariff upon all articles to the very lowest limit, and that the slightest change in the direction of reduction must be followed by ruin, bankruptcy, pauperism, death, and destruction; and with such a picture of possible desolation before them they, without a pang, attempt to change the tariff on the products of the States of Louisiana, Florida, and South Carolina, so as to bring about these dreadful results.

Mr. EZRA B. TAYLOR. Mr. Speaker, I make the point of order that there is no question before the House, and I call for the regular order.

Mr. WHEELER. I wish to place in the RECORD a table which I have prepared, showing some of the extraordinary changes which are made in the Senate tariff bill to the detriment of the masses of the people. The table shows the increase in tax proposed by that bill upon some articles of wool and manufactures of wool. I do this under the general permission.

Table showing the tariff on wool and manufacturers of wool, as proposed by the House and Senate bills.

Class.	Articles.	House bill.	Senate bill.
		Per cent.	*Per cent.*
1	Scoured wool, value 30 cents or less per pound	Free.	82
2	Combing wool, scoured, value 30 cents or less per pound	Free.	73
3	Carpet wool, scoured, value 30 cents or less per pound	Free.	42
3	Woolen rags, shoddy, waste, etc., per pound	Free.	26
3	Woolen cloths, valued not above 80 cents per pound	40	75
3	Woolen shawls, valued not above 80 cents per pound	40	68
3	Woolen yarns, valued between 30 and 40 cents per pound	40	134
3	Woolen manufactures not otherwise provided for, valued between 30 and 40 cents per pound	40	148
3	Woolen balmorals, valued between 30 and 40 cents per pound	40	130
3	Flannels, valued above 80 cents per pound	40	87
3	Blankets, valued not above 30 cents per pound	40	80
3	Blankets, valued between 30 and 40 cents per pound	40	64
3	Wool hats, valued not above 60 cents per pound	40	73
3	Women and children's dress goods, weighing 4 ounces or less per square yard, per square yard	40	93
3	Same, weighing over 4 ounces per square yard, per square yard	40	74
3	Bunting, per square yard	40	90
3	Woolen cloaks, dolmans, etc., per pound	40	73
3	Woolen druggets and bockings, printed, etc., per square yard	40	74
3	Belts or felts for paper or printing machines, per pound	40	53

I also wish to place in the RECORD a table which I requested to be furnished by the Bureau of Statistics, showing the value and duties collected on certain articles under existing law, and also showing the excess in amounts of duty under the Senate substitute over and above like amounts under existing law, as well as under the bill passed by the House on July 21, 1888. A table somewhat similar to this has been printed in the RECORD, but the bureau discovered errors in their calculations which are corrected in this table.

Values of and duties collected on the below-named manufactured articles entered for consumption in the United States during the year ending June 30, 1887, with the estimated amounts of duty accruing on like imports under the provisions of House bill 9051 and the Senate substitute; also, showing the excess in amounts of duty under the Senate substitute over like amounts under the present laws and House bill 9051.

Articles.	Values.	Duties collected under—						Excess of duties under Senate substitute over—			
		Present laws.		House bill.		Senate substitute.		Present laws.		House bill.	
		Amounts.	Av. ad valorem rates.	Amounts.	Av. ad valorem rates.	Amounts.	Av. ad valorem rates.	Amounts.	Per cent.	Amounts.	Per cent.
			Per cent.		*Per cent.*		*Per cent.*

NOTES.—This table shows a deficiency of $380,050.37 in the value of, and of $220,791.41 in the duty collected on dutiable merchandise in 1887, as reported in the annual report of the Chief of the Bureau of Statistics. This difference is principally due to the omission from this table of dutiable merchandise ($177,909.59) withdrawn free of duty from warehouse and of merchandise not dutiable under any of the schedules. If these amounts had been included, the average ad valorem rate of duty under the present laws would be 47.10 instead of 47.07 per cent.

The interpretation of House bill 9051 is that of the Committee on Ways and Means, House of Representatives, as published by the clerk of that committee, and of the Senate substitute that of the Senate subcommittee on tariff.

The values and duties under both House bill and Senate substitute are computed on the importation of 1887, without speculating upon any possible increase or decrease consequent upon a decrease or increase in the rates of duty imposed by the proposed bills. The computations have been made as accurate as practicable, but in many cases under the Senate substitute a calculation was made impossible by the change from an ad valorem to a specific rate of duty. In such cases no account has been taken of the proposed change.

TREASURY DEPARTMENT, BUREAU OF STATISTICS, *Washington, D. C., October* 11, 1888.

WM. F. SWITZLER, *Chief of Bureau.*

Hon. JOSEPH WHEELER.

I also submit, in tabular form, a comparative statement showing the operations of the tariff under the existing laws, under the bill passed by this House, and under the substitute proposed by the Senate.

Comparative statement showing the operations under the present tariff laws, under House bill No. 9051, *and under the Senate substitute, respectively, based upon the quantities and values of dutiable merchandise entered for consumption in the United States during the year ending June* 30, 1887.

These tables clearly show the superiority of the House bill to the Senate bill as a measure of relief for the people—particularly for the farmer.

The Senate bill proposes to deprive the farmer of whatever small protection they have heretofore accorded him, and to increase the burdens he has to bear wherever it can be done. Heaven knows his burden is grievous enough without increasing the exactions.

Under the present law his flannel shirt is taxed 95 per cent., his coat 55 per cent., his shoes 35 per cent., his hat 85 per cent., his bucket 55 per cent., his tin wash-basin 55 per cent., his cotton towel 45 per cent., his plates 50 per cent., his knives and forks 35 per cent., his salt 60 per cent., his pepper 60 per cent., his tobacco 180 per cent., his cigar 110 per cent., his window-glass 60 per cent., his bridles 35 per cent., horseshoe nails 55 per cent., his hammers 20 per cent., his plows 45 per cent., his trace-chains 55 per cent., his Bible 25 per cent., his carpet 50 per cent., his sheets 45 per cent., and his blankets 85 per cent.

Nor does this list include all the taxes the poor agriculturist must pay. His wife's broom is taxed 30 per cent., her cooking utensils 40 per cent., her cooking soda 50 per cent., her needles 25 per cent., her spool thread 74 per cent., her calico dress 55 per cent., and the yarn she knits into socks for her husband and children is taxed 80 per cent.

In fact, whether in his house, in his field, at his table, in his bed, or on his knees the farmer is taxed by every possible device, on every conceivable article he must use.

MILLIONAIRES AND MORTGAGED FARMS.

One statement of an unquestionable and undeniable fact will suffice to show that the tendency of Republican legislation has always been to oppress the farmer.

When the Republican party came into power the millionaires of the country could have been counted on the fingers of one pair of hands, and mortgages on farms were, comparatively speaking, unknown. To-day, as the logical outcome of the Republican policy, millionaires are countless and most of the farms in the West and Northwest are mortgaged to the money barons of the manufacturing States of the East and Northeast.

That this is no exaggerated statement is shown by the dispatches which constantly appear in the public press. One of recent date is in these words:

MINNEAPOLIS, MINN., *October* 17.

M. J. Horsemann, of this city, who has been investigating the condition of the farmers in Ramsey County, Dakota, who were reported to be starving to death, returned *last night*. He says there are seventy families who are absolutely destitute of food and fuel, and something must be done, and immediately, or they will starve to death. The real condition of the people is beyond description.

Men, women, and children are in rags, and they have not a cent in the world. Their crops were totally destroyed, and their land, stock, and farm implements are mortgaged up to their full value, and the mortgagers are threatening foreclosure.

The most absolute distress prevailed everywhere. Women and children were crying, and men were going barefooted and in rags.

Do the gentlemen of the Republican party believe that the people, the great body of workers whose sacrifices in war and labors in peace have made this country great, glorious, and wealthy, would ever knowingly have imposed such burdens upon themselves?

No, Mr. Speaker, they can not believe it themselves and can not expect such an absurdity to be credited by others. Thanks to the sagacious leadership of our courageous President, the people have been aroused. Day by day they are learning how they have been through many weary and sorrowful years made victims of an unparalleled system of wrong and extortion.

The intelligent and impartial jury of the American people is now called upon to decide this great and momentous question. That it will be decided in the interest of right and justice I can not doubt. That we must ultimately triumph in this righteous contest I believe as firmly as I believe that to-morrow's sun will rise.

The SPEAKER. The point of order is well taken. There is nothing before the House, except a request for unanimous consent. Is there objection to the request of the gentleman from Pennsylvania [Mr. BAYNE]?

Mr. WHEELER. I would like an answer to my question.

The SPEAKER. But the gentleman from Ohio [Mr. EZRA B. TAYLOR] insists upon the regular order.

Mr. BAYNE. Mr. Speaker, in view of the fact that the deficiency bill has not yet been returned with the President's signature, and that several other bills are in the same position, it seems quite important that the House should have two hours to-morrow, and I do hope that unanimous consent will now be given that when we adjourn to-day it will be to meet at 11 o'clock to-morrow, and I do trust that neither the tariff question nor any other will be allowed to interfere with that simple, single proposition.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. STONE, of Kentucky. I object.

The SPEAKER. Objection is made. Gentlemen who desire to vote will please come forward and pass between the tellers.

Mr. WHITE, of New York. I move a call of the House.

The SPEAKER. The Chair will announce the result so far. Upon this question the yeas are 12 and the nays 6. Does the gentleman still insist upon the point of no quorum?

Mr. STONE, of Kentucky. I do.

The SPEAKER. No quorum has voted and the gentleman from New York [Mr. WHITE] moves a call of the House.

The question was taken on the motion to order a call of the House, and it was not agreed to.

Mr. WHITE, of New York. I move that the House do now adjourn.

The question was taken; and there were—ayes 14, noes 18.

So the House refused to adjourn.

DISTRIBUTION OF DOCUMENTS.

Mr. RICHARDSON. Mr. Speaker, I want to ask unanimous consent, pending the count by tellers, to offer a resolution which applies to the distribution of publications to members of the House. I think every member of the House is interested in the matter, and while this is not a question of privilege, yet it trims very close to it, and I think no member will object to the passage of the resolution. It will be remembered by gentlemen who were here at the time that on the last day of the Forty-ninth Congress Mr. Hammond, of Georgia, introduced a resolution providing that publications ordered by the Forty-ninth Congress should be continued to members of that Congress although their terms expired on the 3d day of March, 1887. The resolution I desire to offer now is simply intended to repeal that one, so as to permit books ordered by the Forty-ninth Congress to be apportioned by the Doorkeeper as they come in to members of the Fiftieth Congress who were not members of the Forty-ninth. I think it is right and proper and ought to pass.

The SPEAKER. Is there objection to the presentation of the request? If not, the resolution will be read, after which the Chair will ask for objection.

Mr. RICHARDSON. The original resolution was introduced by the gentleman from New York [Mr. LAIDLAW], whom I do not now see in the House. The Committee on Printing thought that his resolution did not exactly cover the matter, and therefore recommend a substitute. The reading of the report will explain this matter.

The Clerk read as follows:

The Committee on Printing, to whom was referred a House resolution "that all documents and books published by the authority of the Forty-ninth Congress which now stand to the credit of such members of the Forty-ninth Congress as are not members of the Fiftieth Congress shall be, and the same hereby are, placed to the credit of their successors, respectively," report the same back with a recommendation that it do not pass, but that the following resolution be adopted as a substitute in lieu thereof:

"*Resolved*, That the Doorkeeper of the House of Representatives be, and he is hereby, instructed to apportion to the members of the Fiftieth Congress all books which have not yet been apportioned, including all the volumes of the second edition of Wharton's Digest, notwithstanding the resolution of the House of March 2, 1887, introduced by Mr. Hammond, which is hereby repealed."

There being no objection, the House proceeded to the consideration of the resolution reported by the Committee on Printing; which was adopted.

Mr. RICHARDSON moved to reconsider the vote by which the resolution was adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

The SPEAKER. If there be no objection, the original resolution, for which the resolution just adopted was a substitute, will lie on the table.

There was no objection, and it was ordered accordingly.

Mr. RICHARDSON. I ask that a resolution on the same subject, introduced by the gentleman from Missouri [Mr. WALKER], be also laid on the table.

The SPEAKER. In the absence of objection, that order will be made.

ORDER OF BUSINESS.

The SPEAKER. The question now recurs on the motion that the House take a recess until 11 o'clock to-morrow morning. Gentlemen desiring to vote on that question will pass between the tellers and be counted.

Mr. TURNER, of Georgia. I renew the request made by the gentleman from Pennsylvania [Mr. BAYNE] that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow.

The SPEAKER. Is there objection to the request of the gentleman from Georgia? The Chair hears none, and it is so ordered.

Mr. TURNER, of Georgia. I now withdraw the motion for a recess.

The SPEAKER. The question recurs on the motion made by the gentleman from Kentucky [Mr. STONE] that the House resolve itself into Committee of the Whole for the consideration of bills on the Private Calendar.

Mr. MILLIKEN. I wish the gentleman would withhold his motion for a moment while I present a proposition to which I understand there will be no objection.

Mr. KILGORE. I understood there was a motion pending to adjourn.

The SPEAKER. That has been decided in the negative.

Mr. KILGORE. Upon the motion that the House go into Committee of the Whole House on the Private Calendar the point of "no quorum" was raised.

The SPEAKER. Therefore that question is still pending. No quorum having voted, the Chair appoints as tellers the gentleman from Texas [Mr. KILGORE] and the gentleman from Kentucky [Mr. STONE].

Mr. SOWDEN. I move that the House do now adjourn.

The motion was agreed to; there being—ayes 19, noes 8.

The House accordingly (at 1 o'clock p. m.) adjourned until to-morrow morning at 11 o'clock.

PRIVATE BILLS INTRODUCED AND REFERRED.

Under the rule private bills of the following titles were introduced and referred as indicated below:

By Mr. G. A. ANDERSON: A bill (H. R. 11607) granting a pension to John Cummings—to the Committee on Invalid Pensions.

By Mr. McSHANE: A bill (H. R. 11608) granting a pension to Albert A. Palmer—to the Committee on Invalid Pensions.

PETITION.

The following petition was laid on the Clerk's desk, under the rule, and referred as follows:

By Mr. HOOKER: Petition for reduction of taxes on dental and surgical goods—to the Committee on Ways and Means.

SENATE.

SATURDAY, *October* 20, 1888.

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. J. G. BUTLER, D. D.

The Journal of yesterday's proceedings was read and approved.

NOTIFICATION TO THE PRESIDENT.

Mr. ALLISON submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That a committee of two members of the Senate be appointed, to join such committee as may be appointed by the House of Representatives, to wait upon the President of the United States and inform him that Congress, having finished its business, will be ready to close the present session by an adjournment to-day at 1 o'clock p. m.

The PRESIDENT *pro tempore*. How shall the committee be appointed?

Mr. ALLISON and others. By the Chair.

The PRESIDENT *pro tempore*. The resolution being silent, the Chair will designate, if there be no objection, to serve upon the committee named in the resolution the Senator from Iowa [Mr. ALLISON] and the Senator from Delaware [Mr. SAULSBURY].

CIVIL-SERVICE INVESTIGATION.

Mr. BLACKBURN. I desire to submit the views of the minority of the select committee appointed to examine into the condition of the civil service. I ask that the order hitherto made by the Senate for the printing of the majority report be extended so as to include these views of the minority.

The PRESIDENT *pro tempore*. The Chair hears no objection, and it will be so ordered.

BILLS INTRODUCED.

Mr. MITCHELL introduced a joint resolution (S. R. 117) proposing an amendment to the Constitution of the United States providing for the election of Senators by the votes of the people of the States; which was read twice by its title.

Mr. MITCHELL. The joint resolution is introduced in pursuance of instructions of the Legislature of my State, and I will state that it is also in accordance with my own judgment. I ask that the joint resolution be printed in the RECORD, and referred to the Committee on Privileges and Elections.

The joint resolution was ordered to be printed in the RECORD and referred to the Committee on Privileges and Elections, as follows:

Resolved, etc., That the following amendment to the Constitution of the United States be proposed to the Legislatures of the several States; which, when ratified by three-fourths of said Legislatures, shall become and be a part of the Constitution, namely:

Strike out the word "Legislature" in the first clause of section 3 of Article I, and substitute in lieu thereof the word "people;" so that said clause shall be as follows:

"The Senate of the United States shall be composed of two Senators from each State, chosen by the people thereof for six years; and each Senator shall have one vote."

Mr. MORGAN introduced a joint resolution (S. R. 118) to amend and enlarge the provisions of a joint resolution approved July 25, 1866, entitled "Joint resolution to refer the claim of the administrator of Richard W. Meade, deceased, to the Court of Claims; which was read twice by its title, and referred to the Committee on Foreign Relations.

WITHDRAWAL OF PAPERS.

On motion of Mr. MITCHELL, it was

Ordered, That leave be granted to withdraw from the files of the Senate the papers accompanying the bill (S. 2563) to compensate Mrs. Sarah L. Larimer for important services rendered the military authorities in 1864 at Deer Creek Station, Wyoming, and for loss of property taken by the Sioux Indians.

RECESS.

Mr. ALLISON. I move that the Senate take a recess until 12 o'clock.

Mr. COCKRELL. Would it not be better to take a recess nominally and yet be in a condition to receive any message that may come, with the understanding that no business shall be transacted until the hour named?

Mr. ALLISON. I have no objection to that course.

The PRESIDENT *pro tempore* (at 11 o'clock and 12 minutes a. m.). By unanimous consent, the Senate will informally take a recess, and business will be resumed as occasion may require.

MESSAGE FROM THE HOUSE.

The PRESIDENT *pro tempore* (at 11 o'clock and 30 minutes a. m.). The Senate will receive a message from the House of Representatives.

A message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the House had passed a joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888; in which it requested the concurrence of the Senate.

The message also announced that the House had passed a resolution providing that a committee of three members on the part of the House be appointed, to join a similar committee on the part of the Senate, to wait upon the President of the United States and inform him that the two Houses of Congress are ready to adjourn, and to respectfully inquire whether he has any further communication to make to them.

The message also announced that the Speaker had appointed Mr. MCMILLIN, Mr. TURNER of Georgia, and Mr. RYAN as the committee under the foregoing resolution of the House.

GOVERNMENT EXHIBITS AT CINCINNATI EXPOSITION.

Mr. TELLER. I ask for the present consideration of the joint resolution which has just come from the House of Representatives.

The PRESIDENT *pro tempore*. The joint resolution will be read the first time by its title.

The joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888, was read the first time by its title.

The PRESIDENT *pro tempore*. If there be no objection, the joint resolution will be read the second time at length.

By unanimous consent the joint resolution was read the second time at length, and considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXECUTIVE COMMUNICATION.

The PRESIDENT *pro tempore* laid before the Senate a letter of the Secretary of War, transmitting, in response to a resolution of July 16, 1888, a report from the Chief Signal Officer of the Army, together with charts and tables prepared under his direction, upon the climate of Oregon, and upon the climatic and other conditions of the agricultural districts of Eastern Oregon and Washington Territory, etc.; which was referred to the Committee on Agriculture and Forestry, and ordered to be printed.

MESSAGE FROM THE HOUSE.

At 12 o'clock and 35 minutes p. m. a message from the House of Representatives, by Mr. CLARK, its Clerk, announced that the Speaker had signed the enrolled joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888; and it was thereupon signed by the President *pro tempore*.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. O. L. PRUDEN, one of his secretaries, announced that the President had on the 19th instant approved and signed the following acts and joint resolutions:

An act (S. 45) for the relief of Col. James C. Duane;

An act (S. 1190) for the relief of the estate of Joseph Fenno, deceased;

An act (S. 1137) for the relief of Adam L. Epley;

An act (S. 307) for the relief of Margaret Kennedy;

An act (S. 1482) granting a pension to Sarah C. Taylor;

An act (S. 2663) granting an increase of pension to Mrs. Mary M. Ord;

An act (S. 2110) granting the right of way for the construction of a railroad through the Hot Springs reservation, State of Arkansas;

An act (S. 1494) to secure to the Cherokee freedmen and others their proportion of certain proceeds of lands under the act of March 3, 1883;

An act (S. 3597) to provide for the disposal of the Fort Wallace military reservation in Kansas;

An act (S. 2802) to fix the number of unbound and bound Journals of the Senate and House of Representatives and to provide for their distribution;

An act (S. 3620) supplementary to the act approved February 3, 1887, entitled "An act to fix the day for the meeting of the electors of President and Vice-President and to provide for and regulate the counting of the votes for President and Vice-President and the decision of questions arising thereon;"

An act (S. 3433) authorizing the Secretary of the Interior to accept the surrender of and cancel land patents to Indians in certain cases;

Joint resolution (S. R. 59) authorizing Brig. Gen. Absalom Baird, United States Army, to accept from the President of the French Republic a diploma conferring the decoration of commander of the National Order of the Legion of Honor;

Joint resolution (S. R. 112) authorizing the Secretary of War to receive for instruction at the Military Academy at West Point Henry Lecomte, of Switzerland; and

Joint resolution (S. R. 116) authorizing the Secretary of War to protect the Washington Aqueduct tunnel.

NOTIFICATION TO THE PRESIDENT.

At 12 o'clock and 42 minutes p. m. Mr. ALLISON and Mr. SAULSBURY, of the joint committee appointed to wait upon the President of the United States and notify him that Congress was ready to adjourn, appeared at the bar of the Senate, and

Mr. ALLISON said: Mr. President, the committee appointed by this body, in association with a similar committee from the House of Representatives, have the honor to inform the Senate that they communi-

cated to the President of the United States the fact that the two Houses were now ready to adjourn unless he had some further communication to make, and in response he stated that he had no further communication to submit.

THANKS TO PRESIDENT PRO TEMPORE.

Mr. SAULSBURY. Mr. President, I offer the following resolution.

The PRESIDING OFFICER (Mr. MORGAN in the chair). The resolution will be read.

The Chief Clerk read as follows:

Resolved, That the thanks of the Senate are due, and hereby are tendered, to Hon. JOHN J. INGALLS, President *pro tempore* of the Senate, for the uniformly able, courteous, and impartial manner in which he has presided over its deliberations.

The Senate, by unanimous consent, proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution. [Putting the question.] The resolution is unanimously adopted.

FINAL ADJOURNMENT.

The PRESIDENT *pro tempore* (at 1 o'clock p. m.). Senators, gratitude impels and usage permits the Chair to postpone for an instant the moment of our separation to acknowledge the honor of your resolution of confidence and approval.

But justice demands the admission that if the Chair has succeeded in the discharge of the delicate and important duties of his position; if order has been maintained in debate; if the laws have been impartially administered; if promptness, facility, and correctness in the transaction of public business have been secured; if the traditions of the Senate, which are its noblest heritage, have been preserved inviolate, it is due to your considerate indulgence, to your constant and cordial co-operation. Without these the greatest abilities could not succeed; with these the humblest faculties could not fail.

The termination of the longest continuous session of the Senate since the foundation of the Government approaches; and trusting that the Supreme Power, which controls the destinies of nations as well as the fortunes of men, may, during the brief interval of your labors in this Chamber, continue His beneficence to each of you personally, to the families of which you are members, to the States of which you are representatives, and to the country of which you are citizens, the Chair announces that the Senate stands adjourned without day.

CONFIRMATION.

Executive nomination confirmed by the Senate, October 16, 1888.

SURVEYOR-GENERAL.

Charles W. Irish, of Nevada, to be surveyor-general of Nevada.

HOUSE OF REPRESENTATIVES.

SATURDAY, *October* 20, 1888.

The House met at 11 o'clock a. m. Rev. J. H. CUTHBERT, D.D., offered the following prayer:

Oh, Thou whose throne is in the heavens, and whose kingdom ruleth over all, the Judge of the earth, the Sovereign of the universe, our God and our Father! draw nigh unto us as we attempt to draw nigh unto Thee. Let Thy blessing be upon all who are in authority in the land, both State and National; Thy servant, the President of the United States, both Houses of Congress, the members of the Supreme Court, and especially this assembly. Grant unto these Thy servants, O God, that they may be faithful stewards of the trust committed unto them, and by their zeal and devotion may truly represent the people and approve themselves as ministers of God to them for good and not for evil. And grant unto the people they represent that appreciation of this high and responsible service that will lead them profoundly to sympathize with Thy servants here.

We thank Thee for all that Thou hast done during this session by Thy servants. Whatever has been wrong in spirit or in action, in mercy forgive. Whatever has met with Thy approval, confirm, O Lord, and establish; establish Thou the work of their hands upon them; yea, the work of their hands establish Thou it.

We thank Thee, most merciful Father, that in so large an assembly, so few of Thy servants have been summoned away by death, and that many who have been sick well nigh unto death have been in Thy merciful providence restored. The shadows have fallen upon their households, but the goodness and mercy of our God have been extended to them all.

And now let Thy blessing be upon them in this parting interview—Thy servant, the Speaker of the House, all its officers, all the members, present or absent; the representatives of the press, who have recorded these proceedings, the witnesses of these proceedings. The Lord watch over and between us all. Our fathers, where are they? and the prophets, do they live forever? Like shadows they have gone; like shadows we follow them. Whatever time we are in trouble be Thou our helper; whatever time we are in darkness, uncertainty, and doubt, be Thou our guide, our guide even unto death, and through death to the general assembly and church of the first-born in heaven.

Our Father, who art in heaven; hallowed be Thy name, Thy kingdom come. Thy will be done upon earth even as it is in heaven. Give us this day our daily bread. Forgive us our trespasses as we forgive those who trespass against us. Lead us not into temptation. Deliver us from evil. For Thine is the kingdom, and the power, and the glory, forever. Amen.

THE JOURNAL.

The Journal of the proceedings of yesterday was read.

The SPEAKER. The Journal, if there be no objection, will be approved, with a slight correction in reference to a part which relates to the decision of the Chair yesterday morning. It is simply a verbal inaccuracy. The Chair hears no objection.

OHIO CENTENNIAL EXPOSITION.

Mr. EZRA B. TAYLOR. I ask unanimous consent to submit at this time for consideration a joint resolution.

The SPEAKER. The resolution will be read, subject to objection.

The Clerk read as follows:

Joint resolution authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888.

Resolved by the Senate and House of Representatives, etc., That authority is hereby granted to continue until and including November 15, 1888, the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, under authority of the act approved May 28, 1888.

Mr. EZRA B. TAYLOR. This is simply to authorize a continuance of the exhibits until the date mentioned.

Mr. MCMILLIN. I see no objection to the joint resolution.

There being no objection, the joint resolution (H. Res. 233) was considered, read a second time, ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time, and passed.

Mr. EZRA B. TAYLOR moved to reconsider the vote by which the joint resolution was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

COMMITTEE TO WAIT ON THE PRESIDENT.

Mr. MCMILLIN submitted the following resolution; which was read, considered, and agreed to:

Resolved, That a committee of three members of the House be appointed to join a similar committee on the part of the Senate to wait on the President of the United States and inform him that the two Houses of Congress are ready to adjourn, and respectfully inquire if he has any further communication to make to them.

The SPEAKER appointed Mr. MCMILLIN, of Tennessee, Mr. TURNER, of Georgia, and Mr. RYAN, of Kansas, members of the committee on the part of the House.

ORDER OF BUSINESS.

Mr. TURNER, of Georgia. I move that the House take a recess until 12 o'clock and 30 minutes p. m.

Mr. RICHARDSON. I ask the gentleman to withdraw that motion for a moment to permit me to submit a resolution authorizing the Doorkeeper to employ certain laborers now on the roll, and who will be necessary in his department during the recess.

Mr. TURNER, of Georgia. Very well; I will hear the resolution.

LABORERS UNDER DOORKEEPER.

Mr. RICHARDSON. I submit the resolution I send to the desk, and hope the House will agree to its adoption.

The Clerk read as follows:

Resolved, That the Doorkeeper of the House be authorized and directed to retain in the service and pay of the House during the month of November all persons employed by the session in his department now on the laborers' roll, including T. K. Hackman, the riding page, and the assistant folder in the seal-room, at the same rate of compensation now paid said persons; and the Clerk of the House be directed to pay said persons out of the contingent fund of the House.

Mr. RICHARDSON. These employés are necessary principally in the care of the furniture under the Doorkeeper. There are seven or eight of them in all; and the Doorkeeper desires to be permitted to retain them during the time mentioned.

There being no objection, the resolution was considered, and agreed to.

Mr. RICHARDSON moved to reconsider the vote by which the resolution was adopted; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

ORDER OF BUSINESS.

Mr. TURNER, of Georgia. I now renew the motion that the House take a recess until 12 o'clock and 30 minutes p. m.

Mr. WHEELER. I move to amend the motion by making it 12 o'clock. We are compelled to adjourn at 1 o'clock to-day, and something may transpire to occupy the remaining hour of the session that would be of great importance to the country.

Mr. TURNER, of Georgia. I will state to the gentleman that the half hour remaining of the session has been decided to be ample.

Mr. WHEELER. But the gentleman can not know what may transpire to require a session of the House during that half hour.

Mr. TURNER, of Georgia. I think the time fixed is ample.

The amendment of Mr. WHEELER was rejected.

The motion of Mr. TURNER, of Georgia, was then adopted.

And accordingly (at 11 o'clock and 12 minutes a. m.) the House took a recess until 12 o'clock and 30 minutes p. m.

AFTER THE RECESS.

The recess having expired, the House, at 12 o'clock and 30 minutes p. m., resumed its session.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. NEWELL, one of its clerks, announced that the Senate had passed, without amendment, the joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888.

Also, that the Senate had appointed, as members on the part of the Senate of the joint committee to wait upon the President of the United States and inform him that Congress, having finished its business, was ready to adjourn, Mr. ALLISON and Mr. SAULSBURY.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. KILGORE, from the Committee on Enrolled Bills, reported that they had examined and found duly enrolled a joint resolution of the following title; when the Speaker signed the same, namely:

Joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888.

RICHARD E. RHEA.

Mr. FARQUHAR. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution I send to the desk.

The Clerk read as follows:

Resolved by the House of Representatives, That the Doorkeeper be authorized to retain in his employment for the month of November Richard E. Rhea, mail-page of the House, at the same rate of compensation he now receives; and the Clerk of the House be authorized to pay said sum out of the contingent fund of the House.

Mr. FARQUHAR. I will state, Mr. Speaker, that this morning when the resolution was offered by the gentleman from Tennessee [Mr. RICHARDSON] providing for certain employments during the recess, this was seemingly omitted. There is a demand for his services for ten days after the conclusion of a session, and for the ten days preceding the next session.

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. KILGORE. I understand from the Clerk of the House that the contingent fund of the House is exhausted, or will be when the appropriations already made by the House are provided for. It will therefore be unnecessary to pass any other resolution making drafts upon that fund.

Mr. FARQUHAR. This will take very little money, not more than $30.

Mr. KILGORE. But I understand from the Clerk that there was not enough money in the fund to pay what has been already voted.

Mr. FARQUHAR. Then this will simply go into the pro rate. I can say to the gentleman that it is imperative that these services should be performed, and if the money to pay for them is not in the fund it can be provided for in the deficiency bill.

Mr. KILGORE. I do not think it is necessary to pass any further resolutions of this character, for the reason I have stated.

Mr. RICHARDSON. I suggest to the gentleman that this will be provided for in the deficiency bill.

Mr. KILGORE. Very well. I will not object further.

The resolution was agreed to.

Mr. FARQUHAR moved to reconsider the vote by which the resolution was agreed to; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

JULIA A. NUTT.

Mr. LAGAN. I ask unanimous consent to take up for consideration at this time the bill (H. R. 11580) for the relief of Julia A. Nutt.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. KILGORE. I think we ought not to pass any more bills.

CLERK TO COMMITTEE ON MANUFACTURES.

Mr. WASHINGTON. I ask unanimous consent for the present consideration of the resolution which I send to the desk.

The resolution was read, as follows:

Resolved, That the clerk of the Committee on Manufactures be continued on the roll, at the rate of $6 per day, during the recess of the present Congress, the committee having been authorized to sit during the recess; and that the Clerk of the House be authorized to pay the same out of the contingent fund of the House.

Mr. WASHINGTON. I want to state that the Committee on Manufactures has been authorized to sit during the recess, but in the resolution giving that authority no provision was made for a clerk, so that unless the resolution be adopted they will be without a clerk.

Mr. SOWDEN. Is the clerk of that committee an annual clerk?

Mr. WASHINGTON. No; he is a session clerk.

The SPEAKER. Is there objection to the present consideration of this resolution?

There was no objection.

The resolution was agreed to.

Mr. WASHINGTON moved to reconsider the vote by which the resolution was agreed to; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

REPORT OF COMMITTEE APPOINTED TO WAIT ON THE PRESIDENT.

Mr. MCMILLIN, Mr. TURNER of Georgia, and Mr. RYAN, the committee appointed to wait upon the President, having returned, presented themselves at the bar of the House, and

Mr. MCMILLIN said: Mr. Speaker, the committee appointed to wait upon the President to inform him that both Houses were ready to adjourn and to ask whether he had any further communication to make to Congress, instruct me to report that they have performed that duty and have received the response from the President that he has no further communication to make.

LEAVE TO PRINT.

Mr. O'NEILL, of Pennsylvania. I ask unanimous consent to have printed in the RECORD the paper which I hold in my hand, which is a reply to the report on "free quinine" prepared by Mr. John W. Springer at the request of Hon. WILLIAM M. SPRINGER, a member of this House, and heretofore printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. WASHINGTON. A few days ago objection was made to the gentleman from Alabama [Mr. OATES] having printed in the RECORD something in relation to the tariff, because it was not his own production. From what I know of the paper presented by the gentleman from Pennsylvania it comes under the same head, and therefore I object.

RECESS.

Mr. MCMILLIN. Mr. Speaker, I move that the House now take a recess until seven minutes to 1 o'clock.

Mr. STONE, of Kentucky. I ask the gentleman to withhold that motion for a moment in order that I may offer a resolution.

Mr. MCMILLIN. I yield for that purpose.

EMPLOYÉS OF HOUSE POST-OFFICE.

The resolution was read, as follows:

Resolved by the House of Representatives (the Senate concurring), That the employés in the post-office of the House of Representatives be paid out of the contingent fund of the House for two weeks' services next preceding the beginning of the next session of Congress which they are required to perform; the sum to be fixed upon the present rate of their compensation.

The resolution was agreed to.

Mr. STONE, of Kentucky, moved to reconsider the vote by which the resolution was passed; and also moved that the motion to reconsider be laid on the table.

The latter motion was agreed to.

RECESS.

The motion of Mr. MCMILLIN was then agreed to; and the House accordingly (at 12 o'clock and 40 minutes p. m.) took a recess until seven minutes to 1 o'clock.

The recess having expired, the House reassembled at 12 o'clock and 53 minutes p. m.

THANKS TO THE SPEAKER.

Mr. MCMILLIN having taken the chair as Speaker *pro tempore*,

Mr. RYAN offered the following resolution:

Resolved, That the thanks of this House are hereby tendered to Hon. JOHN G. CARLISLE, the Speaker, for the courtesy, ability, and fairness with which he has presided over the deliberations of the first session of the Fiftieth Congress.

The resolution was adopted unanimously.

MESSAGE FROM THE PRESIDENT.

A message from the President, by Mr. PRUDEN, one of his secretaries, announced that he had approved bills and joint resolutions of the following titles:

An act (H. R. 10112) granting to the Duluth and Winnipeg Railway Company the right of way through the Fond du Lac Indian reservation, in the State of Minnesota, and for other purposes;

Joint resolution (H. Res. 101) providing for the printing of decisions of the Department of the Interior regarding public lands and pensions for sale;

An act (H. R. 7516) to increase the pension of Sylvester Stearns;

An act (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes;

An act (H. R. 10606) to constitute Lincoln, Nebr., a port of delivery, and to extend the provisions of the act of June 10, 1880, entitled "An act to amend the statutes in relation to immediate transportation of dutiable goods, and for other purposes," to the said port of Lincoln;

An act (H. R. 2972) authorizing the President to appoint and retire Alfred Pleasonton with the rank and grade of major;

An act (H. R. 4765) for the relief of G. W. McAdams;

An act (H. R. 11181) making an appropriation for the enforcement of the Chinese exclusion act;

An act (H. R. 8962) for the relief of Anthony L. Woodson;

An act (H. R. 4601) to amend the naval record of Nickolas Leuschen, Peter Leuschen, and Loth Possum;

An act (H. R. 7421) for establishing a light off Pamlico Point, North Carolina;

An act (H. R. 6514) for the allowance of certain claims reported by the accounting officers of the United States Treasury Department;

An act (H. R. 11599) to authorize the Postmaster-General to rent a suitable building in the city of Washington to be used as a mail-bag repair-shop, and for other purposes;

An act (H. R. 1641) for the erection of a light-house, at or near a point midway between Barnegat and Navesink lights, in the State of New Jersey;

An act (H. R. 1249) for establishing a light-house and fog-signal on Roe Island, Suisun Bay, California;

An act (H. R. 5700) to facilitate the transportation of life-saving and light-house supplies at Hog Island, Virginia;

An act (H. R. 7604) for the establishment of a light-house and fog-signal at or near Gull Shoal, Pamlico Sound, North Carolina;

An act (H. R. 6619) for the relief of Eliza A. Cutter Jones;

An act (H. R. 2196) for the relief of S. T. Marshall;

An act (H. R. 10735) for the removal of the political disabilities of Theodore Lewis, of Louisiana;

Joint resolution (H. Res. 229) to print the agricultural report for 1888;

Joint resolution (H. Res. 231) authorizing the Secretary of the Senate and the Clerk of the House of Representatives to pay to the officers and employés of the Senate and House of Representatives borne on the annual rolls their respective salaries for the month of October on the 20th day of said month;

Joint resolution (H. Res. 232) making appropriations to enable the Secretary of the Senate and Clerk of the House of Representatives to pay the session employés of the Senate and House for the full month of October; and

Joint resolution (H. Res. 233) authorizing the exhibits made by the Government at the centennial exposition of the Ohio Valley and Central States at Cincinnati, Ohio, to remain at said exposition until and including the 15th day of November, 1888.

NOTE.—The message also announced that the following bills having been presented to the President on October 5, 1888, and not having been returned by him to the House of Congress in which they originated within the ten days prescribed by the Constitution, had become laws without his signature:

An act (H. R. 6022) granting a pension to Smith Bodkins;

An act (H. R. 10171) granting a pension to Rachel Rogers;

An act (H. R. 10173) granting a pension to Catharine Mulligan;

An act (H. R. 10274) granting a pension to Joseph W. Filler;

An act (H. R. 10672) granting a pension to Mighill H. Patten;

An act (H. R. 9148) to grant a pension to Jane Robinson; and

An act (H. R. 3908) increasing the pension of Jesse L. Garrett.

THANKS TO OFFICERS OF THE HOUSE.

Mr. HOPKINS, of New York. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution which I send to the desk.

The resolution was read, as follows:

Resolved, That the thanks of this House be tendered to the Clerk and the officers of this House for the courteous discharge of their duties.

The resolution was unanimously agreed to.

The SPEAKER. The hour of 1 o'clock having arrived, I now declare this House adjourned *sine die*.

PRIVATE BILL INTRODUCED AND REFERRED.

Under the rule a private bill of the following title was introduced and referred as indicated below:

By Mr. BUNNELL: A bill (H. R. 11609) granting a pension to Hellen A. Moore—to the Committee on Invalid Pensions.

PETITIONS, ETC.

The following petitions and papers were laid on the Clerk's desk, under the rule, and referred as follows:

By Mr. C. H. ALLEN: Petition of Eunice G. Saunders, widow of William Saunders, for a widow's pension—to the Committee on Invalid Pensions.

Also, petition of John Tynen, Stephen Winningder, Daniel Whitman, and Horace Merrill, for pension as veterans of the Mexican war—to the Committee on Pensions.

Also, memorial of John Tynen and others—to the Committee on Pensions.

By Mr. CONGER: Petition of citizens of Massachusetts, Maine, Alabama, Missouri, Mississippi, Virginia, Oregon, Pennsylvania, Michigan, Indiana, Georgia, and California, in favor of pure lard and pure food and drugs—to the Committee on Agriculture.

By Mr. WASHINGTON: Petition of citizens of Pickett County, of Henderson County, and of Sunbright, Tenn., in favor of pure lard and pure food—to the Committee on Agriculture.

APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Aid to Common Schools.

SPEECH

OF

HON. JOSEPH R. HAWLEY,

OF CONNECTICUT,

IN THE SENATE OF THE UNITED STATES,

Tuesday, February 14, 1888,

On the bill (S. 371) to aid in the establishment and temporary support of common schools.

Mr. HAWLEY said:

Mr. PRESIDENT: There is a very large sum of money involved in this measure, popularly known as the Blair bill; but that is a comparatively small consideration. The defenders of the bill have been obliged, I think I may say, to develop their theories of the Constitution, and those theories have so much of a foothold popularly nowadays, not only among people who superficially discuss these matters, but even among men of eminence and supposed legal learning, that it leads one to meditate as to whether we are on the eve of a possibly serious departure from that theory of the Constitution and the relations between the Federal Government and the States to which we have given adhesion for a century.

The proposition before us is to give $79,000,000 in this one bill to be expended during eight years. During eight fiscal years there will be annually appropriated, the first year seven, the second ten, the third fifteen, the fourth thirteen, the fifth eleven, the sixth nine, the seventh seven, and the eighth five million dollars; and two million dollars additional are provided for building school-houses, making $79,000,000. To an old-fashioned reader of old-fashioned works upon the Constitution there are many very singular and interesting features in the bill. One is:

Provided, That no money shall be paid to a State, or any officer thereof, until the Legislature of the State shall, by bill or resolution, accept the provisions of this act; and such acceptance shall be filed with the Secretary of the Interior. And if any State, by its Legislature, shall decline or relinquish its share or proportion under this act, or any portion thereof, the sum so relinquished shall go to increase the amount for distribution among the other States and the Territories as herein provided. And any State or Territory which shall accept the provisions of this act, at the first session of its Legislature after its passage, shall, upon complying with the other provisions of this act, be entitled at once to its pro rata share of all previous annual appropriations.

There is a premium on a prompt acceptance. The money is to be divided among the several States in the proportions of the illiteracy of their population as stated by the census of 1880. Here is another feature that, among our New Englanders, who are indeed truly and righteously State-rights men, whatever may have been thought of us, is rather a singular thing. The governor of a State is to be expected to make humble and detailed report to the Secretary of the Interior upon a variety of matters that for a century have been considered matters of internal administration entirely.

After the acceptance of the general bill by the Legislature of a State, I do not see that the governor of the State has any discretion; at any rate if he does not make his report his State loses its share. It is practically, then, a compulsion, practically an order issued by the Secretary of the Interior to the governor to report to him—

A statement, certified by him, showing the common-school system in force in such State or Territory; the amount of money expended therein during the last preceding school year in the support of common schools, not including expenditures for the rent, repair, or erection of school-houses; whether any discrimination is made in the raising or distributing of the common-school revenues or in the common-school facilities afforded between the white and colored children therein, and, so far as is practicable, the sources from which such revenues were derived; the manner in which the same were apportioned to the use of the common-schools; the number of white and colored children in each county or parish and city between the ages of ten and twenty-one years, both inclusive, as given by the census of 1880, and the number of children, white and colored, of such school age attending school; the number of schools in operation in each county or parish and city, white and colored; the school term for each class; the number of teachers employed, white and colored, male and female, and the average compensation paid such teachers; the average attendance in each class, and the length of the school term. No money shall be paid out under this act to any State or Territory that shall not have provided by law a system of free common schools for all of its children of school age, without distinction of race or color, etc.

So that certain legislation is to be required of the States, not by direct command of the Federal Government, but under a previously purchased assent to the terms of the bill, and then the request becomes the equivalent of a command to the governor of the State.

Under what rules is this great fund to be administered? Here is an interesting feature: The Secretary of the Interior is charged with the proper administration of this law, through the Commissioner of Education. The Secretary is made the supervisor of our governors. The Commissioner of Education is to be made a sort of secretary of state or executive officer for the Secretary of the Interior. They are "authorized and directed, under the approval of the President, to make all needful rules and regulations, not inconsistent with its provisions, to carry this law into effect."

What these rules are to be the State that makes previous acceptance of the general terms of the bill can not know in advance. The Secretary and the Commissioner, with the approval of the President, may alter these administrative rules from time to time, according to their discretion. A governor is still bound to submit to these rules upon the risk of losing the very large sum of money for his State. His State has, by what is supposed to be a binding bargain, agreed that he shall report, and has, moreover, promised a course of legislation.

Then there are some directions—I shall call them directions—to the State as to the character of its legislation.

That the instruction in the common schools wherein these moneys shall be expended shall include the art of reading, writing, and speaking the English language, arithmetic, geography, history of the United States, and such other branches of useful knowledge as may be taught under local laws—

That is kind!—

and copies of all school-books authorized by the school boards or other authorities of the respective States and Territories, and used in the schools of the same, shall be filed with the Secretary of the Interior.

The language of polite request is dropped. The law says imperatively to each State "if this bill is accepted and you wish the money, copies of every book you use must be filed with the Secretary of the Interior."

A provision follows that each State shall raise a sum as great as that given it by the National Government. Then—

SEC. 9. That a part of the money apportioned to each State or Territory, not exceeding one-tenth thereof, may, in the discretion of its Legislature, yearly be applied to the education of teachers for the common schools therein—

provides for training-schools or normal schools.

Further, who shall decide what are common schools "not sectarian in character" in the terms of section 11? I suppose the Secretary of the Interior will have that interesting question before him as to what extent schools are sectarian, which, as once was done in good old-fashioned New England, require the catechism to be well learned, or which, as in many modern district schools, open the day with a chapter of the Bible and a prayer. Are they "sectarian schools?" If so, to what "sect" do they belong? And could a State sanctioning such schools be allowed to have its several hundred thousand dollars a year under this bill?

Section 12 opens thus:

SEC. 12. That no second or subsequent allotment shall be made under this act to any State or Territory unless the governor of such State or Territory shall

first file with the Secretary of the Interior a statement, certified by him, giving a detailed account of the payments or disbursements made of the school fund apportioned to his State or Territory.

That differs in form, but really does not differ in spirit in its assumption of power from a command to the governor of every State that he shall file with the Secretary of the Interior annually a full statement of the payments and disbursements made of this fund.

The section proceeds to require of the governor—

And also the amount expended in such State or Territory, as required by section 9 of this act, and also a statement of the number of school districts in such State or Territory, and whether any portion of such State or Territory has not been divided into school districts or other territorial subdivisions for school purposes, and if so, what portion, and the reasons why the same has not been so subdivided; the number of children of school age in each disdrict, and the relative number of white and colored children in each district, and of the number of public, common, and industrial schools in each district; the number of teachers employed; the rate of wages paid; the total number of children in the State or Territory, and the total number taught during the year and in what branches instructed; the average daily attendance, and the relative number of white and colored children; and the number of months in each year schools have been maintained in each school district.

But hear this:

And if any State or Territory shall misapply or allow to be misapplied, or in any manner appropriated or used other than for the purposes and in the manner herein required, the funds, or any part thereof, received under the provisions of this act, or shall fail to comply with the conditions herein prescribed, or to report as herein provided, through its proper officers, the disposition thereof, and the other matters herein prescribed to be so reported, such State or Territory shall forfeit its right to any subsequent apportionment by virtue hereof—

Until the full amount so misapplied, etc., shall have been replaced. And the sum so lost shall be distributed elsewhere.

If it shall appear to the Secretary of the Interior that the funds received under this act for the preceding year by the State or Territory have been faithfully applied to the purposes contemplated by this act, and that the conditions thereof have been observed, then, and not otherwise, the Secretary of the Interior shall distribute the next year's appropriation as is hereinbefore provided. And it shall be the duty—

This is interesting—

And it shall be the duty of the Secretary of the Interior to promptly investigate all complaints lodged with him of any misappropriation by or in any State or Territory of any moneys received.

There is no complainant described or appointed. The complaint may come from anybody, everybody, who, in the judgment of the Secretary of the Interior, is important enough to deserve a hearing. When he listens to a complaint I see nothing to be done but to send a notice to his excellency the governor of one of our sovereign States, asking him to give account to the Secretary of the Interior as to these charges of misappropriation and failure to comply with the terms of the law.

To proceed:

And it shall be the duty of the Secretary of the Interior to promptly investigate all complaints lodged with him of any misappropriation by or in any State or Territory of any moneys received by such State or Territory under the provisions of this act, or of any discrimination in the use of such moneys; and the said complaints, and all communications received concerning the same, and the evidence taken upon such investigations, shall be preserved by the Secretary of the Interior, and shall be open to public inspection and annually reported to Congress.

It is easy to suppose a case, as follows: The Secretary of the Interior sends notice to the governor, we will say of Alabama, that there are serious charges made by five or fifty respectable citizens in the northwest county of the State that there has been a misappropriation in that county, a violation of the provisions of the act. The Legislature may be in session. The time of the Secretary of the Interior is much occupied. He is required to investigate promptly. He requests the governor of the State to come up to Washington and bring the evidence with him as to how he has disbursed this money, and be prepared to answer the charges. The governor of the State says to the Legislature, "I will be obliged to you if you will take a recess for a fortnight; we shall lose a million dollars if I do not go directly to the Secretary of the Interior and carry my papers and witnesses with me. I must appear there to represent Alabama, the defendant, in answer to five of her citizens on a complaint that she has violated a trust."

Such a case is quite possible; it is almost literally provided for. It is not to be supposed this $79,000,000 will all go through a process of distribution covering eight years without complaint as to the manner of the expenditure—involving charges of misapplication, failure to make full annual reports, keeping sectarian schools, discrimination on account of color, failure to prescribe the proper courses of education, or to file copies of its school-books, etc.

The proceedings must be summary, because on or before the 1st day of September in each year the Secretary of the Interior is required to report to the President whether any State or Territory has forfeited its right to receive its apportionment under this act, and how forfeited, and whether he has withheld such allotment on account of such forfeiture.

No State or Territory that does not distribute the moneys raised by its own taxes equally, without distinction of race or color, is to be entitled to any of the benefits of this act.

Then there are two millions more provided in the sixteenth section to be given to the several States on the same basis, the basis of illiteracy, to be known as the common-school-house fund, and to be expended for the erection of school-houses for the use and occupation of pupils attending schools in the sparsely populated districts. These houses must be built in accordance with plans to be furnished free on application by the Bureau of Education; but not more than $150 shall be paid from said fund towards the cost of any single school-house. Nothing extravagant is provided for there, evidently. There is something ridiculously compassionate in this bill in its attempt to go down to the people of the State a thousand miles away from here and tell them we will give them $150 if they will furnish the rest and let us show them how to build a $300 school-house.

I remember well the log school-house of my childhood, in a Southern State. It was of the rudest possible construction, costing, perhaps, two days' labor of the neighbors and a few cents for nails and nothing for glass. But it was a good school; and the instruction ranged from A, B, C to Virgil and Horace. A proposal to ask the National Government for $150, or to take it if offered, would have been offensive.

It is said that nothing is done under this bill, and great stress is laid upon that, without the previous assent of the State. I can not see how that materially changes the character of the transaction. To impose upon a State these regulations or virtual commands, it is virtually admitted, would be unconstitutional; but the consent of the State having been obtained, it is alleged to be constitutional. That consent only changes it from rape to prostitution. I hold that a State has no power to give the National Government an extension of its control over that State's affairs. A single State can not surrender any fraction of its powers.

In reply to propositions from a Federal officer to give money for schools and lay down terms and conditions and require legislation and detailed statistics and copies of school-books and statements of the courses of instruction, the natural reply of a New England governor would be, "I have the honor to refer you to the history of this Commonwealth for two hundred and fifty years, colony and State, to show you that it has never been in the habit of reporting to anybody how it taught the children in its schools."

But there is no limit to the possible extent of encroachments upon local rights and duties if the policy and logic of this bill are to be sanctioned. A judicious distribution of money might bring over to national control a wide range of subjects which we have hitherto supposed to be retained by the several States for their exclusive regulation.

Mr. President, I am perfectly well aware that the constitutional questions involved here have been argued most ably, at great length, and repeatedly. I make the frank admission that, though I am glad to see that some Senators are listening, I am not speaking to the Senate, but to a part at least of the people of Connecticut, because a decent respect for their opinions in favor of this measure requires that I should give some explanation of my opposition. I hope Senators will pardon me if I seem to say unnecessarily something of what has already been said.

I consider that the bill is a judgment entered up that the common-school system of the country, and, further than that, the system of local government on the whole, has been a failure in a very important particular. If there be one thing that distinguishes the legal and constitutional history of this country, it is the grand theory of decentralization and localization of government. We inherited from our English and Saxon ancestors the local governments of tithings, and hundreds, and boroughs, and towns, and counties. As much power as possible has been retained by the people for the management of all business that begins and ends within their own sight and concerns the so-called smaller matters of government. And this because such work can so be best done, and if not always best done in the judgment of people of other localities or of higher authorities, yet done in the manner most likely to content the people and develop the inestimable power of self-government.

This bill says that in a matter so fundamental, so indispensable, as the education of children, there are a third of the States, more or less, that have so far failed that we must enter upon a very doubtful exercise of power and take a considerable share of control. So far as I have been able to ascertain the authority for the proposed new policy, it is said to lie chiefly in what is called the "general-welfare" clause of the Constitution. It can be nowhere else. It is not found in usage; it is not found in statute; it is not in the letter of the Constitution.

Section 8 of Article I of the Constitution contains eighteen clauses specifying grants of power to the Congress. The first clause is as follows:

The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States.

It is claimed that herein Congress is empowered to provide for the "general welfare;" that is, to do anything which in its judgment conduces to the welfare of the nation, and as education is a good thing, Congress has a right to go to work to educate the people, especially as it is alleged that many of them are either unable or unwilling, or partly both, to educate themselves. The Senator from New Hampshire pushed this claim to a most extravagant extent, likening the bill to the desperate endeavors of a nation to save its life in time of war, and affirming for the National Government a right to say that school education is a matter of such vast and vital importance, and is so wofully neglected, that the nation must in a time of peace and wonderful prosperity assume measurable control over it, even though it were admitted to be

beyond constitutional reach. Pomeroy's Constitutional Law has become a standard authority. This authority (he was my classmate and old friend, I am happy to say) declares:

If the construction should be adopted which regards the second clause [to pay the debts and provide for the common defense and general welfare] as an independent grant of power, it would, in effect, be making our general government unlimited. Providing for the common defense and general welfare includes everything which any government could possibly do; and a grant of power in these broad terms would be the same as making Congress omnipotent, equal in the extent of its functions to the British Parliament.

The usual and constant theory of the Government has been that the expression "to pay the debts, and provide for the common defense and general welfare" is not an independent grant of power. The power of unlimited taxation is truly granted, for that is essential to sovereighty, but it is granted for specified purposes, and the application of the levied money is confined to paying the debts and providing for the common defense and general welfare. As Story and others suggest, the clause has now the same meaning and purpose that it would have if it read, "The Congress shall have power to lay and collect taxes" in order "to pay the debts and provide for the common defense and general welfare." So far from being used to signify a grant of power the words "general welfare" are used for a limitation of power.

The words had a history and a construction before the Constitution was draughted. They occur in attempts to draught schemes of colonial federation. They are found in the third of the Articles of Confederation, thus:

ART. 3. The said States hereby severally enter into a firm league of friendship with each other for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves, etc.

Clearly the Continental Congress understood that as well as if it had italicised the word "general" and said "for their general and not individual, local, and particular welfare."

Bancroft says:

The phrase "general welfare," adopted from the Articles of Confederation, though seemingly vague, was employed in a rigidly restrictive sense to signify (in the language of Washington) "the concerns of the Union at large, not the particular policy of any State."

When the necessity for a better bond of union appeared and the great constitutional convention assembled, it adopted the following resolution:

That the national legislature ought to be empowered to enjoy the legislative rights vested in Congress by the Confederation, and moreover, to legislate in all cases to which the separate States are incompetent, or in which the harmony of the United States may be interrupted by the exercise of individual legislation.

They afterward revised the resolution, and after again proposing to give the new Government all the powers granted by the Articles of Confederation, they added:

And moreover, to legislate in all cases for the general interests of the Union, and also in all those to which the States are separately incompetent, or in which the harmony of the United States may be interrupted by the exercise of individual legislation.

To me there are no explanatory phrases of that day more significant of the authority given Congress than those quoted.

Roger Sherman and Oliver Ellsworth, delegates from Connecticut, in their joint letter transmitting the new Constitution to the governor of Connecticut, said that—

The additional powers vested in Congress extend only to matters respecting the common interests of the Union, and are especially defined, so that the particular States retain their sovereignty in all other matters. The objects for which Congress may apply money are the same mentioned in the eighth article of the Confederation, namely, for the common defense and general welfare, and for payment of the debts incurred for those purposes.

Whoever has examined the too scanty records of that constitutional convention will find that no stress was ever laid upon the words "general welfare" as conveying the power claimed by the advocates of this bill. Nobody thought of them save an occasional skeptic, hostile to the general plan, who pointed to that clause as virtually consolidating all the colonies in one grand national government; but nobody either in the great convention itself or in the separate State convention ever paid serious attention to that criticism.

Among the ablest bodies ever assembled in the country were the conventions called by the several States to consider the adoption of this Constitution. The ablest jurists and wisest legislators of the colonies were there. There is some record of their debates. I have not been able to find a single instance in which the most captious critic, and critics were abundant, claimed that the words "general welfare" had the construction given them by the Senator from New Hampshire and the Senator from New York [Mr. EVARTS]. Those conventions were all exceedingly jealous of this new Government. The great obstacle in the path of the adoption of the Constitution was the popular fear that it was to absorb the precious rights of local government. Seven States offered amendments: New York, thirty-three; Massachusetts, twenty-six; Rhode Island, twenty-one; Virginia, twenty—in general looking rather towards restrictions and limitations of national power, but not one attempting to give a restricted meaning to the words "general welfare," simply because those words were understood to be themselves words of limitation. The general character of those propositions is shown by the ten amendments that were adopted. Two of them (the ninth and tenth) were not in the original only because they would have been really superfluous, and their adoption was due only to abundant caution. They are:

ART. IX. The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

And the famous Article X:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

There is another test of the nation's interpretation of that clause. There have been about one hundred and ten State constitutions adopted in the United States. A considerable number—I have no means of knowing how many, and in many cases undoubtedly they were excellent instruments—were draughted and failed of adoption. Of those one hundred and ten, I think seventeen were adopted before the Constitution of the United States, but at least a hundred constitutional conventions have been held, probably many more than that, since 1789. Now, I appeal to every Senator to say whether I am correct in affirming that probably we have had no representative bodies in the United States to equal those constitutional conventions in ability. I do not think that there is an instance in which a State (unless it might have been in some rough periods of reconstruction; certainly in times of peace there has not been an instance) did not with a broad and generous patriotism say, "Let us have our best men, by general ticket, if not otherwise."

Is there a single one of those constitutions which gives the slightest imaginable color to the construction that the great Senator from New York places on this clause of the Constitution? Not a single one.

There is still other authority. I take the liberty of quoting some familiar passages from Jefferson, Madison, and Story. I read an extract from volume 1 of Story on the Constitution, page 644, section 926, quoting Thomas Jefferson in his opinion on the Bank of the United States, 15th February, 1781:

To lay taxes to provide for the general welfare of the United States is—

Says he—

to lay taxes for the purpose of providing for the general welfare. For the laying of taxes is the power and the general welfare the purpose for which the power is to be exercised. Congress are not to lay taxes *ad libitum* for any purpose they please, but only to pay the debts or provide for the welfare of the Union. In like manner they are not to do anything they please to provide for the general welfare, but only to lay taxes for that purpose. To consider the latter phrase, not as describing the purpose of the first, but as giving a distinct and independent power to do any act they please, which might be for the good of the Union, would render all the preceding and subsequent enumeration of power completely useless. It would reduce the whole instrument to a single phrase, that of instituting a Congress with power to do whatever would be for the good of the United States; and as they would be the sole judges of the good or evil, it also would be a power to do whatever evil they pleased. It is an established rule of construction, where a phrase will bear either of two meanings, to give that which will allow some meaning to the other parts of the instrument, and not that which will render all the others useless. Certainly no such universal power was meant to be given them. It was intended to lace them up strictly within the enumerated powers, and those, without which, as means, those powers could not be carried into effect.

This opinion was deliberately reasserted by Mr. Jefferson on other occasions.

Mr. Madison, in his letter of November 27, 1830, to Mr. Stevenson, says:

Consider, for a moment, the immeasurable difference between the constitution limited in its powers to the enumerated objects, and expanded, as it would be, by the import claimed for the phraseology in question. The difference is equivalent to two constitutions, of characters essentially contrasted with each other; the one possessing powers confined to certain specified cases, the other extended to all cases whatsoever. For what is the case that would not be embraced by a general power to raise money; a power to provide for the general welfare, and a power to pass all laws necessary and proper to carry these powers into execution; all such provisions and laws superseding at the same time all local laws and constitutions at variance with them? Can less be said, with the evidence before us, furnished by the journal of the convention itself, than that it is impossible that such a constitution as the latter would have been recommended to the States by all the members of that body whose names were subscribed to the instrument?

Story, in his work on the Constitution, volume 1, page 630, section 909, says:

SEC. 909. The Constitution was, from its very origin, contemplated to be the frame of a national government, of special and enumerated powers, and not of general and unlimited powers. This is apparent, as will be presently seen from the history of the proceedings of the convention which framed it; and it has formed the admitted basis of all legislative and judicial reasoning upon it ever since it was put into operation, by all who have been its open friends and advocates, as well as by all who have been its enemies and opponents. If the clause "to pay the debts and provide for the common defense and general welfare of the United States" is construed to be an independent and substantive grant of power, it not only renders wholly unimportant and unnecessary the subsequent enumeration of specific powers, but it plainly extends far beyond them, and creates a general authority in Congress to pass all laws which they may deem for the common defense or general welfare.

Story, volume 1, page 302, says:

SEC. 426. On the other hand a rule of equal importance is not to enlarge the construction of a given power beyond the fair scope of its terms, merely because the restriction is inconvenient, impolitic, or even mischievous. If it be mischievous the power of redressing the evil lies with the people by an exercise of the power of amendment. If they do not choose to apply the remedy it may fairly be presumed that the mischief is less than what would arise from a further extension of the power; or that it is the less of two evils. Nor should it ever be lost sight of that the Government of the United States is one of limited and enumerated powers, and that a departure from the true import and sense of its powers is, *pro tanto*, the establishment of a new constitution. It is doing for the people what they have not chosen to do for themselves. It is usurping the functions of a legislator and deserting those of an expounder of the law. Ar-

guments drawn from impolicy or inconvenience ought here to be of no weight. The only sound principle is to declare, *ita lex scripta est*, to follow, and to obey.

The substance of it all is summed up by the same author, volume 1, page 644:

SEC. 927. The same opinion has been maintained at different and distant times by many eminent statesmen. It was avowed, and apparently acquiesced in, in the stated conventions called to ratify the Constitution; and it has been on various occasions adopted by Congress, and may fairly be deemed that which the deliberate sense of a majority of the nation has at all times supported. This, too, seems to be the construction maintained by the Supreme Court of the United States.

That is enough; repetition from a hundred can not strengthen that.

But what does the phrase "general welfare" mean? You may say that it is what Choate called a "rhetorical flourish," but it is entitled to an exceedingly valuable and perfectly proper meaning. The Government is one of enumerated and of limited powers, of course, but within that field over which it has control it is absolutely supreme. I am stating the merest truism. It may tax to the ninety-ninth dollar of the hundred the citizen has. It may take ninety-nine out of a hundred men to war and sacrifice them upon the altar for the good of the country. In everything that is necessary to its life it is supreme, even, for example, going down to the States and putting its hands on the ballot-box for the election of members of Congress, determining not only the men to register and receive the votes, but the men to count the votes, and the men to return the votes, if necessary protecting them by an army. Every citizen in every State who has a right to vote for a representative in the Legislature has a right to vote for a Representative in Congress, and this Government has the power and is bound to protect him in the exercise of his right.

While strictly adhering to the theory of limitations let us be equally ready to glorify the worth and majesty and supremacy of the Federal Government in its own great field.

The moment this Government faces outward to meet other nations it becomes a nation among nations, with all the powers which are essential to the dignity and usefulness thereof. There is nothing that Uncle Sam can be called upon to do as a gentleman among nations that he has not the absolute power to do.

Where else is it? The States have it not; and yet we are, as to all the world without, a nation, full orbed, matchless in splendor and grandeur, moving to the front of the world. Is it not so?

I made memoranda of things done by the United States Government, which the Senator from Mississippi [Mr. GEORGE] carefully collected and collated and recited in the last session to justify his view favorable to this bill, to show that the United States exercised an equally broad constitutional power in other matters. That which he used to justify himself I use to justify myself. It is in accordance precisely with what I have said of the great nation, full orbed, fully developed. He cited an appropriation in 1796 of $4,000 paid to two Americans who had been obliged to pay that sum to ransom themselves from Algerines; $50,000 in 1812, under Madison, to purchase provisions to give to Venezuelans who had suffered from an earthquake. Madison in 1813 signed a bill to distribute vaccine matter among the States. It would be less defensible, it seems to me, nowadays; but it was a very singular, new, and wonderful thing then, and was regarded certainly with as much dignity as our present distribution of beans.

In 1847 ships of war were sent to convey provisions to the people of Ireland. In 1871 ships went with provisions to the starving people of France and Germany. In 1876 the Government spent something like a million dollars participating in the great centennial exhibition. It spent money to explore the Amazon; it spent money upon the Wilkes exploring expedition; it spent money upon expeditions to the North Pole; it surveyed the Nicaragua canal; it has observed eclipses, etc.

Such are things which I claim that the Government has a right to do, concerning the broad general welfare as distinguished from the local and particular and personal welfare of the people of the States. All these things are consistent with the claim I made that there must be somewhere the perfection of a nation as to external matters. It is not to be supposed that we shall be the only government in the world that can not pay a compliment to any other nation. It is not to be supposed that we are the only people in the world who can not make a subscription to some international charity or which can not put up a great statue. Here is a gallant English or Dutch captain who rescues one of our sinking ships; the President sends him a watch or a chronometer. In all external matters the Federal Government is supreme, and must do and has the right to do whatever it is well for a gentleman among nations to do, or, in the language of the constitutional convention, that "to which the separate States are incompetent, or in which the harmony of the United States may be interrupted by the exercise of individual legislation."

When the Connecticut sailor found the old bark Resolute derelict in the Arctic seas and brought it down to New London, a fine exploring ship of the British Government, our Government compensated the sailor for it, took possession of it, fitted it up in good taste, and sent it to the British people with our compliments and good-will. It was accepted in like spirit; and now a fine table made from oak of the old Resolute, and sent over by Queen Victoria, is that upon which the President writes daily in his audience chamber. I do not find the constitutional power for that in any particular letter or word of the Constitution, but I have not the slightest difficulty in finding it in the legitimate inferences and practice of the nation from 1789 to this day. The Constitution intended to make it a full-fledged nation with a government authorized to do anything necessary to which individual States were incompetent. The fathers were not thinking that a State could not keep a district school.

But this is substantially the theory of my absent friend, the Senator from New York. The education of the people is a great and glorious work. The American people are a great and glorious people. Therefore, the great and glorious National Government must undertake the great and glorious work. Let us apply these theories in another direction. If there be one thing that stands first among the objects of human government it is the protection and salvation of life. When two wild and savage tribes engage in battle, and, when the strife is over, spare the lives of captives, they have evidently made a long step toward civilization.

The thing called government first stops men from killing each other, and, secondly, protects their property.

Some of our friends, it seems to me, forget that there is no general law of the United States against murder in any State of the Union, or in force anywhere save upon the high seas, or in waters under Federal maritime jurisdiction, or in dock-yards, forts, or arsenals, or other places under exclusive Federal jurisdiction. Six inches outside of those reservations one man a day for ten years may be killed in the face of the laws and the officers of the United States, and not an officer can lawfully interfere unless, indeed, the crime shall be connected with the obstruction of some Federal law.

Moreover, when a citizen of Connecticut goes to London or to Paris and suffers outrageous wrong and sends report thereof to Washington, the power of the nation is invoked, and if necessary our magnificent Navy and Army may be sent immediately to set it all right. Sixty millions of people would demand justice. Let the same man cross the line into Rhode Island and in like manner be infamously wronged. The Government that might be ready to send armies and navies against other nations has nothing whatever to say to Rhode Island. The wrong may be repeated year after year, and it may be in spirit and reality inflicted upon the citizen simply because he is a citizen of Connecticut; but so long as Rhode Island passes no law against citizens of Connecticut as distinguished from citizens of other States no branch of the Federal Government can interfere. Now, why is not the eloquence of the two distinguished Senators directed toward these obvious omissions in the great Constitution, under which there is no possibility of doing so plain and proper a thing as protecting human life? Is a Government providing for the general welfare when it can not enforce laws for the ordinary protection of persons and property in ninety-nine one hundredths of the area of the States?

Let us try another test. One may take the United States Constitution and, without having a State constitution before him, may easily sketch what the latter must be. On the other hand, give to a legal scholar, who has never heard of the Federal Constitution, copies of the State constitutions and he can construct the general features of the former, just as the naturalist, from a single bone, reconstructs the prehistoric animal.

The United States has passed no law against murder, mayhem, rape, robbery, theft, and the whole range of crimes against person and property, save only when committed thus, in the language of the statute:

Within any fort, arsenal, dock-yard, magazine, or in any other place or district of country under the exclusive jurisdiction of the United States.

Or upon the high seas, or in any arm of the sea, or in any haven, river, creek, basin, or bay within the admiralty and marine jurisdiction of the United States and out of the jurisdiction of any particular State.

As I have said, except in those areas described there is no Federal law against these great crimes. Now, take the statute-book and look through it. To the criminal statutes mentioned add the laws punishing crimes against the existence of the Government, piracy, crimes against the courts, against the operation of the Government in the matter of revenue, currency, and postal service, the misconduct of United States officials, and crimes against the elective franchise and the civil rights of citizens, and you have the whole catalogue of criminal laws of the National Government. The remainder of the single volume is chiefly devoted to the organization and duties of Congress, the judiciary, the various Executive Departments, the Army and Navy, Territories, lands and Indians, the diplomatic service and foreign relations, revenue, postal service, commerce, patents, bankruptcy, and a few other topics of obviously general national interest.

Take the Federal statute-book and you may construct the average State statute-book without having a single copy of a State statute-book in existence. Take the Revised Statutes of the several States, the thirty-eight volumes, and look through the tables of contents. Note the elaborate regulations of the educational system, the details of assessment and direct taxation, the scheme of life for multitudinous business corporations, the safeguards of the relation of husband and wife, parent and child, guardian and ward, master and servant; the laws of inhabitancy; the tenure and transfer of real estate; the laws of commons and highways; the laws of health and burial, and for the sale of poisons and liquors, the laws for the settlement of estates; the elaborate prohibitions of all wrongs to life, person, and property, and the full remedies in graded courts for all

wrongs, the civil and criminal writs, trials, and executions. You will soon perceive that, while many assertions of ancient rights are common to the national and state constitutions and bills of rights, the theory seems rather to be that, though surrendering the chief elements of sovereignty and the general care of all the great external relations of peace and war to a great central National Government, yet, in retaining so much for their hands exclusively, the people at home were doubting the ability and disposition of every power but their own, in their own States, to secure life, liberty, and the pursuit of happiness in the larger part of the field of life's work.

Our magnificent theory of the distinct functions of national and local governments, interlocking and supplementing and, as a whole, making the noblest success in history, is attacked by this bill and many other propositions. Why not? Is it not an embarrassment that we have thirty-eight varieties, yes, counting the Territories, forty-six varieties of law concerning marriage and divorce, forty-six sets of laws concerning devise and inheritance, forty-six sets relating to the tenure of land, etc.? Especially vexed are many good people by the variety and discord of the laws of marriage. Why does not our friend from New Hampshire direct his eloquent and illimitably broad style of construction toward passing some statutes relating to marriage and divorce that shall cover the whole country and so promote the "general welfare?"

There are inconveniences about many of these things. That we will admit; and if the inconveniences be so great that there ought to be a radical change in the fundamental theory of the government in that respect, let us have a constitutional amendment. We are not tied or hampered hopelessly. There is a constitutional process for constitutional changes; they are to be made by Congressional assent, followed by the approval of three-fourths of the State Legislatures, not by unconstitutional statutes and the purchase of the assent of States through generous gifts.

It is to be observed that in forming the Federal Constitution the people of the colonies did not give away as much as they could spare, but only as much as the nation absolutely must have. They did not give away as much as possible; they retained as much as possible. Nothing was given away that could be retained without defeating the purpose to found a nation.

I said there are many schemes to enlarge the central combination of power at the expense of the local subdivision thereof. For example: a demand is made, by what is supposed to be a popular party, that the great National Government shall take charge of the whole system of railroads. Imagine the embarrassments arising from the intertangled and intermingled relations of forty or fifty State and Territorial systems of railway company organization and government! There are about 150,000 miles of railroad in the United States, not counting side-tracks or double or quadruple tracks—enough to girdle the globe with six parallel lines. Perhaps it would cost the nation eight thousand million dollars to get possession of them, and then add six hundred thousand to the number of Government officers and employés to run them. What shall we do with seven hundred and fifty thousand Government officers, employés, soldiers, sailors, etc.? What dividend shall we pay the present owners of railway stock? Or what rate of interest shall we pay upon the bonds we issue for the stock? Political organizations already in the field are putting national railways in their platforms.

Some worthy people desire to have the National Government become a savings bank—that is to say, open banks of deposit at every post-office of any consequence, and pay interest to the depositors of money. How much shall we pay? Four per cent. is as little as most depositors will be content with. The present deposits in the savings banks of the country amount to nearly or quite eleven hundred millions. Why should we borrow that sum and pay 4 per cent. therefor when we can borrow all we want at 2.40 per cent.? But that is the theory pressed, as if there were something magical in the words "United States," and as if these matters could not be left in charge of the people in their several States. I am sure Connecticut desires to be let alone. Her citizens had $97,000,000 in savings banks. My colleague [Mr. PLATT] says it is now $102,000,000. Surely we can not be made to believe that any person sent from Washington is better qualified to manage them than our own citizens, or better qualified to inspect them than our own State superintendents, all of whom are under the daily watch of the depositors.

There is a little more logic in the proposition to establish a postal telegraph, because that bears a resemblance to the carriage of letters; but we shall look with great jealousy upon a governmental telegraph system, costing a hundred millions of capital and requiring a large force of employés.

I hear the exclamation "State rights!" as if I were unduly an advocate of State rights. I am upon the ground of the constitutional convention, of every State convention that was held to adopt that Constitution, and of every State convention that has sought to make a State constitution. I am upon the ground of every great writer upon the Constitution, and the ground of the Supreme Court from the first day to this. I am where the history, laws, Constitution, and legal brains of my country compel me to stand and stay until we have a complete reconstruction of our whole theory, which is decentralization, local self-government, and supreme majesty and power in the great representative central government within its necessary field.

I have heard it said, as if men believed it, too, in this Chamber, when reservation and caution were suggested concerning centralization, "Oh, well, State rights are played out since the war." I have heard it again and again. A Senator from a prominent Southern State said the other day that he did not care how many Trojan horses came along if each one had a million dollars in it. Another Senator, an able lawyer, said to me in this Chamber, "Well, whatever the people want is constitutional." I hope he was not in earnest; I am sure he was partly in joke.

Nothing relating to the rights of the States was settled by the war save this: A State can not be the final arbiter of infractions of the Constitution; a State can not be allowed, upon its own judgment that the Constitution has been violated, to go out of the Union; in short, the question of secession. That is all. Otherwise the Constitution remains exactly as it was and the relations of the States remain just as they were. Of course I mean excepting always the three great amendments. They are receiving their construction rapidly from the Supreme Court. It is surprising many to find that some of the clauses of the amendments are simply prohibitions directed to the States, and that the functions of the Federal Government (according to the Supreme Court) are confined to declaring, through the Supreme Court aforesaid, that violations of said prohibitions are unconstitutional.

No, sir, the true doctrine of State rights is simply that of the theory and practice of the nation, partly an inheritance, partly an insensible growth, and partly the fruit of the wisdom of 1788. If we are to change it, let us do so deliberately. Let us have a national convention to revise the Constitution, and if this bill has wise foundations, let us get the assent of three-fourths of the State Legislatures to a new article giving the National Government measurable or total control of the common schools everywhere. Does any man think that could be done? If not, then, and the Constitution must remain as it is in that regard, pray let us not attempt a most unjustifiable misconception of the function of the words "general welfare," or the still worse theory, that this Constitution must be silent—*inter arma leges silent*—as if we were in the face of a deadly national peril.

The best people to run the common schools are the people of the States, the counties, and towns, and the districts themselves. Not that there may not be failures and errors from time to time, just as in other matters of local government, but that the evils of the great central control would far overbalance those failures in the long run, and, education being a vital interest, if the people can not cultivate the desire, and zeal, and spirit of self-sacrifice requisite to conduct education, then local self-government is a failure.

But, in general, the people take good care of their local interests and duties. In general, but not everywhere and always, I am sorry to say, yet surely in the end, our form of government will be vindicated. It is to be regretted that the desire for good schools is not stronger in many localities. It is the desire that is lacking. Much is said of the weakness and poverty of the people. For a time there was poverty in the South. The fences were down, the fields were growing wild, the banks were ruined, railroad stock vanished. The negroes changed form as wealth and instead of being $3,000,000,000 or $4,000,000,000 in the hands of the slaveholders, they were $4,000,000,000 or $5,000,000,000 in their own hands, and after the first shock the economic condition was improved. There was destitution; there is little now. There is a greater lack of desire than of ability. There are the inevitable embarrassments of scanty scattered settlements. It is impossible to have ideal schools among a people of limited means, whatever their strong desire, who are but ten or twenty to the square mile.

There is no Southern State so poor as were the nine towns of Connecticut in 1650, and no county poorer; yet in that year they enacted that each town of fifty families should keep a good school, and, a few years later, that towns of one hundred families should have a grammar school able to fit pupils for the university already established at Cambridge. Penalties were imposed for neglect.

Now, will this measure increase the desire and the self-sacrifice for education? A large part of the value of the educational system is in its giving the people, the parents and the guardians, a just estimate of the value of education. The thoughtful people who are interested in great educational enterprises in the South hope to see the adults in neglected regions come to know enough to desire common schools. The schools will soon follow.

Are you going to hasten that result by such legislation as this? I do not believe it. I think it is the judgment of the wisest educators that the odds are against it. When you go from without, from a great, distant, inexhaustible source, this great fountain in Washington, and take a chest of money to pay for schools, it is believed that it would weaken instead of strengthen the hoped-for spirit. The muscles of the arm are not strengthened by being supported from without.

Consider, the money supplied by this bill would come by a round-about path from a distant source. It would not be seen as it traveled from the pocket of the tax-payer to the Treasury at Washington. But as it left the Treasury and was passed down by order of the Secretary of the Interior to the State treasurer and the managers of schools it would assume the guise of a heavenly blessing seen by the tax-payer for the first time. Yet it would have been shorn by the tolls of tax-gatherers.

The cheapest way to have a common school, other things being equal, is to have the people take the money from their own pockets and hand it to the schoolmaster and the carpenter and the wood-seller and the book-seller in their own district. The people will be more likely to see waste and mismanagement and they will think oftener of the school. The process nearest to that in value is the action of county and State authorities.

But if money is paid out at the back door to A B, and 95 per cent. of it is paid in a year after by C D at the front door, some illiterate people will think that C D pays it out of his own pocket.

When the eight years of this bill shall have expired, you will hear candidates upon the stump saying, "My fellow-citizens, I am going back to Washington in place of Smith. Smith says the Blair bill is played out; that the time is up, and he does not want any more of it. As against that narrow view of the Constitution, as for that miserable, by-gone, worn-out theory of State rights, I am for the broad national view. I promise you, if I get there, the Blair bill shall be renewed and continued. And inasmuch as the population of our district has increased, I shall join in demanding at least $12,000,000 or $15,000,000 a year hereafter. This is a great country."

I have no faith that the process will cease. More probably the measure will be made stronger and the scheme of supervision and interference stronger. A previous acceptance by the State will be waived by mutual assent. It will be enough to refer to the law of 1888. The farce of purchasing the assent of a State is easily omitted. The process of Federal assumption of State duties—let us hear less of rights and more of duties—the process will not take the form of violent trespasses. It is more likely to proceed in the disguise of good works and to win its way by purchases and compromises.

I am reminded of that *pia fraus*, that pious fraud of the ancient common law, the process of fine and recovery. A B was in possession of lands securely entailed, bolted down by entails, entirely beyond his control. Wherefore, in order to convey the lands he pretended to lose them. C D brought a sham suit; A B abandoned the defense and was allowed to compromise and surrender the estate. In time the courts and even the Parliament came to recognize this as honest business. It would be only repeating history if in twenty years after the passage of this bill the Federal Government should find itself virtual master and certain mismanager of common schools, and then encounter and surrender to a fierce agitation for a return to wisdom.

It does not bother me that Connecticut is to get $352,000 from this bill and pay out $871,780. I do not think it would trouble the people of our State at all if they thought the balance was given for a great and just national purpose. I know it would not. They never shrink from the cost of education or whatever is indispensable to State and national prosperity. But I have to doubt that the Senator from New Hampshire could go right into Connecticut and persuade some illiterates that the bill was really a benefaction to Connecticut, because they could see the $352,000 come into our state-house and go out into the towns and school-districts, but they would see little of the collection and travel of the $871,000 going down to Washington.

As an interesting, if not amusing, example of the exhibitions that this great benefaction develops, I present a resolution taken from the Democratic platform adopted in North Carolina June 26, 1884:

Whereas there is now more than $100,000,000 in the Treasury of the United States wrung from the pockets of the people by unjust taxation on the part of the Republican party: Therefore,

Resolved, That we will accept such distribution of said surplus revenues of the Government for educational purposes as may be made by the Congress of the United States: *Provided, always*, That the same shall be disbursed by State agents, and not accompanied by objectionable features and embarrassing conditions.

That which most strongly draws the sympathy of good people toward this measure is the appeal in behalf of the emancipated slave. There is no person under twenty-three years of age who was a slave. There is no person under twenty-six who has a recollection of his bondage. Nearly a generation of the former slaves is dead. For the survivors there is great hope in moral and religious training; but very few of those illiterate now will hereafter learn to read. The Uncle Toms and Aunt Dinahs are in that regard almost hopeless.

I forbear to inflict upon the Senate tables of statistics and pages of quotations, but my reading convinces me that the South is for the most part making excellent progress—in some cases most admirable progress in education.

Surely the votes show that the States for whose benefit the bill is chiefly urged show it a remarkable degree of hostility and give us cause for doubt and hesitation. It would be also remarkable if some Senators were not overpersuaded to support the bill by the popular effect of the temptation offered by tens of millions of money. Some States unanimously oppose it. The Kentucky Legislature has adopted hostile resolutions during our discussions here. Has any Southern Legislature sent to Congress this winter an appeal in its behalf? I have not heard of one.

Who says that Maryland is poor and can not take care of her children, and is willing to take $150 to help build a school-house? Or Delaware? Or great and rich Missouri? Does Texas need it with her 278,000 square miles, an empire of itself, whose startling statistics of area, school lands, and past and prospective growth travel around the world? What folly to carry to Texas next year $356,000, and four millions within eight years. She has uncounted resources not yet changed to money, and has just thrown the deed of a principality to the contractors for her new state-house! Does Arkansas need it, with her wonderful prosperity and her most honorable zeal in the cause of education? Or Florida? The good cause prospers there also. The North fancies that its emigrants scattered all over the State deserve part of the credit, but, if the native is entitled to the whole of it, so much the better. Georgia boasts of her wealth and growth.

Mr. President, it is an old saying, and one worthy of belief, that self-help is the best of all help. Every one of us here, something like a veteran in experience of the world, knows exactly how to spoil a boy of sixteen by nursing him and feeding him with a spoon. I think that large bodies of citizens can be similarly injured. The education that is obtained in a community where it is hard work for the father to spare the $5, and where he is certain to ask the boy every few days, "How are you getting along, John?" and where the mother must care for the children and watch and patch them, and start them to school, and wish for their help at home on busy days—that kind of education is worth something; but the education paid for out of the inexhaustible pocket of Uncle Sam is not worth twenty-five cents on the dollar to some people. The odds are it will demoralize them in the end.

I thank the occupant of the chair [Mr. PLATT] for what he sends me at this moment in behalf of the history of his side of the State—the ancient colony of New Haven, consolidated with Connecticut in 1662.

The legislation of New Haven, in 1656, contains this chapter:

It is ordered that the deputies for the particular court in each plantation within this jurisdiction for the time being, or where there are no such deputies, the constable or other officers in public trust shall, from time to time, have a vigilant eye over their brethren and neighbors within the limits of the said plantation; that all parents and masters do duly endeavor, either by their own ability and labor, or by improving such schoolmaster or other helps and means as the plantation doth afford, or the family may conveniently provide that all their children and apprentices, as they grow capable, may, through God's blessing, obtain at least so much as to be able to read the Scriptures and other good and profitable printed books in the English tongue, being their native language, etc.

I have no doubt that a great many friends of education, superintendents of public schools and eminent teachers, most honorable citizens whose business it has not been to study law-making, led by the most laudable and generous of impulses, have been warm friends of this bill. To those people I pay my tribute of profound respect, if they will permit me to say it, affection. But sitting here reading, hearing, and thinking, looking over the whole broad field, and looking not to this year, or the next year, or the next, but to wide results and many years, some of us are led to believe the bill fraught with more mischief than good.

But by no means all the educators are upon what is to me the wrong side. President Barnard, of Columbia College, New York, says:

My objections are founded not only on the consideration that it is a bill to promote mendicancy, but also upon the higher consideration that it is totally without justification in the Constitution of the United States. There is not only in the Constitution no direct grant of power to Congress to do a thing of this kind, but the spirit of the provision in regard to the power of taxation is violated when it is proposed to distribute money among the States, not in proportion to the entire population, but in proportion to a particular class; and inasmuch as the distribution of these large sums of money has a manifest tendency to discourage the honorable spirit of self-help in the subsidized States, it is manifestly doing harm rather than good, and hence can not find even a poor pretext at justification under the much-abused "general-welfare" clause of section 8 of the Constitution.

President Hyde, of Bowdoin College, says:

At the head of a petition in favor of the Blair bill which has been circulated industriously in these parts, the fact that there is a surplus in the Treasury was placed prominent among the reasons why the petition should be signed.

These in brief outline are my reasons for opposing the Blair bill, and I think it was owing to similar reasons that only one signature to the petition mentioned above was obtained from the college faculty.

President Carter, of Williams College, dwells upon the value of vigorous effort and self-denial of the people as the thing there is the most need for in this question:

I have spent some time in the South, and have given some attention to the conditions and prospects of general education in that part of the country. My previous feeling that the precious boon of education can not be conferred on whole peoples without regard to their estimate of its value, but must be secured by vigorous efforts and self-denial arising from an appreciation of the necessity of the rudiments to every community, has been deepened by what I have seen. There is great need of schools in the South. There is also great need of hospitals. But it by no means follows that it would be wise for the Federal Government to devote large sums of money to the erection of buildings and the support of directors for either the training of the mind or the cure of the body. If the result of the Blair bill could be to encourage self-help and to make education precious, to arouse self-denial and give vigor to the slowly but surely increasing respect for public education, and firmness to the determination to make it more general and thorough, one might support it with earnestness. But the effect of its passage and enforcement could not be such, but would be the very reverse. And, though one must have warm sympathy with some of those educators who have done much to develop this respect and self-reliance, under most difficult conditions, and who now ask for the passage of the bill, the best interests of the South and of the country as a whole, rightly considered, loudly ask that we carefully adhere, in this matter above all others, to the principles of local self-government and local self-reliance.

Here is a protest from the superintendent of schools in Texas:

SIR: It is a mistake to assume that the teachers of the South universally desire the passage of the Blair bill. The State Teachers' Association of Texas has once refused to indorse the Blair bill, once indorsed a resolution favoring Federal aid

without Federal supervision, and at its last meeting ignored the subject almost entirely. Many leading teachers in this State are outspoken in opposition to the Blair bill, while almost all are indifferent to it.

In common with many of the more thoughtful teachers of the South, I can not see how such a bill, by which the Federal Government will gradually assume control of education, can be constitutional. I still hold to the belief that all powers not expressly delegated to the General Government are reserved to the States and the people; and I have not ceased to interpret the "general-welfare clause" of the Constitution as limited by the specific grants of power delegated in the same instrument. I hold these opinions, without assuming to be a constitutional lawyer, because I believe that the Constitution is at once so simple, strong, and comprehensive that an average school-boy can understand its meaning.

But, apart from the constitutional question, I believe that the Blair bill, if it should become a law, would impede the progress of popular education in the South. Of the progress which has been made in the last decade, and which is still being made, I need say little; for all who have given any attention to this matter know how wonderful it has been. The Southern States have never been in so good a condition educationally as they are at present. The growth is normal, healthy, and strong. Interest in the education of the masses is greater than it has ever been. Opponents of public schools have been converted or silenced. In the mean time the spirit of self-help has grown apace with the rapid industrial development, which is almost universal. This spirit of self-help is the life-blood of any sound educational system either in the individual, or the school, or the State; and this spirit grows by exercise. Many school districts are supplementing State aid by local taxation. In a few years all will do so if the people are not led to look away from themselves to the Federal Treasury for the support of the schools. The Southern States are much better able to carry on and develop efficient systems of public schools now than they were to inaugurate them twenty years ago. Why may we not reasonably expect them to do so?

Some of the demagogical or short-sighted advocates of this bill have won friends for it by promises of lower school taxes, and it is highly probable that a strong effort will be made, if the bill should become a law, to reduce the State tax for the support of the schools by the amount received from the Federal Treasury. Thus the effect would clearly be not only to stop the healthy progress now being made, but even to lower the present standard of efficiency of our school system.

Illiteracy is disappearing in the Southern States. The apparent increase shown by the census of 1880, as compared with that of 1870, is simply due to the untrustworthiness of the latter so far as the South is concerned. The census of 1890 will show the truth. If the South, while bearing the burden of the vast mass of illiteracy which overweighted citizenship at the close of the civil war, has been able to make such satisfactory progress in all that constitutes stable prosperity, no fears for the welfare of the nation from this quarter need be entertained in the future.

I have not the slightest doubt a very large percentage of this apparently bad showing comes from the fact that the census of 1870 was—I will not say quite worthless, but—very imperfect as compared with the census of 1880.

The South does not need the extraconstitutional help proffered by this bill now; at the time when extraconstitutional help was needed it was not given or tendered.

I may add that I have no doubt that the Blair bill, if it should become a law, would be the beginning of the transition from State control of public education to national control. At least ten years would be necessary to complete this transition, and during this period the efficiency of our schools would be impaired by the antagonism of the dual system. A national system of education, however admirable it may be in Germany, is neither necessary nor desirable in the United States.

OSCAR H. COOPER,
Superintendent of Public Instruction of the State of Texas.

AUSTIN, TEX., *February* 8.

General Armstrong, of Hampton, is the head of the famous Hampton school, normal school, Indian school, and colored man's school. I have rarely known a man in whom the sentimental and the severely, coldly practical are so happily united as in this man—soldier and gentleman, son of a missionary, idealist and hard-headed farmer and mechanic, all combined. He says:

SIR: As to our position towards the Blair bill, events seem to have pretty clearly defined it for us. From 1870 to 18 4 we, with others, worked for Government aid for Southern schools, urging Senator Hoar's bill, which failed to pass the House, and accepting the "Blair bill" when it appeared as the best thing we were likely to get. But we never regarded it as a bill which a true educator would have framed, both because it granted too much aid in too short a time and because there was danger of a final reaction when its bounty should cease.

As then the marvelous and, we confess, unexpected growth and strength of the Southern school system made themselves manifest, and when we began to study the causes to which these were due we found that a change of base was forced upon us. The justification for this change I find in the vigor of sentiment existing in the South in favor of the public-school system; in the impartial devotion to it of many ex-Confederate slaveholders, which I have personally witnessed; in the fact that it is hopeless and fatal for any politician, whatever his standing, to oppose it (the negro vote finding its chief excuse in the solidity with which it goes for "free schools"); in the surprising development of Southern resources; in the evident ability of the so-called border States to educate in a reasonable time all their children; in the great school endowment of Texas and the growing wealth of Georgia and Alabama; and in the progress of schools in Florida, Arkansas, and other States, which provide in all, it is estimated, 15,000 negro schools alone, of which Virginia has 1,600.

From our own standpoint we can say nothing stronger than that, in the midst of our struggle to secure from charity the means to support the Hampton School, we would not accept aid from State or people were it offered on the plan of the Blair bill, being conscious that in the end it would do us more harm than good. For here it is not mainly education that we seek to give, but education through self help. Take out the self-help and the rest is not worth much. Apply the Blair bill to the Southern school system and it will check the growth of the best thing in Southern life, the effort of the people to educate themselves. One-third of the Southern children of school age have to-day probably no chance for education; twenty years ago almost none had it; twenty years hence I believe all will have it.

Furthermore, as I see how far we are from securing the application of the rules of civil-service reform to our Indian work, a sweeping change of officers being in order at the opening of every political change, I feel less confidence that Government bounty to Southern schools could be applied to the best advantage; while, on the other hand, the use of funds from local taxation is carefully watched and abuses are fought with vigor.

Above all things, educational work ought to be wholly free from party interests. Its foundations must be sure and permanent, not spasmodic and shifting; and for these reasons I have come gradually to the conclusion that national aid, at least as provided by the Blair bill, is unwise and undesirable.

S. C. ARMSTRONG.

HAMPTON, VA., *January* 30.

Professor Minor, of the University of Virginia, says:

I take much interest in the Blair bill, very earnestly desiring its defeat; first, because I think it a very dangerous infraction of the Constitution; and second, because communities, like individuals, are always enfeebled by having done for them what they can and ought to do for themselves.

President Eliot, of Harvard University, says:

SIR: The policy embodied in the Blair bill seems to me utterly vicious. It is bad enough to raise a surplus, but to use a part of that mischievous surplus in enfeebling the admirable public sentiment of the South in regard to education is far worse.

And he says further:

General Armstrong put the whole matter into a nutshell when he said in his letter to you of January 30, speaking of the education given at Hampton, "Take out the self-help, and the rest is not worth much." That is true of all education, and applies to States just as well as to individuals.

Mr. BLAIR. Would the Senator object to my putting in the very latest report coming from the superintendent of schools of Virginia as to the actual condition of the schools there just now?

Mr. HAWLEY. I would rather the Senator should put that in at the close. That of itself is an isolated fact.

Mr. BLAIR. It is a reply to General Armstrong. General Armstrong's statement is that things are improving in Virginia.

Mr. HAWLEY. That is an issue between you and General Armstrong. I have such respect for the man that I like his opinion and feeling about it better than I do a column of cold figures.

President Chamberlain, of the Wisconsin University, is a man of ability and, I am told, a man of exceptionally good judgment. He says:

The provisions of the Blair bill impress me unfavorably, not because of any objection to governmental aid to public education, which I most cordially approve, but because of the peculiar method of the apportionment. If a specific—

And this is a good point—

If the specific endeavor is to be made by the General Government to remove illiteracy by a discriminative appropriation, the bounty—for it amounts to that—should be placed upon the illiteracy removed, and not upon the illiteracy permitted to exist. Illiteracy in this country is not so much the result of poverty as of indifference, and a permanent and effective remedy is only to be found in the development of local interest and endeavor. Government aid, if it is to be discriminative at all, should be apportioned on the basis of endeavor and not upon the lack of endeavor, of which illiteracy is the expression.

If the principle of apportionment on the basis of illiteracy is established there is danger, if not certainty, that the same principle will determine the apportionment of future appropriations which are sure to be sought. There will then be a specific inducement to use the funds for the education of the dominant few, and to keep in ignorance as many as practicable so as to secure the greater future apportionment. It will be impossible to effectively guard against this by legal provision. Not only will the beneficent end sought thus be liable to be defeated, but a precisely opposite result encouraged.

If the apportionment is to be discriminative, it should be based upon the decrease of illiteracy or the increase of school attendance. The bounty should be placed on the thing sought, and not upon the thing sought to be removed.

I speak theoretically. I have never known educational prizes to be awarded on the basis of ignorance and indifference. I can only imagine the effect of offering a bounty upon idle and truant boys.

Superintendent Seaver, of Boston, one of the men on whom our good friend the Senator from New Hampshire lavishes a little sarcasm and the Senator from New York a good deal, as they did upon Mr. Marble, of Worcester, a gentleman of eminent professional worth—Superintendent Seaver, of Boston, says:

Like many others, I at first felt impressed by the sentimental view of this question. To sweep away illiteracy by magnificent grants of money from an overflowing national treasury seemed not only a grand enterprise within itself, but a display of patriotic generosity on the part of the Northern people towards the Southern, which could not fail to be attended with the happiest results. But this is paternal government, the objections to which have been growing clearer and clearer ever since the days of reconstruction, particularly through experience in the Southern States themselves.

Aside from the doubtful constitutionality of the Blair bill—a point which may be open to technical argument—the measure clearly involves an extension of the functions of the National Government into the domain of education, a domain that has hitherto been left in the exclusive possession of the several States; and such an extension, whether technically justifiable or not, is clearly, to my mind, a bad constitutional policy.

After presenting the constitutional argument forcibly, he adds:

We no more want a department of the General Government controlling education throughout the nation than we want a department of public worship.

He says this also, which is perfectly true:

If there were no surplus in the Treasury, no one would seriously propose to lay a tax of $79,000,000 to be collected by the National Government and distributed to the several States for educational purposes.

Now, Mr. President, there is a great deal more that might very easily be said. If Senators knew how much temptation I have resisted, they would regard leniently my assumption of so much time. A few words more.

The honorable legislation of the Continental Congress concerning the Northwestern Territory, and the equally noble and uniformly sagacious legislation of the Federal Congress in laying the foundations of future States with dedications of great areas of land to education are not to be cited in favor of this bill. Those legislators were the trustees and guardians of future empires. When the young States assumed the reins of self-government the trust was discharged and the new State became responsible to God and its own people for the dedicated wealth.

The students of the science of government, the world over, are coming to believe what our fathers believed, and the great mass of our jurists,

statesmen, and historians always believe, that the wisdom of our founders, under the blessing of Heaven, has found the true solution of the great problem of the government of large populations covering wide areas. It is in the division and decentralization of power, local self-government, and large measures of local liberty and independence, combined with a national government that, for all purposes of national life, has unrestricted power, reaching to every citizen as well as every State; that, in its internal as well as external relations, supplies that to which the individual States are severally incompetent, and to the world at large appears in the full magnificence of power appropriate to a free people near the head of the world in all the true elements of greatness.

And, while we are meditating upon measures tending to centralization the rest of the world is tending toward the positions we are asked to vacate. Great Britain, to whom the problem has been one of life and death, is shaken to the center by the debate and is meditating measures of decentralization that may at any hour develop into greater changes than any that empire has undergone for a century.

In my opinion this bill, glorious as the cause is, fascinating as the arguments in favor of education always are, is a bill drawing into Federal control an interest that from the settlement of the continent to this day has been under local control, and wisely so. It is a bill to promote mendicancy; it cultivates beggary. It is a bill declaring the failure of local self-government in one of the supreme interests of the people. It purposely declares the bankruptcy of States who before our very eyes are rich and growing. It makes an ineffectual if not a false pretense of temporary action; it would be not for eight years; it would be the beginning of a permanent policy, a permanent new relation between the Federal Government and the States, and it would never go backwards; it would never diminish its action.

I hope the bill will be defeated. I wish that every Senator could be at liberty to vote exactly as his judgment and conscience command, unfettered by the resolutions of State Legislatures or previous committals. The longer this bill is held in view the weaker it grows, and the nearer to constitutional rights, and justice, and wisdom, in my judgment, the people and Congress are coming. I am willing to see the bill defeated by any of the constitutional means—defeated by the House, defeated by the Senate, or defeated by the President.

Purchase of United States Bonds.

REMARKS

OF

HON. RALPH PLUMB,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 3, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 5034) to provide for the purchase of United States bonds by the Secretary of the Treasury—

Be it enacted, etc., That the Secretary of the Treasury is hereby authorized to apply the surplus money now in the Treasury, and such surplus money as may hereafter be in the Treasury, and not otherwise appropriated, or so much thereof as he may consider proper, to the purchase or redemption of United States bonds—

Mr. PLUMB said:

Mr. CHAIRMAN: This bill comes here from the Ways and Means Committee upon the supposition that there is a lack of power now in the executive department of the Government to use any part of the surplus in the Treasury in paying a premium on Government bonds. President Cleveland in his message to this House on the opening of the present Congress says:

> The only provision of law from which such a power could be derived is found in an appropriation bill passed a number of years ago, and it is subject to the suspicion that it was intended as temporary and limited in its application, instead of conferring a continuing discretion and authority. * * * If it is deemed wise to lodge in the Secretary of the Treasury the authority in the present juncture to purchase bonds, it should be plainly vested, and provided, as far as possible, with such checks and limitations as will define this official's right and discretion, and at the same time relieve him from undue responsibility.
>
> In considering the question of purchasing bonds as a means of restoring to circulation the surplus money accumulating in the Treasury, it should be borne in mind that premiums must of course be paid upon such purchase. * * *

The views expressed by the President as to the want of power on the part of the Government to redeem its outstanding indebtedness are held by the general public regardless of party lines, a fact which of itself renders a careful examination of the whole subject of bond redemption of the utmost importance; and it is on this account especially that I have been induced to address the House on this occasion.

Mr. Chairman, the financial condition of the country is one of peculiar gravity, such as has never before occurred in our history. We are confronted with a large and increasing surplus in our Treasury, and at the same time are in debt more than a thousand millions of dollars, three-quarters of which it is almost universally believed can not, in consequence of the requirements of existing law, be redeemed for twenty years to come, and not a dollar of it for the next four years. Influenced by this general supposition, the question, "What shall we do with the surplus?" is one of absorbing interest to all classes. The President exhausts himself in its consideration, political parties are taking sides upon it, and the whole industries of the country are threatened with revolution in consequence of the supposed existence of a law which forbids the use of the surplus for the purpose of extinguishing the debt unless outstanding bonds are purchased at any premium the holders may demand.

Now, Mr. Chairman, the ground which my investigation of this subject compels me to take is, that by existing law, as it really is to-day, a large majority, if not all, of the outstanding bonds of the United States are subject to call at the pleasure of the Government. If this be the correct view, and I hope to be able to show that it is before I sit down, the necessity and importance of the most careful investigation will be conceded by every member on this floor.

Section 3693 of the Revised Statutes provides, among other things, that "none of the interest-bearing obligations of the United States not already due shall be redeemed before maturity, unless at such time bonds of the United States bearing a less rate of interest than those to be redeemed can be sold at par in coin." This statute, it should be remembered, is a general law, designed to affect and control all issues of Government bonds. It was first enacted for the purpose of strengthening the public credit, and was carefully worded so as to cover every exigency that might in the future arise in respect to the interest-bearing public debt. Its object was and is to give to the public a solemn pledge that all bonds might be paid before maturity, in case the credit of the Government should so improve that a saving could be made to the people by the issue and sale at par of a bond drawing a less rate of interest than the bonds to be redeemed.

This statute was first enacted in March, 1869, and was re-enacted in the revision of the statutes by an act approved June 22, 1874, *and again* by acts of March 2, 1877, and of March 9, 1878, which provide that—

> When printed and promulgated as herein provided, the printed volume shall be legal evidence of the laws in all the courts of the United States, and of the several States and Territories, but shall not preclude reference to nor control in case of any discrepancy the effect of any original act as passed by Congress since the 1st day of December, 1873.

Nowhere within the lids of the Revised Statutes can there be found any repeal of this act, and, what is more, as we shall see further on, nearly all legislation on the subject of issuing the bonds of the Government harmonizes with this important statute.

Mr. Chairman, lawyers in this House will agree with me that such a statute can not be repealed by implication; ay, they will go further and tell you that its provisions control all legislation on the subjects it embraces, which legislation having been passed subsequently, makes temporary provision in relation to the subject of the general law. The manifest importance of section 3693 of the Revised Statutes, its intended far-reaching control over all financial legislation both before and since March 1, 1869, the date of its enactment, can best be understood by a brief review of the historical facts which called for the passage of this act known as "An act to strengthen the public credit."

Four years had elapsed since the surrender of Lee at Appomattox; the impulse that moved all patriots to herculean efforts to preserve union and liberty, regardless of sacrifice, was resistless in its power and bequeathed to the nation a victory the grandest ever written on the page of history; but its value was secured at an immense cost. After war, peace; after peace, the accounting; and for this purpose Congress had to devise the ways and the people had to furnish the means. At the time we are considering the accounts had largely come in and had been so far adjusted as to reveal to the country a national debt of $2,500,000,000. The expenditure required by this great war was too vast in amount to be furnished by hoarded capital, and the people were called upon to pledge their property and their future earnings in the shape of Treasury notes and in interest-bearing bonds payable in such notes, so that each man and woman who contributed of their substance or their labor, each soldier who carried a musket, and each officer in command, of whatever rank, received the pledge given by all to one that this vast debt should be paid.

This pledge of the people that they would consecrate their fortunes as well as their lives and sacred honor was a scheme that the mere man of money could not comprehend, and against it he most solemnly protested, declaring again and again that money could not be made in that way; but Congress, uninfluenced by the timid counsels of capital, provided for the issue of the greenback, made it a legal tender, and the Supreme Court declared it valid. Congress went further and provided for taking up these Treasury notes and giving interest-bearing obligations of the United States in their stead, with the provision, however, that these bonds were redeemable in the same kind of Treasury notes for which they were issued, and that the interest should be in coin or in both coin and currency.

When the act to strengthen the public credit was passed there was outstanding, as stated by the then Senator Hendricks, of bonds, the interest of which was payable in coin and the principal in greenbacks, a total of $1,600,000,000. The interest on this entire debt, with the exception of $215,000,000, was at 6 per cent. At the time of which I

am speaking both bonds and greenbacks were greatly below the par of gold, a discount which, as stated by Senator Garrett Davis, amounted in the aggregate to $900,000,000—that is, if these bonds could be brought up to a par with gold it would put this vast sum into the pockets of those who held the bonds. The proposition before the country was to have Congress declare that the entire public debt should be payable in coin, and upon this question the people and their representatives in Congress were divided; not Democrats on one side and Republicans on the other, but bondholders and the moneyed men in favor and the tax-payers against it.

Mr. Chairman, it is no part of my purpose to say here which of these parties was right. I am bringing before the House the actual condition of financial affairs prior and up to March 1, 1869, at which time Congress took the initial step towards the resumption of specie payments.

Sir, this immense debt, evidenced by interest-bearing and non-interest-bearing Treasury notes, bonds payable in lawful money or greenbacks and bonds payable in coin, and above and beyond all other facts, the high rate of interest, nearly all of which was payable in coin, confronted Congress, and to meet the situation called forth a debate which for importance and ability has never been equaled in the financial history of the Government. This debate was participated in by such members of the House of Representatives as Schenck, Garfield, Stevens, Butler, Logan, and Allison, and such Senators as Sherman, Fessenden, Conkling, Doolittle, Garrett Davis, Morton, Henderson, Hendricks, and Howe, occupying a great amount of time, and was finally decided in the Senate at a late hour in the night of Saturday, February 27, 1869.

Mr. Chairman, I refer thus fully to this history to show that no effect of the act under discussion on the past, present, or future could possibly have escaped these legislators. Every word was fully considered, and without question each provision of the law expressed a purpose, in respect to which there can be no mistake.

We are now called upon to examine that provision of the act which declares that none of the interest-bearing obligations not already due shall be paid before maturity, unless at such time United States notes are convertible into coin at the option of the holder, or unless at such time bonds bearing a less rate of interest than the bonds to be redeemed can be sold at par in coin. This, Mr. Chairman, is plain English. In it there is no ambiguity. These words are fitly spoken—spoken in the interest of all the people by those who were duly authorized to speak; and this law, which is the law to-day, proclaims to all that whenever bonds bearing a lower rate of interest than those outstanding can be sold at par in coin the right to pay off the latter is reserved. Notice is given in this public statute to all the world that under the circumstances so minutely described this great right of sovereignty will be exercised. That nothing short of the exercise of this right was contemplated by Congress when this act was passed is shown by the words uttered by Senator SHERMAN of the committee of conference on the part of the Senate. Senator Doolittle asked:

How can you fund the 5-20 bonds, bearing 6 per cent. interest, into a bond bearing a lower rate of interest after the Congress of the United States in a public act expressly pledges the faith of the Government to pay the 5-20 bonds, principal and interest, in gold at 6 per cent.?

Senator SHERMAN answered:

My honorable friend from Wisconsin comes back and says, "How can you fund the public debt?" I will tell him. We will do it just as England does it, and just as every other country did that reduced the rate of interest. When the bonds of the United States rise above par in gold, then we can place in the money markets of the world a bond bearing a lower rate of interest.

Sir, I believe that if we would wisely and persistently, firmly and boldly march to specie payment in such a way as not to distress our people—not by increasing taxes, but by steadily appreciating our public credit until the 5 per cent. bonds rise to par in gold—the whole of the 6 per cent. bonds could be paid off. Why, sir, when the bonds of England rose to 103 per cent., 3 per cent. above par, in gold, then it was that they reduced the rate of interest 1 per cent. by putting out a bond at a lower rate of interest.

Again, replying to Senator Morton, Mr. SHERMAN concluded by saying:

I do assert, as a question of public policy, that it is wise for us now to declare in the language of this bill that the bonds and greenbacks shall alike be paid in gold as rapidly as we can do so, that these bonds and these greenbacks shall be linked together in every law that is passed, that every privilege that is given to the bondholder shall be given to the holder of the greenback, that both shall rise to the par of gold, when the bondholder may be paid off by bonds bearing a lower rate of interest, and with a large saving of interest to the people of the United States in that most oppressive form of our expenditures.

Mr. Chairman, let us next see what was said by General Schenck, manager on the part of the House, in explanation of the same conference report. I quote from the CONGRESSIONAL GLOBE, volume 73, page 1879:

The Senate had also struck out the following proviso as it passed the House: "*Provided, however*, That before any of said interest-bearing obligations not already due shall mature or be paid before maturity, the obligations not bearing interest and known as United States notes shall be made convertible into coin at the option of the holder."

Mr. Schenck declared that—

The Senate would not agree to anything to take the place of that proviso; but it was finally agreed by the committee of conference to insert in the place of the proviso stricken out, the following: "But none of said interest-bearing obligations not already due shall be redeemed or paid before maturity unless at such time United States notes shall be convertible into coin at the option of the holder;" that is—

Explained General Schenck—

the bonds of the United States are not to be paid before maturity, while note-holders are to be kept without their redemption, unless the note-holders are able at the same time to convert their notes into coin. But inasmuch as this might raise the price of bonds to a higher figure and be for the benefit of the bondholders, then they proceed to put in further language so as to keep the bonds from going up out of proportion to greenbacks by providing that if the bonds went above par in gold then they might be paid off; because it was supposed we could then sell bonds at a lower rate of interest. They put in these further words, "unless at such time bonds bearing a lower rate of interest than bonds to be redeemed can be sold at par in coin."

Now, sir, is it possible to make clearer the fact that this act had in it two purposes—one in the interest of the bondholder, the other in the interest of the tax-payer? To the former it was a sure increase in the value of their bonds amounting to hundreds of millions of dollars; to the latter the promised relief in the future from taxation by a reduction of interest whenever the bonds came to be above par in coin. This guaranty to the tax-payer was not willingly conceded by the Senate, but, being insisted upon by the House, was inserted in the conference report, and because it was so inserted Mr. Stevens gave the measure his support. I repeat, Mr. Chairman, the concession to the tax-payer was this: whenever bonds could be sold at par, bearing a lower rate of interest than bonds to be redeemed, then the outstanding bonds were redeemable. That, sir, was the law then; it is the law now, as I shall proceed to show.

This act was first approved, as has been already stated, March 1, 1869. It was incorporated into the Revised Statutes with very few changes, and on the 22d of June, 1874, by enactment of Congress, made one of the statutes of the United States, general and permanent in its nature, and as such it was clothed with all the binding force that could possibly attach to it had it been voted upon in a separate bill and duly signed by the officers of the two Houses of Congress and approved by the President. In support of this view I cite the following authorities.

In the case of The United States *vs.* Bowen (100 United States Reports, page 513), Justice Miller, in delivering the opinion of the court, said:

The Revised Statutes must be treated as the legislative declaration of the statute law on the subjects which they embraced on the 1st day of December, 1873. When the meaning is plain the courts can not look to the statutes which have been revised to see if Congress erred in that revision, but may do so when necessary to construe doubtful language in expressing the meaning of Congress.

In the light of these facts and of this decision we are prepared to examine Title XLII of the Revised Statutes, which relates to the public debt. A careful reading of this entire title, containing sixteen sections, will show that it was intended to be, and is, a compilation from the various acts which had been passed from time to time prior to 1873 on all matters relating to the public debt.

If there be a doubt in the mind of any one as to this intention, it must be removed by section 5595 of the Revised Statutes, which declares:

The foregoing seventy-three titles embrace the Statutes of the United States, general and permanent in their nature, in force on the 1st day of December, 1873, as revised and consolidated by commissioners appointed under an act of Congress, and the same shall be designated and cited as the Revised Statutes of the United States.

In order to remove all question as to what acts or parts of acts were intended to be repealed by the re-enactment, section 5596 provides:

All acts of Congress passed prior to said 1st day of December, 1873, any portion of which is embraced in any section of said revision, are hereby repealed, and the section applicable thereto shall be in force in lieu thereof; all parts of such acts not contained in such revision having been repealed or superseded by subsequent acts or not being general and permanent in their nature: *Provided*, That the incorporation into said revision of any general and permanent provision, taken from an act making provisions of a private, local, or temporary character, shall not repeal or in any way affect any appropriation or any provisions of a private, local, or temporary character contained in any of said acts, but the same shall remain in force; and all acts of Congress passed prior to said last-named day, no part of which is embraced in said revision, shall not be affected or changed by its enactment.

Mr. Chairman, we are now prepared to ascertain just how much, if any portion, of the refunding act under the provisions of which all of the now outstanding interest-bearing obligations of the United States were issued has been repealed and how much remained in force after June 22, 1874. Remember, the repealing statute declares "that all acts of Congress passed prior to December 1, 1873, any portion of which is embraced in any section of said revision, are hereby repealed and the section applicable thereto shall be in force in lieu thereof."

Now, an examination will show that sections 3695, 3696, 3697, and 3701 re-enact several sections of the refunding act. For instance, section 6 of the refunding act contains a provision for the cancellation of bonds which have been purchased, and is re-enacted in section 3697.

Section 6 of the refunding act also has in it provisions relating to the sinking fund and the cancellation and destruction of the bonds purchased, which are re-enacted in section 3695 of the Revised Statutes. Can there be a question but that the several portions of the refunding act are embraced in the Revised Statutes? And if, in the language of the law, the enactment of any portion works a repeal, can there be any doubt but that the enactment of these several portions works a repeal? And is it not true that the sections applicable thereto are in force in lieu of the repealed sections?

It should be borne in mind that the revision took effect some three years after the funding act was passed, and more than four years before a 4 per cent. bond had been issued and before a 4½ per cent. had

been sold. Now, if there remains a question as to the fact of the statutory repeal of the refunding act, it may be further insisted that, as a general principle of law, the later act repeals by necessary implication the former. In the case of The United States *vs.* Tyman (11 Wall., 88), the court says:

> The revision of 1874, while professing to follow previous statutes, was in law a new enactment, and wherever, either by accident or design, provisions of previous law are altered in the Revised Statutes the Revised Statutes must control.

But it may be claimed that while several sections of the refunding act are repealed, thus working a repeal of "any act of Congress, any portion of which is embraced in any section of said revision," yet section 1 of said refunding act, which provides for the issuing of all of the bonds now outstanding, and fixes the date of their maturity, both provisions being temporary in their character, is thereby exempted from the repeal. If this be so, what becomes of section 3693 of the Revised Statutes? Is it made a nullity by an act of a temporary character passed prior to the date of the revision? Can general laws be made of no effect in any manner except by being repealed?

In Ellis *vs.* Page (1 Pickering, 43), the supreme court of Massachusetts said (page 45):

> It is a well-settled rule that when any statute is revised, or one act framed from another, some parts being omitted and others retained, the parts omitted are not to be revised by construction, but are to be considered as annulled. To hold otherwise would be to impute to the Legislature gross carelessness or ignorance, which is altogether inadmissible.

Another instance of the controlling effect of the Revised Statutes of the United States over pre-existing enactments is found in the case of The United States *vs.* Hammond (2 Woods, pages 197–203). It there clearly appeared that section 820 of the Revised Statutes was re-enacted by a mistake, the original law from which it was taken having been repealed before the enactment of the revision; but Judge Woods—afterward of the Supreme Court—said that

> This made no difference, and that Congress having enacted the section, whether by mistake, inadvertence, or otherwise, it was renewed and put in force from the date of the revision, even though it had previously been repealed.

It is true that in State *vs.* Stoll (17 Wall., 425), the Supreme Court held that if the provisions of a special charter or a special authority derived from the Legislature can reasonably well consist with general legislation whose words are not absolutely harmonious with it, the two are to be deemed to stand together, one as the general law of the land, the other as the law of the particular case.

In this case it would be impossible to apply that principle, because if the provisions of the refunding act (section 1) were allowed to remain in force, allowing the one thousand millions of bonds to be redeemed at the pleasure of the United States at any time within thirty years after the date of their issue, there would be nothing left for section 3693 to operate upon.

> Any construction of a statute which implies that Congress passed an act which could have no possible operation is not to be adopted. Effect must be given to all the words of a statute, and every part of it must be so construed as to give it force. (United States *vs.* Fisher, 109 United States Reports, 143.)

The case of The United States *vs.* Auffmordt (122 United States Reports, 197) is a very recent case, reaffirming the principle that—

> Where a statute is passed covering a whole general subject, it repeals all former laws governing that subject, because it takes their place and there is nothing left for the previous laws to operate upon.

But, Mr. Chairman, suppose we go further with the argument and for the sake of it concede that the provision of the funding act as published which declares the maturity of the bonds to be after thirty years from the date of their issue still remains as a temporary provision, what is its force and legal effect when construed, as it must be, in conjunction with the Revised Statutes or general law on the subject of the redemption of the bonds? Why, sir, plainly this: These bonds mature in thirty years, but the Government reserves the right to redeem them before maturity on condition that at the time bonds bearing a lower rate of interest can be sold at par in coin. There is no way to escape from this construction of the two acts, unless you insist that a temporary provision may repeal a general law which deals with the same subject—a construction which must be conceded to be entirely inadmissible.

Mr. Chairman, a careful reading of section 3693, which I have so many times referred to, demonstrates that it was the design of Congress to give it the same control over the redemption of all bonds issued after the revision, as it had and was intended to have on all bonds issued prior to March, 1869. A change was made in the revision in one word, as follows:

In the act of 1869 the text reads, "But none of said interest-bearing obligations," etc., referring, no doubt, to bonds then outstanding; whereas in the Revised Statutes Congress has been careful to strike out "said" and insert "the," so that it reads, "none of the interest-bearing obligations," etc.; which must refer to all such as were issued or to be issued under any law that had been or might be passed by Congress.

This change of terms is significant; it was not made by accident or mistake, but "said" was stricken out and "the" inserted instead for the purpose of reasserting the great right reserved to the people to avail themselves of every possible opportunity to reduce the interest on the public debt and so to reduce taxation, for that, which as Senator SHERMAN well said, "is to the people the most oppressive form of our expenditure." "None of said interest-bearing obligations" meant in the act of 1869 the 5.20 bonds and others that had already been issued, while "none of the interest-bearing obligations," which new wording took effect December 1, 1873, not only controlled existing bonds, but bonds which had been provided for by law but had not been issued, as was the case with the 4 and 4½ percents, together with any that might thereafter be issued.

Mr. Chairman, thus far it has been my purpose to make clear my understanding of the law as it is found in the statute-books, irrespective of any variance of the wording of the funding act as actually passed, from what is published in the Statutes at Large. I maintain that the act approved March 1, 1869, and re-enacted in the revision of June 22, 1874, is general law, and that none of its provisions have ever been repealed, or even attempted to be repealed; that its object was defined with the utmost clearness in the great debate which resulted in its first becoming the law, and that the object of Congress in re-enacting it is put beyond questioning by the insertion of the definite article "the" in the place of the adjective "such," as in the original act. The object was to continue in force a law which retained in the Government the right to redeem all of its outstanding interest-bearing indebtedness before maturity, on condition that at the time bonds of the United States bearing a less rate of interest could be sold at par in coin.

THE REFUNDING ACT.

I come now, Mr. Chairman, to the consideration of the act passed July 14, 1870, known as the refunding act, under which the 4 per cent. bonds, so called, were issued, and with the indulgence of the committee I will make a brief statement of facts, such as I desired to make some days ago in respect to the variance *found to exist* between the law as passed by Congress and as it is published in the Statutes at Large. An editorial in a prominent public journal, which claimed that the law as found in the statutes authorized the Secretary of the Treasury to call for redemption outstanding bonds in the order prescribed by law, caused me to investigate that question, and in doing so I determined to examine carefully the refunding act of July 14, 1870, and all the facts attending its passage. In thus pursuing the investigation I noticed that the report of the committee of conference between the two Houses on the funding bill, and which was agreed to in the House of Representatives by a yea-and-nay vote, in providing for issuing one thousand millions of 4 per cent. bonds, declared that said bonds were "redeemable at the pleasure of the United States for thirty years from the date of their issue," while in the act as published in the Statutes at Large the preposition "for" is omitted and "after" is inserted in its stead. This essential variance between the act as voted upon and as printed in the Statutes at Large so interested me that I determined to ascertain, if possible, which was correct, and for that purpose went to the State Department and there examined the enrolled bill as signed by the Speaker of the House, the President of the Senate, and as approved by the President. To my great surprise I found that the word "for" as above described had been erased and the word "after" inserted in its stead, so that the enrolled bill reads "after" instead of "for."

Thinking it possible that the enrolling clerk had found that the record made by the Secretary of the Senate contained the word "after," and had made the erasure and alteration in the bill before it was signed, I next had recourse to the records made by both the Secretary of the Senate and the Clerk of the House in the original daily Journals of the proceedings of their respective bodies, a certified copy of which is before me, and in both these original records the word "for" stands unaltered, just as it was when the yeas and nays were recorded on the final passage of the bill, and presumably as it was when the enrolled bill was signed.

Mr. Chairman, it would be difficult to find in our language two words with more opposite definitions than these prepositions "for" and "after." Webster says, "The radical sense of 'for' is to go, to pass, to advance, to reach or stretch," and that it signifies "during," and Worcester adopts the same definition.

On the other hand, the same authorities define the word "after" to mean following, or later in time.

It follows, then, that as the law stands now upon the record of both Houses of Congress the bonds commonly called 4 percents are redeemable at the pleasure of the United States at any time during thirty years.

Mr. Chairman, the proposition I maintain is that in cases where there is an important variance between the records made of the wording of the law by the proper officers of the two Houses of Congress and the published copy, the records of the House and Senate must be resorted to, and if the words there recorded have a clear and distinct meaning, no resort to any other testimony to set aside that meaning is admissible, and that the law as found on such records must stand until repealed. I make this proposition in the presence of a large number of lawyers who are members of this body, and I ask them to show if they can that this is not the rule. Sir, the erroneous publication of the law does not make it a law, even though it is published and signed by the presiding officers of each House and approved by the President.

A similar question has been raised in England. In May's Treatise on Proceedings in Parliament it is said, page 554, that—

Since the assent of the Queen, Lords, and Parliament is essential to the validity of an act—

1. Will the royal assent cure all prior irregularities in the same way that the passing of a bill in the Lords would preclude inquiry as to the informalities in any previous stage?

2. Is the indorsement on the bill recording the assent of the Queen, Lords, and Commons conclusive evidence of the fact? or

3. May the journals of either house be permitted to contradict it?

The first case in which a difficulty arose was in the 33d of Henry VI.

In that case the Lords, in order to avoid certain construction as to the date on which a certain bill was to take effect, altered the date, but did not return the bill to the Commons. A motion was made to impeach the validity of the act on the ground that the Commons ought to have had the bill back. On the hearing, Chief Baron Illingworth and Mr. Justice Markham were of the opinion that if the amendment made the bill vary in effect from that which was sent up from the Commons the act would be invalid. Chief-Justice Fortescue concluded the case by saying:

This is an act of Parliament, and we will be well advised before we annul any act of Parliament, and peradventure the matter ought to wait until the next Parliament; then we can be certified by them of the certainty of the matter; but, notwithstanding, we will be advised what shall be done.

In 1829 a bill to amend the law in relation to the employment of children in factories passed the Commons and was agreed to in the Lords with an amendment, and through mistake received the royal assent, after which the amendment was agreed to by the Commons; but in order to remove all doubts an act was passed to declare that "the act shall be valid and effectual to all intents and purposes as if the amendment made by the Lords had been agreed to by the Commons before said act received the royal assent."

In 1843 the schoolmasters' widows' fund bill was returned to the Commons with amendments, and by mistake the bill received the royal assent. After an examination of precedents the act was made valid by a new enactment.

In this country, as in England, the assent of the President, the Senate, and the House of Representatives is essential to the validity of an act, and the courts of the United States have with great unanimity held, as has been done in England, that the records made by the law-making branch of the state must be resorted to in all cases in dispute in order to ascertain what the law is.

The first to which I shall refer is entitled Town of South Ottawa *vs.* Perkins (page 261 *et supra*, 94 S. C. Reps., Otto, IV). The facts of this case occurred in my Congressionaldistrict, and, briefly stated, are these: Certain towns along the line of the Ottawa, Oswego and Fox River Valley Railroad voted bonds to the amount of nearly half a million dollars to aid in the construction of said road. The town of South Ottawa, acting under a published act of the Legislature, which was signed by the speaker of the house, the president of the senate, and approved by the governor, voted to issue, and did issue, its bonds to a large amount for the purpose indicated. These bonds were delivered to the railroad company, and by it to the contractors, who sold them to investors and used the proceeds in constructing the road. Every transaction in relation to the issuance and sale of these bonds was made in the utmost good faith. After interest had been paid on the bonds for a year or more it was discovered that the record made by the secretary of the senate of Illinois did not show affirmatively that the bill granting to these towns the authority to vote the issue of bonds as indicated above was read a third time and the yeas and nays called thereon, as the constitution of the State requires.

When the case came on for trial in an Illinois court, the town of South Ottawa offered to prove by the journals of each house of the Legislature that there was no entry in the same of a final vote by the senate on the act of February 18, 1857 (giving the town authority to vote). The testimony was objected to, and was ruled out by the court on the ground that the holder of the bonds was a bona fide purchaser of them without notice of any objection to their validity; that the first installment was paid at maturity, and therefore the defendant was estopped from offering any evidence to show that the act was not passed, the same having been duly published among the printed statutes as a law, and being, therefore, *prima facie* a valid law; in other words, although it might not have been duly passed, the town, under the circumstances of the case, was estopped from denying its passage.

Now, the Supreme Court of the United States, after stating the case in the language above quoted, say:

We can not assent to this view. There can be no estoppel in the way of ascertaining the existence of a law. That which purports to be a law of the State is either a law or it is not a law, according as the truth of the fact may be, and not according to the shifting circumstances of parties.

Further on, in the same opinion (page 269), the court lays down the general doctrine as follows:

Not only the courts but individuals are bound to know and can not be received to plead ignorance of it. The holder of the bonds in question can claim no indulgence on that score, and can take no advantage that he is a bona fide purchaser without notice.

Again, it may be urged that while the law as laid down in the above case applies to the existence of a statute, it does not apply to a case like the refunding act, in which a single provision of the act is in dispute. To which I reply that, in the opinion just quoted, the court affirms the doctrine held in the case of Gardner *vs.* The Collector (6 Wall., 511), namely:

That when a question arises in a court of law of the existence of a statute, or of the time when a statute took effect, or of the precise terms of a statute, the judges who are called upon to decide it have a right to resort to any source of information which in its nature is capable of conveying to the judicial mind a clear and satisfactory answer to such question, always seeking for that which is most appropriate, unless the positive law has enacted a different rule.

The purport of the doctrine held is clearly to the effect that no distinction can be made between the question of the existence of a statute and that of the precise meaning of terms used in a statute that has been duly passed.

In the case of Gardner *vs.* Collector (6 Wall., page 499), before referred to, the Supreme Court of the United States held that it is competent to go beyond the published statutes, and sustains the position taken by Lord Coke—

That every one is bound to take notice of what is done in Parliament, for as soon as Parliament hath concluded anything the law intends that every person hath notice thereof, for the Parliament represents the whole realm.

To this Justice Miller, by whom the opinion, to which there was no dissent, was rendered, adds:

If this proposition be sound, of which there seems to be no reason to doubt, how can it be held that the judges, upon whom is imposed the burden of deciding what the legislative body has done when it is in dispute, are debarred from resorting to the written record which that body makes of its proceeding in regard to any particular statute?

He adds, further, that the courts of last resort in several of the States have expressly decided that this may be done, and quotes—

Purdy *vs.* The People (4 Hill's N. Y., page 384): "The certificate of the secretary of state that the bill was passed by a two-thirds vote is not evidence that it was passed by a two-thirds vote; at least it is not conclusive evidence. The journals kept by the two houses may be resorted to in ascertaining whether an act was passed by a two-thirds vote."

De Bow *vs.* The People (1 Denio, page 9): "The question whether a particular act received the assent of the required number of members is to be determined by the court, who is for that purpose to examine the original law on file in the office of the secretary of state."

Fowler *vs.* Pierce (2 Cal., page 151): "The court may go behind the record evidence of a statute and inquire whether it was passed or approved in accordance with the constitution."

Matter of Wellman (20 Vt., page 656): "But it would be unsafe as it would be unfit to allow the commencement of a public law whenever the question may arise, whether at near or distant time, to depend upon the uncertainty of parol proof or upon anything extrinsic to the law and the authentic recorded proceedings in passing it."

The conclusion reached by the United States Supreme Court is as follows:

We are of the opinion, therefore, on principle as well as authority, that whenever a question arises in a court of law of the existence of a statute, or of the time when a statute took effect, or of the precise terms of a statute, the judges who are called upon to decide it have a right to resort to any source of information which in its nature is capable of conveying to the judicial mind a clear and satisfactory answer to such question; always seeking first for that which is most appropriate, unless the positive law has enacted a different rule.

I am aware that some lawyers seem to think that when a law as published has been acted upon in good faith for a long series of years it becomes binding as a law, notwithstanding it was never passed in the form in which it was published, and to support this view the case of Pease *vs.* Peck (18 Howard, page 599) will be quoted. This was a case arising in the State of Michigan where a law which was

adopted and published by the governors and judges of the then Northwestern Territory was to be in force until the organization of the General Assembly therein, unless disapproved by Congress, but afterwards the Legislature shall have authority to alter them as they shall see fit.

In a volume of laws so published there was contained a certain statute of limitation, which was re-enacted by a revision of the laws, but subsequently the phrase "beyond the seas" was dropped out of the statute without express legislative authority, and for thirty years the statute of limitation had been acted upon with the phrase "beyond the seas" left out. One of the parties to the case sought to give effect to the law as it was originally worded, but the court held—

When a law as published has been acknowledged by the people and received the harmonious interpretation of a long series of years, the propriety may well be doubted of referring to any ancient manuscript to show that the law as published was not an exact copy of the original manuscript.

This case and the one under discussion differ so widely in the circumstances under which they each arose that the doctrine laid down in the former case can have no bearing on the latter.

In discussing the question, Judge Grier said:

It must be remembered that there is no allegation or pretense that the act published by authority of the Legislature differs from the original reported to them and adopted by them. That is the only original, if there be any in existence, by which the printed copy could be corrected or amended. But to correct or amend the declared will of the Legislature as published under their authority by the words of a document that did not emanate from them * * * would be, in our opinion, judicial legislation and arbitrary assumption.

The language of the court thus given shows conclusively that if the same variance had been shown between a law as passed by the Legislature of Michigan and as published by their authority no such decision of the cases would have been rendered.

Having shown, as we think, conclusively that there is a total lack of authority to sustain the view that the erroneous publication of a supposed law can defeat the will of the law-making power, we shall proceed to discuss and maintain the doctrine that, in case of dispute, the record made by both Houses of Congress and approved by them can alone determine what the law is.

Mr. Chairman, the decisions of courts of the highest resort, both in this country and in England, on this question are all in one direction, and all unite in bringing us to the conclusion that the law as it stands on the records of Congress is the law, and it must be our rule of action

as long as it stands there. No accepted rule of interpretation will permit us to go elsewhere than to the words used to ascertain what the law means.

Vattel lays down in his first rule of interpretation for treaties and statutes the following:

The first general maxim is that it is not permitted to interpret what has no need of interpretation. When an act is conceived in clear and concise terms, when the sense is manifest and leads to nothing absurd, there can be no reason to refuse the sense which this act naturally presents. To go elsewhere in order to restrain or extinguish it is to endeavor to elude it.

And this rule is adopted by the United States Supreme Court in United States *vs.* Fisher (2 Cranch, 358).

Puffendorf says:

As for words, the rule is, unless there be reasonable objection against it, they are to be understood in their proper and most known signification, not so much according to grammar as to the general use of them.

Rutherford's Rules of Interpretation declare that—

Words are the common signs that mankind make use of to declare their intention to one another; and when the words of a man express his meaning plainly, distinctly, and perfectly, we have no occasion to have recourse to any other means of interpretation.

The American rule is:

Whether courts are interpreting an agreement between parties, a statute, or a constitution, the thing to seek is the thought which it expresses. To ascertain this the first resort in all cases is to the natural significance of the words employed in the order and grammatical arrangement in which they stand. If thus regarded the words embody a definite meaning which involves no absurdity and no contradiction between different parts of the same writing, then that meaning apparent upon the face of the instrument is the one alone we are at liberty to say was intended to be conveyed. In such a case there is no room for construction. That which the words declare is the meaning of the instrument, and neither the courts nor the Legislature have a right to add or to take away from that meaning. (Newell *vs.* The People, 7 N. Y., 99; McCluchey *vs.* Cromwell, 11 N. Y., 593.)

Again, in the enactment of statutes the rule of interpretation in respect to the intention of the Legislature is that when the language is explicit the courts are bound to seek for the intention in the words of the act itself, and they are not at liberty to suppose or to hold that the Legislature intended anything different than that their language imports. (Supervisors of Niagara *vs.* The People, 7 Hill, 513.)

It is useless to quote more authority on these points. It seems to be well settled that it is our duty to ascertain the exact language used by Congress in passing the refunding act, and having so ascertained it, it is equally apparent that it needs no construction, its meaning being so clear that none is required.

In concluding the legal part of my argument I submit—

1. The Revised Statutes, approved June 22, 1874, contain the law now in force pertaining to the public debt, and that any provisions of the refunding act of July 14, 1870, inconsistent with the Revised Statutes are either repealed or must be so construed as to give force and effect to said statutes; and it follows, therefore, that whenever bonds of the United States can be sold at par in coin, bearing a less rate of interest than any of the bonds which represent the outstanding interest-bearing obligations of the United States now bear, they are redeemable at par.

2. If there be any question as to the right of the Government to redeem or refund the 4½ per cent. bonds, there can be none as to the 4 percents, for the reason that the law as passed makes them redeemable at the pleasure of the United States at any time within thirty years from the date of their issue. Whether it be by accident or design, the law as it stands provides for the redemption of all of the 4 percents at the pleasure of the United States.

Mr. Chairman, the condition contemplated in the law has come. Bonds bearing 2½ per cent. and possibly 2 per cent. interest can be sold at par in coin to-day, and this interest burden can thus be reduced 1½ per cent. at the very least, making a saving to the tax-payer of not less than $200,000,000; and yet the opportunity of doing so is unheeded by those whose duty it is to execute the law. Why, sir, the Administration now in power has taken from the Treasury $2,852,015.88 of the tax-payers' money and handed it over to those holding Government bonds, which bonds by law are free from all tax, and for what? For the principal of these bonds? No, not that. Was it for interest? No, not for interest. If for either the debt or interest on the debt, no one could complain. For what, then, have nearly three millions been taken out of the Treasury? Why, sir, it is for a premium on these bonds. Is there any law authorizing such procedure? If so, why should it be resorted to instead of exercising the lawful right to pay these bonds before maturity, which the act of 1869 and the revision of 1874 so clearly confer?

I pass now to the consideration of further objections that I am sure will be urged against the view I have thus presented. It will be said that inasmuch as the refunding act has been so long published as reading "after thirty years," etc., transactions have been made on such reading, and it would not be just to the holders of the 4 percents, now at a premium, for Congress to insist upon authorizing the Secretary of the Treasury to either issue bonds bearing a lower rate of interest for the purpose of redeeming the 4 percents, or to pay them off before the expiration of thirty years from their date; indeed, it may be claimed that to do so would be a species of repudiation, such as this Government should not permit.

Sir, this objection is entitled to the gravest consideration. Whenever the honor and integrity of the Government are at stake no good citizen will desire to have anything done that will in any degree tend to tarnish that honor or impeach that integrity.

In discussing this branch of the question, it is proper to explain at the outset that in no event can the action contemplated be made to relieve the Government from paying in full the principal and interest of its debt. If it were otherwise, I, for one, would not favor it. Every cent that the outstanding bonds call for should be paid, and will be paid. But the premium which the securities of the Government bear does not, in any legal sense, affect our duties or responsibilities. These premiums express speculative opinions of capitalists as to their value, and change from day to day, like premiums on shares and bonds of any corporation. When such corporations pay the principal and interest on their bonds and divide their net earnings on their shares no one thinks of holding them accountable for more, and yet we shall, no doubt, be charged with a want of equity if we avail ourselves of the law and proceed to refund the debt so as to save $200,000,000 to those who pay the taxes.

What is equity? It is defined to be an impartial distribution of justice. Now, let us for a moment see how this impartial distribution of justice stands historically between the bondholder and tax-payer in reference to the very debt which led to the issuing of these 4 percents. This indebtedness was incurred to put down a rebellion at a cost of more than $6,000,000,000. From whence came this vast sum? Only a moiety of it was advanced by the capitalists of the country. It was furnished in the main by employing the credit of the whole people, in the form of the Treasury note. This immense debt has been nearly extinguished, not by the capitalists, but by that great middle class from which the ranks of the Army were filled. They are the men who left their homes and their business—alas! how many never returned to home or business—and for love of country, not for pay, saved liberty from its peril, and made property secure. Where then were the men of wealth, the bondholders of to-day? They were busy at home, they speculated on disturbances in values caused by war, and on the inflation prices inevitable when the public credit has to be used to such an extent as the great war demanded, and, of course, they alone became the owners and holders of Government bonds.

The following table, showing where our outstanding registered bonded debt is held, the amounts held, and the total thereof, is from the report of the Register of the Treasury, 1887:

Bonds.	Foreign.	Treasurer United States for national banks.	Domestic.	Total.
4 per cent	$7,261,850	$129,792,850	$484,833,950	$621,888,650
4½ per cent	3,739,950	79,141,600	124,099,600	206,981,150
Pacific railroad		3,481,000	61,142,512	64,623,512
Total	11,001,800	212,415,450	670,076,062	893,493,312

Of the $670,076,062 under heading "Domestic"—

Insurance companies hold in round numbers	$55,500,000
Savings-banks, institutions, etc., round numbers	209,000,000
Individuals, trustees, etc	405,576,062
Total	670,076,062

Of the entire $893,493,312, only $11,001,800, a little over 1.23 per cent., is held abroad.

There are about 48,708 individual and trustee holders, representing $405,576,062, or an average of $8,327 each.

In addition to the registered bonds outstanding as enumerated above, there are—

Outstanding of the funded loan of 1891	$38,588,550
Outstanding of the funded loan of 1907	112,300,450
Total	150,889,000

This shows that of the people of the United States about one individual holds bonds to twelve hundred that are not bondholders.

This table of registered bonds shows, in the main, how the public debt is distributed, although the unregistered bonds can not, of course, be traced to the actual holder.

It will be seen that some two hundred and ten millions belong to national banks and savings institutions, while fifty-five millions are the property of insurance companies, leaving only four hundred and five millions in round numbers in the hands of individuals, largely, no doubt, wealthy men. It is said that one hundred millions of these securities are held by the representatives of one of the largest estates in America. It is not likely that those interested in this estate care to avail themselves of the premiums, and therefore will not suffer loss on that account, save in the rate of interest; but if it were so, could that fact furnish an equitable justification for the burden which, to refuse the legislation contemplated, would be put on the labor interests of the country?

Men of wealth are not all sordid, and as a rule they understand the necessity and propriety of complete submission to the law as it stands

on the statute-book, for it is only when law is supreme that property is secure. The banker is too intelligent to suppose that in the long run the interests of his most important branch of commercial affairs can best be promoted by suffering any injustice to be done to the industrial wealth producer upon whose prosperity the bank depends for support and profit. It is, moreover, pertinent to observe that in a large degree the premium on Government securities will not be made available to these holders in the form of premiums, for the reason that they are intended to be kept by them until by lapse of time the premium will fade away. Complaint will only come from those who are unwilling that a rate of interest 1½ per cent. per annum higher than such investments would now command—and which through a failure to invoke the law has been paid them for some years—should not be continued for twenty years more.

Mr. Chairman, I have referred to these two parties in interest in this matter not for the purpose of arraying one body of citizens against another. The object should be to cause each one to feel and acknowledge the equal importance of all those who go to make up the grand mosaic work of the social compact we call government.

The capitalist and the laborer are dependent upon each other, and both require the aid of intellect and skill, and I am sure that both capital and labor have a deep interest in heartily acknowledging this fundamental truth. Can the hand say to the foot, "I have no need of thee?" As well can capital say to labor, or labor to capital, "My interests are not yours." Surely "all are but parts of one stupendous whole," and a government like ours can not stand without honestly adopting in legislation the great principle of equity to all classes and conditions among its citizens.

Mr. Chairman, the facts to which I have referred point to the necessity and propriety of guarding well the interests of the great body of the people upon whom the burden of taxation must necessarily rest. If they are to love, cherish, and defend the Government that is over them it will be because their rights and their interests are not neglected, and because the scales of justice are evenly poised between the high and the low, the rich and the poor, the capitalist and the laborer. The people of this country are not anarchists, and they will never become such if equity prevails in the administration of public affairs.

It can not be denied that upon every principle of right as between the tax-payer and the bondholder, the former is entitled to the saving which can be secured to him by such legislation as it now fairly lies in our power to adopt. To be sure, the bondholder will lose his expected premium, but did the Government promise him a premium? No. The Government promised the principal of the bond with interest, and that is precisely what the Government will pay in any event. Is there the shadow of repudiation in such a fulfillment of the promise of the Government? Is it equitable to insist that the tax-payer shall lose over two hundred millions, which the enhanced credit of the Government enables us to save? I think not.

Mr. Chairman, this is in no sense a party question; it is more a question of financial justice. The refunding act was passed seven years before a 4 per cent. bond was issued under its provisions; and when it was enacted it was not expected that these bonds would command a premium, and the right of the Government to redeem them seemed to have no special significance; but as time went on the people, strengthened by the great struggle through which they had passed, again at peace, marching together, a triple alliance of enterprise, capital, and labor, caused this country to make strides in material prosperity such as was never before witnessed on this globe. Farms, mines, mills, and factories were multiplied, new Territories were occupied, new States erected, railways and telegraphs were projected in every direction, and a surplus of wealth was created which, in the form of money, sought safe investment at low rates of interest. Then it was that these bonds found ready takers at home; less than 1½ per cent. of those outstanding being held abroad—as shown by the report of the Register of the Treasury, already quoted. These bonds now bring a high premium, mainly because the value of interest on Government securities, which like these are free from tax, is not to exceed 2½ per cent. per annum. In other words, it is their tax exemption and the unquestioned quality of the bonds that give them a value beyond par and interest, which is denominated premium, and which has reached 25 per cent.

This enormous premium, it is conceded, will fade away whenever the 4 percents are either redeemed or refunded; but has the bondholding class earned the right to have this premium continued to them at the expense of the tax-payer? Is it the duty of Government to withhold such action now as will put an end to such injustice? Shall we, by refusing a remedy that clearly lies within our reach, burden the people of the country with a tax of over $11,000,000 annually for twenty years to come, for the sole benefit of bondholders, who as a class "toil not, neither do they spin?" To do this would not be, I greatly fear, an impartial distribution of justice.

We shall be told, moreover, that these bonds were sold by the Treasury Department or its agents, with a promise that they were redeemable only after thirty years from the date of issue, and that we are in honor bound to fulfill that promise, even though it be clearly shown that no authority of law was in existence for making it.

Sir, when the act of March 1, 1869, was passed, and over sixteen hundred millions of bonds, which by law were redeemable in paper money, were thereby turned into coin bonds—a performance that put untold millions into the pockets of the bondholders—the same claim was made in justification of the procedure. Then, as now, it was urged that the agents of the Treasury Department had made promises and representations upon which the bondholders relied when they bought the bonds. Of this justification Hon. Thomas Ewing, of Ohio, then declared:

> What is said of promises made by the Secretary of the Treasury or his agents that bonds would be redeemed in specie, is so far absurd that no respectable lawyer would venture to urge it in a court of justice. The act of Congress, which was the Secretary's power of attorney, was in the hands of the capitalist, and his counsel was bound to know what the law was.

So in the case we are considering. If the bondholder, in defiance of these well-settled propositions, decided to risk his chances for a premium on the mere insertion in the bond of statements not authorized by the law, he did so at his peril, and no principle of law or equity will justify us in insisting that the tax-payer is bound to make good his mistake.

Mr. Chairman, the President has told us of his misgivings in paying a premium on bonds and asks for definite authority; and, sir, I have no reason to doubt but that the Executive and his legal advisers will indorse the correctness of the views I have here advocated as to the law as it stands; hence the solicitude, and hence the request that "the authority should be plainly vested."

Sir, the first step to be taken in compliance with this request should be to direct the Secretary of the Treasury to obey the law. He should be instructed to use any surplus in the Treasury available for the reduction of the debt in redeeming the outstanding bonds in the order of their issue. This done and the reduction of the surplus is assured, and the fear of a dangerous stringency in the currency, either in Wall street or in the country at large, will no more vex the President nor his Secretary of the Treasury. This policy inaugurated and it will not be necessary to destroy the productive industries of the country in order to reduce the surplus; but in ten more years the great war debt will have been wiped out, and none will sigh for its return, unless it be those bondholders who love a long bond, issued by a rich government, with good interest, free from all tax, and at a high premium.

If, on the other hand, Mr. Chairman, we enact this bill into a law and authorize the Secretary of the Treasury to go into the market and buy the bonds of the United States, what a spectacle will be made of the financial policy of the Government. The Secretary of the Treasury in the stock market, sometimes a bull, sometimes a bear, operating for a fall in premiums in the name of the people. Sir, the very idea is ridiculous. Can you call this statesmanship without blushing? Why, sir, the Hon. JOHN SHERMAN expressed true statesmanship when he, in the great debate to which I have already referred, insisted that we would follow the example of the British Government in this respect, and whenever the rate of interest could be lowered it would be done.

Public funds should never be permitted to rise enough above par to bear any considerable premium. Such a condition of things tends to increase the value of money, which is always an additional burden on productive industry. The lower the rate of interest the easier it will be for our manufacturers to compete for the markets of the world, and it is the duty of this Government to at least set the example of paying as low a rate of interest as money is worth for securities of like quality; and we all know that there are none better on the globe than the bonds of the United States.

Mr. Chairman, it seems to me we can take no middle ground. Either we must repeal the law or we must call for its enforcement. By enforcing it we shall establish a principle in finance of great value to the sovereign people, the right to reduce the interest rate on the public debt to the lowest possible point, and to rid themselves of the debt when they are able to do so without burdensome taxation. It would, moreover, mark the beginning of a new era in the relations that have hitherto existed between money and the people. Long enough in the history of the world has money been the master and the people the slave, and it is time to inaugurate a change and make money the servant and tool of the people; not by disregarding law, but by strict obedience thereto; not by demanding aught that justly belongs to money or to those who possess it, but by insisting that a just regard shall be had for that great host of wealth producers which make up the body of our people from the humblest wage-worker through all classes to the business man and banker.

Mr. Chairman, why break faith with the people and refuse to perform the solemn pledge made to them on March 1, 1869, and reiterated June 22, 1874—a standing proclamation of the law to-day; a promise which binds us to reduce to a minimum the rate of interest on the public debt, and retains the right to pay it off when we can? If any part of the contract is to be declared off, why not let other parts go also, and go back to the agreement then made, to pay the bonds off in lawful money, greenbacks? That was the very condition upon which the bonds were first issued. Do this, if you will, and then as we have ability to pay, and as the business of the country demands currency, take up the bonds with Treasury notes, redeemable as they now are in coin. Let them take the place of bank notes, but do not, I implore you, refuse the people the right to reduce the rate of interest, while

you insist in violation of the agreement in permitting the bondholder to hold his bonds for twenty years to come. Remember the great body of the people for whom we are legislating are too intelligent to be deceived in this matter. They may be, many of them, plain people, as Lincoln called them; they may necessarily be busy with their own every-day affairs, or they may be wage-workers; but, thank Heaven, we have advanced to a period in which every public act is known and intelligently scrutinized by the citizen, of whatever condition in life he may be. The common school, the press, and the telegraph have put it beyond the power of those in authority to bind with impunity burdens upon the people beyond their own convictions of what is just.

Mr. Chairman, I am constrained to believe that every member on this floor is willing and anxious to vote for the fulfillment of the pledges of the law, and that the defeat of this bill will so show. As for me, never so long as I have a vote here will I cast it in favor of securing to the holders of Government bonds a premium thereon at the expense of the tax-payer.

Under any circumstances such a vote would be unadvisable, and doubly so when, as now, the solemn declaration of the law is that it need not be done. Such a vote is nothing short of taxing one class for the benefit of another, and is properly characterized by the language of the Supreme Court of the United States in the following words:

To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it on favored individuals to aid private enterprises and to build up private fortunes, is none the less robbery because it is done under the forms of law and is called taxation.

Mr. Chairman, my contention is—

1. That the refunding act as published names a time at which the bonds issued under it mature, and that section 3693 of the Revised Statutes, which was enacted subsequent to the refunding act, and before any of the 4½ and 4 percents were issued, was intended to and does control all the provisions of the refunding act in respect to the redemption of said bonds before maturity.

2. That the statute referred to contains a clear and express provision for the redemption of these bonds before maturity on the conditions named therein.

3. That the conditions necessary to the lawful exercise of the right to redeem these bonds have transpired and now exist.

4. That as if to remove all possible doubt as to the right to redeem now the bonds known as 4 percents, a correct reading of the refunding act as passed shows that they were made redeemable at the pleasure of the United States at any time during thirty years from the date of their issue; so that,

5. Beyond all question the $735,000,000 of outstanding interest-bearing obligations of the Government known as 4 per cent. bonds are redeemable at the pleasure of the United States; and

Finally, that existing law, the eternal principle of equity, the highest industrial interests of the people, as well as true political economy, demand that the Secretary of the Treasury be directed to use the surplus in the Treasury applicable to the reduction of the public debt in redeeming these bonds.

War Claims.

SPEECH

OF

HON. JAMES D. RICHARDSON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 9, 1888.

The House having under consideration the bill (H. R. 2952) for the allowance of certain claims for stores and supplies taken and used by the United States Army, as reported by the Court of Claims under the provisions of the act of March 3, 1883, known as the Bowman act—

Mr. RICHARDSON said:

Mr. SPEAKER: Before beginning the discussion of this bill, I desire to thank the House in behalf of the claimants interested for the kindness to them and the courtesy to myself in giving unanimous consent for its present consideration.

The claims included in this bill, which is known as the omnibus bill, are all for stores and supplies furnished to the Army of the United States during the war. This fact has been found in each case by the Court of Claims, a court charged with the express duty of making such investigation under the act of March 3, 1883, known as the Bowman act. The preliminary inquiry in each case was as to the loyalty of the claimant. That fact has been found favorably by the Court of Claims in all these claims; and, in addition to that fact, the finding is further that the claim is just, and in each case is for supplies furnished the Union Army during the late war between the States.

Mr. LANHAM. How many claims are embraced in this bill?

Mr. RICHARDSON. There are about thirty-five, of which twenty-five belong to the State of Tennessee. In order that there may be no misunderstanding, I want to say, in addition, that the findings of fact by the Court of Claims in each case are carefully certified by that court under its seal. There was a finding in each case. These findings of the Court of Claims were submitted to this House during the Forty-ninth Congress and were regularly referred to the Committee on War Claims, of which I was then a member. Each case was considered by that committee upon the findings of the Court of Claims, and unanimously reported by myself from that committee to the House. They have been again unanimously reported in this omnibus bill, which I had the honor to introduce into this House on January 4th, 1888, by the Committee on War Claims of the present House.

Mr. WHITTHORNE. May I ask my colleague a question?

Mr. RICHARDSON. Yes, sir.

Mr. WHITTHORNE. Are not the methods pursued by this bill precisely the methods pursued in the disposition in the House of the 4th of July claims?

Mr. RICHARDSON. Precisely, except that, as the House will understand, the findings in the 4th of July claims are by the Quartermaster-General of the Army through his agents. In these cases the facts are found by a court of competent jurisdiction—the Court of Claims—composed of five judges, able and learned in the law. The claims are regularly prosecuted in that court, the United States Government being represented in each case by an Assistant Attorney-General and the claimant by his attorney. The proceedings are conducted much as if they were cases in a chancery court.

Mr. HOLMAN. I notice that the claim of Urias Buskirk, of West Virginia, is one of the claims included in this bill. Now, that State is one of the States embraced under what is known as the 4th of July law. It has been classified as one of the loyal States. Citizens of that State and of Tennessee were entitled to a hearing before the Quartermaster-General and the Commissary-General for supplies taken by the Army and the Navy for the use of the United States.

Mr. LANHAM. Did that apply to old Virginia, or only to certain counties in old Virginia?

Mr. HOLMAN. It applied to what is known as the State of West Virginia. It is important, therefore, whether any of these claims have been considered by the Quartermaster-General and the Commissary-General, and, if so, what was their finding? It is a well-known fact that some $70,000,000 of claims were filed before the Quartermaster-General and the Commissary-General, and that those claims continued to be filed as late as 1879, when the limitations applied. Under that law the Quartermaster-General and the Commissary-General were clothed with ample authority to send out agents for the purpose of taking testimony wherever it was necessary in the investigation of these claims. I would like to ask the gentleman from Tennessee [Mr. RICHARDSON] whether he thinks, where claims were considered before the Quartermaster-General and Commissary-General for supplies taken for the use of the Army, they having such ample authority under the 4th of July law to send out agents in all directions to procure whatever testimony was necessary, it is not now desirable we should know just exactly what was the finding upon the cases which were examined, and why, if cases were not investigated, they were not brought to the attention of those tribunals within the time limited by the law?

Mr. RICHARDSON. I will endeavor to answer the gentleman from Indiana as fully as I can. He asks if the claims are barred by law. The third section of the Bowman act has this provision:

Nor shall the said court have jurisdiction of any claim against the United States which is now barred by virtue of the provisions of any law of the United States.

With this provision in the law I am quite sure that court would not take jurisdiction of a claim barred under any law. The claim to which he refers was carefully considered in the Committee on War Claims of the last Congress upon the findings of the Court of Claims, and, as I have remarked, was favorably reported. In addition to that fact I submit this principle to the gentleman from Indiana: That even if this case had been considered at one time by either the Quartermaster-General or the Commissary-General and disallowed—which I do not admit is the case—he must remember that the claim has been properly referred, for sufficient reason, under the Bowman act, to the Court of Claims, a court organized for the express purpose of investigating all facts raised in this case. This court is better prepared, better equipped, and better qualified to pass upon all the questions involved in the claim, including that of loyalty and of the justice of the claim, and, indeed, in every respect as to its merits, than the Commissary-General or the Quartermaster-General.

I say this because the United States in this court is represented by counsel and the claimant by counsel. I have felt all along, while a member of the Committee on War Claims and in the discharge of my duties as a member of this House, that it was not necessary for me to go back of the findings of the Court of Claims, where that tribunal had examined a claim, and investigate the facts in the claim, or to ascertain if the agent of the Quartermaster-General or the Commissary-General was more entitled to be depended upon for a true finding of the facts than the Court of Claims. It is well known that these agents were not qualified for such examinations. I prefer, in the discharge of my duties

as a member of Congress, to take the finding of this court, composed of efficient judges with ample powers and organized for the express purpose of examining into these claims, because I know they are clothed with ample facilities for such investigation.

Mr. HOLMAN. I wish to ask the gentleman from Tennessee another question while he is upon the floor, and it is this: How do the amounts reported by the Court of Claims compare with those of the claims when originally presented?

Mr. RICHARDSON. The Committee on War Claims found that in nearly every case the Court of Claims cut down the claims and allowed only a small proportion of the amount asked. In some cases they allowed the full amount, but in most of them the claims were largely reduced. I will add further that prior to the beginning of this Congress a little over two thousand cases arising out of the war had been referred by Congress to the Court of Claims, and that court have been so careful in their consideration, so particular and so rigid in applying the principles of the law in these cases, that less than 10 per cent. of all such so referred to it have been passed upon favorably, and so reported back to Congress.

Mr. LANHAM. In regard to the claim of J. R. McKinnie, administrator of David McKinnie, deceased, of Hardeman County, Tennessee, I do not discover from the reading of the report that there was any finding by the Court of Claims that the claimant was loyal. The other reports that have preceded this have shown that that fact of loyalty was found by the court. There was a question originally as to the loyalty of this claimant, and the court failed to find that he was loyal. In view of that fact I think we should strike out that paragraph of the bill relating to the claim of McKinnie.

Mr. RICHARDSON. In reply to the gentleman from Texas I desire to call his attention to section 4 of the Bowman act, under which this claim was considered by the Court of Claims. It is true, as the gentleman has stated, that the court has not set out as one of its findings the loyalty of the claimant. But if the gentleman will turn to section 4 of the Bowman act he will find the court is prohibited from entering upon consideration of the claim until the fact of loyalty is established. Section 4 of the Bowman act is as follows:

SEC. 4. In any case of a claim for supplies or stores taken by or furnished to any part of military or naval forces of the United States for their use during the late war for the suppression of the rebellion, the petition shall aver that the person who furnished such supplies or stores, or from whom such supplies or stores were taken, did not give any aid or comfort to said rebellion, but was throughout that war loyal to the Government of the United States, and the fact of such loyalty shall be a jurisdictional fact; and unless the said court shall, on a preliminary inquiry, find that the person who furnished such supplies or stores, or from whom the same were taken as aforesaid, was loyal to the Government of the United States throughout said war, the court shall not have jurisdiction of such cause, and the same shall, without further proceedings, be dismissed.

Now, the question of loyalty is a jurisdictional question. It is not necessary for the Attorney-General of the United States to appear and file a plea of want of loyalty. The law itself files that plea; and the Court of Claims, until the fact of loyalty is fully established, declines to enter into the consideration of the merits of the claim.

Contrary to the general practice in courts there are two investigations by this court; first, as to the question of loyalty——

Mr. OATES. Is not the gentleman mistaken as to the question of loyalty being a jurisdictional fact? Does that cut any figure in the case at all, unless the act requiring the reference, or under which the reference was made, required proof of loyalty? Otherwise it cuts no figure whatever, as decided by the Supreme Court.

Mr. RICHARDSON. The gentleman from Alabama [Mr. OATES] is correct as to the practice in some cases—that is, where claims are referred by an act of Congress; but there is no act referring this case to the Court of Claims. It is referred by a committee of this House under the Bowman act, which provides that in all cases referred under it by a committee of Congress the fact of loyalty must be first ascertained before the court can consider the claim. Therefore the question of loyalty is a jurisdictional question. The law itself makes it a jurisdictional question. Of course, it is understood that I had nothing to do with the making of that law. I would probably not lay so much stress upon the question of loyalty as is done in that law if I had my way about it. But as a member heretofore of the Committee on War Claims, I recognized, and as a member now of the House I recognize the full force and effect of that law, and expect to be governed by it in all these cases. Now, Mr. Speaker, as I was about to state when interrupted, the court first hears each claim upon the plea of loyalty; and unless by affirmative proof the claimant overcomes the difficulty in that respect and establishes his loyalty throughout the war—not from the time of taking the oath, as in the 4th of July cases, but throughout the war—the court decline to enter upon the consideration of the case under the Bowman act. Therefore, while the court have not set out in their report that they found affirmatively that this claimant was loyal, they could not, under the law as an intelligent court, and would not, and, I undertake to say, did not enter upon the consideration of the case until the claimant was found to have been loyal.

When the question of loyalty is established to the satisfaction of the court, then the case is remanded to the rules, as it were, in chancery practice. The case is not proceeded with. The court does not go on to try the case upon its merits, but it remands it, just as a chancellor does when he remands a case for additional proof. It is sent back to the rules, to a separate docket, and then it is that the case is tried upon its merits. Proof is introduced; witnesses for the claimant are examined by his attorney and cross-examined by the United States Attorney-General; witnesses for the Government are introduced by the Attorney-General and cross-examined by the attorney for the claimant, and this second trial of the case is upon its merits. Now, sir, there is no case in this bill that has not undergone both these investigations; first a preliminary one to establish the loyalty, and then, that being affirmatively established, a second trial upon the merits of the case. I hope the gentleman will not make a motion to strike out the item mentioned.

Mr. LANHAM. It seems from the reading of the report of the Court of Claims that the Commissary-General was not satisfied at the time as to the loyalty of this claimant, and there is an omission in the report of the Court of Claims to make any statement whatever with reference to the question of loyalty. In all the other cases that have preceded this one in the bill I believe the fact of loyalty has been affirmatively set forth by the court.

Mr. CATCHINGS. The gentleman is mistaken about that. There was a case the other day in which the same omission occurred, and attention was called to it by the gentleman from Michigan [Mr. BURROWS], but he finally conceded that it was not necessary that the fact of loyalty should be set out in the report, because it was a jurisdictional fact.

Mr. LANHAM. I had not noticed that, but in view of this case as it stands I think that we ought to have some affirmative showing as to this claimant's loyalty.

Mr. RICHARDSON. Now, then, sir, the House having gone over all the claims included in the pending bill, I desire to add a few words to what I have already said in the running debate thereon. I will first speak of the 4th of July claims in order that members may get the distinction between such claims and those included in this bill which may be better termed Court of Claims cases. The 4th of July claims arise in this way: When the armies of the United States were in the field during the late war between the States it was almost invariably the case that the quartermasters and commissaries could not give legal or formal vouchers for the supplies taken from the people for the support of the Army. Early recognizing this fact, in 1864, on the 4th day of July, Congress passed a bill authorizing the payment for stores and supplies taken from citizens of the loyal States, when proof was made before the Quartermaster-General and the value of these stores established.

In 1866 this privilege was extended, first, to some counties of West Virginia, and then to the State of Tennessee. In each case the claimant was required to establish that he had been loyal to the date of the taking of his property. In 1871 Congress established the Southern Claims Commission and provided for payment for stores and supplies taken in all the States in insurrection. The investigation by the Quartermaster-General under the 4th of July act, as it was called, was conducted mainly by him, with the assistance of agents furnished him by Congress to conduct the investigation, to inquire into the property so taken in the vicinity where the claims arose. In many, if not in all, such instances these investigations were made without any proper or legal hearing, made by these agents, who were without legal education and training, and for some years after the close of the war by agents full of prejudices against the claims.

It is true that a large number of the claims thus investigated by these agents of the Quartermaster-General's Department were allowed and paid, but very, very many were rejected. Many of these rejected cases have been brought before Congress year after year, session after session by claimants asking relief. We all know that Congress has been in the past almost overwhelmed with private bills and petitions for the relief of these claimants, and efforts have been made to take them away from Congress and place them before some court or forum having jurisdiction to legally try and determine them. Both President Grant and President Hayes recommended the reference of these claims to a court. The Secretary of the Treasury, Mr. Bristow, and his successor, Mr. Sherman, the Quartermaster-General, and nearly every official of the Executive Departments having charge of these matters have recommended that a court of competent jurisdiction should be required to pass upon these cases and finally adjudicate them.

At last, after many efforts, on March 3, 1883, the act known as the Bowman act was passed by Congress. This act provides that all these claims, along with others, may be referred to the Court of Claims, but it requires that the claimant shall prove his loyalty throughout the entire war, as a jurisdictional question, while under the 4th of July act, as it is called, a claimant could recover if he showed that his property was taken after he had taken oath of allegiance to the Government; yet under this Bowman act the claimant is required to prove beyond doubt that he was loyal from the beginning to the close of the war. As I have already remarked, about 2,025 such claims have been referred by committees of Congress, under the Bowman act, to the Court of Claims. Less than 10 per cent. have been favorably reported back to Congress by that court. All these set forth in the pending bill have been so referred by Congress and reported back by that court.

Now, Mr. Speaker, these men had been for years importuning Con-

gress, session after session, for relief; had failed to get it, and finally Congress said to them by the Bowman act, "You shall have a hearing in the Court of Claims." They have had it, and that at very considerable expense, because the testimony in the Court of Claims has to be taken with proper observations of the forms of law, attorneys must be employed, and all the expenses incident to a court trial must be incurred, and have been incurred. The cases are reported back here, the amount due each one definitely ascertained after judicial investigation, and Congress is asked to pay them. Case after case has come back here from that court, after a full investigation under the act of Congress, has been sent to the proper committee, favorably reported upon, and yet no final action taken by Congress.

As a member of the Forty-ninth Congress, near the close of its last session I attempted to do what should have been done long before, in my judgment, that is, take all of these cases, put them in one bill, and pass them. But that bill failed. I have made the same effort again in the pending bill. Here, sir, are men who, twenty-five years ago, furnished to the armies of the United States the food and transportation necessary to sustain those armies in the field, without which they could not have been sustained, and which could not have been obtained elsewhere or under other circumstances. These claimants have been suppliants at the feet of Congress since that time for the pay due them, begging, pleading, and urging payment of their just claims; and yet the representatives of the people in Congress have refused and failed in the discharge of what I think was their duty—to pay them. After years of effort Congress decided that these claims could not be properly investigated while pending here, but should be judicially investigated, and it sent them to the Court of Claims for such investigation, and impliedly, at least, in doing so, it pledged itself to the payment of whatever amounts might be determined by that court to be due.

The express object of the Bowman act, as shown, was to give relief to Congress by taking claims involving controverted questions of fact from Congress to that court. I shall not, in asking for a reason why we do not respect the findings of that court, pronounce any eulogy upon its members. But, so far as my opinion goes, and for whatever it may be worth, I do say it is a judicial tribunal thoroughly qualified to pass upon just such cases as these. It is composed of five judges of ability and long training, men who have for years been engaged in this class of work, and who, I may safely say, can not be imposed upon in the investigation of these cases.

The findings of this court are entitled to greater consideration when we know that there are, besides the judges, trained and skillful attorneys looking after the interests of the United States. Congress does not refuse to allow these claims because there is not sufficient money in the Treasury with which to pay them. What, then, may I ask, causes the delay and the refusal to pay these claimants, the claims of men who are asking, not for mercy, but simple justice? I will not say it is demagogy, but I will say that it is not, in my opinion, creditable to Congress and to the American people that citizens are thus treated. The time has fully arrived when the United States can afford to be honest and decent with all creditors.

We should treat all subjects with absolute impartiality. But let me ask, while this class of creditors are thus treated, how is it with those who hold the bonds of the Government? As a class the latter are rich and powerful, the moneyed people, and the corporations of the country. The former are poor and with comparatively small estates and incomes. With the latter, that is, the rich and powerful, in advance of the maturity of his claim, three, four, five, eight, or ten days, the Secretary of the Treasury—and Congress approves his act—writes the check for the interest due and forwards it so that even before the day it shall become due the wealthy creditor holds in his hand, delivered to him at his own door, the check for his money. But it is the poor and lowly, the men who toil in the field, on the farm, and in the factory, who have not, like Shylock, the bond to present to the Government—they must be compelled to wait, and beg, and plead for their money and then possibly not get it. It seems, sir, that Congress dare not refuse to pay the banks and bondholders, yet does not hesitate to impose upon other creditors equally as deserving and meritorious.

The late Senator Sumner, speaking of this question, once said, "We have the meanest Government in the world," and the late Senator Morton, on January 12, 1869, said:

> Let me take the case of a Union man in the South, who has borne the heat and the burden of the civil war; who has been persecuted, and who has sustained all those hardships that we know were incident to the condition of a Union man in the South during that war. To say that we will treat him as a public enemy and that we will refuse to pay him for his property, deliberately taken by the Government, when, under the same circumstances, we would pay a man living in the North for his property taken by the Government, is revolting to the plainest principles of justice. I can not subscribe to any such doctrine.

In my judgment it is the duty of this House to pass this bill. It is five years since the Bowman act was passed, and, so far, not a solitary man has been paid one dollar under the provisions of that act. Three years ago and more that court began to report the facts in cases similar to these that had been examined into, and yet, for some inexplicable reason to me, so far Congress has made no appropriation for them. I do not think Congress can longer afford to pursue such a course. It can not afford to be dishonest with the citizens of the United States. As I am now, sir, asking this small boon, comparatively speaking, for my people, and what has heretofore been denied and refused them, it will not, I trust, be deemed inappropriate for me to refer briefly to immense benefits so freely voted by Congress to another class of its citizens—I mean ex-soldiers, who are receiving such munificent bounty from the Government in the shape of pensions.

It would seem from the amounts thus voted that Congress feels it can not do enough in that direction.

The contrast is striking, yet why should it be?

The war could not have been fought without soldiers. Soldiers could not exist without the very supplies and stores furnished them by the claimants in this bill, and others of like character.

Why then discriminate?

Why applaud the man who fought, yet turn a deaf ear to the man who fed him that he might fight?

Is it because the one lives North and the other South?

Congress rushes to the front to pay the pensioner, and is equally as prompt, if not more so, to pay the bondholder, but the plowholder who toiled and labored the year round to plant and till and gather his crop, saw it all taken by his Government, to which he was always devoted and loyal, yet his claims are ruthlessly and insultingly brushed aside and rejected.

These citizens reside largely in my State because it was the theater of war so long and was so continuously occupied by the Union armies.

Ungrudgingly and without serious complaint they meet the onerous and exorbitant rate of taxation laid upon them by the high protective tariff under which we live.

They are taxed not to raise taxes, but to protect and build up monopolies and add wealth to wealth four, five, and ten fold, and, though thus ground down and imposed upon, they struggle on. I will be pardoned if I say under such circumstances they should feel that a just and benignant Government should not refuse them so fair and honest a demand when it is comparatively so small a pittance.

As I have already stated, the pending bill provides for about thirty-five claimants. Of this number twenty-five are citizens of my own State, and the amount which they will receive if this bill becomes a law is the sum of $84,092.16.

Since entering this House as a member of the Forty-ninth Congress, my first term, it has been my pleasure, as it was made my duty by reason of my assignment to the Committee on War Claims of that Congress, to investigate with some care the provisions in the laws of Congress for the allowance of Southern war claims. I find, sir, that members on this floor have not given close attention to these laws. I desire therefore now to repeat possibly something which I may have already said in regard to these various acts of Congress passed for the allowance of these claims. First, then, was the act of July 4, 1864. The first section of that act denied jurisdiction to the Court of Claims over such claims. The second section made the Quartermaster-General's Office the place for the settlement of claims for quartermaster's stores. The third section made the Commissary-General's Office the place for the settlement of claims for commissary's supplies. Only the claims of loyal citizens in States not in insurrection could be passed upon by the Quartermaster-General and Commissary-General.

In 1866 Congress extended the provisions of this act to certain counties in West Virginia, and on July 28 of that year extended its provisions to the loyal citizens of Tennessee. Under that act claimants furnished their testimony by *ex parte* testimony or affidavits and any vouchers that they might have received from any officers of the Army who had regularly, not wantonly, taken and used their stores and supplies. The Government took its proof by means of special agents sent out into the field to investigate claims, who inquired secretly, and so reported; it not being until the act of June 5, 1880, that claimants or their attorneys were allowed to be present and cross-examine witnesses before these special agents.

It is a fact, and will not be denied by any one, that the reports of these agents when made were considered and held to be confidential, their contents were not to be disclosed, and the claimants and their attorneys were denied access to these reports. This was the mode of procedure for sixteen years, and was certainly contrary to the genius of our institutions. As for the Commissary-General, no law was passed allowing him special agents, and consequently he did not investigate the claims by himself or such agents. He acted only on such claims as were supported by vouchers or affidavits furnished by officials. These remarks refer to 4th of July claims.

I desire now to refer to the Southern Claims Commission, which was organized under act of March 3, 1871. This commission was given jurisdiction over claims for stores and supplies of loyal citizens in the States that had been declared in insurrection, and this without regard to the act of July 4, 1864. The original act creating the commission declared that all claims not presented to the commission before March 4, 1873, should be forever barred. The life of the commission was fixed by this act at two years, but Congress extended it from time to time. On June 15, 1878, Congress declared that the commission should expire on March 10, 1880, and it so expired. On the same day, June 15, 1878, Congress limited the time for claimants filing evidence in chief

and submitting their claims to March 10, 1879, but it allowed them to take testimony in rebuttal after that date. On June 23, 1879, Congress required the special agent of the commission to give notice to and opportunity for claimants to be present at the taking of testimony by said agents on behalf of the commission.

But the act was not of any benefit to claimants, owing to the near approach of the end of the commission, and because the claims in which claimants had filed their evidence before March 10, 1879, had been nearly all disposed of. And by act of May 11, 1872, the commission was authorized to create not more than three agents to investigate the claims presented to it. This investigation was to be the hunting out of evidence against the Government and the cross-examination of the claimant's witnesses. When the claim was for over $10,000 the commission required the claimant to come with his witnesses to Washington and to have the testimony given orally before the commissioners. Congress did not make the commission a court to pass judgment officially and absolutely against the Government, but only a tribunal to investigate and report on each case to Congress, so that Congress could do in respect to the case whatever it might thereafter think proper. The commission prior to the act of June 23, 1879, prohibited their special agents allowing claimants or their attorneys to be present at the taking of testimony by them on behalf of the Government.

Thus it will be seen difficulty upon difficulty, obstacle upon obstacle, was thrown in the way of adjudication and allowances of these claims. It is not to be wondered at, therefore, that many who were disappointed, whose claims had been unjustly and unfairly and improperly disallowed, were clamoring to the representatives of the people in Congress for simple justice. Out of this clamor and contention, as I have heretofore said, came the act which I have referred to, called the Bowman act, passed for the express purpose, as I have already stated, and I quote from the caption of the act, "to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government." This act was well considered, and was debated very fully in Congress before it passed, as the record shows, the gentleman from Indiana taking part therein and offering amendments thereto, with the object of perfecting it.

This act gave jurisdiction to the Court of Claims over all the claims that had been submitted to and disallowed by the Southern Claims Commission, except those barred by reason of not having the evidence in the case filed before March 10, 1879, and except those paid in part. Also, of all claims presented to and disallowed by the Quartermaster-General and Commissary-General under the act of July 4, 1864. That is to say, that this act gives to the committees of either House of Congress powers to refer these claims of loyal citizens for stores and supplies to the Court of Claims for investigation and report. In passing upon such claims the court has before it all the testimony—good, bad, and indifferent—submitted to the Southern Claims Commission and the report of the commission. It calls upon the Quartermaster-General and the Commissary-General for all information in their control, and upon the War Department and War Records offices, including Confederate archives, for information in their control.

When the claimant or the Government desired to take additional testimony due notice must be given, and the claimant is present in person or by his attorney, and the Government by attorney acting for the Attorney-General. When the proof is thus taken and the case is ready for trial it is argued upon briefs and orally by the attorneys of both sides. Then when the findings of the court under all the circumstances I have shown are favorable to the claimant, how can any gentleman on this floor refuse to vote the necessary appropriation to pay the claim? The Supreme Court of the United States regards the findings of the Court of Claims as final in all such cases. Why can not this House do so? In the case of Carven *vs.* The United States (111 U. S., page 609) the Supreme Court said:

> We have no doubt that Congress, in cases under the Bowman act, intended to establish the same practice of making the findings of fact by the Court of Claims conclusive on both parties, thus removing from the halls of legislation the determination of controverted questions of fact, relieving itself and its committees from the investigation of such matters proper to be tried only by a judicial tribunal, and obtaining the full measure of the assistance and relief contemplated by the act.

Now, Mr. Speaker, having said what I have upon the injustice so often done these claimants by Congress, particularly in reference to the claimants who have been forced to resort to the Court of Claims for their remedy and for the allowance of their just demands, it is but fair and proper for me to say that there has been some liberality shown by Congress heretofore in the allowance of the claims under the 4th of July act, as it is called. These claims, popularly known as 4th of July claims, because the bill under which they are audited and allowed passed Congress on the 4th of July, 1864, are under that act annually at the beginning of each session of Congress transmitted by the Secretary of the Treasury to the Speaker of the House of Representatives and by him laid before Congress. That is to say, all these claims so investigated and allowed by the proper accounting officers of the Treasury for the current year are annually, at the beginning of Congress, so transmitted.

As a member of the Committee on War Claims of the House of Representatives of the Forty-ninth Congress I gave assiduous attention to the allowance of all such claims. I have no cause to complain, and do not complain for my people, for a want of proper consideration of such claims since I have been a member of this House. Having somewhat criticised the House for its tardiness and its refusal to make an appropriation for the claims in the pending bill, found by the Court of Claims, I will very briefly make some amends by referring to the allowances made in payment of the 4th of July claims, upon bills which I had the honor to introduce or report to the House. For illustration, take this class of claims which were transmitted to the second session of the Forty-eighth Congress—the session preceding the one to which I was elected—by the Secretary of the Treasury. I found when I entered this House that the bill including these claims had not been passed by the Forty-eighth Congress, and I addressed myself at once to the obtaining of the necessary legislation to that end, and succeeded in having reported from the Committee on War Claims, of which I was a member, the bill for their allowance.

In this bill 557 citizens of my State were beneficiaries to the amount of $169,788.50. During the first session of the Forty-ninth Congress I had the honor of introducing and assisting in pressing to its successful passage a bill containing a similar class of claims which brought relief to 640 citizens of my State to the amount of $177,874.52. In the second session of that Congress I likewise had the honor of presenting and assisting in pressing to its passage a similar bill. which brought relief to 567 citizens of Tennessee, and the amount allowed them in the bill was $120,115.35. These sums amount in the aggregate to $467,782.37, and have been paid out to 1,764 citizens of Tennessee. The poor people thus benefited and blessed are deeply grateful to Congress for the relief thus afforded.

Mr. Speaker, I will be pardoned for saying I take some pride in referring to this record, as it is the first time in the history of Congress, as I am informed and believe that three of these bills have been passed by one Congress. Only one was passed by the Forty-eighth Congress.

As a member of the present Congress I have had the honor to introduce a bill, and it has been favorably reported by the Committee on War Claims and is now upon the Calendar awaiting its regular call, for a similar class of claims, in number 364, and which carries the sum of $71,777.86, and I have no doubt at a very early day its passage will also be secured. I shall spare no effort, at any rate, to bring about this most desirable result.

Thus there will have been paid, since my admission to a seat in Congress, including the latter bill, to the people of Tennessee, 2,128 in number, the sum of $539,556.23. If the pending measure, the Court of Claims bill, passes, it will, as I have stated, bring relief to twenty-five additional citizens of my State and to the sum I have already mentioned, $84,092.16. The whole number of people thus relieved, as you will see, Mr. Speaker, is very large, to wit, 2,153, and the whole sum paid and to be paid them $623,648.39.

It is apparent, when the aggregate amount set out is apportioned among so large a number of claimants, the amount to each is small. But that it has proven and will prove a blessing to them, I shall not attempt to demonstrate—it is self-evident. I will not detain the House further, but ask an immediate vote upon the passage of the pending bill that justice may be no longer deferred, but may be at an early day meted out to these deserving people.

I demand the previous question upon the passage of the bill.

The demand was sustained, and under operation thereof the bill was passed.

Terms of President, Members of Congress, etc.

REMARKS

OF

HON. C. NEWTON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 2, 1888.

The House having under consideration the joint resolution (H. Res. 120) proposing amendments to the Constitution changing the time for the commencement and limitation of the terms of the President, Vice-President, and members of Congress, and altering the date of the annual meeting of Congress—

Mr. NEWTON said:

Mr. SPEAKER: The pending resolution proposes to amend the Constitution. To amend as to the commencement and limitation of the terms of the President; to amend as to the date of the annual meeting of Congress. The resolution provides that the term of office of the President shall continue until the 30th day of April, 1889, and that the 30th day of April shall thereafter be substituted for the 4th day of March as the commencement and termination of the official term of the President and Vice-President. The 31st of December is substituted

for the 4th day of March as the commencement and termination of the official term of Senators and Members of the House of Representatives. The first Monday in January of each year in lieu of the first Monday in December is proposed as the day for the assembling of Congress.

Some of the provisions of the resolution have evidently not been matured, and their operation would, to my judgment, bring about results not contemplated by the honorable gentleman, the author of the resolution.

The term of office of the President is extended until the 30th day of April, 1889, by the terms of the resolution.

Now, it is very improbable, should the amendments proposed be voted by this Congress, that those amendments would receive the sanction of three-fourths of the several States as required by Article V of the Constitution before the 4th day of March, 1889. Say that this ratification will be had before that time, Mr. Speaker, and the effect of this measure would be to extend the present term of the President of the United States from the 4th day of March, 1889, until the 30th day of April, 1889, nearly two months.

I believe this to be an unwise and dangerous precedent in the legislation of our country, should it be adopted. Whilst it is proper for legislation to fix and regulate the terms of officers to be elected in the future, I believe it to be unwise for legislation to interfere with, either to curtail or to extend, the terms of officers already elected. This legislation may appear to us harmless now, but the time may come in the history of this country when the Representatives of the American people may behold it as a hideous monster, threatening the overthrow of republican institutions. And the future Representative may appeal to it as a precedent in the legislation of this Government for the extension and continuation of power, inconsistent with and beyond the tolerance of republican ideas and institutions.

There is a feature of this resolution to which I desire to call particular attention. The resolution provides:

> The Congress in existence when the members of the first House of Representatives are elected, after the ratification of this amendment, shall hold no annual session after such election, and its term of office shall expire on the 31st of the following December.

The effect of this provision, if this proposed amendment were ratified before December, 1888, would be to abridge the term of the present Congress by two months and to extend the term of the President by about the same time. The President, whose term of office expires, under existing laws, with that of the Fiftieth Congress, would in such event hold office for four months after the expiration of that Congress, and so on for future Presidents and Congresses. It has been suggested, however, that the amendment would not be ratified by the required number of States before the expiration of the term of the present incumbents. It is possible for such a ratification before this time, whilst we may say it is improbable. Let us suppose, Mr. Speaker, that the administration of the affairs of the Government should by the next general election be transferred from the party in power. Whilst this is hardly supposable now, such a condition of political affairs is liable to occur at some future period of our history.

In weighing and considering the merits of the proposed amendment we should contemplate at least that this country at some future period will be confronted by such a political condition. We would then have a President representing one party and one policy and a Congress dominated by another party and representing an entirely different policy. Well may we imagine the embarrassment of the Chief Magistrate of this country advising and recommending a policy to a Congress that would not only reject that policy, but hurl it back with ridicule and contempt. May we consider long and well before we as American citizens consent to place the President of this Republic in a position that would embarrass, humiliate, and bring into public disregard the highest office within the gift of the people of this country. Besides, there is another feature of the proposed measure that deserves to be more seriously considered than any other, a feature that opens up the pathway to probable instability and revolutions in the Government, civil revolutions that would be appalling to the American people and might threaten overthrow to republican institutions.

Under the proposed amendment, should the election of the President be transferred to the House of Representatives, the incoming or new Congress would have the choosing of the President.

In the grasp for power, and in the maintenance of the party in power (whatever party may be in power at the time), we may well foresee the numerous contests that would come before that Congress, the inducements to corruption and fraud, and the consequent wranglings and delays resulting it may be in disorganization and a failure to make choice of a President before the time fixed for his inauguration. Other evils may be foreseen without being pointed out, resulting from such a status of affairs. Such a condition of things would necessarily result in dissatisfaction and discontent to the American people, disorganizing their councils, and placing their revered institutions in jeopardy.

Mr. Speaker, it is sufficient for me that such results might be made only remotely probable by the adoption of the proposed amendment. If we are to make innovations on the legislation of this country, let us be deliberate and prudent as to the steps which we may take. If we are to make innovations, let the fundamental law, the Constitution of this country, be the last to be invaded. Let those innovations be demanded by some great public convenience and necessity, and let them have a tendency to stability, and not to instability, disorganization, and revolution.

But it has been properly suggested that Congress may, without the intervention of a constitutional amendment, provide a different day for the assembling of Congress.

The Constitution provides, Article I, section 5: "The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December unless they shall by law appoint a different day."

If the proposed amendment has for one of its objects to bring the newly elected member sooner to the discharge of and in the active exercise of his official duties, if it be desired, as suggested in the discussion, that he should come to the discharge of his duties fresh from the people, that object may be attained by a simple act of Congress independent of any constitutional amendment, and the Congress elected in November might by act of Congress be required to assemble in March subsequent or at some day earlier than it would now assemble under the existing law.

But, Mr. Speaker, while the time, as now fixed, for the assembling of a newly elected Congress may be too long, I do not think that it is an unwise idea that some time should elapse between the election of a new Congress and the date when that Congress is to assume the active exercise of its official duties. The new member, whose time hitherto has only been partially given to the study of important public questions, is better enabled to study more closely the important questions that affect the great interests of the country and of the people whom he represents, and on the assembling of Congress he comes to the discharge of his duty better prepared and equipped to act upon these questions.

Mr. Speaker, I have not heard any good reason assigned for changing the inauguration of our President from the 4th of March to the 30th day of April. This amendment seems to have been prompted more through sentiment than through any apparent necessity. Now whilst sentiment is to be admired in many things, it should have no place as a reason for changing the organic law of a great government. Since the foundation of the Government, with one exception, our Presidents have been inaugurated on the 4th of March, and I do not believe that we should now, through sentiment or through any buta good and valid reason, supplant this day memorable in our history for another.

Mr. Speaker, we are called upon by the proposed measure to make certain innovations in the fundamental and organic law of the country. We should ever approach a question of this kind with the greatest deliberation, care, and prudence. Nothing less than a great public demand and necessity should induce us to a step of such importance. I have yet to learn that such necessity exists. I have yet to see that our institutions would be in any wise ameliorated by the proposed amendments, and I can not under my convictions support the propositions presented in the pending resolution.

Civil-Service Appointments of Persons who Served in Confederate Army and Navy.

REMARKS

OF

HON. JOHN W. DANIEL,

OF VIRGINIA,

IN THE SENATE OF THE UNITED STATES,

Wednesday, March 21, 1888.

The Senate having under consideration the second reading of Senate bill 2443 providing for preferences in certain cases in civil-service appointments of persons who were engaged in the military or naval service of the so-called Confederate States—

Mr. DANIEL said:

Mr. PRESIDENT: If this were a question of courtesy to the Senator who has offered this bill, there would be no doubt in my mind as to how I should vote upon it. I feel incapable of offering a discourtesy to any Senator on this floor, and I certainly would go very far to avoid doing so to one who has been inspired by such magnanimous and generous sentiments as those which that Senator has expressed.

But no public question should ever be decided by any mere matter of courtesy. The question before the Senate is the propriety of the consideration of this bill. If it had gone in due course without note or comment, none would have felt that anything improper had occurred. But since a question has been made upon it, that question must be met, and I trust that no ex-Confederate on this floor will dodge that question, although doubtless his emotions might incline him to do so. If I could with propriety decline to vote upon this question I would do so, because in my judgment it does not become a Confederate soldier to ask

of the United States Government any peculiar right or privilege whatsoever; and no Confederate soldier within my knowledge has done so.

The Confederate soldier boldly laid down the gauntlet of war and made war, and when he came out of that war he had contempt for but two classes who were engaged in it: first, the men who made apologies; and, second, the men who demanded them. Questions of great international strife and of great social conflict never descend to personality. They are governed by the great philosophies of human existence; they are governed by laws higher and superior to and above the mere conduct of the individual who moves in the great path of human history.

I have no doubt that the honorable Senator from New Hampshire has offered this bill in a spirit of benevolence and of kindness and of generosity; but it has not been called for by any Confederate; it has not grown out of any demand of public sentiment. The wise legislation of the world is generally that which is the product of a matured public opinion which has gradually formed behind it and of which it becomes the mere legislative expression. No public discussion has been had upon this subject; no wide debate either North or South has been heard upon it. The Senator from New Hampshire said that he originated the bill. I venture to believe that its origin is almost entirely confined to the lucubrations of his own mind. While I shall greatly respect, yea, shall honor and admire and feel my soul go out to the great and noble spirit that will face any kind of opposition to assert that which he believes to be right, I can not believe, sir, that in this instance that gentleman has acted wisely or in consonance with the public spirit of the country.

All, sir, that the Confederate soldier asks of the United States is that he shall stand equal before its laws and shall have a fair opportunity to work out his own salvation; and I venture to say there is not a county or a town or a hamlet from the Potomac to the Rio Grande in which a Confederate soldier will be seen in rags or in tatters in the street begging bread. There is no palace and no hut and no fireside where he is not always a welcome and honored guest; and there is no honorable citizen who would not divide with him whatever he had in this life of its comforts.

There is no danger of any such honorable and true man, however humble he may be, or however little may be his fortune, dying upon the roadside because no good Samaritan will come by to lend him a helping hand. The Confederates ask nothing special not accorded to other men in this Government; all they ask is that they be respected in those rights of American citizens which they have assumed knowingly and intentionally, and which they intend to abide by, in such manner that, God helping them, no man can justly point toward them the finger of scorn or apply to them the epithet of insult.

Refund of Direct Tax of 1861.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 3, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 139) to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved August 5, 1861—

Mr. OATES said:

Mr. CHAIRMAN: The bill before the committee provides for the refunding or repaying in part to the States and Territories and to the District of Columbia, and in part to the individuals from whom it was collected, the direct tax levied under the act of August 1, 1861. A provision in a general revenue bill passed at that time levied for the exigencies of the war which was then impending twenty millions of dollars annually and apportioned it among the States, Territories, and the District of Columbia according to their respective populations. There were supplementary acts subsequently passed, but these related only to the States then in insurrection or rebellion.

This law could not, owing to the existence of actual war, be enforced in the Southern States. These supplemental acts contained much harsher provisions for their enforcement than the original act contained. It is a most singular fact, I will remark in passing, that although this law laid this tax annually, there never was any attempt made to collect it except for the first year, and yet, so far as I have been able to find, that law is yet unrepealed. So uneven was it in its operation and contrary to what the people had been accustomed to, I suppose was the consideration which caused its non-enforcement, notwithstanding it was a constitutional enactment.

The collections of this tax in the loyal or Northern States and Territories, with, I believe, a single exception, were made through the States and Territories and the District of Columbia. They availed themselves of the provision in the act allowing 15 per cent. to be retained out of the collections by all States and Territories which assumed its payment. I believe Delaware was the only exception. All the others assumed and paid, with the exception named and the Territories of Utah and New Mexico, the amount of the assessment apportioned to their populations respectively. The Territory of Washington never paid in full, but all others of the Union States and Territories assumed and paid the tax, mark you, not as States and Territories, but they collected it from the people, and for the employment of their machinery in collecting this money from the people they retained 15 per cent. of the collections, which aggregated two and one-quarter millions of dollars. And, gentlemen, it was asserted here yesterday that this bill carried $15,000,000 only. If you will examine it you will find that it covers the whole field, including the 15 per cent. deduction, and that it aggregates seventeen and one-half millions of dollars.

In the Southern States it could not at the time be enforced, but as the Union arms conquered that territory collectors of this tax followed and collected by assessment and sale in many cases and in many others by receiving in money directly from the property owner the amount of assessments against his property. There were many irregularities in some of the conquered districts in the matter of the assessments and collections. A notable instance was that in South Carolina, where the entire town of Beaufort was sold after the notice of sale had been misdescribed so far as the property was concerned, the notice given being of a misleading character, and thus the property was thereby sacrificed and the owners robbed of their homes.

The same is true in respect to many plantations near there and within that district. There were irregularities in other localities, but none so great as in this; and to-day there is a bill pending before this House, now in the Judiciary Committee, for the purpose of rectifying the wrong done and repairing the damages so far as it is within the power of Congress to do it. That, however, I only mention as incidental to this discussion.

After the war the process of enforced collection in the Southern States continued. Greater progress was made in some localities, as in Louisiana, South Carolina, and Virginia, than in others; but in none, save the State of Louisiana, were the collections completed and the sum raised which had been assessed to them.

After the war, in view of the condition of affairs in the South, the industries of the people completely revolutionized, everything out of joint, the people broken down in fortune and prostrated, the Congress from time to time passed acts delaying and postponing the collection of this tax in those States; the last of which was passed in 1868 and extended the time to the 1st day of January, 1869, since which for a period of twenty years no effort whatever has been made to collect a dollar of this tax.

The aggregate of collections is about seventeen and one-half millions, which leaves uncollected two and one-half millions only, in round numbers, or one-eighth of the original assessment. And this alone is the pretext upon which the passage of this bill is urged—because only one-eighth of that tax remains uncollected and which has been allowed to sleep for twenty years, it is now made the pretext for bringing forth this bill to deplete the Treasury of seventeen and one-half million dollars in the interest of those who desire to get rid of the surplus in the Treasury otherwise than by reducing the taxation which now burdens the people and cripples our national prosperity. Other gigantic schemes of misappropriation are to follow if this be successful.

How is it to be distributed? By the terms of the bill all the States and Territories which assumed and paid the tax are to receive the total amount of this money. It is to be given to them as States and Territories, while as such they never paid a dollar of it. There is a "trust" provided in the bill, to continue for six years, as the mode of repayment to those from whom the United States collected it directly. The money is to remain in the hands of the governor of the State, to allow people who paid the tax, or their legal representatives, to make proof of the fact, and where they do so to recover back the money. That provision applies to whom? Only to the people of the Southern States; for this tax was collected directly from none others except Delaware. By this provision they are to be postponed for six years, as none of them are barred until that time expires, and the governor can not ascertain to whom to pay it before that time expires.

Another thing. This provision for a "trust," to run for six years, is beyond the term of office of the governor of any State or Territory, and yet there is no provision for it to pass to his successor. He is not a bonded officer, and if he were his sureties would not be liable for this trust. His bond was never executed in contemplation of his becoming the trustee for these purposes. And hence in criticism of the bill I feel warranted in asserting that it is most carelessly, inartificially, and ineffectively framed.

The bill further provides that if any of this money remains at the end of six years which is not taken by proof, as I have already stated, then that becomes the money of the State. Now, how will it operate in respect to the loyal or Northern States and Territories of the Union? New York will receive, under the provisions of this bill, about two and one-half millions. Her citizens who paid it are not to receive a dollar of it; it is all to go to the State; and what is true of New York is equally true of all the other States and Territories which adhered to the Union during the war, with the solitary exception of Delaware.

In that State the trust would operate, and the people who paid the tax would receive the money under the provisions of this bill. Is that a just discrimination?

In every other loyal State the money will go to the State as a State; not to the people who paid it. Suppose that New York undertakes to distribute the money to the tax-payers, to the people who paid it, how will it operate? Those who paid the tax a quarter of a century ago in large part have died or left the country, or have found homes in some of the Western or Southern States or Territories. What interest have they in refunding to the State of New York to relieve from present burdens of taxation some Wall street king, some speculator, or some millionaire? This bill would be of some benefit to the present tax-payer, but none to those who paid it and have since removed from the State. The annual taxes of the State constitute an obligation on the present generation. Why take the money of the tax-payers of a past generation for the relief of the present one? Is there any justice in that?

Mr. HEARD. Will the gentleman yield to me?

Mr. OATES. Yes, sir.

Mr. HEARD. I ask the gentleman this question: If the money which was paid by this State as a State be refunded now to the State and go into its treasury, will it not lessen the rate of taxation and thereby be a relief to all the tax-payers?

Mr. OATES. They never paid any of this money as a State. Your State did not. None of them did. They collected it from the people, and while it will relieve the burdens of the present citizens of the State it will not relieve the burdens of all those who paid.

Mr. HEARD. I am sure the gentleman wants to be thoroughly understood. He says this was not paid by the State as a State. In contradistinction of the case where it was paid by the sale of the property of individual citizens, I say it was paid by the State as a State, because the money was collected by the general laws of taxation of the State, as in my own State.

Mr. OATES. The collections made from individuals by the United States form the case in which this bill provides a trust and for the money to go back to the persons from whom it was collected or their personal representatives. But where this tax was collected through the machinery of the State, and by the State from the people, this bill provides simply for paying the money back to it as a State and not to the people from whom it was collected. It has but the mere semblance of justice in it. The bill is deceptive and misleading in all its features, and, with the committee amendment adopted, more to the benefit of the lobbyists interested than to the people at large.

There is another thing to which I will invite the attention of the House in respect to the operation of this bill if passed. It must be remembered that there is a marked change in the number of the people and the condition of the respective States now as compared with a quarter of a century back; and if you test this refund by the last census you will find that the bill will operate enormously to the advantage of the Eastern or older States as against the Western or new States. As an illustration of this let us take the State of New York with a population, as shown by the Tenth Census, of 5,082,871; New York would receive under the operation of this bill the amount of the net collections, exclusive of the 15 per cent., which I insist is included in the bill, $2,213,330.86, while on the same basis the State of Kansas, with a population of 996,096 would get only $71,743.33. The ratio of population approximates one to five in favor of New York, while the ratio of money paid to the States will approximate $1 to $30 in favor of New York. The State of Nebraska, with a population of 452,401, would receive under the operation of this bill $19,312. As compared with New York its population is about as one to eleven, while the bill will distribute the money it appropriates in the proportion of $1 to Nebraska for every $114 to New York. Illinois, with a population of 3,077,871, approximating three-fifths that of New York, under this bill would receive but $1 for every $2.25 received by New York. So take it as you will, this bill, which is claimed to be an adjuster of inequalities, is in its operation a creator of more glaring inequalities, in respect to the people and the States who paid the tax, than those now existing.

I now pass from the criticism of the bill to the more serious question of the power of Congress to pass it.

To that I will now pay my respects. It was a tax legally and constitutionally laid. Will any one deny that? The taxing power of the United States through its Congress is plenary and unlimited except as to the manner in which the tax is laid. The Congress had the right to lay this tax, and, as in the case of all direct taxes thus laid, it was apportioned among the States and Territories according to population—not according to their ability to pay, not according to the value of their property, but according to the number of their people. That is the constitutional provision. But although this tax was a constitutionally laid tax, it is intimated in the report of the majority that there has been some question or cavil made about the constitutionality of the manner of its collection in allowing the States to collect it in consideration of 15 per cent.

That objection is utterly unsound. The Congress, having the right to lay the tax, had the right to choose the most appropriate means, in their judgment, for its collection; and who will undertake to gainsay the proposition that Congress did determine that that was the most appropriate and best means of collecting this tax, constitutionally laid? So far as it was laid and collected, which is to the extent of seven-eighths of it, it was legally and constitutionally done. It was expended in the maintenance of armies and navies and for the public defense, which was a constitutional and legal purpose.

Now, sir, I take it for granted that no gentleman on this floor will assert or maintain the proposition for one moment that this tax was not legally laid and legally collected, so far as it was collected, with the exceptions I have named in South Carolina, and legally and constitutionally applied. The fact that a part of it remains uncollected does not in the least affect the legality and uniformity of the tax. The provision of the Constitution unmistakably requires that duties, imposts, and excises shall be uniform; but uniformity is not an essential element in the constitutionality of a direct tax, but if it were, the constitutionality of this tax can not be denied by saying that it was not uniformly collected, as uniformity would have reference to the laying and apportioning the tax, and not to the failure of the Government to collect it or any part of it.

Mr. HOPKINS, of Illinois. Will the gentleman allow a question?

Mr. OATES. I will yield for a question.

Mr. HOPKINS, of Illinois. Is the gentleman in favor of the collection of the unpaid balance of the twenty millions?

Mr. OATES. I will meet you on that. I am not; and I will tell you why further on. I am not in favor of it except in one contingency. If you will pay back to the Southern States the sixty-eight millions of cotton tax you took from my people wrongfully under an unconstitutional law, Alabama alone will pay it out of the ten millions of cotton tax you took from her people in 1866, 1867, and 1868, after the close of the war.

Mr. HOPKINS, of Illinois. You state that a tax, the cotton tax, was laid unconstitutionally, which is denied by equally as good lawyers as yourself.

Mr. OATES. I decline to yield, Mr. Chairman. I do not propose to be led off from the line of my argument.

Mr. HOPKINS, of Illinois. I wanted to know whether you were in favor of the collection of the balance of the twenty millions.

Mr. OATES. I have answered that, and I will have more to say about it a little further on.

Mr. HEARD. Will the gentleman allow me a question on a law proposition?

Mr. OATES. Yes, sir.

Mr. HEARD. The gentleman from Alabama concedes the constitutionality of the levying of this direct tax, and says that it was done in pursuance of the Constitution. He says also that the Constitution requires that taxes shall be laid uniformly. Now, would the gentleman maintain that the Constitution in its spirit would be executed if a tax were uniformly laid, but only partially collected? Would not the partial collection be equivalent to laying the tax in a manner not uniform?

Mr. OATES. I did not yield for a speech. I had already answered that question as plainly as I could in my limited use of the English language.

Mr. HEARD. Then I beg the gentleman's pardon. I was absent from my seat during the first part of his remarks.

Mr. OATES. I had said emphatically that the failure of the Government to collect the tax in any part would not affect the question of the uniformity of the tax if that were essential.

Mr. DALZELL. Will the gentleman allow me to ask him a question?

Mr. OATES. I will yield for one question and then I will yield no more.

Mr. DALZELL. Why do you say that the cotton tax was unconstitutional?

Mr. OATES. Allow me to come to that further on. I do not choose to be led off from the line of my argument now to answer that question, but I will answer it later.

Now, Mr. Chairman, this direct tax having been legally and constitutionally laid, apportioned, and collected, to the extent, at least, of seven-eighths of it, and legally applied, I ask any gentleman here to rise, now or at any subsequent time, and point me to any provision in the Constitution of the United States which authorizes Congress to pass an act to repay it. There are numerous cases, both State and Federal, where taxes illegally and wrongfully collected have been refunded to those from whom they were taken, but where is there a case of taxes legally and constitutionally laid and collected and applied being refunded?

Mr. EZRA B. TAYLOR. Will the gentleman allow me, in answer to his request, to state a case?

Mr. OATES. I would like to hear of such an instance, for I do not know of any.

Mr. EZRA B. TAYLOR. The revenue which was divided in 1836 among the States——

Mr. OATES. Ah, I will answer that.

Mr. EZRA B. TAYLOR. Was collected from the people of the States. It was divided among the States—repaid to them.

Mr. OATES. It was not distributed as your bill proposes to dis-

tribute the money in this case. That was at first proposed; but the President and Congress knew and held that there was no constitutional power to do that, which is the very thing you are seeking to do by this bill.

Finding the Constitution in the way, those who desired to distribute that money were more ingenious than you are; they invented a scheme by which they flanked the Constitution, and passed a law to deposit or loan the surplus to the States, dividing it among them pro rata according to population. There is the law on this subject, which speaks for itself. That was not a refunding act nor one to distribute among the States. The gentleman cites that case as a precedent for this, but it is squarely against him. It was conceded they could not do what is proposed to be done here. There was a surplus then in the Treasury, and there was a desire to "raid" it just as certain gentlemen want to do now; but it was conceded that there was no power to distribute the money in this way. The men of that day had respect for the Constitution and the obligation they had taken to support it. They invented a plan, which, however, was not very creditable to them, by which they flanked that instrument, and loaned that money to the States, or deposited it with them. The money is to-day on deposit with each of those States and belongs to the people of the United States. The people of eleven of the present States of the Union did not participate in that distribution. That money is as much their property to-day as of the other States, and they have an equal interest in it with the States with which the money was deposited. I expect to offer at the proper time an amendment to this bill, requiring the Secretary of the Treasury, if this bill should pass, to treat those deposits as a set-off against the claims under this bill.

Mr. Chairman, touching the question of power I read from the report I prepared and submitted as the views of the minority of the Judiciary Committee, as follows:

The Government of the United States in the exercise of a constitutional power laid and collected this direct tax, and applied it to a constitutional purpose—that of the common defense. Those who paid it, whether States or citizens, have no claim whatever, either in law or equity, for the return of any part of it. It belonged absolutely to the Government of the United States, and hence the reimbursement of the States, Territories, and District of Columbia which the bill proposes, is a pure gratuity; and the Constitution does not confer upon Congress any power to make the appropriation or pass this bill.

No doubt the friends of this measure contemplate the appropriation out of moneys now in the Treasury as one of the many plausible schemes for disposing of the surplus and making generous and wide-spreading distribution thereof, instead of applying it to the payment of the debts of the United States, and thereby diminishing to some extent the $48,000,000 of interest which they are annually paying. But will they assert that Congress has the power now to lay a direct tax of $17,500,000 upon the people of the United States for the purpose of paying the identical appropriation which this bill proposes to make? And yet if this appropriation be constitutional, there is no question about the power of Congress to raise the money by any of the methods and powers of taxation conferred by the Constitution.

Will the friends of this bill claim that it is a rightful exercise of the constitutional power to tax—to lay upon the people a direct tax in this year of 1888 to reimburse the States and Territories for the payment of a direct tax laid in 1861? If so, why may not Congress with equal propriety lay and collect this year a direct tax sufficient to reimburse the States and people who paid the direct taxes laid and collected in 1798, and again about the close of the last war with Great Britain?

Section 8 of Article I of the Constitution empowers Congress to lay and collect taxes, duties, imposts, and excises for three general purposes, namely: (1) to pay the debts; (2) to provide for the common defense, and (3) to provide for the general welfare of the United States. Can it be said with any degree of truth that these taxes which were legally laid, collected, and applied a quarter of a century ago constitute a debt in any sense of that word?

The mere statement of the question is its own refutation. Is this appropriation proposed by this bill for the common defense? Is a single dollar of the money by its terms to be applied to the construction of ships, or purchase of guns and materials of war, or for the erection of forts and providing coast defenses, or to raise, equip, or maintain an army, or in any otherwise to provide for the common defense? Nothing of the kind can be discovered among its provisions. On the contrary, it is "to reimburse these States, Territories," etc., money paid in obedience to lawful requirement and applied to the common defense in actual war twenty-five years ago. It is substantially a proposition to give a large amount of money to a part of the States and Territories of the Union; in the language of the bill, "to reimburse" them for money which they as States and Territories did not pay, but which was paid by the land-owners within their borders.

Next let us inquire if the appropriation proposed by this bill falls within the third grand purpose for which the taxing power of the United States may be exercised, *i. e.*, to provide for the general welfare of the United States. We hold, in accordance with sound interpretation and the fundamental principles of the party to which we belong, that this clause does not confer power upon Congress to do whatsoever the majority wills, but to lace Congress up strictly within the powers enumerated in the Constitution and such implied powers as are necessary to be exercised in order to give force and efficacy to those expressed.

In vain do we look through the twenty-eight express grants of power to Congress in the Constitution to find any to which this bill is applicable, or which in any remote degree, by implication or otherwise, confers the power to pass it. The best informed of the latitudinarian constructionists, who contend that Congress has "the power of appropriation," as they call it, independent of those enumerated in the Constitution, concede that the purpose for which the appropriation is made must be general and not local, and even this stretch, or, as we hold, erroneous assumption, is not broad enough to invest Congress with the rightful power to pass this bill. We use the word "rightful" as the synonym of constitutional, and to distinguish it from *brutum fulmen*.

The powers expressly conferred upon Congress to lay and collect taxes are plenary and unlimited, and if there be no limits to the powers of appropriation the United States is a Government of unlimited power. Such a construction blows up the Constitution as with dynamite, and would change the character of the Government, and in the course of time imperil the liberties of the people. It substitutes the unbridled discretion of Congress for a written Constitution which for one hundred years has maintained a government the most marvelous and successful of any in the history of civilization.

The people of this country are more vitally interested in restricting Congress, in the matter of appropriations, to the powers conferred by the Constitution than they are in any other of the provisions of that great charter, for the reason that these are more frequently transcended and abused, usurpations popularized and disguised by the large amount of treasure disbursed; and thus the money of the people is appropriated by their servants and used for the destruction of their liberties, which the restrictions upon power in the Constitution were intended to preserve. They need not fear the unlimited powers of taxation conferred if the money raised be not misapplied, but appropriated only to the constitutional objects and purposes of the Government. If applied only to these, taxation will soon conform to the necessities created thereby, the burdens of the people will be borne without murmur or complaint, and they will have nothing to fear.

Mr. Chairman, if gentlemen can not find any authority in the Constitution for this distribution, why undertake to pass this bill? I can understand very well how gentlemen on the other side of the Chamber can support the measure and do so consistently with their political professions. According to the traditions of their party and those they have succeeded, they are latitudinarians or loose constructionists of the Constitution; they believe that the General Government is the judge of its own powers. But a man who professes to be a Democrat is not entitled to be considered such if he advocates legislation outside of the Constitution.

Democracy—Jeffersonian Democracy—for I make a distinction—there was such a thing as Democracy in existence before Jefferson—Jeffersonian Democracy rests upon the very mudsill of constitutional government; and according to its principles you must find a warrant in the Constitution, either express or necessarily implied, for every bill you propose to pass. When you disregard this principle and go outside of the Constitution for your authority, you are acting undemocratically and in violation of the creed of Jeffersonian Democracy. When you go outside of the Constitution to legislate you are guilty of usurpation.

I am a Democrat because I believe honestly that the administration of this Government upon Democratic principles is best for all the people. If I did not so believe—if I believed that Republican principles, or the principles of any other party, were better for the people, I thank God I have the courage and the manhood to avow my convictions and act upon them. But as I do not so believe, as I believe that Democratic principles are right, and that when this Government is administered upon them it is infinitely better for the people, I adhere to those principles, and a few dollars for my State or my constituents can not buy me nor induce me to desert them. I am not that kind of a Democrat. The fact that my State will get a large amount or a small amount of money never influences me to violate these fundamental principles nor do my constituents expect me to do so. They know that they can trust me. When there is a matter of sound Democracy and constitutional government involved I propose to adhere to my principles regardless of consequences.

Under the operation of the loan to which I have referred, $4,000,000 were deposited with the State of New York. California never received any part of that loan or deposit. Minnesota, Colorado, Florida, and many other States never received any part of it. The $4,000,000 which New York received and which it has now on deposit is the money of the United States, and these other States have an interest in it just as much as the people of New York. Attached to the printed views of the minority of the committee is a table, furnished at the Treasury Department, as late as February 18, 1888, setting forth the amount that each State received as its portion of that deposit, and the States which never received a dollar are enumerated. My State received a portion.

Gentlemen, if we are going into the question of adjusting inequalities, if that is a motive which warrants a disregard of constitutional limitations, then I insist we ought not to stop at a refund of the direct tax, but we ought to go further and make the adjustment of this loan. And we ought not to stop there. You all know what the cotton tax was. That was a tax laid upon raw cotton. Collections of that tax were made from States and Territories during the war; but very little was collected until after the war, the bulk of the money having been collected under the supplemental act. The gross amount of the collections of cotton tax was $68,072,388.98. Here is the table showing the year and the States in which it was collected. So great an abuse of the taxing power of Congress was never exhibited in the entire history of this country.

In this connection there is one curious fact which is very easy of explanation. If I remember rightly there were thirteen loyal States in which some of this tax was collected, and I believe one Territory. You will find that in the State of New York nearly a million dollars of this tax was collected; in Illinois, half a million; in Massachusetts, many thousands. In the aggregate nearly $4,000,000 of this tax was collected in the Northern States, or the States loyal to the Union.

A good deal of cotton during the war found its way through the lines into the North, and just after the war there was a great deal of cotton shipped thence without prepayment of taxes. The law gave the Government a lien on it and the tax was collected wherever the cotton was found in the Northern States. I intend, Mr. Speaker, at the proper time, if the friends of this bill intend to pass it, bad as it is, to offer this amendment to it. If the House has determined to pass this bill, although I say I am opposed to it for many good reasons, and that if I had the power I would defeat it now, yet if you are going to pass it and thereby take from the Treasury of the United States seventeen and a half millions of dollars and distribute it as the bill proposes, then I intend if I can to bring the deposits of 1836 into hotch-pot, and also to

take into the account the amount of the cotton tax and settle inequalities of taxation all along the line and endeavor to treat all alike.

I would deduct the amount arising out of these deposits from the sums found due to any and all the States. That would be only fair enough and assist in some sort to adjust the existing inequalities which this bill professes to correct, but utterly fails to do.

Mr. HOPKINS, of Illinois. I desire to know whether there is not a bill now pending before the Judiciary Committee providing for the refunding of this cotton tax?

Mr. OATES. Yes, there is.

Mr. HOPKINS, of Illinois. That is all.

Mr. OATES. And we expect that the same Committee on the Judiciary which reported in favor of this bill will vote against that bill providing for the refunding of the cotton tax.

A MEMBER. Including the gentleman from Illinois.

Mr. OATES. Yes; I am sure he would be found amongst those voting against it. I would expect nothing better of him.

The amendment I propose to offer is as follows:

Provided. That the Secretary of the Treasury be, and he is hereby, authorized and directed to credit and pay to each State a sum equal to the amounts collected therein, respectively, as a tax or duty on raw cotton under the provisions of the act approved July 1, 1862, and the supplementary and amendatory acts thereto; which sums, when so credited and paid, shall be accepted and held by such States to be disposed of as their respective Legislatures elected next after the approval of this act may direct; and an appropriation is hereby made out of any money in the Treasury not otherwise appropriated for the purpose of carrying out the provisions of this act.

You gentlemen who are in favor of the Blair educational bill in order to help the States of the South now laboring under such a burden of illiteracy would do well to vote for this amendment, as it would better enable the Southern people to maintain their public schools without having recourse to an unconstitutional and dangerous piece of legislation for that purpose. Pay your debts and the Southern States can educate their children without aid from the Federal Treasury.

Now, this tax on raw cotton is not upon the same basis as the direct tax in respect to its constitutionality. And why do I say so? Under the Constitution duties must be uniform. The eighth section of the first article of the Constitution empowers Congress to lay and collect taxes, duties, imposts, and excises; first, for the purpose of paying the debts of the United States; secondly, for the common defense; and thirdly, to provide for the general welfare, not of the people at large, but of the United States, using that word in its governmental sense and not in a territorial sense merely.

It provides that all duties laid shall be uniform throughout the United States. Now, this cotton tax was imposed on the raw material, and by its terms was a duty laid on the producer, and it is a fact which is known of all men, it was a duty imposed on an article which could be grown or produced only in one section—that it was a physical impossibility to produce it anywhere except in one section of the Union; and as it was an impossibility, therefore, to produce it anywhere but in one section any tax imposed upon that material could not be a uniform duty.

Mr. DALZELL. Will the gentleman allow me to ask him a question?

Mr. OATES. Not at this point. In the same connection I will observe that the Constitution prohibits the imposition of a tax or duty on any article of export. In the very nature of things cotton is produced to be exported, and yet this cotton tax was imposed upon the raw cotton grown for the purpose of being exported.

Mr. DALZELL. If I understand the proposition of the gentleman from Alabama it is that because cotton can not be grown in a certain portion of the Union the tax imposed on cotton is in violation of that provision of the Constitution which requires that all taxes which are laid shall be uniform. Do I understand the gentleman aright?

Mr. OATES. I say that, and I also say that it is in violation of another provision of the Constitution.

Mr. DALZELL. Let me ask the gentleman another question; I do not wish to make a speech, but merely to ask a question. I wish to call the attention of the gentleman to a decision of the Supreme Court of the United States which is against the position the gentleman has assumed.

A MEMBER. What page?

Mr. DALZELL. It is to be found in 112 U. S., 594.

Mr. OATES. The case referred to by the gentleman from Pennsylvania [Mr. DALZELL] holds that the provision in the law laying a tax of 50 cents on each emigrant to this country on their arrival in any of the ports of this country is a uniform tax according to constitutional requirement. That decision does not militate against my position at all. That tax or duty is the same at all the ports of the United States. A decision on that point to the same effect might have been reached by the court on the ground that the duty was a part of our foreign policy, as it is laid upon aliens or persons who are not citizens of the United States. The decision is in nowise analogous to the question of the unconstitutionality of the cotton-tax law for the want of uniformity.

Mr. Chairman, this identical question of the constitutionality of the cotton tax has been before the Supreme Court. It was brought up in a case from Tennessee, when the court consisted of but eight judges in consequence of the inability of Chief-Justice Chase to sit at the hearing, and the eight justices before whom it was argued were equally divided in opinion on the question of its constitutionality, and hence no decision was rendered. That is a fact, whatever the gentleman may find in his Supreme Court Reports.

Mr. LONG. Will the gentleman's argument apply to sugar and ice?

Mr. OATES. Oh, no.

Mr. LONG. Why not to sugar and ice?

Mr. OATES. Because both can be produced in more than one section of the Union. They can be produced in nearly every latitude of the Union.

Mr. DALZELL. Well, is the tax on tobacco unconstitutional?

Mr. OATES. No. Do not you produce tobacco in Connecticut as well as in Virginia and Florida?

Mr. BAYNE. But not in Maine.

Mr. GEAR. Nor in Iowa.

Mr. OATES. Perhaps not, but they are not large enough to change the rule. One or two States would not, I apprehend, be a sufficient exception to destroy the rule.

I stated, Mr. Chairman, in the views of the minority of the Committee on the Judiciary that the question of the constitutionality of this cotton tax had never been decided by the Supreme Court, and therein gave my views, as I have attempted here to do orally, why I believe that the tax imposed was unconstitutional and ought to be returned to those who paid it. I have not time now to enlarge my argument on this question. I quote from the minority report as follows:

It is therefore fair to presume that very little, if any, of this tax burden was borne by persons outside of States in which the cotton was produced. Sixty-four million nine hundred and thirty-five thousand one hundred and twenty-one dollars and fifty-six cents of this tax was collected in the Southern States, either directly or indirectly, from the producers, and that at a time when their fortunes were wrecked, their plantations laid waste, their substance exhausted by a devastating war unparalleled in modern history, and their labor system revolutionized and unreliable. Many millions more, which never reached the Treasury, were taken from these people and embezzled or stolen by collectors and their thieving assistants. Was it not a fitting time to call a halt in collecting the two and a half millions of uncollected direct tax?

We have already referred to section 8 of Article I of the Constitution of the United States as conferring upon Congress the unlimited power of taxation for all the purposes of Government enumerated in that instrument. There is, however, in that section one restriction, one limitation, upon this taxing power which Congress has no right to transcend. It is the last clause in that section, and in these words:

"But all duties, imposts, and excises shall be uniform throughout the United States."

The duty laid upon raw cotton could not be uniform throughout the United States, because cotton upon which it was laid and collected could not be raised or produced anywhere within the jurisdiction of the United States except in the eleven Southern States which attempted in 1861 to secede from the Union, usually called the insurrectionary or rebellious States, and to a very inconsiderable extent in Kentucky and Missouri. It was a notorious physical impossibility to raise or produce raw cotton anywhere within the United States except in the thirteen States last referred to. The language of the statute imposing this tax was:

"There shall be paid by the producer, owner, or holder, upon all cotton produced within the United States * * * a tax of ——— cents per pound, etc."

The last and most oppressive of the amendatory acts in relation to said tax was approved July 13, 1666, entitled "An act to reduce internal taxation," etc., but in fact increased the duty imposed upon cotton from 2 to 3 cents per pound. Under its provisions two-thirds of the total amount of the tax was collected. It will be observed that it was not a war measure, but enacted more than a year after the peace.

The constitutionality of the laws imposing this tax has never been decided by the Supreme Court of the United States, and hence remains an open question, but one which to our minds and in the light of common sense needs but to be stated in order to be seen. Hon. THOMAS C. MCRAE, of Arkansas, in a very able speech upon this subject, delivered in the House February 14, 1887, used the following pertinent language concerning the duty imposed on cotton:

"As such it should be uniform throughout the United States. The fact that the duty was on raw cotton, which could only be produced in a part of the States of the Union, precludes the idea of uniformity throughout the United States. Of the sixty-eight millions collected under the laws, nearly all was collected from citizens of the Southern cotton States, and the citizens of the Northern States paid no tax corresponding to it. When it was stated in the debates upon the Constitution that under the taxing clause certain States having property peculiar to its climate and surroundings might be oppressed, Mr. Madison very promptly and emphatically repudiated the idea, and declared that the Constitution did not admit of it, and insisted that either in the rule of apportionment or of uniformity all States and their interests would be protected. If the cotton tax can be sustained, then the rule of uniformity has utterly failed of its purpose and imposes no restrictions on Congress whatever."

Section 9 of Article I of the Constitution declares, among other things, that:

"No tax or duty shall be laid on articles exported from any State."

When this clause was under consideration in the convention which framed the Constitution, Mr. Ellsworth said:

"There are solid reasons against Congress taxing exports: First, it will discourage industry, as taxes on imports discourage luxury. Secondly, the produce of different States is such as to prevent uniformity in such taxes. There are indeed but a few articles that could be taxed at all, as tobacco, rice, and indigo, and a tax on these alone would be partial and unjust. Thirdly, the taxing of exports would engender incurable jealousies."

We believe that the cotton tax was unconstitutional on both the grounds above set forth. To say the least, in the language of Mr. Ellsworth, this cotton tax was "partial and unjust."

I will do all I can to defeat this bill, but if you are going to pass it over my objection I will insist on an amendment which I will offer to refund the cotton tax to the States in which it was collected to be disposed of as their respective Legislatures may see proper to direct, because the Legislature is the representative and reflects the will of the people in the State. No doubt the Legislatures of all the States would say, return the money to those from whom it was taken so far as practicable, because that would be just.

Now, gentlemen will observe that if they are determined to pass this bill or repay this seventeen and one-half millions of dollars the coupling of this amendment to which I have referred does not reduce the amount of direct tax their States will receive, but is in addition to what thirteen of the States of the North would receive of the direct tax, because a part of the cotton tax was collected within them.

The State of New York, which would, under this bill, receive of the

direct tax about two and one-half millions of dollars, would receive, if the amendment to refund the cotton tax is coupled with it, $867,942.68 in addition, and so of all of these other Northern States to which I have referred, except those in which no cotton tax was collected.

But, Mr. Chairman, it is only from the necessity of the case that I will attempt the solemnization of the bans between the cotton tax and the direct tax, as one is legitimate and the other illegitimate. I believe that Congress has no power to return the one; while it has power to return the other. I would stake the claim for a refund of the cotton tax on a decision of the constitutionality of the law imposing it by the Supreme Court. If the $68,000,000 collected from Southern farmers on their cotton since the war was a constitutional and legal tax, I would not vote to return a single dollar of it, nor would a single one of those who paid it desire me to do so, notwithstanding it was unfair and burdensome for them to pay it.

Money collected by lawful taxation for the use of the United States belongs to the United States, and no tax-payer, whether State or individual, has any claim to it, either legal or equitable. The repeal of the law imposing the tax on raw cotton prevented a decision on its constitutionality. I challenge the friends of this direct-tax refunding bill to pass an act allowing a test case to be made through the Court of Claims, by which a decision may be reached on the cotton-tax law. I favor obedience to law and will keep sacred the oath I have taken to support the Constitution of the United States.

I have heard it said that this direct-tax refunding bill is a peace offering; that it is a necessary measure of peace and reconciliation between the Northern and Southern States of the Union. That is an old saw. It has been repeated to me so often during the last twenty-seven years that it makes me doubt whether I will ever live long enough to completely wash the imaginary smell of Confederate brimstone from my garments. I never was as badly whipped as some Southern men were who never got any nearer the front than I did. I was whipped just sufficiently to observe the terms General Grant had the magnanimity to extend to us. I laid down my arms in good faith and returned to the Union and Constitution, which I cherish as mine and the only Government I ever expect or desire to have for myself and those who come after me. I have no other acknowledgment to make to any one.

I and the people of my section for twenty years after the close of the war did everything you told us to do for peace and reconciliation except to vote the Republican ticket, and I supposed that reconciliation had been reached on everything else; but it seems that I was mistaken. The demand breaks out in a new place, and I hear from some of my timid neighbors the old cry of peace and reconciliation. I have lost about all the respect I ever had for it. The demand may be honest. I have heard of a Jersey legislator who asserted that his colleague was honest. How, it was asked, can he be honest when he accepts a bribe? The response was, "Because he will stay bought." I am not disposed to reconcile any more, because you will not stay reconciled. I am going to do just whatever I conscientiously believe to be right without regard to whether it reconciles or pleases any one else. I understand that to be the privilege of every American citizen.

Refund of Direct Tax of 1861.

SPEECH

OF

HON. LUCIEN B. CASWELL,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 14, 1888.

On the bill (S. 139) to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved August 5, 1861.

Mr. CASWELL said:

Mr. SPEAKER: On the 5th of August, 1861, Congress, in the exercise of a constitutional authority, levied upon the people of the several States and Territories a tax of $20,000,000, and apportioned it according to population. The tax was made a lien and collectible through the Internal Revenue Bureau. The act of Congress authorized the States and Territories to assume the tax. Pursuant to this delegated authority the Legislatures of twenty-nine States passed laws assuming the tax, though full payment was not made in some cases for many years; and the State of Georgia never voluntarily paid any portion of it. Her act of resumption was at a late period, and soon after the act of resumption she denied her own authority as a State to make the payment. Large portions of this tax were collected by way of offset of claims found due from the United States, and in many instances by withholding moneys due the States as a part of the proceeds of the sales of public lands.

At the time of the levy in 1861 several of the Southern States were in open rebellion, and the tax could not be enforced within their dominion. But at a later period, as possession was gained by the Federal Army, collections in parts of a State were made, some by voluntary payment and some by actual sales of property; nearly all of Beaufort County, in South Carolina, was sold for the tax, and great hardship resulted to this portion of the State, while other parts escaped altogether, and the tax remains still uncollected. In 1868 Congress directed a suspension of efforts to collect the tax for the time-being, and since then none has been made except by offset of claims, which has been done down to a very late period.

But it has been recently held by the Supreme Court that the tax was a levy, not against the State in its municipal or political character, but against the people owning property therein, and that without an assumption of the tax no liability whatever existed against the State as such, and that offsets against such States could not be enforced. Actions were brought against the United States by Louisiana, Alabama, and Mississippi, and judgments recovered to the amount of $131,124.08 for claims which had been thus offset and applied on the tax.

The whole amount collected in cash and by way of offset up to the 2d day of March, 1888, amounts to $15,227,633.03; $2,206,985.67 has been credited to the States on account of commissions allowed for the assumption and payment of taxes. There remains uncollected $2,562,401.29.

The bill under consideration proposes to refund to the several States and Territories all sums which have been collected, either by offset or otherwise; and it also proposes to cancel that which is not collected.

Prior to the decisions which held the tax to be against the people, and not against the municipality, the Treasury Department had treated the tax as debt and credit with the States upon the books, and the uncollected portion stands charged in account against the delinquent States, but without authority to enforce collection, except it may be in the way of offset with such States as have assumed the tax, and in such cases great doubt is entertained as to the right of offset, as the tax was not against the State.

Owing to the great inequality in the levy as well as in the collections which have been made, and the embarrassments attending further and a complete execution of the law, and the fact that, in some of the States, a part of the citizens were compelled to pay, or did voluntarily pay, while a part have escaped, and the fact that some of the States have paid in full, while others have paid only in part, and some not at all, and that as the accounts now stand large balances appear upon the books of the Treasury Department against such of the States as have not paid, it is believed this bill should pass, and restore to the States and to the people, so far as possible, the money received from them.

I submit a letter from the First Comptroller, dated March 2, 1888, giving information as to the condition of the account and also the statement referred to in his letter:

TREASURY DEPARTMENT, FIRST COMPTROLLER'S OFFICE,
Washington, D. C., March 2, 1888.

SIR: Your letter of the 27th ultimo to the Secretary of the Treasury has been referred to this office.

In reply I have to state that the report of the committee appointed to examine the direct-tax accounts was approved by this Department, and adjustments have been made as recommended, as shown in the inclosed statement, and which gives all balances due to the United States on account of direct tax uncollected. The accounts of the States and Territories not therein named are balanced and closed. From an estimate made in this office it appears that to pay back the direct tax proper to the several States and Territories, after deducting the amounts credited under acts of Congress and amounts paid back under appropriations for the 15 per cent. and the amounts of the judgments for certain set-offs obtained in the Court of Claims, there will be required (approximately) $15,035,000.

An estimate of the amount required to pay the amounts collected by the direct-tax commissioners, incidental to the tax, namely, penalties, interest, costs, and the amounts involved in the sales and redemptions of land, etc., would involve months of labor and would require the examination of many hundred claims for the refund of money collected under the direct-tax laws that have been passed upon during the last twenty-five years.

Respectfully yours,

M. J. DURHAM, *Comptroller.*

Hon. L. B. CASWELL,
House of Representatives, Washington, D. C.

Statement in relation to direct tax.

Name of State or Territory.	Amount of direct tax charged.	Amount of tax collected by direct-tax commissioners from citizens.	Amount collected from the State by set-off of amount due to the State.	Total amount collected and credited.
Alabama	$529,313.33		$22,520.24	$22,520.24
Arkansas	261,886.00	$154,701.18		154,701.18
Florida	77,522.67	4,766.26		4,766.26
Georgia	584,367.33	82,427.47	35,555.42	117,982.89
Louisiana	385,886.67	314,500.84	71,385.83	385,886.67
Mississippi	413,084.67	69,584.55	43,740.11	113,324.66
North Carolina	576,194.67	377,452.61		377,452.61
South Carolina	$363,570.67	$222 396.36		$222,396.36
Tennessee	669,498.00	392,004.48		392,004.48
Texas	355,106.67	180,841.51		180,841.51
Virginia	729,071.02	442,408.09		442,408.09

The gentleman from Alabama [Mr. OATES] denies the constitutional authority of Congress to pass this bill, on the ground that the tax was legally levied, and by a strict construction of the Constitution no authority can be found for refunding it. But he claims if we are to pass the bill we should amend it so as to include a refunding of the tax, $68,000,000, which was levied upon raw cotton by the act of July 1, 1862. He asserts that this tax was unconstitutional and unjust, because cotton was raised only in the Southern States, and that Congress should restore the money to the States in which the collection was made. He insists that the direct tax of $20,000,000 which we propose to refund, so far as collections were made, was constitutional, and can not be refunded, while the cotton tax was unconstitutional and should be refunded. He does not see how Democrats can vote for the first proposition, believing, as they do, in a strict construction of the Constitution, while it would be consistent for Republicans to support it because of their well-known custom of loose construction.

It may be, sir, that we have not in our interpretation of the Constitution so limited its meaning as to destroy its usefulness.

Certainly we did not agree with the Democratic Attorney-General, Mr. Black, in 1860, when he advised the Executive of the United States that there was not authority in the Constitution to coerce a State or compel her to remain within the Union. And, as a result, the great strong arm of the National Government remained paralyzed and was not raised till State after State took its departure and rebellion was fully organized. And had there not been at this juncture an Executive elected by a party that could see some authority in the Constitution for the preservation of the Union, and who succeeded to power, secession and permanent dissolution of the Union would have certainly followed.

I believe, sir, the implied powers of the Constitution are sufficient to enable Congress at all times to enact needful laws for the preservation of the Government, and to adjust its taxes, its finances, and the equality of its burdens among the States. While I would not violate its express provisions or do that which would conflict with its spirit and purpose, I would not withhold the administration of justice in cases where Congress had already assumed jurisdiction in its acts for our common defense. But, sir, I invite the gentleman from Alabama [Mr. OATES] and the House to a consideration of this bill in the light of strict construction which he chooses to apply.

It is now the settled law beyond all question that this tax was a levy upon the people and not upon the States; and what authority, I ask, if we look for express authority, can there be found in the constitution of any of these States for the assumption and payment of the tax levied upon its people, and what authority had Congress to provide that a State might assume and pay the tax? Certainly no such provision can be found in Federal or State constitutions. Then it follows by the rule of strict construction, which the gentleman invokes, that the whole transaction of assumption and payment was without warrant or constitutional authority.

This being so, it is difficult to see why Congress should not refund the money received and reimburse the treasury of each State for the money we had taken from it without constitutional authority, and which amounted to little more than a loan, for the time-being, to the General Government, and especially should the money be refunded now while there is a surplus in the Treasury of the United States, which, it is universally admitted, should be put in circulation.

Again, it is equally clear, under the same rule of construction, that the offset of claims which the States held against the United States was without authority. A large portion of the amount collected was by the offset of these claims, and we *should now pay the money we have* in that way confiscated and applied in liquidation of the tax account.

In some of the States the tax was collected only from a part of the people, and remains uncollected as to others. By what principle of equity should the United States retain the moneys collected of part of the people, and forgive the others of the tax levied upon them?

In any possible view of the questions involved in this discussion, equity and fair-dealing require that we retrace our steps so far as we can, and refund the moneys paid by the States from their general fund, and that we also pay to the States in which levies and collections were made from the people, in trust for them, all that was realized in such proceedings.

It is conceded that the levy of this tax was legal, but while that was so, it does not follow that the methods adopted for its enforcement were also valid. In reference to the repayment of the cotton tax I have this to say to the friends of the measure: If we should consent to it, and amend this bill accordingly, one of two things would as surely follow as the sun is sure to rise and set. Either such action would defeat the passage of the bill in the Senate, as well as in the House, or, if enacted into law, it would put the party to which they belong out of power at the first election. Whether such payment would be right, or whether it would be wrong, such would be the result.

I am not surprised that gentlemen who represent the cotton States should press this measure upon Congress. It seems a great hardship to them, no doubt, to be obliged to contribute in any way to the cost of the Federal Government in its defense against the war for the dissolution of the Union. It is true they were very much impoverished, and they suffered untold disasters. In fact, history can never record the full extent of the sufferings and deprivations consequent upon the great war by the Confederates as well as by the loyal people, and this should be a warning for all time to come to all who might contemplate another overthrow of the General Government. But those who were beaten are in no worse condition than the defeated party who enters the courts of justice recognized in all parts of the civilized world. He who suffers defeat is often compelled to pay the expense. So in the great wars of other countries, the vanquished are often compelled to contribute to the victors. But no such exaction is here proposed. We simply seek to refund to the States fifteen and a quarter millions of dollars which we, in the hour of need, collected from them, but which we do not now, with an overflowing Treasury, need.

I will say to the friends of the cotton tax, you can never claim its

repayment on the ground of its illegality. The rule is too well settled that the validity of a tax levied upon specific articles does not depend upon the universality of the article taxed, but upon the uniformity of the tax upon the article wherever found. In this case the tax was collected in twenty-six different States. It is true the greatest part of it was from the States engaged in the rebellion, but that does not affect the rule of taxation so as to avoid the levy. It may have rested heavier upon some portions of the country than upon others. Such is always the effect of specific taxation. In the Northern States taxes were collected from articles rarely produced in the South. So it is with the tax upon tobacco, and even spirits; a distillery is almost unknown in some of the States, while in others they are very numerous.

We are not discussing the injustice of the tax levied upon cotton, but the validity of the tax, for that is the issue raised by the gentlemen who insist the cotton tax shall be made a part of this bill. There are always great inequalities in the levy and collection of taxes. A specific tax is always so. The article may be found in large quantities in some localities and not at all in others; but it is quite evident the effort will never be made again to collect from real estate a tax for the support of the General Government, either in the time of war or in the time of peace.

It is said the people now residing in many of the States have moved away and would not be benefited by the repayment of the tax. It should be remembered that in twenty-six States the tax was assumed and treated as a State liability, and that it was levied upon real estate which still remains to receive any benefits which may inure to it from the payment of money into the treasury.

Besides, emigrants from one State to another only exchange places, giving and taking such benefits as are incident thereto.

The Mills Tariff Bill and the Confederate Constitution.

SPEECH

OF

HON. BISHOP W. PERKINS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 14, 1888.

Mr. PERKINS said:

Mr. CHAIRMAN: It is not my purpose in the little time that I may occupy now to pay much attention to this Indian appropriation bill; but I wish to notice briefly the speech which was made by my friend from Minnesota [Mr. NELSON] when this bill was last under consideration. My friend made what was termed by many a free-trade speech; and it seems to have been popularly indorsed by the free-trade organs of the country; yet in that speech he took occasion to say that he believed in the doctrine of protection; and I think there can not be given to his language the construction that has been given to it by the members of the Cobden Club, of the country, and the free-trade organs. I say this in justice to my friend who declared, as I have had occasion to say, that he believed in the American doctrine of protection; and in that we agree. We may differ in details; we may differ a little as to how proper protection to American industries is to be consummated or secured, but we agree in believing that that doctrine is best for our country.

The gentleman in his speech took occasion to call the attention of the House to the fact that more than $500,000,000 worth of farm products were exported from this country in the year 1887. He did not, however, suggest that the value of the farm products that year, including live-stock, butter, cheese, milk, etc., aggregated $5,000,000,000, or substantially that. He did not call attention to the fact that the exports were but 9 or 10 per cent. of that which was grown and raised by the farmers of our country. Nor did he call attention to the fact that if the factories and manufacturing industries of our country were prostrated and the five millions of laborers employed therein were discharged and set adrift to engage in agricultural enterprises, to put their labor as producers in competition with the farmers of the land, there would necessarily be imposed upon the farmers the duty of sending abroad for a market not only the $500,000,000 worth of their products, but perhaps five times that amount each year, and thus greatly suffer for the want of a home market. Neither did the gentleman suggest to this House, as I desire to suggest to it, that this market in which the American farmer sells more than 90 per cent. of what he grows is more important to him than the market in which he sells but 10 per cent.; and that for this reason it is important that our Government should guard with jealous care this home market, in which our American farmers find the opportunity to sell so much, and in which the American laborer finds the opportunity to earn so much and to be such an excellent consumer.

Mr. Chairman, my friend had read to this House some letters received by him from constituents and friends in the State of Minnesota. I desire to have read, somewhat in answer to those, a letter which I have received from a farmer in my own State.

The Clerk read as follows:

MOUND VALLEY, KANS., *December* 18, 1887.

MY DEAR SIR: What will the Democrats and Mugwumps do with the tariff this session of Congress? As you know, I am a farmer and quite an old man, and I have lived in this country a good many years when we had Democracy and free trade, and I know what they are. In those days I drew wheat from my farm in Indiana to Vincennes, a distance of 45 miles, and sold it for 33 cents a bushel, and took calico at 35 cents a yard, and very common brown sugar at 14 cents a pound, and, as is generally known, there is much sand in Vincennes, and the merchants were troubled with optical delusions, and could not tell the difference between common brown sugar and yellow sand, and, as a result, when we would get home we would find our sugar badly mixed with sand. Remembering all this, I say, as an old farmer, may the good Lord deliver us from Democracy and free trade.

Can't you send me some documents?

[Laughter.]

I am yours, truly,

W. H. HARPER.

Hon. B. W. PERKINS, *Washington, D. C.*

Mr. PERKINS. This, Mr. Chairman, tersely calls the attention of the country to our wonderful progress as a nation with protection, and puts in vivid contrast our condition as a people in the days of free trade and dependence upon Europe for our manufactured goods. The letter is an argument in itself, and briefly recalls our marvelous growth and development under the magic of protection.

But, Mr. Chairman, I desire to have read from the message of the President of the United States to Congress at the opening of this session an extract, as I desire to devote a little attention to it.

The Clerk read as follows:

But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty.

So it happens that while comparatively a few use the imported articles millions of our people, who never use and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public Treasury, but the great majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to the home manufacturer. This reference to the operation of our tariff laws is not made by way of instruction, but in order that we may be constantly reminded of the manner in which they impose a burden upon those who consume domestic products as well as those who consume imported articles, and thus create a tax upon all our people.

Mr. PERKINS. Mr. Chairman, I did not request the reading of this extract because the reasoning was new or the proposition novel or logical, but in order to call the attention of the House to the fact that it presents the old argument that the tariff necessarily increases the price of every protected article, and adds to the cost of living and to the burdens of consumers to the extent of the duty imposed. If that argument is true, and accepting it as logical and correct for the purpose of my suggestion, I desire to call the attention of my friend from Minnesota, who presumes to speak for the farmers of the Northwest, to the fact that this tariff duty adds annually to the value of the farm products of the land over $1,200,000,000. I have here a list of farm products for 1887, with the tariff upon each article and item; and according to a statement furnished quite recently by Senator BROWN, of Georgia, the duty imposed on these farm products for the year 1887 would aggregate the grand sum I have suggested—$1,203,954,994. Thus, if the tariff adds to the cost and price of all protected articles, as is argued by the President and others, to the extent of the tariff duty imposed, then we find that the consumers pay to the American farmers annually $1,203,954,994 for their farm products more than they could realize for them under other circumstances, and that much more than they could sell them for were it not for Republican protection. I furnish a table showing the amount of the leading farm products of the United States and the profit resulting to farmers from the application of this rule, which must apply to farm products as well as to manufactured articles:

1885.	Corn produced	bushels...	1,936,176,000
	Gain at 10 cents per bushel duty		$193,617,600
	Wheat produced	bushels...	357,112,000
	Gain at 20 cents per bushel duty		$71,422,400
	Rye produced	bushels...	21,756,000
	Gain at 10 cents per bushel duty		$2,175,600
	Oats produced	bushels...	629,409,000
	Gain at 10 cents per bushel duty		$62,940,900
	Barley produced	bushels...	58,836,000
	Gain at 10 cents per bushel duty		$5,836,000
	Potatoes produced	bushels...	175,029,000
	Gain at 15 cents per bushel duty		$26,254,350
	Hay produced	tons...	44,731,550
	Gain at $2 per ton duty		$89,463,100
	Tobacco produced	pounds...	562,736,000
	Gain at 35 cents per pound duty		$196,957,600

Duty at 35 cents to $1 per pound.

1887.	Cattle raised, 33,511,750 head	value...	$663,137,926
	Gain at 20 per cent. ad valorem duty		$132,627,585
	Horses raised, 12,496,744 head	value...	$901,685,755
	Gain at 20 per cent. ad valorem duty		$180,337,151
	Sheep raised, 44,759,314 head		$89,872,839
	Gain at 20 per cent. ad valorem duty		$17,974,569
1880.	Wheat flour made		$315,394,385
	Gain at 20 per cent. ad valorem duty		$63,078,877
	Cheese made	pounds...	243,157,850
	Gain at 4 cents per pound duty		$9,726,314
	Butter made		806,672,071
	Gain at 4 cents per pound duty		$32,266,882
	Molasses made	gallons...	46,811,523
	Gain at 4 to 8 cents per gallon duty		$3,745,081
	Sugar made	pounds...	124,516,685
	Gain at 1.40 to 3.50 cents per pound duty		$4,358,084
	Provision—meats	value...	$303,562,413
	Gain at 20 per cent. ad valorem duty		$60,712,482
	Hops raised	pounds...	26,546,378
	Gain at 8 cents per pound duty		$2,123,710
	Rice raised	pounds...	110,131,373
	Gain at 2½ cents per pound duty		$2,477,965
	Wool clips	pounds...	240,681,751
	Gain at 10 per cent.—per pound 2½ to 12 cents—duty		$24,068,175
	Pickles, etc	value...	$2,407,342
	Gain at 35 per cent. ad valorem duty		$842,569
	Beans and peas	bushels...	9,594,027
	Gain at 10 per cent. ad valorem duty		$959,002

RECAPITULATION OF SUPPOSED PROFITS.

Corn	$193,617,600	Cheese	$9,726,314
Wheat	71,422,400	Butter	32,266,882
Rye	2,175,600	Molasses	3,745,081
Oats	62,940,900	Sugar	4,358,084
Barley	5,836,000	Meats	60,712,482
Potatoes	26,254,350	Hops	2,123,710
Hay	89,463,100	Rice	2,477,965
Tobacco	196,957,600	Wool	24,068,175
Cattle	132,627,585	Pickles, etc	842,569
Horses	180,337,151	Beans, etc	959,002
Sheep	17,974,567		
Wheat flour	63,078,877	Total	1,203,954,994

Yet it is suggested that a system which gives this aid to the farmers of our land is not a good system, but is one which, in the language of the President of the United States, is to be denounced as "vicious, inequitable, and illogical."

Mr. Chairman, it is a system that has encouraged the wonderful growth that we have made as a people since the inauguration of Abraham Lincoln, on the 4th day of March, 1861. It is scarcely necessary, I apprehend, that I should spend the time of this committee to speak of the condition of this country at that time, of its wealth, its resources, its development, its manufacturing industries, and all of those things which go to make up the material greatness of a nation, and which gives employment to labor and finds opportunity for the investment of capital. Yet I might properly call the attention of the committee to the fact that up to that period the whole wealth of the nation, in round numbers, all its earnings and accumulations, aggregated but $16,000,000,000.

Dating the first settlement of our country at Plymouth in 1620, and following its growth and development until 1861, a period of two hundred and forty years, with the legislation that had prevailed up to that time, we find that we had accumulated an aggregate capital of but $16,000,000,000, and yet, sir, when the Republican party stepped aside on the 4th day of March, 1885, and Grover Cleveland was inducted into the Presidential chair, the aggregate wealth of this nation had reached in round numbers the sum of $50,000,000,000. We had in twenty-four years under the legislation and policy fostered and given to the people by the Republican party sustained our country against civil war, paid our debts, redeemed our promises, advanced our credit, pensioned our soldiers in part, and faithfully observed our obligations to the people, and grown from a country of $16,000,000,000 to the enormous wealth of $50,000,000,000.

Two hundred and forty years of growth and legislation had given us but $16,000,000,000, while twenty-four years of Republican government and Republican legislation more than trebled the amount; and yet the system of legislation and administration which enabled us to do all this and to give to the world this matchless exhibition of government is denominated by the present Executive as vicious, inequitable, and illogical. It gave us more than $32,000,000,000 in the twenty-four years of its existence, and has made us the richest and most powerful nation of the world, and because upon this side of the Chamber we stand here and point to it with pride and say that it is evidence of good legislation, that it is evidence of wise administration, we are charged with favoring all that is pernicious and bad in government.

But, Mr. Chairman, some say that this wonderful growth and development of the country is not to be ascribed to that system of legislation; some say that no part of it is to be ascribed to the administration of the Republican party of this Government, and perhaps, briefly, my friend from Minnesota [Mr. NELSON] has suggested that. They would suggest as the reason for that growth and development that it is because of our great rivers, our great harbors, because of our immense area of public lands, our rich mines, our productive prairies, our great mountains, and magnificent bays. All of these natural advantages, coupled with a productive soil and genial climate, are assigned as the reasons for this growth and development. But, Mr. Chairman, will that answer the argument which is advanced in support of this system of American protection? I ask were not these natural advantages here from our first settlement and during all the years we were climbing up to the possession of an aggregate capital of $16,000,000,000?

Did the Republican party cause the rain to fall, and create God's sunshine, the fertile lands, the great rivers and harbors, and the inviting prairies? I am willing to concede that all of these were here for all the decades before the Republican party came into the control of the Government. But with Republican legislation and Republican administration these natural advantages which we had were made to contribute to our growth, development, and prosperity, until we had trebbled the wealth we had been theretofore two hundred and forty years accumulating, and gave to the world an exhibition of growth and prosperity the like of which had never been seen in the annals of time nor in the entire circuit of the sun. But permit me to call attention to this significant language in the message of the President:

But the reduction of taxation demanded should be so measured as not to necessitate or justify either the loss of employment by the workingman nor the lessening of his wages.

Why this language, Mr. Chairman, except it is an admonition from the President of the United States to his free-trade colaborers that they must take notice of the stubborn, irresistible, incontrovertible, and eloquent fact that the Republican system of protection opens to the American workingman opportunities for employment and adds to his compensation given in exchange for his industry and his toil?

Mr. Chairman, it is not necessary nor have I the time to call the attention of this House to the conditions existing in other nations and with other people, and put them in contrast with the conditions existing here. It is an oft-told tale. But I may be pardoned for calling the attention of the House and the country to this bill which is reported from the Committee on Ways and Means. I have it now in my hand, and I find on an examination of it that almost every article raised by the American farmer is put upon the free-list, while that which is the product of labor, and labor alone, popularly called "raw material," is stricken down in almost every instance, and put in competition with European pauper labor, while what little protection is left for our country by the provisions of the bill is left exclusively for capital.

Is that remarkable, Mr. Chairman, when we come to remember the circumstances of propagation and gestation under which the bill was given to the House? Is it remarkable when we come to remember who considered the bill; who framed the bill; who reported it to the House? I have here, sir, in my hand, a list of the Committee on Ways and Means. I find the first name upon the committee is ROGER Q. MILLS of Texas, the second name is BENTON MCMILLIN of Tennessee, the third name CLIFTON R. BRECKINRIDGE of Arkansas, the fourth name W. C. P. BRECKINRIDGE of Kentucky, the fifth name HENRY G. TURNER of Georgia, the sixth WILLIAM L. WILSON of West Virginia, the seventh WILLIAM L. SCOTT of Pennsylvania, and the eighth WILLIAM D. BYNUM of Indiana. Then follow the names of the five Republican members of the committee.

But as is well known and is publicly understood, the Republican members, the trained and experienced legislators from the North and East, of the committee had no voice, no part, no lot whatever in the preparation and make-up of that bill; and as is also well known to the House, the Representative from Pennsylvania named as a member of that committee was most of the time elsewhere. His duties called him from the House and from the meetings of the committee. And so we find that the great manufacturing States of the land and all that great territory of the Union north of the Ohio River and east of the State of Indiana had no voice, no part whatever in the preparation of the bill. We find it was considered and reported to this House by the Representatives of these Southern States; and when we remember the antecedents of these gentlemen, and the convictions they have heretofore entertained, is it remarkable that we should find they have made no provision for labor or the products of the field? Why, Mr. Chairman, we all remember that it was but a few years since when these men contended that capital should own its labor, should lash its labor, and sell it to the highest bidder; but a few years since the farmers of the great North were called the "mud-sills of society" and our laboring people were scorned by the governing classes of the South and insulted as "greasy mechanics."

The antecedents of the men who reported this bill are known to all, and of course no attempt has been made to conceal their convictions. But in considering legislation it is always well to study the convictions and antecedents of the men who enacted the same, and so think I in the study and contemplation of this bill.

I have here, Mr. Chairman, the constitution of the Confederate government, and I shall ask to have read two or three passages from it.

The Clerk read as follows:

[Article IV, section 2, clause 1.]

The citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States; and shall have the right of transit and sojourn in any State of this Confederacy, with their slaves and other property; and the right of property in said slaves shall not be thereby impaired.

[Article IV, section 2, clause 3.]

No slave or other person held to service or labor in any State or Territory of the Confederate States, under the laws thereof, escaping or lawfully carried into another, shall in consequence of any law or regulation therein be discharged from such service or labor; but shall be delivered up on claim of the party to whom such slave belongs, or to whom such service or labor may be due.

[Article IV, section 3, clause 3.]

The Confederate States may acquire new territory, and Congress shall have power to legislate and provide governments for the inhabitants of all territory belonging to the Confederate States lying without the limits of the several

States, and may permit them at such times, and in such manner as it may by law provide, to form States to be admitted into the Confederacy. In all such territory the institution of negro slavery as it now exists in the Confederate States shall be recognized and protected by congress and by the Territorial government; and the inhabitants of the several Confederate States and Territories shall have the right to take to such Territory any slaves lawfully held by them in any of the States or Territories of the Confederate States.

Mr. PERKINS. Now I ask the Clerk to turn forward and read a prior section which I have marked.

The Clerk read as follows:

[Article I, section 8, clause 1.]

The congress shall have power:

To lay and collect taxes, duties, imposts, and excises, for revenue necessary to pay the debts, provide for the common defense, and carry on the government of the Confederate States; but no bounties shall be granted from the treasury, nor shall any duties or taxes on importations from foreign nations be laid, to promote or foster any branch of industry; and all duties, imposts, and excises shall be uniform thoughout the Confederate States.

Mr. ALLEN, of Michigan. What Democratic platform is that from?

Mr. PERKINS. I have had these sections of the Confederate constitution read for the purpose of showing what the men who have reported this bill but a few years ago believed. They were no doubt sincere in their convictions, and so zealous were they that they were willing to take swords and guns in their hands and upon the battle-field struggle if necessary to strike down this Government, so that those convictions might be fastened and perpetuated in the States of the Confederacy for all the years to come.

I am not denouncing these men or quarreling with them because they entertained those convictions. As brave men I respect them, and I know how with swords and fire they battled for those convictions and imperiled life and limb that no other government should be given to their people. These convictions were their pillar of fire by night and their pillar of cloud by day; and, entertaining them, is it remarkable that they should have reported to this House the bill they have?

Having no respect for the ordinary farmer and believing that capital should own its labor, and that no encouragement should be given to the American manufacturer, and that no duty whatever should be imposed upon imported products, could they do otherwise than they have in the bill presented? Are they not to be commended for their liberality rather than condemned for their un-American predilections?

Representing the governing side of this House, they were by the action of the Speaker given the power to prepare and report this bill, and, in keeping with their convictions, they have performed their duties. Possessing the power, is it remarkable that they should refuse a hearing to the farmers, to the laborers, and to the American manufacturers, and report a bill that would give to the country the conditions they contended for upon the field of battle as nearly as our changed circumstances would permit?

The bill they give to this House for its consideration is of the character and kind I have suggested, and must result in striking down the products of the field and in putting the laborers of America in competition with the laborers of the Old World, except perhaps that they propose to give an additional bounty to the rice grown on Southern fields, and to give to those engaged in pressing and baling cotton the iron bands or ties they require free of duty, while the Northern farmer engaged in baling hay or the Northern manufacturer engaged in hooping barrels must pay the import duty imposed on the iron that he uses.

Mr. Chairman, in the limited time allotted me I can not go over this bill as I would like to do, nor can I give attention to many questions that are important to be considered in connection with this proposed legislation, But I suggest the hope that in the debate that we are to be favored with there will be no jugglery. I hope that the mask of hypocrisy will be stricken off, and that the hideous face of free trade will be exhibited in all its brazenness. I want these men to talk their convictions. I know in the years gone they have been admonished to keep quiet. While the Townsends and Springers and others have indulged in their empty platitudes [laughter] these men have been admonished to keep still, and for prudential reasons to take back seats. But I trust that day has gone. These men are men of ability and of convictions, and they have the right to be heard. They are the important, the governing factor in the Democratic party. They give to the Democratic organization 153 electoral votes, and they have the right to be heard. Whether they do this by fraud and violence is, perhaps, not for me to say, but without the electoral votes given to the Democratic party by these men it would be a bantling scarcely worthy of attention. Hence we see them honored with these important duties, and consulted as the oracles of the party. Let them talk, and let them exercise their power as they did quite recently. Perhaps it was but right that they should filibuster against a Democratic House, the report of a Democratic committee, and the business of a Democratic Congress for eight days to defeat a bill which proposes to pay to the loyal States of the country $17,000,000 advanced to the General Government to aid it in putting down treason and rebellion. Remembering their fealty to the Democratic party and their distinguished services in its behalf, it perhaps was but right that a Democratic House should surrender to them, after eight days of filibustering tactics they had given the people of the country to understand that money could not be taken from the public Treasury to reimburse the loyal States for such expenditures. [Applause.]

Mr. Chairman, upon this side of the House we believe in the dignity and honor of labor, and believe it entitled to good legislation. It has always been the doctrine of the Republican party that the boy who is employed to till the fields, to cultivate the corn, to mow the hay, and to hold the plow, if he is honest, if he is sober, if he is industrious and law-abiding, is just as much entitled to our honor and good-will, to our favorable consideration and respect as is the man who owns the farm and gives him employment; and it was this doctrine of the Republican organization that made a rail-splitter President of the United States and a canal boy its chief Executive and most distinguished citizen. [Applause.] Here, Mr. Chairman, we join issue with the men who report to this House the Mills tariff bill.

[Here the hammer fell.]

Mr. PERKINS. I desire to have printed in the RECORD, as a part of my remarks, the letter which I send to the reporters. It is a letter from a workingman and an old soldier.

There was no objection.

The letter is as follows:

WEIR, CHEROKEE COUNTY, KANSAS, *March* 20, 1888.

HONORABLE COMRADE: With intense interest the people are watching the Senate and House of Representatives. Grover's free-trade message has awakened our farmers and miners. We see plainly the value of iron and steel imported into this country last year is immense. We have none too much money in the country; none too much work for our laboring men. We have paid to English and German molders and rail-makers large amounts which should have been distributed among men bearing the burdens of our Government, buying the grain, meat, and coal of our fertile soil, and sharing with us all the duties, responsibilities, and glories of an American citizen. The men to whom we have paid these large sums of money do not do anything for us; they buy little from us, they have shut out our grain and meat, they are not helping our institutions, but theirs is in antagonism to ours. The nearer we come to manufacturing every ounce of iron and steel we need the more prosperous will the country be. We protest against any reduction of the revenue. The country is generally prosperous, and this prosperity has come by wise adjustment of all branches of business production and manufacture to each other. It has taken many years of costly experience to establish it, and any fooling with that will be injurious, cause enormous losses to all classes, while under the present revenue system the country has grown richer quicker than during any previous period of its history, and more rapidly than any other nation in the world. There is more work for our people to do, there are better wages paid than there ever was before; their wages will buy more of the comforts of life than ever before, and more than any other people can buy for a day's wages. In this world, with such results before our eyes, it would be very wrong to change the system because some demagogue asks it, who is striving to make personal or political capital, deluding the people, pretending to relieve burdens which were never felt, and relieving hardships which are imaginary. Does the so-called Democracy want to fill the nation with tramps and outlaws, to cripple the power of the Government to pay the honest debts of the nation to the men who saved it at the expense of their lives, health, and strength, and the men who hold the Government bonds? To destroy the Government's power to pay these debts to the men who depended on its honor is bad faith, ungrateful, and is criminal repudiation, and one which will be certain to bring about serious results. We protest against such a course with all our power, and we call on our Representatives and Senators to make this protest effective,

I am, very truly, yours,

WM. H. VINCENT,
Weir, Cherokee County, Kansas.

To Hon. B. W. PERKINS,
Washington, D. C.

The Direct Tax and the Cotton Tax.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 3, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 139) to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved August 5, 1861—

Mr. WHEELER said:

Mr. CHAIRMAN: When the vote was had this morning upon the motion of the gentleman [Mr. FORAN] representing the Committee on Appropriations that the House proceed with the bill making the necessary annual appropriations for pensions, I interposed an objection to the motion to dispense with the reading of the names. It seemed to me that on so important a measure it was best to give an opportunity for reflection during the few moments so occupied.

The question before the House was this: Shall we proceed to consider a bill which appropriates money to pay the pensions awarded by law to the wounded and disabled soldiers of the Republic, or shall we push the soldiers' claims aside to proceed with a bill which seeks to give $17,000,000 to wealthy property-holders and to rich and prosperous States?

After waiting until the last moment for the motion to come from the other side I changed my vote and moved a reconsideration. It was my hope that a sufficient number of our friends of the other party would

come to the rescue of the soldier and reverse the action by which they had ignored, or at least postponed, his legal rights.

The appropriation bills have been unusually delayed this session—from causes for which the Democratic party is in no way responsible—and notwithstanding our efforts we have as yet been unable to secure consideration of the annual bill which provides the means to pay pensions to the soldiers of the country, and I felt warranted in the belief that it was much more in keeping with the professions of the gentlemen on the other side of the aisle to consider the just rights of the soldiers, many of whom are poor and decrepit, rather than to devote their efforts to rushing through a bill, the only effect of which will be to make rich men richer, and which, in its best aspect, is of conjectural expediency, of questionable propriety, and of extremely doubtful constitutionality.

Mr. GROSVENOR. Will the gentleman allow me a moment? At what time would the money become available for the "poor and decrepit soldiers" if the pension appropriation bill had passed to-day.

Mr. WHEELER. It would become available at the time fixed by law.

Mr. GROSVENOR. When is that?

Mr. WHEELER. In reply to the gentleman I will ask him a question—whether a Democratic Congress has ever allowed the 3d of April to arrive without considering that measure; and I will also ask if it is consistent for his party to cast a solid vote against taking up and passing the bill?

Mr. GROSVENOR. Do you think the bill is endangered now by being postponed?

Mr. WHEELER. Unless Republicans continue to vote against its consideration, I do not think it is in any serious danger; but for every Republican in the House to vote against the bill twice in one day might justify some apprehension. With profound respect for those who differ with me and vote for another course of procedure, I shall adhere to my view that it is more proper to take up appropriation bills of that character which appropriate money to the Federal soldiers of the country, who, by laws already enacted, are entitled to the money, in preference to taking up a bill like this, which appropriates money to rich States who have no shadow of a legal claim to the gratuity which in this manner is sought to be taken from the Federal Treasury.

Mr. GROSVENOR. Is there not plenty of money being paid out every day to meet all the demands of the Pension Office?

Mr. WHEELER. Under the excellent management of a Democratic administration, there is.

Mr. GROSVENOR. Could a dollar of the money appropriated by the pending pension appropriation bill be available until after the 30th of June next?

Mr. WHEELER. I do not think it would. But that is not the question I wish to discuss.

Now, Mr. Chairman, when I moved to reconsider the vote by which the House declined to consider that bill, it was in the hope that gentlemen on the other side would reconsider and change their votes, and I have deep sympathy for the awkward position in which they are placed by their failure to avail themselves of the opportunity. And although I have very little time, I would be inclined to yield a considerable portion of it to those of my Republican friends who wish, before it is too late, to apologize to the soldiers for their votes this morning. If any of them are not sufficiently contrite to make apologies, I will even yield them time for explanations. [Laughter.]

Mr. GROSVENOR. We will give you opportunity to vote on pension questions.

Mr. WHEELER. I have no doubt you will—after you have had your way in voting money into the pockets of the rich and prosperous.

The explanation I have endeavored to make has been to show that my dilatory motions, and motion to reconsider, were not made for the purpose of filibustering to prevent the discussion of this bill—for I am very anxious to have it fully discussed—but with the object of securing what I considered the proper order of business in this House, impressed as I was from my own observation, and what I have seen in the press, with the fact that we are further behind in regard to appropriation bills than at many preceding Congresses.

THE PRINCIPLE INVOLVED IN SUCH LEGISLATION.

I wish to say, Mr. Chairman, that I regard the bill before the House as containing legislation more pernicious than any ever introduced in Congress. The bill involves this startling principle: that Congress, exercising the power under the Constitution to tax, may, in one Congress, levy a tax for the purpose of refunding a tax levied by a preceding Congress. When that is admitted as one of the principles to govern the legislation of this country, there is no limit to our power in this respect, and no limit to the evil which may arise from the establishment of such precedents. If one Congress may levy a tax to pay back what another Congress has levied, less, of course, all deductions resulting from expenses of collection, refunding, etc., it would be in the power of Congress to treble and quadruple the officials of our country, though our party is pledged as far as possible to reduce them, and thereby reduce the burdens upon the people.

Why, Mr. Chairman, if we establish the precedent some gentlemen are now contending for, let me ask where shall it be stopped? If it be equitable and lawful to refund this tax upon the ground that the Southern States did not pay their full portion, why should we not also refund the internal-revenue tax on whisky and tobacco collected in the North during the years in which the same tax was not collected in the South? By the same reasoning it could be contended that we should enact a law to refund the income tax because during some years it was paid in the North and not paid in the South. We must pause before committing ourselves to the dangerous and indefensible principle which underlies this bill.

DIRECT-TAX LAWS BY CONGRESS.

Again, Mr. Chairman, the tax proposed to be refunded is a tax which has been declared by the Supreme Court of the United States to be constitutional. The first law which I can find embodying a direct tax was passed in 1798; and we find running through all the opinions of the Supreme Court, from 3 Dallas down to 112 United States Reports, decisions asserting that this character of tax is constitutional. By examination of the statutes I find that prior to 1861 but four direct-tax laws have been enacted by Congress. These laws were: First, the act of July 9, 1798, which was amended February 28, 1799, January 2, 1800, May 10, 1800, May 13, 1800, and January 13, 1805; second, the act of July 22, 1813; third, the act of January 9, 1815, amended March 3, 1815; and fourth, and last prior to 1861, was the act of April 27, 1816, which was amended several times, the last amendment being that of April 28, 1828, which extended the time allowed for the redemption of land sold for direct taxes.

It appears that these direct-tax laws have been passed upon by the Supreme Court. I have before me numerous decisions affirming their constitutionality, among them being the cases *in 9th* Cranch, 4th and 5th Wheaton, 9th and 12th Wallace, 99th, 102d, and 110th United States Reports.

We all know that, even if not expressly called on to do so, an appellate court will assume of its own motion to pass upon the constitutionality of any law before it which involves the right of the Government to collect its revenue.

In what position do we stand before the country? We are proposing to pay back a constitutional tax, while we have constantly refused to pay back a tax which the Supreme Court of the United States has in effect declared to be unconstitutional. At the proper time I shall propose an amendment providing that all moneys collected by virtue of the tax called the cotton tax shall be refunded to the States from which said money was received after the cessation of hostilities in the war of 1861–'65, and my amendment will also provide that this shall be done in accordance with the provisions of House bill No. 1189, introduced by myself in this Congress, and which is in these words:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, directed to ascertain what amounts were paid to the United States as a tax upon cotton by persons then residing in or who were engaged in raising cotton in the States of Maryland, Delaware, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, Kentucky, Missouri, California, Illinois, Indiana, Ohio, and the Territories of Arizona and New Mexico, and the Indian Nation, or Indian Territory, and the amounts ascertained to have been paid by said persons, or collected by persons authorized by an officer or officers of the United States to make said collections from persons then residing in or who were engaged in cotton-raising in said States and Territories, respectively, shall, by the Secretary of the Treasury of the United States, be paid to such officer as the Legislature of each of said States and Territories may by law designate; that is to say:

He shall pay to the officer who may be designated by the Legislature of the State of Illinois the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the State of Illinois.

He shall pay to the officer who may be designated by the Legislature of the State of Indiana the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the State of Indiana.

He shall pay to the officer who may be designated by the Legislature of the State of Ohio the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the State of Ohio.

He shall pay to the officer who may be designated by the Legislature of the State of Virginia the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of West Virginia the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Arkansas the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of California the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State

He shall pay to the officer who may be designated by the Legislature of the State of Louisiana the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Tennessee the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislsture of the State of Texas the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who shall be designated by the Legislature of the State of Missouri the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Florida the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of North Carolina the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Alabama the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Georgia the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Mississippi the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of South Carolina the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Kentucky the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Maryland the amount which was paid by virtue of said law by persons then residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the State of Delaware the amount which was paid by virtue of said law by persons then residing in or who were engaged in cotton-raising in the said State.

He shall pay to the officer who may be designated by the Legislature of the Territory of Arizona the amount which was paid by virtue of said law by persons residing in or who were engaged in cotton-raising in the Territory of Arizona.

He shall pay to the officer who may be designated by the Legislature of the Territory of New Mexico the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the Territory of New Mexico.

He shall pay to the officer who may be designated by the council of the Indian nation the amount which was paid by virtue of said law by persons residing in or who were engaged in raising cotton in the Indian Territory or Indian nation.

SEC. 2. That when cotton was shipped from one State to another and the tax paid was paid by the person to whom it was shipped, or by any other person in a State other than the State in which said cotton was grown, such sums shall be included in the amounts paid by the persons residing in the States where said cotton was grown; and said amount shall not be included as an amount paid by persons residing in the State to which said cotton was shipped before the said tax was paid thereon.

I introduced a similar bill in the Forty-seventh Congress, and it slept the sleep of the just. I repeated the effort in the Forty-ninth Congress, and again failed to secure consideration of the measure.

Mr. ALLEN, of Michigan. Will the gentleman allow me to ask him a question?

Mr. WHEELER. Yes, sir.

Mr. ALLEN, of Michigan. If the gentleman is opposed to levying a tax, as I understand him to say he is, for the purpose of refunding to the States the direct tax, why does he propose to levy a tax to refund the cotton tax? What difference is there between the two?.

Mr. WHEELER. There is a very great difference. I think the gentleman will agree there would be much more propriety in refunding a tax collected under the provisions of a law which was repugnant to the Constitution, and therefore was collected illegally, than in refunding a tax collected pursuant to a law which was unquestionably constitutional.

A VITAL DIFFERENCE BETWEEN THE LAWS.

There is another difference between the two proposed laws. The effect of the cotton-tax law would be to pay money back to those from whom it was wrongfully taken.

It would be very difficult, if not impossible, to return the money to those by whom the direct tax was actually paid, under the bill now being considered, as most of the $17,000,000 was paid by the States.

Again, those States whose population and wealth have increased since 1861 would be losers, while a State which has not been so fortunate would gain if the direct tax were refunded. In discussing the equity of questions like these we must assume that the $17,000,000 proposed to be paid must be collected in some way from the people, and we must further assume that States pay taxes, substantially, in proportion to their population and wealth. Proceeding under these assumptions, Maine, for instance (if we except Vermont), has changed less than any State, her population being about 3 per cent. greater than in 1860, while the population of Nebraska has increased about 3,000 per cent. Again, the assessed value of property in Maine has increased about 72 per cent., while in Nebraska the increase in the assessed value of property has been more than 3,500 per cent., now surpassing Maine in both wealth and population.

Nebraska's part of the direct tax was $19,312, while that of Maine was $420,826. Maine would get twenty dollars for every one received by Nebraska, and yet the amount Nebraska would have to pay to make up the $17,000,000 would exceed that which would be contributed by Maine.

There is much in the measure now under consideration, and in the method by which it was forced upon us, to excite distrust. When in the Senate, the bill was in this language:

Be it enacted, etc., That it shall be the duty of the Secretary of the Treasury to credit to each State and Territory of the United States and the District of Columbia a sum equal to all collections made from said States and Territories and the District of Columbia, or from any of the citizens or inhabitants thereof, or other persons, under the act of Congress approved August 5, 1861, and the amendatory acts thereto.

SEC. 2. That all moneys still due to the United States on the quota of direct tax apportioned by section 8 of the act of Congress approved August 5, 1861, are hereby remitted and relinquished.

SEC. 3. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to reimburse each State, Territory, and the District of Columbia for all money found due to them under the provisions of this act; and the Treasurer of the United States is hereby directed to pay the same to the governors of the States and Territories and to the commissioners of the District of Columbia: *Provided*, That where the sums or any part thereof, credited to any State, Territory, or the District of Columbia, have been collected by the United States from the citizens or inhabitants thereof, or any other person, either directly or by sale of property, such sums shall be held in trust by such State, Territory, or the District of Columbia for the benefit of those persons or inhabitants from whom they were collected, or their legal representatives: *And provided further*, That no part of the money collected from individuals and to be held in trust as aforesaid shall be retained by the United States as a set-off against any indebtedness alleged to exist against the State, Territory, or the District of Columbia in which such tax was collected.

While the bill was being discussed in the Senate, Senator BUTLER proposed an amendment which was adopted, and which was in these words:

And provided further, That no part of the money hereby appropriated shall be paid out by the governor of any State or Territory, or any other person, to any attorney or agent, under any contract for services now existing or heretofore made between the representatives of any State or Territory and any attorney or agent.

THE PEOPLE'S INTEREST DISREGARDED.

Singular as it may appear, this important amendment was stricken out by the Committee on the Judiciary of the House. It would certainly be very interesting to learn what influence accomplished this result. If there was a redeeming feature in the bill it was this proviso, which sought to secure the money to the people. It is asserted that all or nearly all the States have contracts with agents which stipulate that a certain pro rata of the $17,000,000 shall be paid to persons who stand at the door of this Hall and urge the passage of the bill. I ask, was it not in their interest that the proviso was stricken out which exacted that all the money should be returned to the people? Is it possible that any other interest could have secured the amendment?

Again, why was the bill forced upon our consideration to-day?

For the first time in the history of legislative proceedings, so far as my experience extends, the Committee on Rules undertook to dictate what particular bills reported by the several committees should be considered. To our surprise the arrangement of days for bills from the Committee on the Judiciary appeared in these words:

That Tuesday and Wednesday, April 3 and 4, immediately after the reading of the Journal, be set apart for the consideration of Senate bill 139, to provide for refunding the direct tax levied in 1861, and after the consideration of said bill is completed the remainder of said time is set apart for the consideration of any other bill or bills designated by the Committee on the Judiciary.

IMPORTANT LEGISLATION POSTPONED.

This unfortunate order subordinated to the bill under discussion much important legislation which has been considered by the Judiciary Committee. I recall first, the bill to reorganize the judiciary system of the United States; second, the bill to restrict the ownership of real estate in the Territories to American citizens; third, the joint resolution proposing an amendment to the Constitution of the United States prohibiting polygamy; and fourth, a bill to limit the jurisdiction of the district and circuit courts of the United States.

If we enact this direct-tax bill into a law we inaugurate a new and novel idea of administration, the purpose of which in this case is to appropriate $17,000,000 with the apparent intention of allowing a large portion of these millions to be given to the lawyers and agents who are said to have instigated and urged on the bill.

The political party which brings up this bill, by its action in 1866 and 1867, declared that the Southern States were no part of the Union during the period when this tax was collected, and during that period, as a matter of fact, those States were denied representation in Congress. This is shown by the reconstruction acts and the restoration of those States to the Union by the various laws of Congress.

PROTECTION AND TAXATION GO TOGETHER.

If they were correct in the position they assumed at that time there is no ground upon which they can justify the claim sought to be set up, that the direct tax due and collected in 1862 can now be demanded.

From the beginning of time no civilized government has ever sought to enforce such a hardship.

When Germany acquired the department of Alsace and Lorraine in 1871 would she have been justified in saying to the people of those provinces, "You were a part of Germany for centuries, and remained so until Louis XIV forcibly annexed you to France by the treaty of Ryswick. We did not willingly acquiesce in the claim of France, but have always insisted that you rightfully belonged to and were liable to pay taxes to Germany. We could not make you pay taxes when you were under the dominion of France, and we will therefore now proceed to assess and collect taxes according to German laws for all those years;" and if France should now recover back those provinces would she require the people to pay taxes to France for the seventeen years they had been under the dominion of Germany?

The principle upon which taxes are levied is that it is payment for the benefits conferred and for the protection afforded. If a government is not in a position to protect, it is not in a position to tax.

When Alsace and Lorraine were protected by France they paid taxes to France, when protected by Germany they paid taxes to Germany.

When Alabama was protected by the Federal Government it paid taxes to that Government; when the Federal Government gave no pro-

tection, and was supplanted by the Confederate Government, Alabama paid taxes to that sovereigntv.

It may be said that the cases are not similar, because the French provinces were forced to recognize German authority and accept German protection; but it must be remembered that the Federal Government contended that the greater part of Alabama and Tennessee unwillingly submitted to Confederate power, and if that be true then the inability of the Federal Government to protect that portion is an inhibition to any claim or right of taxation during the period in which she abdicated in favor of the Confederacy.

BUT ONE SOVEREIGN CAN TAX.

To be brief, there is but one safe rule in such matters. No people ought to be required to pay tribute to two sovereigns. If they could be compelled to do so, then any sovereign who has the power arising from temporary occupancy, coupled with a claim of right to possession, could collect taxes for the period when the unfortunate province was governed by and paying tribute to another sovereign, and therefore such people might pay full taxes to three, four, or more sovereigns for the same period. To obviate such injustice protection has always been regarded as a prerequisite to taxation.

In our Government, representation is also insisted upon as a prerequisite. Alabama was denied both during all the time the direct-tax law was in force, and in no sense was that State liable to its provisions.

A portion of this tax was collected in the South in 1865, after President Johnson's proclamation of restoration. All of these States had duly-elected Senators and Members of Congress standing at the doors of these halls, but nevertheless all these States were denied representation.

Mr. ALLEN, of Michigan. Will the gentleman allow me to ask another question?

Mr. WHEELER. Most certainly. What is it?

Mr. ALLEN, of Michigan. Does the gentleman from Alabama propose to refund the cotton tax by imposing a tax and raising the money for that purpose?

Mr. WHEELER. I thank the gentleman for his suggestive inquiry, as that is the very question I wish to put at issue.

Four justices of the Supreme Court declared the law under which the cotton tax was collected to be in violation of the Constitution, and therefore null and void. I contend that it might be eminently proper for us to enact a law to refund money collected as taxes pursuant to an unconstitutional law, while it would be very questionable legislation to refund money collected under a law which is in strict conformity to the Constitution.

Mr. ALLEN, of Michigan. Do I understand the gentleman to say that the Supreme Court has decided that this tax was unconstitutional?

Mr. WHEELER. The law was held by four justices of the Supreme Court to be unconstitutional.

THE COTTON TAX IN COURT.

The case was first tried in the United States circuit court for the district of West Tennessee, on the suit of William M. Farrington against Rolfe S. Saunders, collector of internal revenue, on the plea of trespass on the case, H. F. Cooper, assistant assessor for the Eighth collection district, State of Tennessee, having assessed, and said Saunders, as collector of internal revenue, having collected a tax of $2,005.74 on 148 bales of cotton under the act of July 13, 1866.

Mr. ALLEN, of Michigan. Did I understand the gentleman to say that the Supreme Court had decided that the cotton tax was unconstitutional?

Mr. WHEELER. I stated how the court stood. I stated that four judges held the law to be unconstitutional and four judges were of the opinion that the unconstitutionality of the tax had not been established.

Mr. ALLEN, of Michigan. Then it was not decided to be unconstitutional?

Mr. WHEELER. No. When the case was tried but eight judges participated in the hearing, and the court was evenly divided. I was going on to explain how the cause got before the Supreme Court, and why it was that no opinion was published in the reports.

When the cause came to trial in the United States district court at Memphis, Tenn., it was agreed between the plaintiff and defendant that it should be tried by the court without a jury, upon a statement of facts setting forth the assessment of the tax, the threat of the collector to seize the 148 bales of cotton in default of payment of the tax so assessed, that the plaintiff thereupon paid said tax under protest, and appealed to the Commissioner of Internal Revenue at Washington, demanding that the amount of the said tax be refunded to plaintiff; that the appeal was rejected, and suit was at once entered to recover from the collector of internal revenue the amount of said tax upon the ground that the law under which the defendant claimed to have acted in assessing and levying said tax was unconstitutional and invalid, for the reason that it was, in effect, an export duty or tax, because three-fourths to five-sixths of all the cotton raised in the United States was exported.

Upon consideration of the cause the circuit court held that—

The said act of Congress of the 13th of July, 1866, imposing an internal-revenue tax of 3 cents per pound upon cotton grown and produced within the United States is constitutional and valid, and that the law of the case upon the facts agreed is with the defendant.

APPEALED TO THE SUPREME COURT.

To this opinion of the court plaintiff excepted, and appealed to the Supreme Court of the United States.

It will be observed from the record that in order to get the cause before the Supreme Court the plaintiff accepted a decision by the circuit court affirming the constitutionality of the law, and therefore on appeal the burden rested upon plaintiff to show why the decision of the circuit court should be reversed.

The cause was argued before the Supreme Court on the 7th and 8th February, 1871, Justices Nelson, Clifford, Swayne, Miller, Davis, Field, Strong, and Bradley sitting. Mr. Chase, the Chief-Justice, was ill, and did not participate in the hearing.

Notwithstanding the extreme sectional feeling prevailing at that time and the aversion to questioning any law of Congress enacted for the purpose of raising revenue to meet the obligations of the Government, and notwithstanding the fact that twelve days intervened between the close of the argument and the final action of the court, but four justices of the Supreme Court of the United States were willing to acquiesce in the opinion of the court below, while the other four members of the court contended that the law was unconstitutional and void.

Such a result under such circumstances was regarded as being equivalent to an admission of the justice of the case of appellant. Suppose the Government had entertained the same confidence in the strength of its position as was manifested by the plaintiff, and had consented to an adverse judgment in the lower court for the purpose of obtaining a final decree from the Supreme Court, the burden of proof would have been shifted, and by the division of the highest judicial tribunal in the Republic the cotton-tax law would have been *officially* declared unconstitutional, null, and void, and that such a decision would be sound law I think there can be no question.

ANOTHER ELEMENT OF UNCONSTITUTIONALITY.

In addition to the admissions in the record in the case of Farrington *vs.* Saunders, it will be admitted here that the cotton tax was not uniform in its application, because no one can question the fact that cotton is a staple, the production of which is confined to particular and limited localities.

The assumed authority for the proceedings I have recited was called the first cotton-tax act, which is to be found in section 4 of the act approved March 7, 1864, pages 15 and 16, volume 13, Statutes at Large, and is couched in these words:

And be it further enacted, That from and after the passage of this act, in lieu of the duties provided in the act referred to in the first section of this act, there shall be levied, collected, and paid upon all cotton produced or sold and removed for consumption, and upon which no duty has been levied, paid, or collected, a duty of 2 cents per pound; and such duty shall be and remain a lien thereon until said duty shall have been paid, in the possession of any person whomsoever. And further, if any person or persons, corporation or association of persons, remove, carry or transport the same, or procure any other party or parties to remove, carry, or transport the same from the place of its production, with the intent to evade the duty thereon, or to defraud the Government, before said duty shall have been paid, such person or persons, corporation or association of persons, shall forfeit and pay to the United States double the amount of said duty, to be recovered in any court of competent jurisdiction: *Provided*, That all cotton sold by or on account of the Government of the United States shall be free and exempt from duty at the time of and after the sale thereof, and the same shall be marked free, and the purchaser furnished with such a bill of sale as shall clearly and accurately describe the same, which shall be deemed and taken to be a permit authorizing the sale or removal thereof.

The records of the Treasury show that a considerable portion of the tax on cotton was collected in cities outside of the Southern States in which the cotton was produced. The tax paid at such cities was levied and collected under the further provisions of the same act, which I will now read:

Whenever any cotton, the product of the United States, shall arrive at any port of the United States from any State in insurrection against the Government, the assessor or assistant assessor, under the act referred to in the first section of this act, shall immediately assess the taxes due thereon, and shall, without delay, return the same to the collector or deputy collector of said district, and the said collector or deputy collector shall demand of the owner or other person having charge of such cotton the tax imposed by this act.

ADDING TO THE BURDEN.

In 1866 this act was amended, and the tax on cotton was increased to 3 cents per pound. I read the law as amended. It is to be found in section 1 of the act approved July 13, 1866, page 98, volume 14, Statutes at Large.

Be it enacted, etc., That on and after the 1st day of August, 1866, in lieu of the taxes on manufactured cotton, as provided in "An act to provide internal revenue to support the Government, to pay interest on the public debt, and for other purposes," approved June 30, 1864, as amended by the act of March 3, 1865, there shall be paid by the producer, owner, or holder upon all cotton produced within the United States, and upon which no tax has been levied, paid, or collected, a tax of 3 cents per pound, as hereinafter provided: * * * and no drawback shall, in any case be allowed on raw or unmanufactured cotton of any tax paid thereon when exported in the raw or unmanufactured condition. But no tax shall be imposed upon any cotton imported from other countries and on which an import duty shall have been paid.

I have prepared a table (which will be printed with my remarks) showing at a glance the aggregate amount of the tax assessed and the amount collected under the cotton-tax act and under the direct tax of

1861, the amount paid by each State, and the amount claimed to be still due or remitted, which I will read:

Table showing the amount of the direct cotton tax and direct land tax assessed and the amount of cotton and land tax collected, and the balance claimed to be due the United States or remitted.

States and Territories.	Direct cotton tax assessed.	Direct land tax assessed.	Aggregate cotton and land tax collected.	Amount claimed to be due the United States or remitted.
Alabama	$10,388,072.10	$529,313.33	$10,410,592.34	$511,028.30

Total	68,072,386.72	20,000,000.00	83,665,354.90	4,721,815.52
Deduct amount overpaid by South Carolina				14,390.63
				4,707,424.89

*Overpaid.

There was allowed to California, deficiency act July 7, 1884	$31,583.26
There was allowed to Kansas, deficiency act August 5, 1882	10,761.50
There was allowed to Nevada, deficiency act July 7, 1884	688.90
There was allowed to Delaware on compromise	4,350.50
There was allowed to Nebraska under act August 7, 1882	15,030.40
There was allowed to New Mexico under act July 1, 1862	62,648.00

And, singular to say, the amount collected from South Carolina on the direct land tax was $14,390.63 in excess of the assessment.

WHEN TAXATION IS PROPER.

Since the dawn of civilization no one has contended that a government can not exercise the power of drawing from its citizens the means requisite to the proper administration of its affairs. This has always been done by taxation, and no question has exercised the thought and attention of the greatest minds of the world to so great an extent as has "What property shall be taxed, and how shall the tax be collected?" No tax law deserving the name has ever been enacted that did not at least pretend to be rigorously and impartially just, and by universal consent no tax law can be just which is not uniform.

The great men and exalted patriots who framed our Constitution were deeply impressed with this idea, and consequently we find that that instrument empowers the Congress "to lay and collect taxes, duties, imposts, and excises," but qualifies this grant of power by the express limitation: "All duties, imposts, and excises shall be uniform throughout the United States."

At that time property was pretty nearly equally divided between the citizens; that is, we had no class which owned great wealth and no class which was extremely poor. Nearly all owned some property, and very few could be found who owned nothing. Therefore it seemed to be just and quite consistent with this very proper idea of uniformity in taxation to provide that—

No capitation or other direct tax shall be laid unless in proportion to the census or enumeration hereinbefore directed to be taken.

The debates in the constitutional convention show that the fathers were extremely solicitous to establish this principle of uniformity beyond the possibility of peril, as the necessity for such restrictions upon and limitations of the taxing power had been made manifest by the experience of ages, as recorded in history.

THE OLDEST TAX LAWS.

The Institutes of Menu probably present the oldest tax regulations of which we have any record.

The learned oriental scholar, Sir William Jones, in the preface to his translation of the Institutes of Menu, uses these striking words:

It is a maxim in the science of legislation and government, that laws are of no avail without manners, or, to explain the sentence more fully, that the best intended legislative provisions would have no beneficial effect even at first, and none at all in a short course of time, unless they were congenial to the disposition and habits, to the religious prejudices, and approved immemorial usages of the people for whom they were enacted.

These, and other considerations, which he specifies, led him to study and finally to publish—

That system of duties, religious and civil, and of law in all its branches, which the Hindus firmly believe to have been promulged in the beginning of time by Menu, son or grandson of Brahma, or in plain language, the first of created beings, and not the oldest only, but the holiest of legislators; a system so comprehensive and so minutely exact that it may be considered as the Institutes of Hindu law.

Sir William Jones then discusses the probable date when the Institutes were given to man, and, after an intricate astronomical calculation, concludes that the Hindoo account would probably fix the period at about the close of the twelfth century before Christ, but after comparison with the Védas, he concludes:

The original of this book must have received its present form about eight hundred and eighty years before Christ's birth.

The Institutes are given in chapters divided into paragraphs, or, it might be more exact to say, arranged in the original, inmetrical stanzas, consecutively numbered. The first three stanzas of the first chapter are in these words:

1. Menu sat reclined with his attention fixed on one object, the supreme God, when the divine sages approached him and, after mutual salutations in due form, delivered the following address:

2. "Deign, sovereign ruler, to apprise us of the sacred laws in their order, as they must be followed by all the four classes and by each of them in their several degrees, together with the duties of every mixed class.

3. "For thou, lord, and thou only among mortals knowest the true sense, the first principle, and the prescribed ceremonies of this universal, supernatural Véda, unlimited in extent and unequaled in authority."

The sages are then instructed in the duties of the several classes, and in the seventh chapter, "on government and public law," I find these words:

80. His (the king's) annual revenue, he may receive from his whole dominion through his collectors; but let him in this world observe the Divine ordinances; let him act as a father to his people.

124. Of such evil-minded servants as wring wealth from subjects attending them on business, let the king confiscate all their possessions, and banish them from his realm.

127. Having ascertained the rates of purchase and sale, the length of the way, the expenses of food and of condiments, the charges of securing the goods carried, and the neat profits of trade, let the king oblige traders to pay taxes on their salable commodities.

128. After full consideration, let a king so levy those taxes annually in his dominions that both he and the merchant may receive a just compensation for their several acts.

129. As the leech, the sucking calf, and the bee take their natural food by little and little, thus must a king draw from his dominions an annual revenue.

130. Of cattle, of gems, of gold and silver, added each year to the capital stock, a fiftieth part may be taken by the king; of grain, an eighth part, a sixth, or a twelfth, according to the difference of the soil and the labor necessary to cultivate it.

131. He may also take a sixth part of the clear annual increase of trees, flesh-meat, honey, clarified butter, perfumes, medical substances, liquids, flowers, roots, and fruit,

132. Of gathered leaves, pot-herbs, grass, utensils made with leather or cane, earthen pots, and all things made of stone.

137. Let the king order a mere trifle to be paid, in the name of the annual tax, by the meaner inhabitants of his realm, who subsist by petty traffick:

138. By low handicraftsmen, artificers, and servile men, who support themselves by labor, the king may cause work to be done for a day in each month.

139. Let him not cut up his own root by taking no revenue, nor the root of other men by excess of covetousness; for, by cutting up his own root and theirs, he makes both himself and them wretched.

There is a world of justice and wisdom in the works of Menu, and it would be well if lawmakers of to-day would show as much consideration for the poorer classes.

I can not agree with Menu in all his views. He was not justified in taking a sixth or an eighth, or even a twelfth of the grain; and it would have been quite proper to take much more than a fiftieth of "gems, and gold and silver added to the capital stock." It is possible there is an error in translation from the Hindoo, and that fiftieth should read fifth. I read from a book printed in London in 1807, and if it is correct our Hindoo compiler of three thousand years ago was not inspired with the Democratic idea of light taxes on necessities and heavy taxes on articles of luxury.

EGYPTIAN AND ATHENIAN LAWS.

From the history of ancient peoples we learn that taxation generally included a contribution of gross products. The Egyptians contributed to their rulers one-fifth. Tithes of the fruits of the earth and of the in-

ecrase of cattle were reserved by the Hebrews for the priesthood. At a later period the Jewish kings exacted a larger tribute, and the taxation ultimately became so burdensome that the ten tribes seceded. These taxes consisted mainly of conscripted labor, "a contribution personelle," and a capitation tax upon some of the classes.

In Athens the population appears to have been divided into four classes, according to the value of the property owned by the citizens, the lowest class, or that owning but little or no property, being entirely exempt from taxation. From Grote's History of Greece (John Murray's London edition, volume 3, page 155 *et seq.*) we learn that Solon's method of levying taxes is thus explained:

Solon distributed all the citizens of the tribes, without any reference to their gentes or phratries, into four classes, according to the amount of their property, which he caused to be assessed and entered in a public schedule. Those whose annual income was equal to 500 medimni of corn (about 700 imperial bushels) and upward, 1 medimnus being considered equivalent to 1 drachma in money, he placed in the highest class; those who received between 300 and 500 medimni or drachms formed the second class; and those between 200 and 300 the third. The fourth and most numerous class comprised all those who did not possess land yielding a produce equal to 200 medimni.

(It seems from this work that a medimnus was about equal to 2 bushels of American measure.)

The writer then says:

Each of these three classes was entered in the public schedule as possessed of a taxable capital calculated with a certain reference to his annual income, but in a proportion diminishing according to the scale of that income, and a man paid taxes to the state according to the sum for which he stood rated in the schedule; so that this direct taxation acted really like a graduated income tax. The ratable property of the citizen belonging to the richest class (the Pentakosiomedimnus) was calculated and entered on the state schedule at a sum of capital equal to twelve times his annual income; that of the Hippeus, or Knight, at a sum equal to ten times his annual income; that of the Zeugite at a sum equal to five times his annual income.

Thus a Pentakosiomedimnus whose income was exactly 500 drachms (the minimum qualification of this class) stood rated in the schedule for a taxable property of 6,000 drachms, or 1 talent, being twelve times his income. If his annual income were 1,000 drachms he would stand rated for 12,000 drachms, or 2 talents, being the same proportion of income to ratable capital; but when we pass to the second class, or Knights, the proportion of the two is changed. The Knight possessing an income of just 300 drachms (or 300 medimni) would stand rated for 3,000 drachms, or ten times his real income, and so in the same proportion for any income above 300 and below 500.

Again, in the third class, or below 300, the proportion is a second time altered: the Zeugite, possessing exactly 200 drachms of income, was rated upon a still lower calculation, at 1,000 drachms, or a sum equal to five times his income; and all incomes of this class, between 200 and 300 drachms, would in like manner be multiplied by five in order to obtain the amount of ratable capital. Upon these respective sums of scheduled capital all direct taxation was levied. If the State required 1 per cent. of direct tax the poorest Pentakosiomedimnus would pay, upon 6,000 drachms, 60 drachms; the poorest Hippeus would pay, upon 3,000 drachms, 30; the poorest Zeugite would pay, upon 1,000 drachms, 10 drachms. And thus this mode of assessment would operate like a graduated income tax, looking at it in reference to the three different classes, but as an equal income tax, looking at it in reference to the different individuals comprised in one and the same class.

All persons in the state whose annual income amounted to less than 200 medimni or drachms were placed in the fourth class, and they must have constituted the large majority of the community. They were not liable to any direct taxation, and, perhaps, were not at first even entered upon the taxable schedule, more especially as we do not know that any taxes were actually levied upon this schedule during the Solonian times. * * * Such were the divisions in the political scale established by Solon, called by Aristotle a Timocracy, in which the rights, honors, functions, and liabilities of the citizens were measured out according to the assessed property of each.

THE ROMAN SYSTEM.

Among the Romans taxes were laid according to a census of the different tribes and their property (*res mancipi*), and a *tributum* was exacted from each individual member of the tribe according to the assessment. Colonists upon the lands "distributed" (conferred upon the occupants) paid taxes (*vectigalia*) in kind, amounting to one-tenth of the wheat and one-fiftieth of other products. When paid in money (as they sometimes were) these taxes were called *stipendiarium*. Besides these there were at different times (*protorium*) imposts and taxes on successions, bachelors, etc.

Niebuhr says that in the property embraced in the census as *res mancipi*, money, houses, tracts of land with the rights attaching thereto, buildings and implements upon them, and beasts of burden and draught, and horses were included.

I read from the seventeenth chapter of Gibbon's Decline and Fall giving an account of the system of taxation in vogue in the Roman Empire under Constantine:

An ingenious philosopher (Montesquieu, L'Esprit des Lois) has calculated the universal measure of the public imposition by the degrees of freedom and servitude, and ventures to assert that according to an invariable law of nature it must always increase with the former and diminish in a just proportion to the latter. But this reflection, which would tend to alleviate the miseries of despotism is contradicted at least by the history of the Roman Empire, which accuses the same princes of despoiling the senate of its authority and the provinces of their wealth. * * *

Whatever was honorable or important in the administration of the revenue, was committed to the wisdom of the præfects, and their provincial representatives; the lucrative functions were claimed by a crowd of subordinate officers, some of whom depended on the treasurer, others on the governor of the province; and who, in the inevitable conflicts of a perplexed jurisdiction, had frequent opportunities of disputing with each other the spoils of the people.

The laborious offices, which could be productive only of envy and reproach, of expense and danger, were imposed on the Decurions, who found the corporations of the cities, and whom the severity of the Imperial laws had condemned to sustain the burthens of civil society.

A foot-note of the author, supplemented by one by M. Guizot, says:

The title concerning the Decurions is the most ample in the whole Theodosian Code, since it contains not less than one and ninety-two distinct laws to ascertain the duties and privileges of that useful order of citizens.

The Decurions were charged with assessing according to the census of property prepared by the *tabularii*, the payment due from each proprietor.

This odious office was authoritatively imposed on the richest citizens of each town; they had no salary, and all their compensation was to be exempt from certain corporal punishments, in case they should have incurred them. The Decurionate was the ruin of all the rich. Hence they tried every way of avoiding this dangerous honor; they concealed themselves, they entered into the military service, but their efforts were unavailing; they were seized, they were compelled to become Decurions, and the dread inspired by this title was termed impiety.

The historian then returns to the subject we are considering:

The Decurions were mutually responsible; they were obliged to undertake for pieces of ground abandoned by their owners on account of the pressure of the taxes, and finally to make up all deficiencies.

The whole landed property of the empire (without excepting the patrimonial estates of the monarch) was the object of ordinary taxation. * * *

An accurate census, or survey, was the only equitable mode of ascertaining the proportion which every citizen should be obliged to contribute for the public service; and from the well-known period of the indictions there is reason to believe that this difficult and expensive operation was repeated at the regular distance of fifteen years. The lands were measured by surveyors who were sent into the provinces; their nature, whether arable, or pasture, or vineyards, or woods, was distinctly reported; and an estimate was made of their common value from the average produce of five years.

The number of slaves and of cattle constituted an essential part of the report. An oath was administered to the proprietors, which bound them to disclose the true state of their affairs, and their attempts to prevaricate or elude the intention of the legislator were severely watched and punished as a capital crime, which included the double guilt of treason and sacrilege.

A large portion of the tribute was paid in money, and of the current coin of the empire gold alone could be legally accepted.

THE FEUDAL EMPIRE AND FRANCE.

During the long period of the feudal empire taxation assumed the form of occasional aids, and services incident to tenures terminable at the pleasure of the lord, the principal being aids, reliefs, primer seizin, wardship, and marriage. In addition to this taxation by the imperial government each feudal lord extorted from his vassals whatever portion of the fruits of their industry and any personal service he chose to exact.

The first general tax in France was called *taille*, and was levied in 1644, the professed object of which tax was to provide for the support of a regular force to relieve the lands from the depredations and oppressions of the feudal militia, and was laid upon all the property in the kingdom, except that of the nobility and the church.

In 1790–'91 the *taille* was abolished, and a system of taxation adopted which was in the main in accord with what are now almost universally accepted as the true principles of political economy. The distinction was then made between direct and indirect taxes, and all taxes of the latter class, except imposts, were abolished, and the difference between the two kinds of taxation is thus explained in 6th Merlin Répertoire, 307:

Direct taxes are levied upon property, upon faculties, and upon persons. Property was divided into real and movable. *Indirect contributions* are taxes on the manufacture, the sale, the transportation, and introduction of objects of commerce and consumption—taxes of which the amount is usually advanced by the manufacturer, merchant, or carrier, and is borne and indirectly paid by the consumer.

DIRECT AND INDIRECT TAXES DEFINED.

The indirect taxes which were suppressed at that time, were duties for entrance into cities, towns, or burghs; upon sales in gross or by retail; upon liquors, stamps, playing-cards, and other similar taxes that were under the charge of the régie. All the ancient taxes were abrogated; and in their stead there were substituted direct taxes designated contribution foncière, contribution mobilière, contribution personnelle, and patents (licenses).

Dalloz, in his Répertoire Méthodique et Alphabétique de Législation de Doctrine et de Jurisprudence (volume 27, pages 215 *et seq.*), defines or designates these taxes as direct, and all taxation not included in these are indirect. The word *impôt*, he says, on page 399, is no longer employed in the language of finance or the budget (*dans le langage financier ou budgetaire*), having been replaced by the word *contribution;* and contributions are divided into direct and indirect. The latter are so designated because they are exacted in an indirect manner, and without a determination of the person who is to pay them, and the difference between the two is that in direct contributions the person is designated and he is the person to pay them.

The distinguished writer on political economy, J. Stuart Mill, adopts the French classification in his Political Economy. He says:

A direct tax is one which is demanded from the very person who is expected and desired to pay it. Indirect taxes are those which are demanded from one person in the expectation and intention that he shall indemnify himself at the expense of another, such as the excise and customs.

Dr. Wayland defines a direct tax as a tax upon every one in proportion to the property he possesses. An indirect tax is a tax upon commodities during their passage from one person to another.

In France the contribution foncière, ever since its establishment in 1790, has been a tax upon land, upon principles of proportional equality, except where a departure from the rule was demanded by the interests of agriculture. It is assessed without reference to the annual net revenue, the net revenue being regarded as the residue after expenses of cultivation, support, seeds, and harvest are deducted, and the assessment is made after a comparison of the products for a series of years, by which comparison the mean product is obtained.

The contribution mobilière is a similar contribution levied upon personal property, salaries, etc.

The patent is a privilege to pursue a particular vocation.

These internal indirect taxes are known in France as régie; in Belgium, as accises, and in Great Britain as excises. In neither country are they levied upon the raw products of agriculture. No doubt there are exceptions, but the general and nearly universal rule is that the excise is upon consumption, and upon commodities that have passed beyond the first stage of production.

THE ENGLISH AND AMERICAN PLAN.

In Great Britain the ancient form of taxation upon property was by the grant of subsidies and by aids. The land tax was an assessment of the various counties according to the valuation of the land, and was collected from the subjects according to the entire amount of the property.

In the colonies and States of North America there was, in general, no mode of taxation other than direct taxation before the adoption of the Constitution. Massachusetts and Connecticut levied an excise tax. Several of the States imposed import duties, but the principal source of revenue was by means of direct taxes, taxes on real and personal property.

Mr. Madison, in his report of the debates in the constitutional convention, says that Rufus King made the direct inquiry, "What is the precise meaning of direct taxation?" But it does not appear that any member of the convention volunteered an explanation, but in the thirty-sixth number of the Federalist there is a reference to the division of taxes into direct and indirect, and it is there stated in general terms that taxes on houses and lands are direct, and that import duties and excises are indirect, but no attempt at definition is made. As a member of the Virginia convention Chief-Justice Marshall defended this direct-tax clause of the Constitution, maintaining that there was no reasonable ground to apprehend improper assessments and extraordinary expenses of collection. In this speech Judge Marshall alludes to lands, slaves, plantation stock, and a few other articles of domestic property as objects of direct taxation, the speaker probably having in his mind a Virginia farm of that period. Mr. Madison commends this speech in 2 Elliott's Debates, 185.

The first instance in which the clause of the Constitution conferring the power of taxation upon Congress was subject to judicial construction was that of Hylton *vs.* The United States (3 Dall., 171). In this case the court held that a tax upon carriages was an indirect tax.

REPRESENTATION AND TAXATION INSEPARABLE.

One striking feature of the opinions in this case is the assertion that the underlying principle of the Constitution upon this subject was that representation and taxation should be co-extensive, and the chief difficulty was in deciding what should be considered as population in determining the subject of representation.

I find also that it is very clearly shown by the debates in the convention that it was conceded as unquestioned that taxation and representation were to go together, and that the number of the population, as ascertained in accordance with the provisions of the Constitution, was to afford the rule of apportionment. The proceedings also show that the convention was agreed upon the proposition that the entire wealth of the State was a proper subject of taxation.

WHAT THE CONSTITUTION FRAMERS THOUGHT.

Mr. Gouverneur Morris, on the 12th of July, 1787, moved to amend the taxing clause by empowering the Legislature to vary the representation according to the principles of wealth and population by a proviso that "taxation shall be in proportion to representation."

Later in the same day Mr. Morris said:

Some objections lay against his motion, but he supposed they would be removed by restraining the rule to direct taxation. With regard to indirect taxes on exports and imports and on consumption, the rule would be inapplicable.

Mr. Wilson held the principle to be sound, but could not see how it could be applied unless limited to direct taxation. The objection was that indirect taxes could not be ascertained. Thereupon Mr. Morris amended his motion by inserting the word "direct," and as amended it read:

Provided always, That direct taxation ought to be proportioned to representation.

From this it is clear that the word "direct" in this clause of the Constitution was contradistinguished from indirect taxes, and that the only powers of taxation under the Constitution must be classified as a power to lay direct and indirect taxes, and that a direct tax not apportioned to representation is not authorized.

The opinions of Justices Chase, Patterson, and Iredell in Hylton *vs.* The United States (3 Dall., 171) all agree that a direct tax, to be constitutional, must be laid in proportion to numbers as ascertained by the census.

It has been contended by some writers on political economy that a tax upon the raw product of land is a tax upon the land itself. This would no doubt be true for spontaneous products which require no labor, and it therefore follows that a tax on the products of land is at least in part a tax upon the land itself, and that to strictly conform to the Constitution such taxes should be assessed in proportion to population.

The citations I have made from the systems of taxations of various peoples—from the Hindoos down to Great Britain—all show that land has always been taxed through its products. And the debates in the constitutional convention show that a tax upon land was agreed to be a direct tax. The underlying principle of all taxation to which there was no dissent was that, so far as practicable, all should contribute to the necessary expenses of the Government in proportion to the amount of protection afforded to person and property; that protection for the person being universal, every one should pay for it, and that protection for property should be paid for only by the owners of property; and finally, that direct taxation should be proportioned to representation.

In debating the repeal of the stamp act in 1766, Lord Camden, formerly Chief-Justice Pratt, used these words:

My position is this, I repeat it, and will maintain it to the last hour: taxation and representation are inseparable. The position is founded in the law of nature—it is more, it is itself an eternal law of nature; for whatever is a man's own it is absolutely his own. No man has a right to take it from him without his consent; whoever attempts to do it does him an injury; whoever does it commits a robbery.—*Bancroft's History*, volume 5, 446–448.

THESE VIEWS AND THE COTTON TAX INCONSISTENT.

What protection did the cotton-producing States enjoy during the period this pretended tax law was in force?

Let the history of the infamous carpet-bag era answer.

What representation did these States have in the Congress that assumed the right to impose this tax, which was neither proportioned to the number of the population nor uniform in its effect throughout the entire country, but was avowedly levied upon only a portion of the people engaged in a particular agricultural industry in a defined and limited locality?

It can not be argued that a tax upon all raw cotton, wherever it may be produced in the Union, is an equal tax, because there are a number of States in which its production is a matter of impossibility.

One can not imagine a condition of affairs in which such a tax would fall upon the citizens of Iowa, Michigan, Minnesota, Wisconsin, Maine, New York, Vermont, or some twenty other States I might mention.

It is not in the power of any court to alter the meaning of words, nor is it in the power of Congress. A tax upon an article exported is in violation of the Constitution, whether it be levied as an export tax or not.

If this were not so, why the provision in the law imposing a tax upon distilled spirits and fermented liquors, under which such spirits or liquors may be exported without tax, whereas the tax must be paid upon all consumed? And it will be remembered that this law was enacted at a time when one of the most prominent leaders of the party in power declared that the Constitution had been laid aside, and another leader, equally prominent, that it had been buried.

Under the cotton-tax law the State of Mississippi paid as much tax as did Georgia, which State (had either State been allowed the representation to which each was entitled) had twice the representation, and paid three times as much tax as Tennessee, which had more than double the representation to which Mississippi was entitled.

Not one dollar of the whole amount of the cotton tax collected was paid by a man who had a voice in its imposition.

The tax was in no way proportioned to the value of the product upon which the tax was laid. The lowest grade of "stained uplands" paid as much as the highest grade of "New Orleans" or the long-staple "Sea-island."

It was strictly and avowedly sectional.

THE BURDEN ON THE PRODUCERS.

A planter of more than usual skill asserted that—

In 1867 he had 230 acres in cotton; made 126 bales, averaging 427 pounds. His working force was fourteen hands and eleven mules. The aggregate value of the cotton crop was $8,750, and the direct money expenditure in making it was $7,980, leaving a nominal profit of only $770. The tax was $1,325, leaving an actual loss of $555, allowing nothing for interest on capital invested or wear and tear of land and implements.

The same planter said further:

Such lands as he cultivated sold at (in 1867) from $2 to $3.25 per acre. His average tax was $5.75 per acre of cotton, the best acres paying $15 each. The freedmen working for him had a joint interest in the crop. The average tax falling on a full hand was $16; on a woman $10.75. One freedman, with a family, paid $57.50; another with a wife and seven children, the oldest too small to plow, paid $27.50.

All the State, county, and corporation taxes he had paid during a period of fifteen years, prior to 1861, were not equal to the cotton tax imposed upon him in the single year 1867.

The tax paid on cotton by Elijah (a freedman) in 1867 was greater than his (the planter's) average State tax when owning over 2,000 acres of land and sixty negroes, besides other property.

COTTON CROP OF 1867.

Bales produced	2,240,282
Bales exported	1,657,015
Consumed in United States	583,267
Consumed in cotton States (estimated)	60,000

Leaving 2,180,282 bales actually exported, if we accept the rule laid down by the court in Almy *vs.* California, 24 Howard, 169, which declares that an article conveyed from one State to another State of the Union is an article exported, within the meaning of the Constitution.

THE QUESTION IN THE CONVENTION.

The most strenuous opposition to the adoption of the Constitution was provoked by the fear that the taxing power it conferred upon the

Congress might be arbitrarily exercised. This opposition was only quieted by demonstrating that the power had been most carefully guarded. This may be illustrated by the reply of Alexander Hamilton:

Where is the difficulty? Where is the evil? They never can oppress a particular State by unequal imposition, because the Constitution has provided a fixed ratio, a uniform rule by which this *must* be regulated.

Again, in the Federalist, we find the express declaration by Alex. Hamilton:

The taxes intended to be comprised under the general denomination of internal taxes may be subdivided into those of the direct and those of the indirect kind. * * * It declares the latter to embrace duties and excises on articles of consumption.

As to which the writer is at a loss to conceive what can be the nature of the difficulties apprehended.

Regarding direct taxes, the same writer says:

Let it be remembered that the proportion of these taxes is not to be left to the discretion of the National Legislature, but is to be determined by the numbers of each State. * * * The abuse of the power of taxation seems to have been provided against with guarded circumspection. In addition to the precaution just mentioned, there is a provision that all duties, imposts, and excises shall be UNIFORM throughout the United States (No. XXXVI.)

A FORCIBLE ILLUSTRATION.

In discussing the adoption of the clause conferring upon the Congress the general power of taxation, Hon. George Ticknor Curtis, in his History of the Constitution, says:

The practice of taxing the products of a country, as they pass out of its limits to enter into the consumption of other nations, can be beneficially exercised only by a government that can select and arrange the objects of such taxation so as to do nearly equal justice to all its producing interests.

If, for example, the article of wine were produced only by a single province of France, and all the other provinces produced no commodities sought for by other nations, an export duty upon wine would fall wholly upon the single province where it was produced, and would place its production at an unequal competition with the wines of other countries. But France produces a variety of wines, the growth of many different provinces, and therefore in the adjustment of an export duty upon wines the Government of that country, after a due regard to the demand for each kind or class of this commodity, has chiefly to consider the effect of such a tax in the comepetition with the same commodities produced by other nations.

At the time of the formation of the Constitution of the United States there was not a single production, common to all the States, of sufficient importance to become an article of general exportation. Indeed, there were no commodities produced for exportation by so many of the States that a tax or duty imposed upon them on leaving the country would operate with anything like equality even in different sections of the Union. In fact, from the extreme northern to the extreme southern boundary of the Union the exports were so various, both in kind and amount, that a tax imposed on an article the produce of the South could not be balanced by a tax imposed upon an article produced or manufactured at the North. How, for example, could the burden of an export duty on the tobacco of Virginia, or the rice or indigo of South Carolina, be equalized by a similar duty on the lumber or fish or flour of other States. * * *

However theoretically correct it might have been, therefore, to confer on the General Government the same authority to tax exports as to impose duties on imported commodities, and the argument for it drawn from the necessities for revenue and protection of manufactures was exeeedingly strong, the actual situation of the country made it quite impracticable to obtain the consent of some of the States to a full and complete revenue power. Several of the most important persons in the convention were strongly in favor of it.

Washington, Madison, Wilson, Gouverneur Morris, and Dickinson are known to have held the opinion that the Government would be incomplete without a power to tax exports as well as imports. But the decided stand taken by South Carolina, whose exports for a single year were said by General Pinckney to have amounted to £600,000, * * * probably led the committee of detail to insert in their report of a draught of the Constitution a distinct prohibition against laying any tax or duty on articles exported from any State. (Volume II, pages 282-285.)

A DIRECT TAX MUST BE APPORTIONED.

In the case of Hylton *vs.* United States (3 Dallas 171), the four justices who heard the arguments and decided the case held that the tax on carriages was an indirect tax, and therefore constitutionally levied, the reason assigned for the finding being that it was a tax on consumption or expense.

Chief-Justice Ellsworth, having just been sworn into office, and not having heard the whole of the argument, declined taking any part in the decision of the cause. Justice Chase said:

It seems to me that a tax on expense is an indirect tax, and I think an annual tax on a carriage for the conveyance of persons is of that kind, because a carriage is a consumable commodity, and such an annual tax on it is on the expense of the owner.

In expressing his views Justice Patterson used these words:

The question is whether a tax upon carriages be a direct tax? If it be a direct tax it is unconstitutional, because it has been laid pursuant to the rule of uniformity and not to the rule of apportionment. * * * In answer it has been observed that the sum and not the tax is to be apportioned; and that Congress may select in the different States different articles or objects from whence to raise the apportioned sum. The idea is novel. What, shall land be taxed in one State, slaves in another, carriages in a third, and horses in a fourth, or shall several of these be thrown together in order to levy and make the quotaed sum? The scheme is fanciful. It would not work well, and, perhaps, is utterly impracticable. * * * All taxes on expenses or consumption are indirect taxes. A tax on carriages is of this kind, and, of course, is not a direct tax. Indirect taxes are circuitous modes of reaching the revenue of individuals who generally live according to their means. (3 Dallas, 180.)

In support of his opinion, Justice Patterson quoted from Smith's Wealth of Nations:

The impossibility of taxing people in proportion to their revenue by any capitation seems to have given occasion to the invention of taxes upon consumable commodities; the state not knowing how to tax directly and proportionately the revenue of its subjects, endeavors to tax it indirectly by taxing their expenses, which it is supposed, in most cases, will be nearly in proportion to their revenues. Their expense is taxed by taxing the consumable commodities upon which it is laid out. (Volume 3, page 331, London edition, 1789.)

Blackstone, after describing the several species of taxes that existed in early times, speaks of their substitution, in the reign of Richard II and Henry VI, by the new system of "subsidies." This system of "subsidies" was, he asserts:

A money tax on persons, levied in proportion to their wealth; lands being valued according to their rental or production. * * * These personal assessments, the subsidies which preceded them, and the more ancient scutage, hidage, and taillage, were, to all intents and purposes, a land tax, and were sometimes expressly called so.

So Smith, in his Wealth of Nations, says:

Taxes upon the production of land are, in reality, taxes on rent. (Volume 3, 274.)

THE PRACTICE IN CONGRESS.

From the organization of our own Government down to the year 1798, when the first direct tax was laid, by that name, and up to within a comparatively recent period (between 1816 and 1861), no internal taxes were ever levied in the United States that could not be classed as taxes on consumption or expense, or the manufacture of articles for consumption. During all these years there was not a tax on personalty that operated in the same manner as a tax on land, and yet was laid without regard to apportionment. There were duties (taxes) on distilled spirits, stills, licenses, carriages, snuff, and refined sugar, on some auction sales, and stamp duties.

In an essay, published in Harper's Magazine for August, 1866, Hon. George Ticknor Curtis asserted:

It may therefore be said that prior to 1861 the Congressional construction of the Constitution has been as follows:

First. That a tax on land and houses, and a capitation tax, are direct.

Second. That taxes on specific articles of consumption or expense are indirect.

Third. That an ad valorem tax on personal property, without reference to consumption, is of the same character as an ad valorem tax on land, both being direct.

If this is a correct presentation of the views of Congress regarding the taxing power conferred upon it by the Constitution—and I believe the best Constitutional lawyers concur in that view—it must be admitted that this cotton tax, levied as it was, directly upon production, without reference to its consumption, was in fact a direct tax which, under the Constitution, could only be levied by the rule of apportionment.

IT WAS AN EXPORT TAX.

The framers of the Constitution had also during the existence of the Colonial Government been impressed with the inequalities and difficulties attending duties exacted upon the products of a colony when transmitted beyond its borders, and after considerable discussion the convention agreed upon the provision that—

No tax or duties shall be laid on articles exported from any State.

In the agreed case I have referred to it was admitted that three-fourths to five-sixths of the cotton raised in the United States was exported. Therefore on all such cotton the tax of 3 cents per pound was in effect an export tax.

It will be admitted here that in 1866 and 1867 substantially all the cotton raised in certain States which was not exported beyond the sea was exported from the State in which it was grown.

To illustrate, I will refer to the States of Alabama and Arkansas. At that time they were almost without cotton mills, and all cotton grown in those States was transported either to Europe or to the mills of the North and Northeast. At periods in 1867 and 1868, when the greater part of the $68,000,000 was collected, cotton was sold by the producers as low as from 7 cents to 10 cents per pound. During the period when that low price prevailed the effect of the law was to exact that cotton raised in Alabama could not be exported from that State until an amount equal to more than one-fourth of its value was paid as tax to the Federal Government.

Now, when we consider that all cotton grown in Alabama was solely for export to other States, or to foreign countries, we can not resist the conclusion that the tax referred to was a tax "laid on articles exported from a State."

I think it will be admitted that no fact connected with the agriculture of the United States is more clearly established than that the quantity of cotton consumed in the States where it is grown is but an insignificant fraction of the total product, the great bulk of it being exported to other States in the Union.

The cotton-tax law has no precedent in the history of our Government, and certainly we can not find any warrant for such legislation in the Constitution.

It has certainly been clearly shown to be a direct tax, and if it can be established that such a tax can be imposed by Congress without reference to the rule of uniformity and apportionment, then all the objections made in the convention to the grant of the taxing power to the General Government are shown to have been well founded, and all the arguments by which those objections were answered have been falsified.

THE EXPORT TAX IN THE CONVENTION.

Let us see how doubtful the members of the convention were as to the advisability or propriety of conferring this power upon the Congress.

From the debates of the convention we learn that when the proposition to grant a general power of taxation was presented, Mr. Mason urged the necessity of coupling with it the prohibition: "no taxes shall

be levied on exports." He was most emphatic in the expression of his unwillingness to leave the question to be governed by a special article. Note these words:

He hoped that the Northern States did not mean to deny the Southern this security. He acknowledged his jealousy for the productions of the Southern, or, as he called them, the staple States.

Mr. Ellsworth said:

There are solid reasons against Congress taxing exports. First, it will discourage industry, as taxes on imports discourage luxury. Secondly, the product of the different States is such as to prevent uniformity. There are, indeed, but a few articles that could be taxed at all, as tobacco, rice, indigo, and a tax on them alone would be unjust. Thirdly, the taxing of exports would engender incurable jealousies.

Mr. Williamson asserted that the approval of such a measure by the convention—

Would destroy the last hope for the adoption of the plan.

Mr. Butler was emphatically opposed to the grant of the taxing power, holding it to be—

Unjust and alarming to the staple States.

Mr. Gerry held that the grant of the taxing power—

Would enable the General Government to oppress the State as much as Ireland is oppressed by Great Britain.

Mr. Madison, who favored the proposed grant of the power to lay general taxes, proposed that such power could only be conferred by the "consent of two-thirds of the Legislatures," but the proposition was negatived, and the provision as it now stands adopted.

VIEWS OF CONSTITUTIONAL WRITERS.

Commenting upon this restriction or limitation of the general grant of the taxing power conferred upon the Congress, Justice Story says:

The obvious object of these provisions is to prevent any possibility of applying the power to lay taxes or regulate commerce injuriously to the interests of any one State so as to favor or aid another. If Congress were allowed to lay a duty on exports from any one State, it might unreasonably injure, or even destroy, the staple productions or common articles of that State. The inequality of such a tax would be extreme. * * * The power is, therefore, wholly taken away to intermeddle with the subject of exports.

It surely can need no argument to satisfy any one that an inhibition applied to one State loses any of its force when applied to several States. When the learned justice says that the Constitution prohibits the laying of a tax upon the exports from "any one State," he certainly desires to be understood as applying the same rule to all or any group of the States united in one government.

In considering the restrictions on the powers of Congress embodied in the text of the Constitution, the learned Dr. William Rawle, in his treatise on the Constitution, says:

The general principle on which it (the Constitution) is constructed being declared and manifest throughout, it follows that to no purpose inconsistent with or extending beyond that principle can its power of legislation be carried. Yet it was expedient in some instances to introduce positive exceptions; in some to qualify powers enumerated or implied, and in others to secure by explicit declarations both the Republican foundation and the equality of the States in all points within the sphere of the General Government. * * *

It has been repeatedly observed that the leading principle of the whole Constitution is uniformity in respect to the several States, as far as it can be obtained. The natural or artificial products of States are different. To lay a general duty on the exports of rice or cotton or tobacco would affect only the Southern States; on flour or grain, principally the Central States, and on the domestic manufactures would operate chiefly on the Northern and Eastern States engaged in them, yet without this restriction perhaps it might be done. (Pages 115, 116.)

It will be observed that this distinguished writer had even at that early day anticipated this very question, and alludes to the effect on the Southern States of an export tax on rice, cotton, and tobacco.

THE ACT ITSELF SHOWS ITS ILLEGALITY.

The act of Congress under which the cotton tax was imposed is sufficient in itself to show that the tax was unconstitutional. The fifth section proposes to inflict the penalty of fine and imprisonment upon—

any person or persons who shall convey or attempt to convey from any State in which cotton is produced, to any port or place without the United States any cotton upon which the tax has not been paid—

and to guard against the possibility of misunderstanding or misconstruing the intent and purpose of the act it was provided in the first section of the bill:

No drawback shall in any case be allowed on raw or unmanufactured cotton of any tax paid thereon when exported in the raw or unmanufactured condition.

While in the sixth section it is provided—

That upon articles manufactured exclusively from cotton, when exported, there shall be allowed as a drawback an amount equal to the internal tax which shall have been assessed and paid upon such articles in their finished condition, and in addition thereto a drawback or allowance of as many cents per pound upon the price of cotton cloth, yarn, thread or knit fabrics * * * as shall have been assessed and paid in the form of an internal tax upon the raw cotton entering into the manufacture of said cloth or other article.

These several provisions of the law certainly constitute a distinct and positive legislative declaration that no raw cotton shall be exported until it has paid a tax, and certainly no one will contend that this was not an export tax because it was not so designated or because it is expressly called an internal tax. Such a contention would involve the assumption that Congress had the power to change things by merely changing their names.

In the case of Brown *vs.* Maryland (12 Wheaton, 419) the court decided that an act of a State requiring importers to take out a license for which they shall pay $50, is repugnant to that provision of the Constitution which declares that—

No State shall, without the consent of Congress, lay any impost or duty on imports or exports, except what may be absolutely necessary for executing its inspection laws.

Chief-Justice Marshall says:

In performing the delicate and important duty of construing clauses in the Constitution of our country, which involve conflicting powers of the Government of the Union and of the respective States, it is proper to take a view of the literal meaning of the words to be expounded, of their connection with other words, and of the general objects to be accomplished by the prohibitory clause, or by the grant of power.

And in considering the arguments of counsel, that it was within the power of a State to tax occupations, and that the tax of $50 on the wholesale dealers in imported goods was nothing more than the exercise of their power, Justice Marshall used these words (page 444):

But if it should be proved that the duty on the article itself would be repugnant to the Constitution, it is still argued that this is not a tax upon the article, but on the person. The State, it is said, may tax occupations, and this is nothing more.

It is impossible to conceal from ourselves that this is varying the form without varying the substance. It is treating a prohibition which is general as if it were confined to a particular mode of doing the forbidden thing. All must perceive that a tax on the sale of an article imported only for sale is a tax on the article itself.

Chief-Justice Taney delivered the opinion in tha case of Almy *vs.* State of California (24 Howard, 169), which decided that—

A stamp duty imposed by the Legislature of California upon bills of lading for gold or silver, transported from that State to any port or place out of the State, is a tax on exports, and the law of the State unconstitutional and void.

In delivering the opinion Mr. Taney said:

We think this case can not be distinguished from that of Brown *vs.* The State of Maryland, reported in 12 Wheat., 419. That case was decided in 1827, and the decision has always been regarded and followed as the true construction of the clause of the Constitution now in question.

And in replying to Mr. Benjamin's argument, by which he endeavored to show that the prohibitory clause of the Constitution only applied to articles actually shipped, the learned jurist said:

But a tax or duty on a bill of lading, although differing in form from a duty on the article shipped, is in substance the same thing.

ITS EFFECT PROVES ITS CHARACTER.

If we should designate an appropriation bill as a means of raising revenue the appropriation bill would nevertheless remain an authority to expend money, even though it were officially called a bill to raise money.

But the law not only undertakes to impose, and did impose, a tax which is distinctly and expressly prohibited; it goes a step further and discriminates against the producer of the cotton and favors the manufacturer at the expense of the agriculturist. Raw cotton exported must pay a tax of 3 cents per pound, but manufactured cotton exported is relieved of the tax previously laid upon the raw product. It will thus be seen that the Government exacted 3 cents per pound from the producer of the cotton, and then the 3 cents per pound paid by the planter was donated to the manufacturer when his product was exported.

The law was violative of both the letter and the spirit of the Constitution in almost every sense. It proposed to levy a tax which the organic law, under which the Congress possesses all its powers, expressly says shall not be levied; it was neither apportioned to the States according to numbers nor uniform in its effects, as all such taxes are required to be; it was oppressive to one great industry while stimulating and protecting another. And to conclude, it was a tax upon a people who by force were denied representation in the Federal Congress from November, 1865, to June, 1868, the period during which nearly every dollar—quite nineteen-twentieths—of the cotton tax was collected.

It has been argued that the decision of the Supreme Court in Hylton *vs.* The United States (3 Dallas, 171) justifies the imposition of the cotton tax, but those who fall into this error fail to observe that carriages are articles of use and consumption, that they are found in all the States, and are presumably distributed with substantial equality in localities where wealth approximates to uniformity in distribution, and notwithstanding this marked difference many eminent lawyers have held that the decision in the 3 Dallas case was erroneous.

MR. MADISON'S VIEWS.

Mr. Madison, who probably knew as well as, if not better than, any man in the country the intent and purpose of every phrase and word used in the Constitution, speaking of the case, declared that the tax on carriages succeeded "in spite of the Constitution" (Works, volume 2, page 14); that the proposition laid down by the court "struck at the Constitution" (*ibid.*, page 160), and that there never was a question on which his mind was more satisfied.

If Mr. Madison, the father of the Constitution, and one of the first lawyers of his time, not only questioned but actually took issue with the Supreme Court in the Hylton case (3 Dall.), how emphatic would that distinguished jurist have been in denouncing the absolute unconstitutionality of the cotton tax, and how appropriate would be this language of Chief-Justice Marshall, in 12 Wheaton, page 144:

It is impossible to conceal from ourselves that this is varying the form without varying the substance. It is treating a prohibition which is general as if it were confined to a particular mode of doing the forbidden thing.

In support of Mr. Madison's position it should be observed that the

court itself did not appear to be altogether certain as to the correctness of their construction, and while stating that they did not think the tax on carriages was a direct tax, they coupled the opinion with a doubt as to the power of the Supreme Court to declare an act of Congress void on the ground of its being contrary to and in violation of the Constitution. This is expressed by Justice Chase in these words:

As I do not think the tax on carriages is a *direct* tax, it is unnecessary *at this time* for me to determine whether this court *constitutionally* possesses the power to declare an act of Congress *void* on the ground of its being made contrary to and in violation of the Constitution; but if the court have such power I am free to declare that I will never exercise it *but in a very clear case.*

This, I believe, was the first hearing in which Justice Chase participated, and the doctrine announced by him regarding the power of the court is very different from the usage of the court in later years.

LAW AND EQUITY OF THE CASE.

If the constantly repeated decisions of the Supreme Court are to be regarded as binding upon us, we must admit that the direct tax was a constitutional and valid exercise of the taxing power conferred upon Congress.

If we accept the ordinary significance of a divided tribunal of the dignity of the Supreme Court of the United States, we must admit that the cotton tax is of questionable validity. If we consider the last-named tax in reference to the uniform practice of Congress in imposing direct taxes, we must confess that the cotton tax was illegal, and therefore all money collected under its pretended authority was improperly extorted, and, applying the language of Lord Camden, the attempt to enforce it did the South a wrong. I refrain from using the strong language of this great jurist.

Lord Camden said it was robbery. I say it is unjust.

I believe no one who has spoken in favor of the bill has pretended that the direct-tax law in any way infringed the Constitution, nor do they contend that it was unjust in any respect.

The strongest argument in favor of the bill seems to be that we have a surplus in the Treasury, and that its distribution would be beneficial.

I believe it is admitted that every State has its agent urging the passage of the bill, and I think it is also conceded that before the measure was introduced they had made contracts with their respective States quite satisfactory to themselves, in some instances the percentage to be paid the attorneys being from one-third to one-half the amount sought to be refunded.

In both equity and law the cotton tax stands upon a very different basis. The people who paid it have unceasingly contended that it was illegal. All admit that it was imposed upon a people who were refused the right of representation in the Congress of the United States, and by special laws were denied any participation in the affairs of government.

Our opponents concede that it was not uniform in its operation, and that it was not apportioned according to population; and the history of the case shows clearly that it was a tax upon an article exported from a State. There can be no doubt as to the duty of Congress in matters so clear and plain as these.

I have discussed this question to show the great propriety of so amending the bill as to give us an opportunity of voting at the same time upon the proposition to return the money collected by the Government under the direct tax and the cotton tax, and I think all will admit the justice and equity of the proposition.

MARVELOUS ADVANCEMENT OF THE SOUTH.

I was glad to hear the gentleman from Missouri [Mr. HEARD] speak of the wonderful prosperity of his great and powerful State, and it is with almost inexpressible gratification that I view the well-nigh unexampled progress and marvelous development throughout that great section called the Southland of our Republic. The eyes of all the world are fixed upon that highly-favored land, and all peoples are learning of our well-nigh boundless but until recently almost hidden wealth.

The capitalist, the men of industry, energy, and enterprise, the skilled mechanic, the ambitious youth, and the hopeful laborer, are all coming among us to find a hospitable welcome and happy homes, and enjoy with us the advantages and blessings which God has showered so lavishly upon us.

The next census will show a changed condition in the South as compared with the last, which is certainly highly gratifying. I learn from incomplete reports of governors and commissioners of agriculture that the assessed value of property in certain of those States has increased $970,000,000 in less than seven years. The addition to the railroads is reported at 17,300 miles, a gain of 89 per cent. The value of farm products has increased $170,000,000, while live-stock has increased $182,000,000, and there has been a gain of more than 50 per cent. in the value of the grain produced.

In 1880 we mined 6,000,000 tons of coal, whereas we now mine 17,000,000 tons, an increase of nearly 300 per cent.

States which seven years since yielded 332,000 tons of pig-iron now produce nearly 1,000,000 tons, an increase of 300 per cent., and while the public press informs us that mortgages and debts are increasing in alarming proportions among the farmers and artisans of the West, it also tells us that obligations of this character are steadily decreasing throughout the entire South; that while labor and capital throughout the North are arrayed against each other in an apparently interminable and relentless warfare, boycotts, strikes, and lock-outs being of almost daily occurrence, such things are unknown in the South, where the employer and the workman move on in harmony and peace, happiness, prosperity, and contentment being the almost universal rule.

ALABAMA'S TRIUMPHANT PROGRESS.

Alabama, which in 1879 was the tenth State in the Union in the production of pig-iron, now leads all the States of the South, and with one exception, will soon exceed all other States both North and South.

The best of steel is now made in Alabama by a process of recent invention.

Manufacturing cities are springing up as if by magic.

Glass-works, iron-works of all kinds, cotton-mills, mammoth car-works, and other industrial enterprises are being erected in the mineral belt and beside the clear waters of the beautiful Tennessee. Silent and uninhabited wastes of a few years ago are now the busy homes of the artisan, and the honest farmer, who but yesterday watched the sun sink below the golden horizon, now beholds a cloud of smoke by day and a pillar of fire by night, telling him of the great transformation which has taken place, and of the triumphs of progress and material advancement.

The Tariff—Mortgages and Millionaires.

SPEECH

OF

HON. A. M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 25, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of revenue—

Mr. DOCKERY said:

Mr. CHAIRMAN: I confess that it is with some degree of embarrassment that I attempt at this time a discussion of the principles involved in the pending bill, for the reason that I am the first one of the "militia" forces to follow the "regulars" of the Ways and Means Committee.

In this great country, with its teeming population, its vast area, its great diversity of soil, climate, and production, there are necessarily conflicting and clashing interests; but there is no conflict, real or imaginary, which can not be satisfactorily adjudicated if we but apply to its consideration the spirit of patriotism, moderation, and prudence.

Let us invoke this spirit in the conduct of the debate, and endeavor to reach a conclusion that will subserve the best interests of the whole people.

Before proceeding, however, it is of paramount interest and moment to recognize the fact that a tariff is a tax.

A revenue tariff is a tax designed to meet the current needs of the Government, administered upon an economical basis. A protective tariff is a system in virtue of which a partial and discriminative bonus is affixed to certain industries to the disparagement of others, vastly transcending the uses of governmental expenditures, and in the teeth of the equitable maxim that "all taxation should be levied for public purposes."

Let us assume that every patriot is willing to contribute his fair quota to the maintenance of the Government. Does not the assumption imply his right to demand that the distribution of the burden shall be rigidly impartial? An obligation is reciprocal in its very essence; a governmental obligation, therefore, must be commensurate with the nation, and must exclude the idea of class, section, or distinction of party.

Mr. Chairman, the great question of tariff abatement is exigent; it is to-day the dominating issue in American politics, and it is therefore the part of wisdom to admit its vital importance, as there are none so poor, none so lowly, none so down-trodden from whom the heavy hand of the present tax is ever lifted. The unabated rate of war taxation increases the cost of nearly every necessary of life, and is severest where the article is most imperative and most universal. Among the four thousand articles subsidiary to this enormous revenue there is in this system, supposed to be of the people, for the people, and by the people, scarcely a single article of absolute necessity from the cradle to the grave that eludes the insatiate clutch of the Federal tax-gatherer or the more inordinate greed and grasp of the home manufacturer.

But, sir, aside from the ethics of the question, shall we disregard the experience of the past, the dangers of the present, and the menace to the future business of the country, and stubbornly pursue a policy which is annually piling into the coffers of the Treasury superfluous millions, legitimately and imperatively needed in the channels of trade? Let us rather, Mr. Chairman, try to meet the issues of this great argument and seek to discern the inferences of duty and of safety.

DIRECT AND INDIRECT TAXATION.

Municipal, county, and State governments are usually maintained by

a system of direct taxation, based either upon the value of real or personal property, or the incomes of corporations and individuals. This method of raising revenue is in thorough accord with the genius of our institutions, exacting, as it does, the greatest amount from the rich and prosperous, and laying the lightest burdens upon the struggling poor. Whatever theoretical criticism might find wherewith to reproach the system, it has this even-handed justice in its right hand: the tax-payer can reckon with unerring exactness as to the precise amount of his contribution, and receive therefor a receipt in minutest detail, both as to item and aggregate.

The Federal Government employs both the direct and the indirect systems of taxation. By the latter it gathers in its greatest store of revenue, laying as it does tribute upon foreign manufacturers the market for whose wares and merchandise is within our borders. This scheme of taxation is indirect; for, whereas the importer pays the impost tax to the Government at our ports of entry, he presently reimburses himself to that extent by adding the duty to the selling price of the goods, the simple and last analysis of the transaction being that the consumer pays both.

The tariff, therefore, increases the cost of every imported article consumed by the people. It is true that the Government receives this added tax or impost; and the objection, therefore, does not lie against the system, but only against its prohibitory features which operate disastrously by diverting the revenue derived under it from the vaults of the Treasury to the pockets of the home manufacturer. To illustrate the correctness of this proposition it must be remembered that the average duty on imported goods is 47 per cent. If, therefore, an article of foreign manufacture is valued at $1 it must pay a duty of 47 per cent. before it can be sold in our market, and the cost to the consumer will be $1.47. The home manufacturer of a like article of course either raises the price of the article by the addition of the impost, or more usually lowers the price upon the commodity, only so far as to undersell the foreign producer and exclude him practically from competition. For it goes without saying that foreigners can not be expected to ship us merchandise for mere amusement and lose money at the same time. The virtual result of the system is, therefore, prohibitory as to foreign imports; turning over our home market to the tender mercies of our home manufacturers, who are thus "protected" to the extent of the duty.

Sir, the present system is fundamentally wrong in its operation, and fundamentally ridiculous in the pleas set up for its continuance. If I may be pardoned a momentary digression to anticipate the order of my argument, and advert to one of these many sophistical and spurious pleas, I would remark that the plea of "infant industries" would be so grotesquely ludicrous, were it not fraught with such serious results, that the refutation would be involved in its statement. If these giant monopolies are mere infants what manner of person, think you, would be a mature and bearded industry?

But to resume; the President in his annual message made the following pertinent remarks in this connection:

> But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty.
>
> So it happens that while comparatively a few use the imported articles, millions of our people, who never used and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public Treasury, but the great majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to the home manufacturer. This reference to the operation of our tariff laws is not made by way of instruction, but in order that we may be constantly reminded of the manner in which they impose a burden upon those who consume domestic products as well as those who consume imported articles, and thus create a tax upon all our people.

LOCAL FISCAL MANAGEMENT.

It would seem, Mr. Chairman, that the same business principles are involved in determining the rate of Federal taxation that prevails in the management of the fiscal affairs of States and municipalities. In these local administrations, where the revenue accrues from direct taxation alone, we find the entire population, irrespective of party, insisting upon the lowest rate of such taxation consistent with the public needs. The Republican here goes hand in hand with his Democratic neighbor in the earnest advocacy of low taxes and economical expenditures. Both, properly, demand the most efficient administration at the smallest practicable cost.

If the school-house, complete in its appointments, is paid for, and the rate of taxation is found to be greater than the educational needs of the community, taxation is reduced at once by "unanimous consent." If the municipality has liquidated its indebtedness, after having erected adequate public buildings, and furnished other needful equipment, the rate of taxation is diminished without dissent, and such is the case in the higher functions of the State itself, as well as the subordinate and minor affairs of the counties, whatever party may hold the helms which steer them all.

Mr. Chairman, the Democratic party of Missouri was entrusted with the conduct of the affairs of that great Commonwealth a little more than fifteen years ago; and within that time and in harmony with these principles has reduced the State debt from $23,000,000 to less than $10,000,000. This creditable result has been attained, whilst at the same time the scale of taxation has been reduced; and the Republican party has given its thorough assent and approval to both the reduction of the debt and the diminution of the tax.

And so, sir, we are confronted with the manifest anomaly, that whilst the people are in entire accord in regard to the fiscal policy of State, county, and municipal affairs, yet when we approach the question of national finances, we find the views of the two great political parties widely divergent.

The Democratic party, consistent with its record as to local taxation, has been unswerving in its demand for taxation for national revenue, whilst the attitude of the Republican party has been hitherto unshaken in its clamor for a protective tax.

Let us examine for a moment the salient pleas in their argument; and as preliminary it may be well to submit an exhibit of the condition of the Treasury, so that we may definitely discern whether or not the necessity for tariff reform actually exists.

PUBLIC DEBT AND SURPLUS.

The interest-bearing bonded debt on the first day of the current year (after deducting the Navy pension fund, $14,000,000) amounted to $1,027,761,742. Of this sum, $230,544,600 bears interest at the rate of 4½ per cent., payable September 1, 1891; $64,623,512 mature March 19, 1895, to January 1, 1899, inclusive, bearing interest at 6 per cent.; and $732,442,100 mature July 1, 1907, this last installment bearing 4 per cent. interest. The Government has no "option" on any part of this indebtedness, having no prerogative of redemption prior to the maturity of the bonds.

The annual receipts, expenditures, and surplus of the Treasury for the fiscal years 1886, 1887, and 1888, and the estimated total surplus at the close of the current fiscal year are shown in the following table:

Year ending—	Revenue.	Expenditures.	Surplus.
June 30, 1886	$380,388,150.01	$330,982,604.81	$49,405,545.20
June 30, 1887	420,240,887.05	364,673,037.51	55,567,849.54
June 30, 1888 (actual and estimated)	436,242,036.02	370,059,821.50	66,182,214.52

Total surplus for three years	$171,155,609.26
Average annual surplus	57,051,869.75
Surplus in Treasury April 1, 1888	104,573,930.34
Estimated surplus June 30, 1888	155,000,000.00

And so, Mr. Chairman, it is obvious that in the last three years we have garnered up a superfluous accumulation, which to a sober and reflective apprehension is simply startling, to the enormous sum of $171,155,609.26 in excess of the total expenditures of the Government. An average annual surplus of $57,051,869.75! This wanton drain upon the resources of the people, supplemented by the accumulations of prior years, it is estimated, will augment the surplusage in the Treasury to the startling exhibit of $155,000,000 at the close of the present fiscal year, June 30, over and above the reservation of $100,000,000 for the redemption of greenbacks, in compliance with the requirements of the law.

Mr. Chairman, shall we, in the light reflected from this picture, illuminating as it does the imminent dangers of financial disturbance, continue the policy of overtaxation? Both of the great political parties have solemnly pledged themselves to revise the tariff and reduce this appalling surplus, and, sir, the people inexorably clamor for the speedy redemption of these pledges.

The President, commenting upon the plethoric condition of the Treasury, remarks most pertinently and pungently that—

> When we consider that the theory of our institutions guarantees to every citizen the full enjoyment of all the fruits of his industry and enterprise, with only such deductions as may be his share towards the careful and economical maintenance of the Government which protects him, it is plain that the exaction of more than this is indefensible extortion and a culpable betrayal of American fairness and justice. This wrong inflicted upon those who bear the burden of national taxation, like other wrongs, multiplies a brood of evil consequences. The public Treasury, which should only exist as a conduit conveying the people's tribute to its legitimate objects of expenditure, becomes a hoarding-place for money needlessly withdrawn from trade and the people's use, thus crippling our national energies, suspending our country's development, preventing investment in productive enterprise, threatening financial disturbance, and inviting schemes of public plunder.

Mr. Chairman, this constantly augmenting surplus of useless and idle money is a reproach to our financial policy, and it has also, sir, the graver aspect of being a menace to the industrial interests of the country. The President has emphasized our present posture by declaring that "it is a condition which confronts us, and not a theory," and that it is the high behest of the people's representatives to devise an effectual and speedy change in this untoward and disastrous condition.

DISPOSITION OF SURPLUS.

Now, Mr. Chairman, the question remains, What disposition shall be made of the surplus now in the Treasury, and in what manner shall we reduce taxation so as to prevent its recurrence?

Prior to the beginning of the present fiscal year the Treasury Department applied a portion of the surplus to the redemption of United States bonds which were subject to call at the pleasure of the Government.

There being now no bonds payable at call, and none maturing until September 1, 1891, it would seem to be the part of wisdom to purchase outstanding bonds to the full extent of the surplus that may accumulate prior to the close of the present fiscal year.

However, this means of restoring to the channels of healthful circulation the money now producing congestion by lying in the Treasury may involve the payment of premiums, and however, in some lesser degree, in itself objectionable, yet, sir, does it seem the only practicable escape from the present accumulation.

Mr. Chairman, the Democratic party is acquitted of any responsibility whatever for the condition of our fiscal affairs requiring the purchase of bonds and the payment of premiums. It was a Republican Congress and a Republican Executive that passed and approved the refunding-tax act of July 14, 1870, under which the bonds bearing 4½ and 4 per cent. were issued, and the date of their payment deferred until 1891 and 1907, respectively. The Democratic administration is therefore compelled to purchase these bonds at a premium to reduce the surplus.

Not only this, Mr. Chairman, but the Republican party is solely responsible for that condition which compels the American people to pay an excessive rate of interest on their bonded indebtedness. As tersely stated by the eloquent gentleman from Kentucky [Mr. BRECKINRIDGE] in a recent debate:

> The difference between 2½ or 3 per cent., the rate at which we could borrow money, and 4 and 4½ per cent. that we are paying on these bonds—a sum easily calculable—is the precise sum that the American people are annually paying for the glorious privilege of having had Mr. JOHN SHERMAN as Secretary of the Treasury during the interregnum of Mr. Hayes.

Again, Mr. Chairman, the danger of a surplus in the future may be avoided by extravagant appropriations, by reduction or abolition of internal taxation of whisky and tobacco, or by lowering the schedule of tariff taxation.

I trust that the first suggestion, as embodying a practicable device for the attainment of surplusage reduction, will be accorded but poor favor by either branch of Congress. The disfavor with which it will be greeted by the Executive has already been anticipated by his recent utterance:

> Of course it is not expected that unnecessary and extravagant appropriations will be made for the purpose of avoiding the accumulation of an excess of revenue. Such expenditure, besides the demoralization of all just conceptions of public duty which it entails, stimulates a habit of reckless improvidence not in the least consistent with the mission of our people or the high and beneficent purposes of our Government.

The revenue derived from the taxes on whisky and tobacco entails no hardship upon the people and should remain undisturbed. As a measure of compromise I might be willing to concede the reduction or abolition of the tobacco tax, but, sir, I am unalterably opposed to any lowering of the tax on whisky. If we are to credit the intimations of our friends on the other side, whisky is essentially a Democratic luxury [laughter], and, in this view of the case, I had supposed, of course, our Republican friends would unite with us in demanding the retention of the tax upon this product. Upon this proposition, however, there seems to be some doubt, as the distinguished leader on the other side [Mr. KELLEY] has already declared himself in favor of abolishing the whisky tax, and is re-enforced in this demand by another eminent Republican leader [Senator WILSON, of Iowa], who expresses his views in the RECORD of April 6, 1888, page 2871, in the following terms:

> Mr. President, we are still confronted with our annual surplus revenue of about $60,000,000. Is there no way by which we can get rid of it without disturbing our true industrial conditions? It seems to me that there is a way which is both short and clear. We have one public tax the gross yield per annum of which more than equals the reduction of revenue we are called on to make. The tax on intoxicating liquors is the one to which I refer. This is where I would make the reduction.

It therefore appears, Mr. Chairman, that two of the great leaders of the Republican party have boldly taken position in favor of striking off the whisky tax. The Democratic party accepts the issue tendered and is quite willing to take the judgment of the people upon the proposition. In my opinion the country is not yet prepared to accept cheap whisky and high-priced clothing as a proper measure of tax reform. [Applause on the Democratic side.]

Upon this point I quote again succinctly from the Executive:

> Our scheme of taxation, by means of which this needless surplus is taken from the people and put into the public Treasury, consists of a tariff or duty levied upon importations from abroad, and internal-revenue taxes levied upon the consumption of tobacco and spirituous and malt liquors. It must be conceded that none of the things subjected to internal-revenue taxation are, strictly speaking, necessaries; there appears to be no just complaint of this taxation by the consumers of these articles, and there seems to be nothing so well able to bear the burden without hardship to any portion of the people.

Mr. Chairman, from whatever point we view this question of excessive Federal taxation our ultimate and inevitable determination must be the schedule of the tariff tax; upon this point must revolve the substantial reduction.

Sir, I trust that I can safely assume that no diminution whatever will be made in the tribute upon whisky. Upon tobacco for the last fiscal year the tax aggregated $30,108,067.13, of which amount the sum of $12,682,137.19 was derived from cigars, cigarettes, cheroots, and snuff, and yet if, in the spirit of concession, the entire amount be stricken off, there will yet assail us the exigency for a reduction of at least $45,000,000, as per the tariff schedule.

If, however, as is probable, the tax on manufactured tobacco alone, amounting, in round numbers, to $18,000,000, be stricken off, there must still be a reform in the tariff schedule of about $60,000,000.

DOES PROTECTION BENEFIT LABOR?

It now seems, Mr. Chairman, that we are prepared to advance to the scrutiny of the arguments used against this scheme of reduction, and in favor of a protective tariff.

Mr. Chairman, the so-called "protective" system operates in placing $5 in the hands of the manufacturers for $1 which finds its way into the vaults of the Government. The inequality and injustice of the system are as patent as the motives of the advocates of its continuance are apparent. The guise in which the thought is dressed is a flimsy one indeed—the protection of the laboring man. Sir, the simple resolution of this issue might be reached by the unvarnished assertion that business *per se*, under whatever name, is grasping and exacting; is dominated by no instinct of philanthropy, but by the law of supply and demand in open and competitive market. This law fixes the wage rather than the profit upon the manufacture.

A protective tariff can only benefit labor by increasing its demand, and this is practically limited to the home market, as shown by the report of the Chief of the Bureau of Statistics. It there appears that in 1880 but 9.65 per cent. of the manufactured product was sold abroad. The tariff is, therefore, rather a hindrance to the laborer, limiting him, as it does, to the degree of employment necessary to supply the demands of the home market alone and leaving him to drift idly upon our shores when such demands shall have been fully met. The salient features of protection, in so far as they relate to labor, may be succinctly summarized.

First. It is insisted that the great body of our people shall pay taxes to the manufacturers, in order that these shall be thus enabled to pay higher wages to the laborers.

Second. The taxes collected under the system are paid by one portion of our population for the assumed benefit of another portion, such tax being in no wise a contribution in whole or in part by foreign nations.

Third. It is manifest, therefore, that the integrity of the entire superstructure of the system lies in the good faith of the manufacturers, and their intent and willingness to dispense some of this enormous bonus to their laborers. With this view of the case before us, let us in a brief space ascertain where the money actually goes, and we may then discover that we have in reality been "protecting" the wrong man.

COST OF THE TARIFF.

By the census of 1880 it appears that the entire manufactured product of the United States aggregated $5,369,579,191, and of this amount 10 per cent., in round numbers, was sold to foreign countries. Deducting this amount of exportation, $536,957,919, from the total product, we find the consumption by the home market amounted to $4,832,621,272, or an annual per capita average of $277 for the 17,392,099 persons who are engaged in the various avocations and who maintain the rest of the population. Estimating that of this domestic consumption only 20 per cent. of its value, instead of 41 per cent., was added by the tariff, we yet find the increased cost to the people of the United States to attain the enormous aggregate of $966,524,254, an average per capita tax of $19.27.

Mr. Chairman, the great State from which I hail, with her population of 2,168,380, contributed of this amount $40,784,682.60, whilst the people of the district I have the honor to represent on this floor were taxed to the extent of $3,047,571, the items of taxation, being in detail, by counties, as follows:

Counties.	Population.	Amount of tax.
Caldwell	13,646	$262,685
Clay	15,572	299,751
Clinton	16,073	309,405
Daviess	19,145	368,541
De Kalb	13,334	256,679
Gentry	17,176	330,638
Harrison	20,304	390,852
Ray	20,190	388,657
Mercer	14,673	282,455
Worth	8,203	157,908
Total	158,316	3,047,571

I am aware, Mr. Chairman, that the advocates of protection insist that this estimate of the increased cost of the manufactured product by reason of the tariff is excessive. But, sir, the very fact of the manufacturers' unwillingness to abate their present profits, or if they be willing to concede the necessity for reform, their insistance that the reduction shall not fall upon their products, is conclusive of their emoluments under the law.

As affecting the further proposition, that the present rates are necessary to the maintenance of present wages, let us scan for a brief space the statistics which ascertain the profits of the manufacturers.

PROFITS OF THE MANUFACTURER.

The census of 1880 showed the capital invested in manufacturing to be $2,790,272,606. The value of the manufactured product was $5,369,579,191; the cost of the materials $3,396,823,549, and the wages paid, after deducting those paid to tailors, plasterers, milliners, masons, carpenters, butchers, blacksmiths, bakers, and agricultural implement makers, not in any wise protected, amounted to $799,358,445. To ascertain the profit of the manufacturers we have only to add the cost of wages and materials and deduct this total from the total value of the product, and by this means we have a profit determined of $1,173,397,197, or 42 per cent. of the capital invested. To further emphasize the exorbitant profit received by the manufacturers let us ascertain the capital embarked in certain lines of industry which produce some of the necessaries of life.

By the census of 1880 it appears that the capital employed in the manufacture of woolen goods was $96,095,564; the total product $160,606,721; cost of materials $100,845,611; and wages paid $25,836,392. A net profit in this industry of $33,924,718, or 35 per cent. upon the capital invested.

By a similar computation we have the net profit on worsted goods of 29 per cent., on cotton goods 22 per cent., and on boots and shoes of 45 per cent.

From a careful review of these tables the conclusion is inevitable that the manufacturers are receiving excessive bounty, not warranted by the legitimate needs of their respective industries and which is only enjoyed by the 44,019 owners of manufacturing establishments. Conceding for the argument's sake any reasonable accessories of expenditure in the way of supervision, risk, and wear, and interest upon the original capital, the profit yet realized by the manufacturer is vastly in excess of that realized in any other legitimate investment.

The manufacturer claims that this profit is largely for the benefit of the laboring man.

Now, Mr. Chairman, if I was a manufacturer possibly I might come before Congress like the others with this sort of plaintive appeal, but whenever I find any business man asking a legislative body for some favor in the interest of the "poor workingman" I always feel like tightening the strings on my pocket-book. [Laughter on the Democratic side.]

Mr. KERR. Why do you not quit the banking business and go into this profitable business of manufacturing?

Mr. DOCKERY. Why, my friend, I remain in the banking business for the same reason that these other gentlemen remain in the manufacturing business—because it pays. [Laughter.] We do not, however, ask for legislative aid, as we are organized under a State charter and can not possibly be advantaged by legislation; but I never would appear before any legislative body asking aid for myself or for my business, masquerading behind the interests of the "laboring men." [Applause on Democratic side.] The Republican party has been the special friend and champion of the banking interest, and in the Forty-seventh Congress removed the tax from bank capital, bank deposits, and bank checks, while it left the taxes on the necessaries of life. [Laughter and applause on the Democratic side.]

Again, Mr. Chairman, manufacturers have a supplementary element of protection in 3,000 miles of ocean, a balance in their favor of freight, insurance, etc., in addition to the absolute and intrinsic bounty wrung from domestic consumers.

Against this picture are the naked outlines of the one presented by the pursuits of my people. These men, worthy as the best, are inexorably destined, with the meager exception of the owners of 182,369 sheep, as shown by the census of 1880, to undergo day in and day out, year in and year out, the bitter cold of winter and the weary heat of summer with no kind of governmental aid whatever.

Sir, I have the pleasure and honor of representing one of the most progressive and enlightened agricultural districts in the United States; and I am unwilling that this people who receive, perhaps, but 4 per cent. net on their farming investments should be further taxed for the benefit of less than fifty thousand favored manufacturers. Equal and exact justice should be rendered unto every man who is sheltered under the broad ægis of the American flag.

The business of the manufacturers with only $2,790,272,606 of capital yielded a profit of $1,173,397,197—42 per cent; while the farmers with an investment of $12,104,081,430, were able only to realize a product valued at $2,213,402,564, which, after deducting labor and other legitimate expenditures, will amount to less than 5 per cent. on the capital invested. And now, Mr. Chairman, having traced the people's money collected under this system into the pockets of the manufacturers, it becomes a question of grave moment; what account do they render of this enormous tribute? For, under any rational system of protection to labor, they are only themselves the custodians of this trust, because after they shall have allowed themselves the reasonable profit designed, they must disburse the residue to their laborers.

Sir, I wage no contest with the manufacturer, as to his just gain and recompense. I desire to see his enterprises progressive, prosperous, and stable, and that the General Government shall foster them to this extent. But that the rest of this great nation should endure excessive taxation, that he alone should reap excessive gains, I raise my earnest protest.

WHAT LABOR GETS.

From its frequency there should be some plausibility at least in the claim that a high Federal tax secures American labor against competition with the pauper labor of Europe. This claim, however, is only tantamount to the assertion that the profits of the manufacturer are entirely adequate to such guaranty, and manifestly this ability can only result from the increase which accrues to the manufactured product by reason of the tariff. The proof of this inheres in the statement. The sole question, then, is, who guarantees the manufacturer? or whether this access of profit goes bona fide to the laborer or is quietly absorbed by the manufacturer. Upon the decision of this point the interest of the laborer must revolve.

And again, manifestly, the laborer in manufactories is primarily concerned in this decision. Sir, I am willing to go as far in the direction of the genuine interests of American labor as any member upon this floor, although none of my constituents are directly benefited by this system, unless it be, as is claimed, the small number of those engaged in growing wool. I am, moreover, sir, entirely willing to support the system if it does veritably uphold the hand of labor throughout the land, and so contribute to the happiness and well-being of our whole people.

Labor is the foundation of national prosperity, and the absolute basis upon which must repose the fabric of our national wealth. It should therefore be our object, as it is our privilege, to contribute to its stability, advancement, and contentment in so far as these lie within the domain of legislative authority.

And, Mr. Chairman, I utterly repudiate the allegation that the party of which I am an humble member do not have these just considerations at heart.

Let us, however, investigate the main question and determine whether, of this immense gratuity to the manufacturer, the laborer has received any increase of pay deserving of the name.

To quote once more the census of 1880, we find that 17,392,099 persons are engaged in the various avocations of life; and that of these 7,670,493 are agriculturists; 4,074,238 are engaged in professional and personal pursuits; 1,810,256 in trade and transportation; 1,214,023 in mining and mechanical occupations, and the residue, after deducting plasterers, blacksmiths, carpenters, and other like pursuits in no sense protected, amounts to the ridiculously disproportionate showing of 2,623,089. It is conclusive that protection only can protect this last class.

Mr. Chairman, after several years of study and reflection upon the injustice of our tariff laws, I am forced to assert that the worst pretense in the whole system is that wanton sophistry by which a few cents of increase in daily wages is made to outweigh the grievous wrong and cheat to the laborer in the spoliation of his goods by the enormous tax on everything he is compelled to have in order that he may be housed, fed, and clad in the humblest manner.

The same inevitable census shows that, after deducting classes not really protected, the 2,623,089 so-called protected laborers received as wages in 1880 the amount of $799,358,445, an average annual wage per capita of $305—the preposterous "protection" of 97 cents per day, all told.

This, then, is the grim exhibit as far as it goes. But, sir, to continue, the manufacturers of woolen goods paid the same year $298 per annum, or 93 cents by the working day. In the department of worsted goods the pay per year was $302, the daily wage being 96 cents. The great moneyed manufacturers of cotton goods doled out the same year to their "protected" employés the annual pay of $240, or the significant protection of 77 cents per day. And, Mr. Chairman, you may run through the entire list, and you will find the same sham of augmented wages to the laborers under the entire scheme of protected industries.

Sir, this exhibit is momentously significant, as it explains the presence in the corridors of the Capitol at this moment of the representatives of less than fifty thousand protected manufacturers. They are here to-day, as they have been in all the years that have preceded, claiming the continuance of governmental aid, ostensibly in the interest of labor; but the people have wearied of the cant and insincerity of this plea.

Aid and security to American labor is the premise upon which every vicious and fallacious theory of protection is grounded. In further elucidation of the intrinsic helplessness of these theories when confronted with the light, I ask the privilege of subjoining a collated table

giving the manufacturers' profits, laborers' wages, and the value of the product of each laborer for the consecutive census reports of 1850, 1860, 1870, and 1880:

	Annual wages paid laborer.	Manufacturers' profit.	Value product of each laborer.
1850	$244.00	42 per cent...	$1,063.00
1860	288.00	47 per cent...	1,438.00
1870	377.00	45 per cent...	2,060.00
1880	305.00	42 per cent...	2,047.00

From 1846 to 1861 the tariff on imports averaged 19 per cent., while from 1861 to 1880 it averaged not less than 50 per cent. The increase of wages for ten years of low tariff was 16 per cent., while in twenty years of high tariff it has been only 6 per cent.

The table readily discloses the reason for the insignificant advance in wages, to wit, the increased productive power of the laborer. Such increase has fallen far short of the increased value of the laborer, for his productive value has increased from $1,063 in 1850, when labor received $244 by the year, to $2,047 in 1880, when the laborer was paid only $305. In other words, the productive capacity of the laborer in thirty years, because of the inventive genius of the people, fostered by wise and generous patent laws, has increased 92 per cent., while his wages show the beggarly advance of 23 per cent.

The table further reveals the fact that while manufacturers have prospered under low and high tariffs, this interest has enjoyed no greater degree of prosperity than during the low tariff from 1850 to 1860. Nevertheless, the standard of wages in high or low epochs, in season and out of season, has eternally had its neck under the galling yoke of supply and demand, which is never abrogated nor even abated, whatever may be the specious logic of the manufacturer, he receiving, as these tables show, the lion's share at all times. The laborer, the efficient factor in their unparalleled bounty, has, from the manufacturer, in no instance, received a single dollar beyond his competitive valuation in the market, which only establishes, by invincible evidence, that "protection" has all along been protecting the wrong man.

Mr. Chairman, the manufacturers talk glibly of the interests of American labor, and yet many of them have repeatedly starved it into subjection, or driven it into other pursuits when it has dared to syllable their harsh injustice; and, in this way, American labor has, in manifold instances, been supplanted by the pauper labor of other countries. So frequent has been this occurrence that Congress has been compelled to forbid such further importation, under the severest pains and penalties. The imminent need of this action has this startling confirmation from the census reports. Of the total number of laborers employed in manufactures in 1880, 819,069, or 33 per cent., were persons of foreign birth, whilst only 2,615,578 foreigners, or 17 per cent., were employed in other avocations. One-third of the whole number of manufacturing laborers were thus foreigners; and yet the specious and seductive cry of "protection to American labor" is as rampant and pervasive as it has been from the first.

Now, sir, I accord, as does the Democratic party, a generous welcome to every citizen of foreign birth who seeks our shores with the genuine purpose of identifying himself with our institutions and promoting our welfare; but I enter an earnest protest against the destructive policy which, under the guise of protection to native labor, is disintegrating and expelling it in favor of the "pauper contract labor" of Europe and other countries.

Can there be any further doubt that the whole issue of "protection" is in the aggrandizement of the manufacturer and the detriment of American labor?

Sir, the discontent and unrest of our laboring people have never been so pronounced as under this protective tariff, devised, as it is claimed, in their behalf. Strikes, and even violent manifestations of the unsatisfactory conditions of labor have become so frequent as to call for the most serious regard and concern. Why, sir, it has only been a few weeks since 82,000 laborers were driven from their employment in Pennsylvania in midwinter by the exactions and oppressions of their employers. And this, Mr. Chairman, was in Pennsylvania, where, we have been told, year in and year out, that the voice of the turtle is ever heard in the land; that the state of the laborer is one of benign satisfaction, and that his comforts are, indeed, enviable. And right here that same laborer is compelled to strike for the bare means of sustenance.

MANUFACTURING VS. AGRICULTURAL STATES.

To further illustrate, Mr. Chairman, the comparative results of high and low tariffs upon the wealth of the manufacturing and agricultural States, I invite especial attention to the subjoined table, showing the total wealth, population, and average wealth per capita for the nine manufacturing States of Connecticut, Maine, New Hampshire, Vermont, Rhode Island, Massachusetts, New York, New Jersey, and Pennsylvania for the census years 1850, 1860, 1870, and 1880, as contrasted with the wealth of the remaining States and Territories:

Years.	Wealth of nine manufacturing States.	Wealth of remaining States and Territories.	Total wealth.	Population of nine manufacturing States.
1850	$3,130,989,851	$4,004,790,377	$7,135,780,228	8,626,851
1860	5,591,607,424	10,568,008,644	16,159,616,068	10,594,268
1870	15,290,032,687	14,778,485,520	30,068,518,507	12,298,730
1880	19,630,000,000	24,012,000,000	43,642,000,000	14,507,407

Years.	Population of remaining States and Territories.	Total population.	Wealth per capita of nine manufacturing States.	Wealth of per capita of remaining States and Territories.
1850	14,565,025	23,191,876	$363.00	$275.00
1860	20,849,053	31,443,321	529.00	507.00
1870	26,259,641	38,558,871	1,243.00	562.00
1880	35,648,376	50,155,783	1,353.00	673.00

Mr. Chairman, an examination of this table reveals such startling discriminations in favor of the manufacturing States by the operation of a high tariff as to make any comment or criticism unnecessary.

Under a low tariff wealth was equalized, so that we find the agricultural States keeping steady step in increase of wealth with the augmentation of the population. In 1860, for example, after sixteen years' rule of a low tariff, the wealth of the manufacturing States, with a population of 10,594,268, amounted to $5,591,607,424, or an average rate per capita of $529.

For the same period the remaining States and Territories, with a population of 20,849,053, increased their wealth to the aggregate of $10,568,008,644, or to a per capita wealth of $507.

And now, Mr. Chairman, let us note the changes which twenty years of high tariff have wrought. In 1880 the population of the nine manufacturing States was 14,507,407 and the wealth $19,630,000,000, or an average to each person of $1,353.

The remaining States and Territories for the same period increased their population to 35,648,376, whilst their wealth was augmented to but $24,012,000,000, or an average individual wealth of only $673.

Sir, these figures are taken exactly from the census, and are outside of controversy. They declare in the open light of day that under a low tariff the wealth of the whole common country was normal, was equally distributed, and that its increase went hand in hand with that of the population, knowing, in Mr. Webster's words, "No North, no South, no East, no West."

The wealth of the agricultural States, moreover, from 1850 to 1860, ten years only, increased 163 per cent., while in the ensuing decades from 1860 to 1880 the increase of wealth was only 127 per cent.

This result, which always follows when the natural laws of trade have full sway, unhampered by tariff restrictions, was reversed during the next twenty years under these odious discriminations, and in consequence we find the wealth forsaking the West, Northwest, and South and driven to its legitimate center in the nine manufacturing States of the East. And so, sir, we are met with the incongruous results, that these twenty years, far from recording the same wholesome increase, growing out of the wholesome conditions obtaining from 1850 to 1860, wherein the manufacturing wealth grew in ten years 78 per cent., are forced to chronicle the enormous increase of 251 per cent. in these States.

Mr. MILLIKEN. Will the gentleman permit me to ask him a question?

Mr. DOCKERY. Certainly.

Mr. MILLIKEN. Do you want to transfer all these manufactories to Europe? Why do you not also build manufactories in your midst?

Mr. DOCKERY. There is no danger of their removal to Europe. The Democratic party favors legislation which will afford all the incidental protection under a revenue system which these manufactures need to enable them to grow and prosper, but we do not propose to continue a system which levies an enormous tribute upon the agricultural States for the benefit of the manufacturing States. [Applause.]

Mr. BOUTELLE. Will the gentleman from Missouri be good enough to repeat the names of the nine manufacturing States to which he has referred?

Mr. DOCKERY. Maine is amongst the number. They are Maine, Massachusetts, New Hampshire, Vermont, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania.

Mr. BOUTELLE. I understand the gentleman to say, then, those are the States against whose interest it is the part of the Democratic party to legislate?

Mr. DOCKERY. I want to say to my friend from Maine [Mr. BOUTELLE] that the Democratic party opposes class legislation, desires to obliterate sectional lines and enact such laws as will redound to the common interests of the whole country. [Applause on the Democratic side.]

I rejoice at the prosperity of the State of Maine, and desire to see her industrial enterprises progressive and stable; but in considering this tariff question we should exclude the idea of class or sectional distinction.

Mr. BOUTELLE. Will the gentleman allow me?

Mr. DOCKERY. I can not yield further, as my time is limited.

The CHAIRMAN. The gentleman from Missouri declines to yield.

Mr. BOUTELLE. I am sure the gentleman will yield for a moment. I understood the gentleman to say—I may have misunderstood him—but I understood him to enumerate a number of States, including the New England States and some others, which he stated had been particularly advantaged in their material resources by the present tariff system, and that it was the policy of the Democratic party to put a stop to the advantages enjoyed by these States.

Mr. DOCKERY. Oh, no; the gentleman could certainly not have so understood me.

Mr. BOUTELLE. That was the impression made upon my mind.

Mr. DOCKERY. No, the gentleman seems to have misapprehended the scope and meaning of my observation.

Mr. BOUTELLE. Then I wish the gentleman would state what he does mean.

Mr. DOCKERY. I have only to reiterate the statements of a few moments since. I oppose all class or sectional legislation, but am quite willing that the manufacturers of Maine, with those of the other States to which I have alluded, shall have all the incidental protection that can be secured under a good sound revenue tariff, but no excessive bounty at the expense of the agricultural States. [Applause.]

Mr. Chairman, it may be insisted that the comparison I have made between the agricultural and manufacturing States, so far as they relate to wealth, is not fair and just, for the reason that it necessarily includes States of the South whose people were impoverished by the civil war. To anticipate this objection I desire to submit a comparative statement of the population, assessed valuation, and per capita wealth of two States, the one manufacturing and the other agricultural, Illinois and Massachusetts. Both of these States have enjoyed whatever benefits accrued from this protective system, and have followed with unflagging zeal the standard of the Republican party.

Mr. HOPKINS, of Illinois. And they are going to follow it.

Mr. DOCKERY. I am afraid that the statement of my friend is about correct.

In 1860 Illinois had a population of 1,711,951, and an average per capita wealth of $227. In 1880 Illinois had a population of 3,077,871, while the average per capita wealth was but $255. In 1860 her average per capita wealth was $227, and after twenty years of high tariff——

Mr. ROWELL. Do I understand you to say that in 1880 the per capita wealth in Illinois was $500?

Mr. DOCKERY. Oh, no; $255.

Mr. LONG. How much in 1860?

Mr. DOCKERY. It was $227; the total assessed valuation of the property in that State being $389,207,372, while in 1880 the assessed valuation was $786,616,394.

Mr. ROWELL. Are you adopting the assessment tables prepared by the assessors of the State, or do you take your figures from the census returns?

Mr. DOCKERY. I quote from the census returns as they appear in the compendium of the census taken in 1860 and 1880.

Mr. HEMPHILL. What was the per capita wealth of Illinois in 1880?

Mr. DOCKERY. Two hundred and fifty-five dollars. There had been an increase of but $28 per capita in twenty years of high tariff. Now let us examine the statistics so far as they relate to Massachusetts; and my Kentucky friend [Mr. BRECKINRIDGE] thinks Massachusetts leads the country. She certainly leads it in the profits received under this system. In 1860 she had a total population of 1,231,066, assessed valuation of real and personal property of $777,157,816, while her average per capita wealth was $631. In 1880 her population had increased to 1,783,085, the value of her real and personal property was $1,584,756,802, while her individual wealth had increased to $888. Massachusetts increased her per capita wealth in twenty years of high tariff $257, while Illinois, the agricultural Republican State of the West, showed an increase of but $28.

Mr. ROWELL. Do you not know that in 1880 Illinois was the fourth manufacturing State of the Union?

Mr. DOCKERY. I am aware of that; but her manufacturing wealth is included in the total valuation which I have given.

Mr. BRUMM. Has the gentleman shown the percentage of increase in population relatively in these States?

Mr. DOCKERY. I have but five minutes' time remaining, and I must beg to be permitted to proceed without further interruption. I do not wonder that our Republican friends are becoming somewhat excited and nervous over these figures. [Applause on the Democratic side.] The area of Illinois amounts to 56,650 square miles; that of Massachusetts is 8,310 square miles. Illinois has six times the area of Massachusetts and almost twice the population, and yet her per capita average is $255, while Massachusetts is $888—Massachusetts having $633 more individual wealth than Illinois.

Mr. DUNHAM. Will the gentleman permit me to ask him one question?

Mr. DOCKERY. If I am given further time I will yield with pleasure.

Mr. DUNHAM. We will give you more time. I want to know if the gentleman is aware that in Illinois the assessment is from one-third to one-sixth of the value, whereas in Massachusetts it runs from a half to the full value?

Mr. DOCKERY. This valuation is ascertained by a Federal census, and I presume has the same basis in all the States. In my own State the assessment is usually made upon the basis of one-half or one-third of the value of the property, except money, which is assessed at its full value.

Mr. DUNHAM. Is money assessed there at its full value?

Mr. DOCKERY. Yes, it is in Missouri. In this connection I desire to call the attention of gentlemen to another fact of some considerable importance. The manufacturing States not only have this enormous disproportion of individual and aggregate wealth in their favor, but as a matter of fact they own a large part of the property accredited to the States of the West and Southwest. Ninety-five per cent. of the shares of stock representing the real value of the railroad property of Illinois, amounting to perhaps $600,000,000, belongs to the citizens of the manufacturing States. The railroad property of my own State—whole real value is about $250,000,000—finds its ownership in New York and Boston, so that you not only have this wealth in the manufacturing States——

Mr. LONG. How important it is for you that we have the wealth!

Mr. DOCKERY. I concede that very readily, and do not object to Eastern capital which finds its way to the West, because it aids us in developing our material resources; but my objection lies against that system of taxation which compels the people of that section to pay tribute to the manufacturing States and thus enable their citizens to acquire fortunes of almost fabulous proportions.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. JOHNSTON, of Indiana. I move that the gentleman's time be extended.

By unanimous consent the time of Mr. DOCKERY was extended until 5 o'clock p. m.

Mr. DOCKERY. I thank the gentleman from Indiana and the House for the courtesy extended.

Mr. WADE. May I ask my colleague a question?

Mr. DOCKERY. I yield to my colleague, although I know he has a habit of asking difficult questions.

Mr. WADE. If we are in that condition as a State, and here is a plan by which other people have got wealthy, as the gentleman says, why can not we apply that system to Missouri, and pay those debts? [Laughter on the Republican side.]

Mr. DOCKERY. Well, my friend, if this policy is to be considered simply as a question of who can secure the greatest bounty, I might be willing to claim a share of the profit for Missouri.

If this protective system is to be continued I want to notify Massachusetts and the other New England States now——

Mr. WADE. Are you not as smart as a Massachusetts Yankee? [Laughter.]

Mr. DOCKERY. I am willing to compete in any market in the world with anybody except a Massachusetts Yankee. [Renewed laughter.]

Mr. Chairman, I was about to observe that if this system is to continue, now that we have the interstate-commerce law, the New England States had as well begin to look to foreign countries for their market, for they will soon be seeking a protective tariff against Alabama, Missouri, and other States of the South and West. If the profits of agriculture are still to be "tolled" in the interest of manufactures, we may be compelled to adopt a policy aggressively defensive.

Mr. Chairman, we are now prepared to appreciate the import of the President's declaration, when, in words ringing with the power of truth, he stigmatized the present tariff as "vicious, inequitable, and illogical." In view of the wanton aggressions which I have shown that this tariff makes against the agricultural States and Territories, the question spontaneously arises: How can such a system by any possibility of sanity receive the support of any Western farmer or any laborer outside of the circle of the manufacturing States?

When the census shows that the great West, until 1860, was waxing strong in wealth and numbers, until at that date her per capita wealth was $507, as against $529 in the manufacturing States; and the same census shows that in 1880 the conditions had become shamefully reversed, and that in the nine manufacturing States the average wealth had swelled to $1,353, whilst that of the other States and Territories had shrunken to $673, I confess, sir, I am at a loss to understand how any one fully cognizant of the facts can uphold such an inequitable scheme of taxation.

MORTGAGES AND MILLIONAIRES.

Mr. Chairman, if there is one thing about which a Republican Representative from the West is more sensitive than another it is the discussion of that phase of the tariff which reveals the startling aggregation of wealth in the manufacturing States, and the equally startling

number of farm mortgages in the agricultural States. A few days since, as a result of a declaration by my colleague [Mr. BLAND], there was some question raised in the House as to the value of the mortgaged property in the State of Iowa, and in that discussion the gentleman from Iowa [Mr. GEAR], recently governor of that great Commonwealth, stated that the assessed valuation of the real estate was, in round numbers, $360,000,000, but claimed in the same connection that the farm mortgages only amounted to $70,000,000. [Laughter.]

I quote from the RECORD of March 22, 1888:

Mr. BRECKINRIDGE, of Arkansas. What did the gentleman say was the assessed value of the Iowa lands?
Mr. GEAR. Three hundred and sixty million dollars.
Mr. BRECKINRIDGE, of Arkansas. And the mortgages are $70,000,000?
Mr. GEAR. Seventy millions. Of course the assessed value is not the real value. The gentleman knows that very well.

In the course of the same debate the gentleman from Iowa [Mr. WEAVER] made the following statements which ought to arrest the attention of every farmer in the United States:

I wish simply to say a word in reply to my colleague from Iowa, Governor GEAR. I am very familiar with the condition of affairs in my State; and when my colleague asserts, on the authority of the governor of the State, that the mortgages will not amount to more than $70,000,000, although that is a very large sum, it is not, in my judgment, large enough by one-half; $150,000,000, according to my best judgment, will not cover the mortgage indebtedness of Iowa.
With regard to the number of farms mortgaged, I say it would be an accident if a man traveling from the south line of Iowa to the north line, or from east to west, should happen to step upon a farm that was not mortgaged. In my remarks awhile ago I said that 62½ per cent., at least, of all the farms of the whole country are mortgaged. This per cent., I again assert, will hold good throughout the Union. It may be less in some States and more in others. In the State of Missouri it is as large as in Iowa; in the State of Kansas much larger, in my opinion.

The gentleman from Indiana [Mr. BROWNE] also presented his views, from which it appears that he concedes that in the ten States of the Ohio and Missouri Valleys there is a mortgage indebtedness amounting to $1,093,000,000. A vast sum, certainly of sufficient proportions to suggest inquiry, and the necessity for remedial legislation. General BROWNE says:

We have heard from the distinguished gentleman from Texas [Mr. MILLS] more than once that the mortgage indebtedness on farmers in ten States of the Ohio and Missouri Valleys equals in the aggregate the immense sum of $3,500,000,000. He no doubt received his information from the partisan press of the country. The truth is, from the investigation made by Mr. Atkinson, a free-trader, I believe, certainly a gentleman of distinction, and when it comes to matter of statistics eminently fair, instead of this indebtedness aggregating $3,500,000,000, it is one thousand and ninety-three millions, or less than a third of the tremendous sum which has been paraded before the country in this House.

Again, Mr. Chairman, according to the report of the commissioner of labor for the State of Michigan for 1887, it appears that 47 per cent. of the farms in that State are mortgaged.

I will not trespass upon the courtesy of the House to pursue this question further, but will state in conclusion upon this point that it may be fairly estimated from the most reliable data at command that the manufacturing States have secured a mortgage interest amounting to at least $2,000,000,000 on the farms and cities of the West and Southwest, and that the ownership of almost the entire railroad and telegraph system of that portion of the country is held in the same quarter. Sir, this condition of affairs should challenge and engage the attention of every thoughtful man. The monetary legislation of the last quarter of a century, with the aid of the protective tariff, has built up an aristocracy of wealth which bodes no good to the future of the country. Why, sir, I remember well, when quite a boy, that millionaires were so few that the school histories made mention of them; and they might have been numbered before the war upon the fingers of both hands. To-day they are numerous in the favored sections of the country, and some of them control fortunes estimated at $200,000,000.

This enormous aggregation of capital in the hands of a few men has assumed such proportions as to give occasion for the most serious concern and apprehension. Within the last twenty-four hours I have heard a distinguished Republican on the other side of the House repeat on the authority of a well-known statistician the statement that if we continue at the same rate to aggregate wealth in the hands of the few we shall in the course of ten years reach a point where 90 per cent. of the entire wealth of the country will be under the control of 1 per cent. of its population. I know that my Republican friends are just as much interested in the consideration of this question as we are, because they have a common interest in the glory, development, and perpetuity of our institutions, and therefore I warn them of the dangers that threaten. To-day the cloud may be no larger than a "man's hand," but if this untoward condition is unchecked the hour may come when monopoly shall throttle the Government and in the name of capital strike down the liberties of the people.

Sir, standing as we do within sight and under the very shadow of that stately monument which consecrates the memory of the immortal Washington, let us in this connection heed his words of wisdom and warning and sternly discountenance "all combinations and associations, under whatever plausible character," which would upbuild and aggrandize one section to the detriment of another section of our common country.

To further exemplify the intrinsic hardship, injustice, and inequality of the present system, I submit the following comparative statement of the duties levied upon certain articles of luxury and necessity, which I will ask the Clerk to read.

The Clerk read as follows:

DUTIES ON LUXURIES.

	Per cent.
Jewelry of all kinds	25
Diamonds	10
Wine, in bottles	29
Satins and velvets	50
Furs	20

Average duty, 27 per cent.

DUTIES ON NECESSARIES.

	Per cent.
Flannels	67
Woolen clothing	70
Agricultural machinery	45
Salt in bulk	85
Crockery	55

Average duty 64 per cent.

Mr. DOCKERY. Mr. Chairman, it will be readily seen that the average duty upon the commodities necessary to the maintenance of the humblest living is more than twice the average duty upon luxuries.

THE HOME MARKET.

Mr. Chairman, the second proposition upon which the advocates of protection chiefly rely is based upon the delusive assumption that a high tariff is essential to the prosperity of our manufacturing interests, and that without such high tariff manufacturers could not prosper; that by reason thereof they do prosper, and thus in the employment given to labor furnish a market for the products of our farmers. I have shown conclusively that the profits of manufacturers under the low tariff that prevailed from 1846 to 1861 were in every rational respect satisfactory to the interest concerned, and certainly in excess of the profit realized in any other legitimate branch of industry, the profits in 1850 being 42 per cent. on the capital invested, and in 1860 47 per cent.

The conclusion, therefore, must be reached that high tariffs are not essential to a remunerative return on the capital invested. If this conclusion be conceded, and from it there seems to be no legitimate escape, the result then necessarily follows that there is no better market furnished by a high tariff than a low one, for neither rate of Federal taxation exerts any substantial influence upon the consumption by the manufacturing employés, except, of course, in so far as they may respectively operate to reduce or increase wages.

A high tariff not only fixes a limit to the market for our farm products, but at the same time decreases their profits.

Commerce between countries is but an exchange or barter. If, therefore, in spite of the "Chinese wall" of Federal taxation, foreign manufacturers bring their products to our market to exchange for articles produced by our agriculturists, they must add the import duties to the value of their goods before obtaining the privilege of making the exchange.

If, for instance, the foreign manufacturer willingly exchanges a woolen hat for a bushel of wheat, the farmer receives in exchange for the wheat a necessary article of wearing apparel; but when the foreign manufacturer of the woolen hat is compelled at our ports of entry to pay a duty of 54 per cent. on the article, he must of necessity add the amount of the duty to the original cost of the hat, and the farmer pays such duty in the increased amount of wheat required to effect the exchange. This example illustrates the operation of the tariff in its effect upon the entire commerce of the country, which in the fiscal year just closed aggregated $1,408,502,979.

I am advised by the statistician of the Agricultural Department that no sufficient data have as yet been collected to show the amount of agricultural products required by the nine manufacturing States in addition to their own production. It is estimated, however, that they consume annually about 80,000,000 bushels of wheat, of which amount they produce 26,000,000 and purchase 54,000,000 from the remaining States; while the exportation of wheat from the entire country has averaged during the last six years 126,000,000 bushels annually.

The exportation of agricultural products is practically confined to cotton, wheat, meats, and corn, the remaining items of agricultural exportation being very few in number and insignificant in value. Of the entire exportation from this country during the last four years, the agricultural products have averaged about 73 per cent., the manufactured products about 15 per cent., and the products of mines and fisheries about 12 per cent. I regret that there are no reliable statistics upon which we can estimate with absolute certainty what per cent. of agricultural products consumed by the manufacturing States are purchased from the agricultural States; but from statistics furnished me by the statistician of the Agricultural Department it is manifest that the exportation of corn, wheat, and meats has increased under a protective tariff, while the home consumption exhibits a marked decrease. In 1860 only five-tenths per cent. of corn was exported, while in 1880 5.7 per cent. was exported; in 1860 9.2 per cent. of wheat only was exported, while in 1880 39.2 per cent. was sold abroad, and in 1860, while the exportation of meats was only 3 per cent., it had grown to 12 per cent. in 1880.

The market for home products, as shown by this table, has decreased in every one of the great items that constitute the agricultural exports,

except the one item of cotton. By the census exhibit for these respective years it must be conceded that the requirements of the home market show a marked and unsatisfactory decrease.

By the operations of the tariff, therefore, the manufacturer finds a home market for his entire production, save perhaps 10 per cent., while the farmer furnishes the products which constitute 75 per cent. of our foreign trade, and is compelled in European markets to compete with the "pauper labor" of the world without any protection whatever. The tariff, therefore, reduced to its ultimate analysis, gives the home market to the manufacturer and the foreign market to the agriculturist.

TRUSTS.

Moreover the "home market" is too often a home monopoly; too frequently "cornered" and controlled by "trusts" and other agencies, which conspire to increase the cost of the necessaries of life.

I sincerely regret that I have not time to present in detail the history of the operations of one of these trusts—the great "cattle trust" of Chicago—which in 1887, according to the Stock Grower, purchased and sold fully two million head of cattle. The membership of this "trust" consists of Nelson Morris, Swift, Armour, Hammond, and Libby, McNeil & Libby. If the two million head of cattle handled by them had been purchased and sold with reference simply to a fair basis of profit, the farmers of the West would have been many millions gainers in the transactions; but these gentlemen constituting the trust "pooled their issues," as appears by the Stock Grower, and under the lead of Nelson Morris forced down the price of cattle, so that it is estimated by this journal that the profits of the "trust" over and above a legitimate return for 1887 amounted to $54,642,210. This, Mr. Chairman, is one of the results incidental to a system which aggregates capital and fosters monopoly.

The President, in this connection, fittingly observes:

In speaking of the increased cost to the consumer of our home manufactures, resulting from a duty laid upon imported articles of the same description, the fact is not overlooked that competition among our domestic producers sometimes has the effect of keeping the price of their products below the highest limit allowed by such duty. But it is notorious that this competition is too often strangled by combinations quite prevalent at this time, and frequently called trusts, which have for their object the regulation of the supply and price of commodities made and sold by members of the combination. The people can hardly hope for any consideration in the operation of these selfish schemes.

If, however, in the absence of such combination, a healthy and free competition reduces the price of any particular dutiable article of home production below the limit which it might otherwise reach under our tariff laws, and if, with such reduced price, its manufacture continues to thrive, it is entirely evident that one thing has been discovered which should be carefully scrutinized in an effort to reduce taxation.

The necessity of combination to maintain the price of any commodity to the tariff point furnishes proof that some one is willing to accept lower prices for such commodity, and that such prices are remunerative; and lower prices produced by competition prove the same thing. Thus where either of these conditions exists a case would seem to be presented for an easy reduction of taxation.

WAGES AND COST OF PRODUCTION.

And right here I would simply, and for a single moment, advert to the disingenuous and evasive plea made yesterday by the gentleman from Michigan [Mr. BURROWS] that a high tariff is conducive to the benefit of the laborer in the lowering of the cost of the staples of consumption.

If I understood the argument of the distinguished gentlemen, it amounted to a declaration that "the higher the tariff the lower the goods." Well, I suppose that statement is possibly correct, the only thing, however, that stands in the way of its immediate acceptance on my part is probably deficient early education and surroundings. [Laughter.] Out in the West we used to have to go to the old-fashioned grist-mill with our corn and take regular turns in getting it ground. In those early days it was the understanding of the community that the more toll the miller took the less meal we had left. Now, when the gentleman from Michigan can satisfactorily explain our primitive misunderstanding of the situation so that we can readily understand that the more toll the miller gets the more meal there is remaining, then I will be ready to accept, without further cavil, the proposition he gravely presents that "the higher the tariff the lower the goods." [Laughter and applause on Democratic side.]

The truth is, Mr. Chairman, that manufactured articles are cheaper than they were in the primitive times, not because of the tariff (for the effect of the tariff is to increase the price), but because of the improved facilities for transportation, and, as heretofore stated, that inventive genius which has brought forth labor-saving machinery, and greatly augmented the productive capacity of the laborer, so as to make it easy for him to compete in any market of the world if you will but lower this excessive rate of Federal taxation.

As conclusively establishing the correctness of this proposition, Mr. MILLS, the very able chairman of the Committee on Ways and Means, in a recent discussion, makes the following statement:

Fifty years ago, Mr. Edward Atkinson shows, it required five persons, two carders, two spinners, and one weaver, working by the old methods, to make eight yards of cloth in one day. They got 20 cents a day; a dollar for the whole five. The labor cost of the cloth was 12½ cents a yard, and calculating 300 working days in a year the whole product of these five cheap laborers was 2,400 yards of cloth; but when coal and steam and machinery were harnessed together to produce cloth, five persons to-day in New England produce 140,000 yards of cloth. The labor cost of the cloth is 1.08 cents per yard. The wages of labor, instead of being $60 a year, or 20 cents a day, is $287 per annum for each.

The result of the labor-saving machinery used was an enormous increase in productive capacity. The result of that was an increase in the rate of wages, and the further result was a great decrease in the cost of production. The old hand-wheel and the old methods of labor have had to depart before the all-conquering march of coal and steam and machinery. They had to go because the small amount of product of the article drove them out of the field. It is not the rate of wages, it is the article which the labor makes and the cost at which that article can be produced—the lower cost—which drives the rival article out of the market. Such is the history which has been written in our country in the last half century.

Mr. Chairman, Mr. Edward Atkinson, one of the clearest thinkers and writers on political economy of the present day, in his little book on The Distribution of Products, lays down the principle that high rate of wages means low cost of product, and low rate of wages means high cost of product. He says that "the cheapest man is the one who works the greatest amount of machinery with the least stops." I read a paragraph from his book, on page 44:

"In any given country like the United States, where the people are substantially homogeneous, where the means of intercommunication are ample, where there are no hereditary or class distinctions, and where there is no artificial obstruction to prevent commerce, high rates of wages in money will be the natural and therefore necessary result of low cost of production in labor."

Again, on page 46, he says:

"Hence, it follows that although the total production of any given thing may not be concentrated at the very best point, it will yet be found to be true that where the conditions are the best, the cost, measured in terms of days of labor, will be lowest, and the wages, measured in terms of money per day, will be the highest, the high money wages being the necessary consequence of the low labor cost. Conversely, low rates of money wages are the natural and necessary result of a high labor cost of production."

Now, then, "it follows," he says, on page 56:

"That the nation which has diminished the quantity of human labor in greatest measure by the application of machinery produces goods at the lowest cost, and by exchange with the hand-working nations, who still constitute the majority of the people of the world, is, by way of such exchange, enabled to pay the highest rate of wages in money, because their goods are made at the lowest labor cost."

INDIRECT TAXATION.

Mr. Chairman, in my opinion the indirect methods by which the Federal taxes are collected furnish the explanation for the support of the protective system by the Republicans of the agricultural States. Under this system the merchant and the shop-keeper are the tax-gatherers in disguise. The manufacturers' bonus and the Government tax are added to the original price of the article, and paid by the consumer without an adequate realization of their amount. Let us use the illustration of the tribute paid by the consumer to governmental support in the various incomes derived from customs duties, internal revenue, and postal receipts, and even here, where there can be no question as to the amount of the tax, we yet find a frequent and characteristic failure to apprehend the full measure of the burden.

In the fiscal year just ended the Government received from customs taxation $217,286,893; from internal taxation, $118,823,391, and from postal taxation, $48,837,609, making the total revenue from these three sources of taxation $384,947,893. Estimating our annual increase in population since 1880 to have been 3 per cent., we ascertain the present population of the United States to be 60,688,497. It will therefore appear that the average tax for each person amounts to $6.33. Missouri's present population upon this estimation is found to be 2,623,740, which would make her quota of revenue to the Government for the past fiscal year aggregate $16,657,020, or an average for each one of the one hundred and fourteen counties of $146,114. The cost to the people of the ten counties I represent, estimated on the same basis, would be $1,213,650, or in detail by counties, as follows:

Counties.	Population, 1887.	Cost.
Caldwell	16,512	$104,576
Clay	18,842	119,333
Clinton	19,448	123,171
Daviess	23,175	146,775
De Kalb	16,134	102,182
Gentry	20,782	131,619
Harrison	24,568	155,597
Mercer	17,754	112,442
Ray	24,429	154,417
Worth	9,985	63,238
Total	191,629	1,213,650

Mr. Chairman, that we may appreciate the exact significance of the tariff in all of its phases, let us add to the $217,286,893 of bona fide tariff received by the Government for customs duties the $966,524,254 of protection or the cost of the tariff incidentally as we have heretofore shown it to be in the increased profits of the manufacturer; and the result is found to be a total annual tax of $1,183,811,147. The average tax for each person by reason of the customs duties alone is $4.33 and that on account of the manufacturer's profit $19.27, making a total per capita tax of $23.60; or a total annual tax upon the people of the ten counties of the district I represent of $4,261,021.

Mr. Chairman, I have sought to present candidly and truthfully the real cost of this system. The only element in the discussion about which there can be any degree of uncertainty is the estimated bounty to the manufacturers. I have placed it at 20 per cent. of the total tariff rate. This is unquestionably reasonable and fair, and I am confirmed in the correctness of this view since, at the close of a quarter of a century of its existence, nearly one-half of the entire wealth of the United States is found to be collected in the nine manufacturing States that have less than one-third of the whole population.

Sir, if for the brief period of a single day we could substitute for the indirect system the direct one of collecting Federal revenue, and the tax-payers be thus enabled to realize the actual amount of the tax, it

would render unnecessary any further argument of the whole issue on this floor. Tariff reform would sweep the country as with a cyclone's power, and the granite hills of Vermont itself would tremble with the pulsations of the mighty revolution.

FREE TRADE.

Mr. Chairman, notwithstanding the avowed pledges of both political parties to revise the tariff and reduce the surplus, the Democratic party is confronted on the threshold of every attempt to redeem its faith by the almost united opposition of the Republican Representatives in Congress, who seek to justify their opposition by the gratuitous claim that the Democratic party is in favor of "free trade." Their almost unbroken ranks have hitherto prevented even the consideration of any measure looking to a reduction of the surplus; and this, sir, although the country is fully advised that every item of every tariff bill is subject to amendment or to be entirely stricken out.

The following utterance of the President would seem sufficient to effectually dispel the phantom of "free trade:"

Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free trade. This savors too much of bandying epithets. It is a condition which confronts us—not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant; and the persistent claim made in certain quarters that all efforts to relieve the people from unjust and unnecessary taxation are schemes of so-called free-traders is mischievous and far removed from any consideration for the public good.

Again, Mr. Chairman, it will be apparent from a very cursory examination of the fiscal affairs of the Government that free trade is impossible unless some system of direct taxation be devised in lieu of the modes by which the Government is now maintained. No politician or political party favors such a change in the manner of collecting the national revenue.

Sir, it is estimated that at the least $384,000,000 will be required for the support of the different functions of the Government for the fiscal year ending June 30, 1889. This amount includes the appropriation required by the sinking-fund act, as well as a sufficient sum to pay the interest on the public debt.

There is no reasonable probability that within the scope of this generation any item involved in this total expenditure will be reduced, save the appropriation for the interest on the public debt. The probabilities indicate an annual increase of the sum total of the appropriations rather than a decrease. Moreover, the appropriations for the Navy and for the support of the pensioners of the Government are especially liable to increase, notwithstanding the impression prevalent in some quarters that the latter appropriation would be materially curtailed upon the advent of the Democratic party into power.

NAVY AND PENSIONS.

When, on March 4, 1885, Mr. Cleveland was inaugurated President, the Navy of the United States was found to consist of but 87 vessels, of which number 37 only were seaworthy. In the brief time in which the Democratic party has controlled the executive department and one branch of the national legislature, it has authorized the construction of 22 war ships, and by the date at which Mr. Cleveland's second term will have concluded, we expect the Navy of the United States to be fully rehabilitated and restored to the "old-time strength" it had when it was the pet and pride of the Democratic party.

Again, Mr. Chairman, on the 30th of June, 1885, we find that there were on the pension-rolls the names of 244,161 Army and Navy invalid pensioners. At the beginning of this year the roll had increased until it then numbered 308,284, thus showing an actual net increase of pensioners of the late war of 64,123. Moreover, Mr. Chairman, there was expended of the pension appropriation for the year ending June 30, 1885, $56,102,000, while the appropriations for the current fiscal year amount to $83,152,500. It therefore appears that since the Democratic party has directed the affairs of the Pension Office the names of 64,123 pensioners of the late war have been added to the roll, and that appropriations for the support of pensioners have increased $27,050,500.

In the course of a recent discussion the gentleman from Pennsylvania [Mr. RANDALL] said:

I beg to assure all those who may have an affrighted fancy that in so far as American industries are concerned, they are not to-day in any danger.

The gentleman gave no reasons for the statement, but might well have added that there is no danger to these industries because no American is hostile or unfriendly to their legitimate needs and requirements.

In the light of these exhibits and statements, therefore, it does not occur to me that we are likely to be confronted with the question of "free trade," except as it may appear once in four years for campaign purposes only.

And now, Mr. Chairman, until we enter upon the consideration of this bill by paragraphs, I shall refrain from a discussion of any of the items that it carries, and will content myself at this moment with the single observation, in reply to a suggestion from a Republican friend, that the "logic of the measure" is the reduction of $78,000,000 of unnecessary and burdensome taxation.

CONCLUSION.

Mr. Chairman, I shall not further trespass upon the attention and indulgence of the House. The President has boldly presented in his recent masterly address the distinctive issue which marks the dividing line between the two great political parties. Upon this paramount question the contest is to be joined for the ensuing control of the Executive and Legislative Departments of the Government. The doctrine he declares can neither be obscured by compromise nor confused by considerations of mere expediency. It is not novel, nor yet is it startling, as it was enunciated by Jefferson, the great founder of the Democratic party, and illustrated by his successors to the Presidency. This doctrine was fundamental and indefeasible throughout the long and splendid careers of so many Democratic Presidents.

The American people will be called upon in November to decide whether they will continue the policy of overtaxation, or whether they will return to the letter and spirit of the Constitution as interpreted by a long line of Democratic statesmen; whether a needless, restrictive, and inequitable system shall continue, or there shall be the salutary reduction of Federal taxation to the needs of the Government economically administered. Upon this proposition, so ably and clearly outlined by the President—this compendium of first principles—will be fought to its finish the coming Presidential contest.

A little more than a century ago our fathers declared themselves against the injustice of discriminative taxation, and for three-quarters of a century after the organization of the Government no political party presumed or ventured to demand from the people a greater tribute than was required for Governmental purposes, and it was reserved for the leaders of the Republican party to insist upon a higher rate than the Government needed. As their course is without precedent, so it seems to be actuated largely by a purpose of contributing enormous bounties to a favored class.

Sir, the principles of the Democratic party are grounded in justice and equality, and in opposition not only to the monopoly of high tariff, but to all monopolies created and fostered by it. The Democratic party consistently and characteristically believe that the highest interests of the people can best be subserved by limiting the scope of the taxing power to the actual necessities of the Government [applause]; that so far from transforming the public Treasury into a great banking establishment its sole legitimate sphere and function is, in the phrase of the President, "as a conduit conveying the people's tribute to its legitimate object of expenditure."

During the long period of Democratic domination economy was enforced—how? By affixing a rate of taxation only sufficiently high to maintain the Government simply and frugally administered. The brilliant and gifted leader of the Republican party, Mr. Blaine, when discussing this characteristic of the Democratic party is obliged to pay a well-chosen tribute to the leaders who so long formulated its policies. Speaking of these, he says:

Too often ruinously lavish in their personal expenditures, they believed in an economical Government, and throughout the long period of their domination they guarded the Treasury with rigid and unceasing vigilance against every attempt at extravagance, and against every form of corruption.

Mr. Chairman, such a policy could not have been successfully accomplished in the presence of superfluous millions, and therefore, under this leadership, so strongly commended by Mr. Blaine, there were no enormous accumulations withdrawn from the channels of business, lying inoperative and useless in the public Treasury and constantly tempting to extravagance and its necessary and inevitable sequence, corruption.

Mr. Chairman, as an American I take especial pride in noting the progress which the century has wrought in nearly every department of effort. The genius and prowess of our people are the wonder and admiration of the world, and the marvelous growth and development of this young Republic is the very romance of history. And yet, sir, while I recognize with intense satisfaction these splendid achievements, I can but consider that the departure we have made from the fiscal policy of the founders of the Government is in every essential particular discriminating, unwise, and deplorable.

Sir, let us speedily return to fundamental fiscal principles; principles as enduring and unchanging as the everlasting hills; principles which declare the just and equal rights of men; principles which seek to uplift the hand of labor and stifle the spirit of monopoly in all its guises and disguises; principles which, in the equality and uniformity of their operation, unhampered and unfettered by restrictive enactments, conduce to the sturdy, self-reliant, and remunerative development of the three great handmaids of industry—agriculture, commerce, and manufactures.

Mr. Chairman, let us lower this wall of Federal taxation, which not only hinders importation, but limits exportation as well; let us unhand and unshackle the genius and enterprise of our people, and thus permit them to regain the commercial supremacy they once enjoyed when the American flag was a familiar sight upon all the waters of the globe and in all the harbors of the world. [Great applause.]

APPENDIX.

[Extract from President's Message on wool tariff.]

The farmer and the agriculturist who manufacture nothing, but who pay the increased price which the tariff imposes upon every agricultural implement, upon all he wears, and upon all he uses and owns, except the increase of his flocks and herds and such things as his husbandry produces from the soil, is invited to aid in maintaining the present situation; and he is told that a high duty on imported wool is necessary for the benefit of those who have sheep to shear, in order that the price of their wool may be increased.

They of course are not reminded that the farmer who has no sheep is by this scheme obliged, in his purchases of clothing and woolen goods, to pay a tribute to his fellow-farmer as well as to the manufacturer and merchant; nor is any mention made of the fact that the sheep-owners themselves and their households must wear clothing and use other articles manufactured from the wool they sell at tariff prices, and thus as consumers must return their share of this increased price to the tradesman.

I think it may be fairly assumed that a large proportion of the sheep owned by the farmers throughout the country are found in small flocks, numbering from 25 to 50. The duty on the grade of imported wool which these sheep yield is 10 cents each pound if of the value of 30 cents or less, and 12 cents if of the value of more than 30 cents. If the liberal estimate of 6 pounds be allowed for each fleece the duty thereon would be 60 or 72 cents, and this may be taken as the utmost enhancement of its price to the farmer by reason of this duty.

Eighteen dollars would thus represent the increased price of the wool from twenty-five sheep and $36 that from the wool of fifty sheep; and at present values this addition would amount to about one-third of its price. If upon its sale the farmer receives this or a less tariff profit, the wool leaves his hands charged with precisely that sum, which in all its changes will adhere to it until it reaches the consumer.

When manufactured into cloth and other goods and material for use, its cost is not only increased to the extent of the farmer's tariff profit, but a further sum has been added for the benefit of the manufacturer under the operation of other tariff laws. In the mean time the day arrives when the farmer finds it necessary to purchase woolen goods and material to clothe himself and family for the winter. When he faces the tradesman for that purpose he discovers that he is obliged not only to return in the way of increased prices his tariff profit on the wool he sold, and which then perhaps lies before him in manufactured form, but that he must add a considerable sum thereto to meet a further increase in cost caused by a tariff duty on the manufacture. Thus in the end he is aroused to the fact that he has paid upon a moderate purchase, as a result of the tariff scheme, which, when he sold his wool seemed so profitable, an increase in price more than sufficient to sweep away all the tariff profit he received upon the wool he produced and sold.

When the number of farmers engaged in wool-raising is compared with all the farmers in the country, and the small proportion they bear to our population is considered; when it is made apparent that, in the case of a large part of those who own sheep, the benefit of the present tariff on wool is illusory; and, above all, when it must be conceded that the increase of the cost of living caused by such tariff becomes a burden upon those with moderate means and the poor, the employed and unemployed, the sick and well, and the young and old, and that it constitutes a tax which, with relentless grasp, is fastened upon the clothing of every man, woman, and child in the land, reasons are suggested why the removal or reduction of this duty should be included in a revision of our tariff laws.

[Extract from remarks of Hon. R. Q. MILLS.]

During our late civil war the expenditures required by an enormous military establishment made it necessary that the burdens of taxation should be laid heavily in all directions authorized by the Constitution. The internal-revenue and direct taxes were called into requisition to supplement the revenues arising from customs, to aid the Treasury to respond to the heavy demands which were being daily made upon it. The duties on imports were raised from an average on dutiable goods of 18.84 per cent. in 1861, to an average of 40.28 per cent. on dutiable goods during the five years from 1862 to 1866, inclusive. This was recognized at the time as an exceptionally heavy burden. It was stated by the distinguished gentleman who then presented to the House the bill so largely increasing the duties, and which to-day bears his honored name, that it was demanded by the exigencies of war and must cease on the return of peace. In his own words he said, "This is intended as a war measure, a temporary measure, and we must as such give it our support."

More than twenty years have elapsed since the war ended. A generation has passed away and a new generation has appeared on the stage since peace has returned to bless our common country; but these war taxes still remain; and they are heavier to-day than they were on an average during the five years of the existence of hostilities. The average rate of duty during the last five years, from 1883 to 1887, inclusive, on dutiable goods amounts to 44.51 per cent., and during the last year the average is 47.10 per cent. Instead of the rate of taxation being reduced to meet the wants of an efficient administration of government in time of peace, it continues to grow and fill the coffers of the Government with money not required for public purposes, and which rightfully should remain in the pockets of the people.

After Congress had so largely increased the duties on imports, and thus bestowed most liberal and generous bounties on our manufacturers, a light internal tax was imposed on the products of domestic manufacture to help the Government meet the heavy demands of war. The internal tax imposed on home manufactures was but a tithe of the heavy burden imposed on the people by the increased duties on foreign goods. It brought to the Treasury in 1866 $127,000,000—a sum which was less than 5 per cent. upon the value of the manufactured product of that year. It was thought not to be unreasonable to require this small contribution from those whose bounty Congress had increased from 18 to 40 per cent. in the price of their products.

But, Mr. Chairman, that tax is gone. It could not be retained. It was a tax on wealth. It came out of the pockets of the manufacturer. As soon as the war was ended complaint was made that this tax was a war tax, that it was no longer necessary, and it was repealed. Congress imposed a tax on incomes, too, to help the Government to meet the expenditures of the war. It brought to the Treasury, in 1866, $72,000,000. The official reports showed that four hundred and sixty thousand one hundred and seventy persons out of the whole population had incomes above the exemption, and they had $707,000,000 of net annual income, while the balance of the people had nothing beyond what was required for annual support. Yet scarcely had the war ended until this tax was declared to be exceedingly odious, inquisitorial, and oppressive; and Congress was asked to repeal it, and it is gone.

Congress thought it was unjust to require 460,170 persons who had an annual income of $707,000,000 to pay anything to support the Government, and they hurriedly swept that "odious" measure from the statute-book. Besides these there were taxes on the receipts of railroad companies, taxes on insurance companies, taxes on express companies, taxes on bank capital, bank deposits, and bank checks, but they are gone. Congress lent a willing ear to the demands of wealthy corporations and individuals and took all the burden from them, but the war taxes on clothing, like the poor, we have always with us. These taxes were given up at a time when our interest-bearing debt of more than $2,000,000,000 was staring us in the face and demanding from the Government more than $140,000,000 annually to meet its interest.

With these facts before their eyes they made haste to roll all the burdens of taxations off the shoulders of the wealthy and lay them upon the shoulders of those who could only pay as they procured the means by their daily toil. Could not that $127,000,000 contributed by the manufacturers from the rich bounties which the Government had given have been retained until the war debt was paid? Could not the $72,000,000 from incomes been held for a few years longer? Could not the tax on the receipts of the wealthy corporations have been continued for one decade?

If these taxes had been kept ten years longer we would to-day have no national debt, and in addition to the moderate reductions now proposed we could give back to the people the hundred millions now required to pay its interest and sinking fund. Upon what economic principle or principle of justice were these taxes repealed and the whole burden laid on articles going into daily consumption, and which must be obtained by the labor of mind and muscle?

Was the tax of 3 per cent. on the domestic blanket paid by the manufacturer more oppressive then than the tax of 79 per cent. on both foreign and domestic blankets paid by the people?

Was the tax of 3 per cent. on a wool hat paid by the manufacturer more oppressive than the tax of 73 per cent. on both paid by the consumer? Was the tax of 3 per cent. on women's and children's clothing paid by the manufacturer more oppressive than the tax of 82 per cent. on both foreign and domestic goods of the same kind paid by the consumer? Was a tax of 3 per cent. on railroad companies, banking companies, insurance companies, express and telegraph companies, more oppressive than an 88 per cent. tax on woolen shawls? Was a 3 per cent. tax on incomes more oppressive than an 80 per cent. tax on a woolen shirt?

The party then in power certainly thought so, for the taxes on wealth are gone, but the war tax on clothing, the war tax on food, the war tax on the implements of labor still remain with us, and the war against our prosperity, our labor, and our commerce is still being vigorously prosecuted—a war that is exhausting in its destructive invasions on labor, whether it is employed in agriculture, manufactures, commerce, or mining.

[Extract from remarks of Hon. BENTON MCMILLIN.]

Table, compiled from Tenth Census, showing value of various manufactured products, per cent. of labor cost, rate of duty existing and proposed.

Industries.	Value of product.	Labor.	Percentage of labor.	Present tariff.	Proposed rate.
				Per ct.	*Per ct.*
Carpets	$31,792,802	$6,835,218	21.5	47	30
Cotton goods	210,950,383	45,614,419	21.6	50	40
Bolts, nuts, etc	10,073,330	1,981,300	19.7	59	35
Nails and spikes	5,629,240	1,255,171	22.3	43	34
Iron pipe, wrought	13,292,162	1,788,258	13.5	70	35
Oil, castor	653,900	44,714	6.8	194	97
Oil, linseed	15,393,812	681,677	4.4	54	21
Screws	2,184,532	456,542	20.9	50	35
Wool hats	8,516,569	1,893,215	22.2	54	40
Woolen goods	160,606,721	25,836,392	16.1	70	40
Worsted goods	33,549,942	5,683,027	16.9	68	46

It will thus be seen that while the labor in carpets, leaving off fractions, is 21 per cent. of the cost, the tariff is 47 per cent. In cotton goods the labor is the same and the tariff 50 per cent. In wrought-iron pipe, labor is 13 per cent. and the tariff 70 per cent. In castor-oil, labor 6 per cent. and the tariff 194 per cent. In wool hats, the labor is 22 per cent. and the tariff 54 per cent. In woolen goods, labor is 10 per cent. and the tariff 70 per cent. In worsted goods, labor is 16 per cent. and the tariff 68 per cent. I do not blame manufacturers and capital for wanting to form a partnership with the laboring man when such a small per cent. of all the cost is labor when compared with the rate of duty imposed.

TARIFF RATES.

	Per cent.
Present rate of dutiable goods	47.10
Proposed rate on dutiable goods	40.00
Present rate on articles affected by bill	54.16
Proposed rate on articles affected by bill	33.36

The Tariff.

SPEECH

OF

HON. WILLIAM L. WILSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 3, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. WILSON, of West Virginia, said:

Mr. CHAIRMAN: It has been said by every gentleman who has spoken against this bill that it raises the issue of free trade or protection in our revenue system. It would disclose a better understanding of its very moderate provisions, as also a better knowledge of the recent fiscal history of the country, to say that it is an effort of the people to recover the lost right of taxing themselves.

The great rule that those who pay taxes, and they alone, should impose taxes may, always and everywhere, be accepted as the test of free government. But after a quarter of a century of protection in this country, private interests are so strongly intrenched in our tariff and have so overgrown public interests, that they regard it as their exclusive domain and resent the intrusion of the people as that of trespassers.

In this tone and in this assumption they speak in their communications to Congress. In this tone and in this assumption they speak

through the powerful press they control, and even through their able and enthusiastic advocates on this floor.

Already in this debate gentlemen have explored the census to ascertain how many private interests are represented by the members who framed this bill, in order thereby to test their right and gauge their fitness to deal with a system of general taxation.

But, sir, these are not new ideas in this House. Six years ago, when there came from the people such a demand for reduction of burdens that not even a Republican Congress could turn a deaf ear to it, we saw a sight as remarkable as any that could be witnessed in a free government. We saw the chairman of the Committee on Ways and Means come into the House, not with a bill to reduce the people's taxes or to stay the unneeded flow of money into the Treasury, but with a set and elaborate argument to prove that the people's Representatives were incapable of framing such a bill.

That Congress responded to his argument. It turned humbly to the great protected interests enthroned in the tariff and said, "We, who represent nothing but the people, will not presume to deal with your superior rights. We will hand over this whole subject to a commission, and when you have named a majority of that commission, and through it made known your wishes to us, we will do our duty by enacting them into law." But privilege grows with what it feeds upon. It is ever assuming a higher tone. The time was when the test of loyalty to the country was devotion to the Union in the struggle for its preservation. Lately, at the other end of this Capitol, the highest official of a great political party has declared that even a McClellan and a Hancock were allies of the Confederacy because they were disloyal to that party. But in this House and in this debate another test has been set up. We have heard the name of an American citizen, who stands before the world as the foremost living representative of American literature, who has an honorable and unsullied record of public service, and whose words, in days past, like Luther's words—were "battles" for freedom we have heard his name, sir, coupled with that of Benedict Arnold, because he refuses to bow down before the fetich of protection.

My colleague on the Committee on Ways and Means, the gentleman from Michigan [Mr. BURROWS], whose speech naturally gave great satisfaction to his party associates, inveighed with more warmth of language than accuracy of statement against this bill and against the manner of its preparation. Indeed, he was swept so far out on the current of his eloquence from any shore-lines of actual fact, as to proclaim that this bill comes into the House without acknowledged paternity, that it is a bantling, a *nullius filius*, secretly laid at the door of the Committee on Ways and Means, and by the majority of that committee transferred to the Calendar of the House.

Mr. Chairman, the gentleman has no warrant for any such statement. Neither in the committee nor elsewhere, neither now nor at any other time have the majority members refused to assume whatever responsibility belongs to the preparation and presentation of this bill, from its enacting clause to its closing sentence. They do not offer it to the House as a bill so perfect in all its details that thorough debate and consideration here may not show cause for amendment or change.

Least of all do they offer it as a discharge of their full duty to the people, but as the best they could do under existing circumstances. When the gentleman from Michigan and his associates seek to discredit this bill because of the alleged manner of its preparation I am tempted to remind them of the history of the existing law, for whose defense they stand so stoutly to-day.

Mr. Chairman, there was a time, doubtless, when the highest statesmanship was to get money into the Treasury as quickly and as abundantly as possible. There was a time when the highest patriotism was to pay taxes as promptly as possible and ask no questions. Under this pressure an internal-revenue system grew up that in a single year brought over $300,000,000 into the Treasury. Under this pressure the tariff rates went up from an average of less than 19 per cent. to an average of more than 48 per cent. It would have been strange indeed, contrary to all experience, if the greedy interests that are always seeking a lodgment in a national budget or a national tariff had missed this rare opportunity. That they were fully improving it was well known to those who had charge of the several revisions and increases of the tariff during the war, for they lulled the people with the promise that as soon as peace returned they would revise and establish it on a basis of justice to all.

Yet for years after the war, and as long as the attention of the people was strained to other matters, the tariff was kept open for any interest or industry that wished to become a parasite on the Treasury. Such interests were not only allowed to name the bounties they exacted from the public, but permitted to write the very laws by which their bounties were secured to them.

"I know what that law means," said Mr. Joseph Wharton, testifying before the Tariff Commission in 1882, as to the statute that raised the duty on nickel, of which he was about the only producer in the country, from 15 per cent. ad valorem to 30 cents a pound, "because I wrote the words of it myself." In like manner owners of the copper-mines of Michigan came down and dictated their tariff rates over the veto of President Johnson; and other interests exercised the same privilege without challenge and without hinderance. But, say gentlemen, "We have had a revision of the tariff since then." What kind of a revision was it, Mr. Chairman? It is true the Tariff Commission in 1882 reported in favor of substantial reduction, and accompanied its report by schedules which professed to reduce from 20 to 25 per cent. I will not inquire into the truth of that profession, for the House threw aside those schedules and attempted to frame a tariff bill of its own. It became lost in the effort; it plunged into the—

Serbonian bog,
* * * * * * *
Where armies whole have sunk,

and finally abandoned the attempt and at the same time its own constitutional right and duty. It took up a tariff bill which the Senate had attached to a House bill reducing internal revenue. The right of the Senate to originate such a measure is more than doubtful; but constitutional questions could not weigh against the necessity of having the tariff revised by the "friends of protection." The friends of protection in that House were smarting under the lash of popular chastisement. They had already been overthrown at the polls by a verdict of the people so spontaneous and crushing as to evince not only disapproval but even disgust. In a few days more a Democratic House was to succeed them. Whatever was to be done must be done quickly. The standing rules of the House were changed so as to permit the Senate bill to be taken up, not for debate or consideration, but to be thrown into a conference committee. The key to the whole proceedings is to be found in the fact that a conference committee is a secret conclave. No Democratic Senator was willing to serve upon that conference, and all the conferees, with the exception of one member of the House, who was present to observe, not to participate, were of one party. Into the deliberations of that conference no voice of a tax-paying people could penetrate, but other voices were heard and obeyed. Rates of duty which both Houses had agreed upon were raised. Rates which the two Houses had placed at different figures were increased over both. The duty on steel rails was put higher than the House in open session had dared to place it, higher than the Senate in open session had dared to place it. The conference report was made in the closing hours of the Forty-seventh Congress. The bill was never read in the House, was but slightly debated, and was hurried upon the statute-book as almost the last act of a House going out under the brand of a people's displeasure.

There is all the distance, Mr. Chairman, which even the rich vocabulary of my colleague from Michigan [Mr. BURROWS] could measure between a bill prepared in secret, if he will so have it, and then sent out to all the people on the wings of the press and subjected to months of discussion in both Houses of Congress, and a law huddled up in the secret recesses of a conference room and transferred without discussion and without examination by the people to the statute-books of the country. [Applause.] And thus, Mr. Chairman, the so-called revision of 1882, instead of being an argument against the present bill, is a burning reason in its favor. It is instructive only as it shows how great a sham and how desperate and audacious a jugglery a revision of the tariff necessarily becomes when committed to the "*friends of protection.*" The effort to reduce taxes became a contest among the captains of industry for higher bounties. The poor, patient, expectant people got no relief. The saddle was readjusted more skillfully to their back, the girth was tightened, and the rider more firmly seated than ever.

But the minority of our committee in their report boast that the Republican party has taken more than $300,000,000 of taxes from the people since the war. That may be true, sir, and still be not the least in the catalogue of sins of that party against the great body of the people. It is true they have reduced taxes; it is true they have abolished taxes; but it has been done in the manner described by my colleague from Texas [Mr. MILLS]. They have taken off taxes that bore on the property of the country. They have taken off taxes that tolled the income of the prosperous or the dividends of corporations. They have removed taxes on articles whose use is unnecessary or hurtful, and they have released taxes whose entire amount went into the Treasury. By such legislation in the first ten years of peace the immense burdens of this great Government were steadily shifted from the shoulders that ought to bear them and are able to bear them to shoulders that ought not to bear them and are not able to bear them. In this manner, sir, we have seen the pressure of taxation in this country removed from its income, removed from its property, removed from its luxuries, and fastened upon those articles of general consumption that meet the primary wants of all the people. You have fastened your system of taxation as a parasite upon that consumption which for the wage-earner means nine-tenths and frequently ten-tenths of all his earnings, until you have built up a tariff which is well entitled to say, "Whoever else escapes my exactions, the poor I have always with me." [Laughter and applause on the Democratic side.]

Mr. Chairman, there is nothing in the world that so vexes the soul of a genuine protectionist as a tax that goes into the public Treasury. If he can not devise a law by which to transfer a large part of it from the pockets of the man who earned it to somebody's pocket who did not earn it, he never rests satisfied until he has wiped it from the statute-book [applause]; and that is the way in which our friends on the other side have proceeded in their so-called reductions of taxes since the war.

It is not my purpose, Mr. Chairman, to discuss the details of this bill

at the present time. That discussion will more properly come at another stage of its consideration. Sir, I adopt the language of the President in his recent message, that it is not so much a theory as a condition that confronts us to-day, although I avow myself a believer in the words which old Patrick Henry wrote into the Virginia bill of rights, enjoining on the servants of the people a "frequent recurrence to first principles." It is a condition of prolonged, excessive taxation; of a surplus flowing into the Treasury which can be gotten out again only by using it to buy the bonds of the Government at the market premium; of a surplus that by the end of the present fiscal year, without such purchase, will drain away from the channels of trade and commerce, one-tenth part of all the money usually in circulation among the people.

That, sir, is the condition which confronts us to-day, and, as in the past, so now there is no statesmanship on the other side of this House that can meet it. Acknowledging an allegiance higher than that which they owe the people in framing a tariff system, they stand helpless before the great task of tariff reduction. Even in their debates here they are "many men of many minds."

Some would untax the whisky of the drunkard and put heavier taxes on the scanty clothing of his wife and children. Others would give untaxed cigarettes to sap the manhood and drain away the brains of our young men, while they would raise the taxes on the workingman's dinner-pail and the cans that contain his winter fruit and vegetables.

The gentleman from Pennsylvania [Mr. KELLEY], after pleasantly alluding to his Democratic associates on the committee as "Bourbons, who neither learn nor forget," by a singular lapse of memory only a few moments afterward, announced that he would deal with the surplus "in accordance with the principles of Colbert and of his illustrious disciple, Napoleon Bonaparte."

Why, Mr. Chairman, Colbert was the great minister of the greatest of all the Bourbons, and neither Colbert nor Napoleon is a teacher to whom the citizen of a free republic can turn for instruction either as to laying or expending taxes. It was Colbert, sir, who built up the navy of his royal master by chaining thousands of innocent Frenchmen to the galleys, just as protection has built up privileged classes and monopoly in this country by chaining millions of American workingmen and farmers to its service. [Applause on the Democratic side.] And, sir, it was Colbert who defined the art of taxation "to consist in so plucking the goose as to get the largest amount of feathers with the least possible amount of squealing." [Laughter.] Never in the history of economic discussion has there been an apter or a more complete definition of a protective tariff. [Applause on the Democratic side.]

But I say to my friend from Pennsylvania that the goose is squealing at last, and we mean to keep the goose squealing until every faithless and sleeping sentinel on the Capitol is awakened to drive back the Gauls of monopoly. [Laughter and applause on the Democratic side.]

Sir, protection, as it speaks to us from across the aisle, does not reason; it prophesies. I have listened to many of its advocates, and I have heard scant argument and much prophesy. There is nothing original in this. Privilege was never yet summoned to release a tribute paid to it by the people that it did not assume the role of Cassandra and prophesy unutterable woes if the industries of the people were released from its grasp and remitted to the laws of trade and the wisdom of Providence. [Applause on the Democratic side.] These gentlemen who would blot out the sun, moon, and stars from our industrial firmament if this bill becomes a law might quiet their fears if they would read a few chapters in the economic history of this country and of England.

More than sixty years ago, when England entered upon that career of industrial emancipation which she faithfully pursued to its full and final issue, she began by removing her prohibitory tariff on manufactures of silk and reducing duties. A member of the House of Commons, amid just such ringing applause as greets similar utterances in this debate, said that if the authors of that bill were prepared to sacrifice half a million of people to an abstract theory, their strength of purpose only showed the depravity of their hearts. But, sir, the manufacture of silks did not die. In the ratio in which duties were reduced, in that ratio the manufacture grew and flourished, and when finally duties were entirely abolished and it no longer cowered behind a protective tariff, it went boldly forth and contended for the markets of the world. When, as a further step in that progress, the time came for England to put wool on the free-list, there were prophesyings that would stir the envy of the wool politicians of Ohio in our day.

It was solemnly foretold that if that measure became a law the wolf and the panther would roam unhindered over the hills then dotted with peaceful flocks. But, sir, the wool industry refused to die. With free wool it assumed new life and vigor. The price of wool increased and the wages of the shepherd doubled.

But when a little later England was about to declare for untaxed bread for her people, then prophecy rose to its highest strain, and declared that the "abomination of desolation spoken of by Daniel the prophet" was about to blight the green fields and prosperous homes of England. An English statesman, Sir James Graham, replying to a deputation that pleaded for free corn, said:

If the corn laws were repealed great disaster would come upon the country. The land would go out of cultivation, the church and state could not be upheld; all institutions would be reduced to their primitive elements, and the people we were exciting would pull down our houses about our heads.

But England put corn on the free-list; and agriculture, which with all the doctoring of thirty years of protective statesmanship had languished and weakened, took up its bed and walked—flourished as it had not flourished since the Napoleonic wars. The price of land went up, the farmer prospered, and the wages of the farm-laborer increased.

So, also, Mr. Chairman, when the protectionist comes down from the mount of prophecy and attempts to deal with the facts of history (for certainly there are some chapters in our economic history that are made up), he deals with them in the same free and irresponsible manner.

We have had twenty-five years of protection in this country and the fruits of it. We have had fifteen years of revenue tariff and the fruits of it. The last quarter of a century, as every one knows, has been noted beyond any other period in the history of our race, for the general advancement and diffusion of knowledge, for the march of science, for the progress of invention, for the subjection to man's control of the great powers of steam and electricity, for the cheapening of the processes of manufacture, and for the immense increase in the facilities of distribution. Whatever we have gained of ourselves, or in common with other enlightened nations of the world; whatever addition to national wealth or individual comfort has come from this march of progress, from the application of science to the arts and industries, and especially of the science of chemistry, which has become the handmaid of manufactures, which discloses to us the secrets of nature's workshop, dissolves and recombines her elements, and finds in the waste products of manufactures sources of beauty and sources of wealth; whatever the inventive genius of our people has done to substitute labor-saving machinery for human drudgery; whatever of wealth has come to us from our own industry and enterprise, and the settlement of a new continent by men coming from other lands to live under free government; the products of our mines and forests—all these protection calmly claims as its own, although it has had nothing more to do with them than with the motion of the planets or with the tides of the seas. [Applause.]

But those peculiar features in the economic history of our country during the past twenty-five years, for which it is just to hold protection fully or partly responsible it conveniently puts aside and ignores.

Proposing to be a policy for the making and maintenance of wages, it tells us nothing of the growing antagonism between labor and capital, that has marked the recent history of our country; of the unsatisfactory relations between employer and employed; of the long industrial depressions; of the twenty and odd thousand strikes, and the twenty and odd hundred lockouts in our industrial establishments during the past six years alone, with the resulting loss of $60,000,000 in wages to labor; of the building up of great wealth by favoritism, which tries to hold on to its privileges by corrupting the ballot-box and intimidating voters; of the centralization of manufactures into a few great corporations, and the recent combination of these into trusts. Of all these, Mr. Chairman, we hear nothing in our discussions.

We hear nothing of its compelling Congress for years past to legislate in the presence of an overflowing Treasury until the traditions of frugality which are a part of our institutions are relaxed and our Calendars are filling with schemes for extravagant and useless expenditure. It imposes humiliation upon its most faithful defenders, for it compels the party on the other side of this House, which held control of every branch of the Government for ten years after the war, and again for the period of the Forty-seventh Congress, to admit that in all that time it failed to enact just and liberal pension laws, and that such laws yet remain to be passed.

It seeks to sap the independence and stifle the rising power and willingness of the South to maintain its local schools by offering largesses from the public Treasury.

It seeks to frighten our great cities on the seaboard with three thousand miles of water before them and sixty millions of defenders behind them, to clamor for great fortifications, lest they be laid in ashes by the nightly visit of some ironclad from Chili, Patagonia, Afghanistan, or Beloochistan.

It urges the restoration of our merchant marine, which it has helped to sweep from the seas, by subsidies, that word of evil omen in a republic, contact with which has never failed to bring shame upon Congress and a stain upon our national honor.

Such, Mr. Chairman, are some of the fruits of twenty-five years of protection; such are some of the ideas with which it is educating our people; such is the career of profligate expenditure along which it is urging us in order to escape any reduction of taxes which may work a lessening of its bounties.

Thus, also, sir, when it comes to deal with the fifteen years of our revenue tariff, it does not hesitate to represent the period from 1846 to 1861 as one of languishing industry and halting growth. In so doing it contradicts the most incontestable facts of our industrial history, and it falsifies that careful record which the country itself makes every ten years of its own growth and prosperity.

Senator MORRILL, of Vermont, whose name is associated with existing tariff systems, in his speech in the Senate on April 11, said:

There is no one who now rises to do reverence to the tariff of 1846.

But Senator ALLISON, of Iowa, whom his party friends in that State have just put forward with much enthusiasm as their candidate for the Republican nomination for the Presidency, once a leading member of the Committee on Ways and Means in this House, and as well qualified to judge of our revenue legislation as any man in his party, gave it as his deliberate judgment, in a debate in this House March 24, 1874, that—

The tariff of 1846, although professedly and confessedly a revenue tariff, was, so far as regards all the great interests of the country, as perfect a tariff as any we have ever had.

Such, sir, I believe will be the judgment of every man who believes that in tariff, as in other legislation, the great interests of the country and the general welfare are to be considered in preference to special interests and individual welfare. [Applause.] Mr. MORRILL further said:

It—

Meaning the tariff of 1846—

left manufactures without encouragement and without hope, the wages of labor were reduced, and much capital suddenly destroyed.

But the census of 1860 shows an increase in the decade of the Walker tariff of 90 per cent. in capital, 60 per cent. in wages, and 85 per cent. in product, as against an increase of 32 per cent. in capital, 22 per cent. in wages, and 27 per cent. in product, for the decade ending with the census year 1880, under the present tariff.

Moreover, Mr. MORRILL himself, on January 24, 1867, in plain conflict with his recent argument, speaking of the year 1860, said:

And that was a year of as large production and as much general prosperity as any in our history.

Mr. Chairman, it was not after fifteen years of languishing industries and general bankruptcy that the two sections of this country sprang into the arena of 1861 for the dread grapple of the civil war.

My colleague from Pennsylvania [Mr. KELLEY] used the same argument in his recent speech, and said that twenty-five years of protective tariff lifted the country out of the national bankruptcy into which it had been thrown by the revenue tariffs of 1846 and 1857. Sir, I say to him, in the name of a tax-burdened people, in the name of the languishing industries of this country, get out of our sunshine, and let us again plunge into ten years of bankruptcy that will increase the general wealth of the country 126 per cent. [applause]; that will increase manufactures 87 per cent.; that will increase agriculture 95 per cent. [Applause.] We have had no such prosperity since his ideas controlled tariff legislation, and we never will as long as those ideas hold sway in our revenue laws.

Mr. Chairman, I come to the claim put forward with most earnestness in this debate that the tariff is the defense of American labor, and the one guaranty of good wages and prosperity to the American laboring man. This is an honorable claim and deserves serious consideration. I should deem myself guilty of a flagitious crime if I entertained any views in private or sought to embody any principles in legislation, that would harden the lot or impair the opportunities of American labor.

But how do the advocates of high taxation support this claim? Why, sir, they stand up in this House, day after day, and paint in glowing colors, which I am sorry to say do not always portray the real facts, the high estate and happy condition of the American laborer, his good and steady wages and ready accumulation of wealth, and his easy path upward to influence and prosperity; and then they draw with greater exaggeration of detail their gloomy pictures of foreign labor, its degradation, scant wages, and almost unendurable destiny, and exclaim, "Behold what the tariff does for American labor!"

Sir, it is true, and I thank God it is true, that the American laboring man is born to a higher and a better destiny than the laboring man of any other country in the world. [Applause.] It is true that there is no pressure of ignorance or poverty so great that an ambitious American youth can not break through and rise to any position to which his worth entitles him. It is true that we have never yet had a separate wage-earning class in this country. It is true that we can see to-day a man who has risen from orphanage and poverty to the Chief Magistracy of sixty millions of people; that in the past men have so risen from the weaver's loom, the tailor's bench, and the canal-boat; and I rejoice as an American citizen that the same inspiring career is still open to ambition and merit. But, Mr. Chairman, they did not owe this to any such antiquated and medieval device as a protective tariff. [Applause on the Democratic side.] They owe it to the bounty of Almighty God and to the institutions of a great and free country. [Renewed applause.] They owe it to the manhood, the pluck, the ambition and virtue with which their Creator endowed them and to the unequaled field for their display which the institutions of their county secure them. [Renewed applause.]

Mr. Chairman, I should but follow with limping gait the vigorous and masterly steps of the chairman of the Committee on Ways and Means, were I to detain the Committee of the Whole with an attempted discussion of the question of wages. His opening speech embodied a careful and complete discussion of the whole subject. I shall aspire to nothing more than the statement of a few general principles, and their confirmation by an authority or two. Wages are better in America and will remain better in America, not by reason of a protective tariff, or any other kind of a tariff, but because the workingman himself earns more than the laborer of any other country. [Applause.] Some of the reasons for this are that he brings to his work a more vigorous body, a more cheerful and ambitious temper, a higher order of intelligence and of skill, and because he surpasses all other men in his constant efforts to invent labor-helping machine whereby the products of his labor are indefinitely multiplied. This last is a matter of common observation among ourselves, and of constant wonder to other people. The Superintendent of our last census has said:

The American invents as the Greek chiseled, as the Venetian painted, as the modern Italian sings.

The commissioner-general of the United States at the last Paris exposition reported that the new labor-saving inventions in our machinery gallery "were a constant surprise and delight to the visitors from other lands."

The whole argument on the other side is based on a comparison of daily wages. It is not a question of daily wages, but of the cost of production which is to determine our ability to compete with other nations in our own markets or those of the world. It is not the hours of labor, but the productivity of labor, if I may use a word I do not altogether like, that is the vital element in the discussion. American labor, as a rule, is able to produce more, and for that reason does receive more wages than other labor, but this does not imply that with us the labor cost of production is higher than elsewhere.

Wages have increased in this country, but not in the ratio in which the productive power of labor has increased. These propositions are abundantly confirmed by those who have most thoroughly investigated this subject. I shall cite the testimony of but one or two.

I am aware, sir, that it is part of the tactics of our friends on the other side to discredit every man who tries to reach general principles as a theorist and doctrinaire. To attempt to apply general principles in every other field of legislation is commended as statesmanship, but in the great field of taxation it becomes, in their eyes, mere theory and college professorism. There is no gentleman, in my judgment, more entitled to a hearing upon this phase of the wage question than Mr. Edward Atkinson. Mr. Atkinson is a man of almost infinite industry, who to the capacity for gathering the most minute details adds a power of generalization that is broad and masterly. Moreover, he has spent his whole life in immediate contact with the processes of production on a large scale.

It is from the data thus gathered that he exposes the fallacy of the reasoning on the other side, that a comparison of the rate of wages in different countries will ascertain the cost of production of any given article, or that low rates of wages are necessary to low cost of production, and establishes the fact that almost invariably high wages accompany a low cost of production.

That labor—

He says—

has in fact proved to be the cheapest by which the largest product for each dollar expended was assured, and that has been the highest paid labor.

General Francis A. Walker, whose discussions of the wage question are perhaps more satisfactory than those of any of our American economists, confirms Mr. Atkinson by saying:

That as a general rule low cost of production is accompanied by high wages to the workingman.

I have here a little book by Mr. Thomas Brassey, of England, on Work and Wages. His conclusions are founded upon the experience of his father, the great railroad contractor, who doubtless beyond any man that ever lived was a hirer of labor in all parts of the world except in America, and who even in the unskilled work of building railroads found the English navvy as cheap at 3 shillings a day as the East Indian at 3 pence. I quote but a sentence or two:

But I maintain unhesitatingly that the daily wages are no criterion of the actual cost of executing work. * * * On my father's extensive contracts carried on in almost every country of the civilized world and in every quarter of the globe the daily wage of the laborer was fixed at widely different rates; but it was found to be the almost invariable rule that the cost of labor was the same, that for the same sum of money the same amount of work was everywhere performed.

Sir, the wages of labor are the laboring man's share of the joint product of labor and capital. The larger that product is the larger his wages are. Why, sir, my friend from Massachusetts [Mr. ALLEN] made a speech in this House yesterday in which, with his usual eloquence, he gave us a beautiful picture of the operatives at Lowell. I venture to say nine-tenths of the operatives at the Lowell factories are not Americans. They are foreigners who have taken the places of former American operatives, because the American operative has better wages and a better position.

Mr. ALLEN, of Massachusetts. Will the gentleman allow me a question?

Mr. WILSON, of West Virginia. Yes, sir.

Mr. ALLEN, of Massachusetts. Suppose, for the sake of argument, it is admitted those operatives are not American, and have succeeded in their position as operatives to those of American birth, the statis-

tics will show that the people formerly employed in those factories are now employed in more useful avocations, and have been able, under the protective system, to accumulate sufficient savings while they were employed in those industries to go into other business. The gentleman from West Virginia surely does not object to that? The accumulated savings of those whom the gentleman denominates foreigners aggregate $14,000,000, almost equal to the aggregate capital employed in those corporations. [Applause on the Republican side.]

Mr. WILSON, of West Virginia. The very point I was making was that American labor, by its higher capacity, had found more lucrative employment [applause], and that you have been obliged to send abroad into Canada and elsewhere to get labor to fill your factories.

Mr. ALLEN, of Massachusetts. The American operative found that employment under the same protective tariff which has brought the others into this country, as shown by the statistics of the gentleman from West Virginia, and the fact of those people coming in from abroad in large numbers indicates the collective judgment of individuals as to the welfare of this country under a protective tariff.

Mr. WILSON, of West Virginia. I do not intend to go further into this discussion, but I desire to read the picture of the Lowell operative under the Walker tariff, and then a picture of the Lowell operative under the protective tariff. I have here in Dickens's American Notes [laughter on the Republican side] a description of a pleasant visit he paid to Lowell:

I happened to arrive at the first factory just as the dinner hour was over, and the girls were returning to their work. Indeed the stairs of the mill were thronged with them as I ascended. They were all well dressed—and that phrase necessarily includes extreme cleanliness. They had serviceable bonnets, good warm cloaks, and shawls. They were healthy in appearance, many of them remarkably so, and had the manners of young women, not of degraded brutes of burden.

The rooms in which they worked were as well ordered as themselves. In the windows of some there were green plants, which were trained to shade the glass; in all, there was as much fresh air, cleanliness, and comfort, as the nature of the occupation would possibly admit of. Out of so large a number of females, many of whom were only just then verging upon womanhood, it may be reasonably supposed that some were delicate and fragile in appearance. No doubt there were; but I solemnly declare, that from all the crowd I saw in the different factories that day I can not recall or separate one young face that gave me a painful impression; not one young girl whom, assuming it to be a matter of necessity that she should gain her daily bread by the labor of her hands, I would have removed from those works if I had had the power. I am now going to state three facts, which will startle a large class of readers on this side of the Atlantic very much.

First, there is a joint-stock piano in a great many of the boarding-houses; secondly, nearly all these young ladies subscribe to the circulating libraries; thirdly, they have got up among themselves a periodical called The Lowell Offering, "a repository of original articles, written exclusively by females actively employed in the mills," which is duly printed, published, and sold; and whereof I brought away from Lowell four hundred good, solid pages, which I have read from beginning to end.

A MEMBER. Will the gentleman give the date of that?

Mr. WILSON, of West Virginia. That was under the Walker tariff of 1846. Now, I hope our friends on the other side who started to laugh when I began to read from Mr. Dickens will resume their laugh. That was the condition of the operatives in the factories at Lowell when Mr. Dickens visited this country under a revenue tariff.

I have here the work of another English traveler who has been at Lowell under the protective tariff, when American laborers have gone out of the mills and other laborers have been marched in to take their places. It is from a book entitled "Old World Questions and New World Answers, by Daniel Pidgeon, fellow of the Geological Society:"

But if "Little Canada," the French-Canadian quarter of the town, be an example of operative homes, then the Eden of forty years ago has indeed departed. Its streets are narrow and unpaved lanes; its rickety wooden houses elbow one another closely and have no gardens, scarcely even back yards. They are let out in flats, as at Holyoke, but are far inferior to the tenement houses of that city, which, if they shelter squalid folk, are at least well built and convenient. Within these wretched dwellings, whose erection ought never to have been sanctioned by the authorities, the Canadians crowd, as they do in Holyoke. Peeps into interiors disclose dirty rooms and families pigging together at meals, or slatternly women and unkempt men leaning from the window-sills. The uncleaned streets are resonant with dirty, ragged, and bare-legged children, as true gutter-birds as any to be found in Europe. The picture speaks of nothing but barren, hopeless lives for the adults and certain degradation for the children.

Look at this picture of your Lowell operatives under a revenue tariff, and at that picture under your protective tariff. [Applause on the Democratic side.]

Mr. ALLEN, of Massachusetts. I suppose the gentleman from West Virginia wishes to be perfectly fair, and in order to give him some trustworthy information on that subject, which, as he seems to have access to English authorities only, I should think he would gladly welcome, I should like to tell him something about the city where I was born and where my whole life has been spent, and to present the refutation of the statement which the gentleman reads here, a statement evidently written by a free-trader for the purpose of supporting free-trade theories.

Mr. WILSON, of West Virginia. The gentleman in his speech yesterday gave his picture, and as there is no necessity for his making it over again, I can not yield my time to him.

Mr. LODGE. Will the gentleman from West Virginia yield to me for a moment?

Mr. WILSON, of West Virginia. I will yield for a moment.

Mr. LODGE. I wish to ask the gentleman a question. I am sure that he wishes to be accurate.

Mr. WILSON, of West Virginia. Certainly.

Mr. LODGE. Did I understand the gentleman to say that the passage which he has quoted from Dickens applies to Lowell under the Walker tariff?

Mr. WILSON, of West Virginia. It was about that time, 1846.

Mr. LODGE. Dickens's "Notes" were published in 1842, four years before the Walker tariff came into existence. [Laughter and applause on the Republican side.]

Mr. WILSON, of West Virginia. I have not the exact date of the publication of Dickens's "Notes," but the tariff rates of 1842 were not half so high as those of 1888. [Applause on the Democratic side.]

Mr. LODGE. The book was published in 1842, and appeared before the tariff of that year could have come into existence.

Mr. WILSON, of West Virginia. Well, this was the condition which existed at and about that time.

Now, as my friend from Massachusetts [Mr. LODGE] has interrupted me, I want to stir up his pure mind a little by way of remembrance. It has been customary in this discussion to try to take shelter under the great names of Henry Clay and Alexander Hamilton. The gentleman from Massachusetts [Mr. LODGE] before he got to be a politician, and even since, I believe, has been a distinguished member of the guild of literature. As such he wrote the life of Alexander Hamilton, and I want to commend to his recollection now, and to all those gentlemen on the other side of the House who are constantly quoting Hamilton, the following extract, written by him before politics got hold of him:

In the year 1791, with all nations protecting their manufactures, Hamilton was a protectionist, favoring the protection of nascent industries. At the present day he would probably be foremost in urging a revision of the tariff.

[Laughter and applause on the Democratic side.]

Mr. LODGE. I am glad the gentleman has read that passage, because I have not changed my views. I am still in favor of a revision of the tariff, but not by the methods of the Mills bill. [Laughter.]

Mr. WILSON, of West Virginia (continuing to read):

At the present time he would probably be foremost in urging a revision of the tariff and a gradual reduction of duties where it could be safely done. In other words, he would now be a moderate protectionist, as he was when he sent in his report, but not one of those who support a heavy duty in order to furnish to industries already firmly established a protection which accrues solely to the benefit of the manufacturers, and of no one else.

[Applause on the Democratic side.]

That was written since 1842. [Laughter.]

Now, Mr. Chairman, I have been led away from my argument by these interruptions——

Mr. LODGE. May I ask the gentleman a question? Will he kindly state the date of the publication of that book from which he has just quoted?

Mr. WILSON, of West Virginia. Eighteen hundred and eighty-three.

Mr. LODGE. Is that the date of the copyright or the date of that particular copy?

Mr. WILSON, of West Virginia. The copyright is dated in 1882.

Mr. LODGE. That was before the tariff revision of 1883. [Laughter and applause.]

Mr. WILSON, of West Virginia. When that was written, Mr. Chairman, the average tariff rate in this country was 42.65 per cent., now it is 47.10 per cent. [Laughter and applause on the Democratic side.]

But, Mr. Chairman, if, as my friend from Lowell and the other gentleman from Massachusetts contend, the protective tariff makes wages, what I can not understand is how a law of Congress should operate so unequally and so unevenly. I have here in my hand an address delivered before the Home Market Club, of New England, by Senator FRYE, of Maine, on what he saw in Europe, in which, with the good old-fashioned protection logic, he pictures the wretched condition of European labor. Now, the Home Market Club is composed largely of gentlemen who derive dividends from the present tariff, and who, naturally, do not want it disturbed.

Mr. MORSE. Exclusively.

Mr. WILSON, of West Virginia. The preface of the address has a statement to show "the vast interests New England has in a protective tariff," and it gives the manufacturing statistics of all the New England States except Rhode Island. I do not know why they left her out unless it was because she had a Democratic governor at that time. [Laughter.]

According to this statement here, the capital invested in those five States is $548,652,118, the number of employés 584,495; but when it comes to wages I find the average wages of an employé in the State of Maine to be $257 a year, whereas in the State of Massachusetts he gets $364, and in the little State of Connecticut $385. Now, what I can not understand is this: If a tariff, a law of Congress, makes wages, why does it operate so unevenly as between the employé in Maine and the employé in Connecticut, and why is the Maine man worth only two-thirds as much as the Connecticut man? And when we come to Vermont, the State of our venerable friend at the other end of the Capitol, I find that the average employé gets only $303.

[Here the hammer fell.]

The CHAIRMAN. The time of the gentleman from West Virginia [Mr. WILSON] has expired.

Mr. MCMILLIN. I ask unanimous consent that the gentleman's time be extended.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that the gentleman from West Virginia may be permitted to conclude his remarks. Is there objection? The Chair hears none.

Mr. WILSON, of West Virginia. Mr. Chairman, if a tariff does make wages, then the protective tariff is the most ungrateful thing that ever existed in the history of the world. Why should it give to the fellow-citizen and compatriot of the last Republican candidate for the Presidency only $257 a year, while it gives to the operative in the good old State that voted for the author of the last Presidential message $385 a year? And why should it give to the fellow-citizen of the author of the tariff, Mr. MORRILL, but $303 a year? That genial old Senator, who is in the habit of spicing his annual speech on the tariff with delightful scraps of poetry, ought to take as the motto for his next speech—"How sharper than a serpent's tooth it is to have a thankless"—tariff! [Laughter and applause.]

Mr. BOUTELLE. Mr. Chairman——

The CHAIRMAN. Does the gentleman from West Virginia yield?

Mr. WILSON, of West Virginia. I will yield for a question.

Mr. BOUTELLE. I would like to ask the gentleman from West Virginia whether the calculations which he gives us as to the rate of wages in different States are based upon the aggregate of all the wages paid, without any reference whatever to the number of people occupied in the different branches of industry, the number of skilled operatives, etc.?

Mr. WILSON, of West Virginia. These are the figures of the Home Market Club. They show the number of manufacturing establishments, and I presume the branches of industry in these different States will average about the same.

Mr. BOUTELLE. The gentleman ought to understand that there is a great difference in the character of the labor in the different manufacturing establishments.

Mr. WILSON, of West Virginia. I can not yield further.

Mr. BOUTELLE. I want to ask one further question.

Mr. WILSON, of West Virginia. I can not yield. If I continue to allow these interruptions I shall never get through.

Mr. BOUTELLE. The gentleman ought not to decline to yield after making a statement such as he has just made.

Mr. WILSON, of West Virginia. Very well; go on with your question.

Mr. BOUTELLE. In this connection, while the gentleman is commiserating my State in regard to the amount received by operatives and laborers, I want to ask whether he will tell me the average wages of farm laborers in West Virginia to-day. I want a candid answer.

Mr. WILSON, of West Virginia. Well, they are not as high as they would be if we had the burden of the protective tariff off our shoulders. [Laughter and applause on the Democratic side.]

Mr. BOUTELLE. I want a candid reply to my question.

Mr. WILSON, of West Virginia. I can not yield further.

Mr. BOUTELLE. Then I want the gentleman to retreat ignominiously.

Mr. WILSON, of West Virginia. I can not yield to the gentleman for a speech; but I will accept him as a full explanation why the Maine man is worth only two-thirds as much as the Connecticut man. [Laughter and applause.]

Mr. BOUTELLE (before order had been restored). I repeat my question: What are the average wages of farm laborers in West Virginia?

The CHAIRMAN. The Committee of the Whole will be in order.

Mr. WILSON, of West Virginia. But, sir, the statistics of the Home Market Club are exactly in line with the figures embraced in the report of the Commissioner of Labor. After careful inquiry into many industries in this country Colonel Wright says that "An examination of these reports will show that there is no such thing as an American rate of wages." For example, in the manufacture of agricultural implements a blacksmith gets 15 per cent. more in Illinois than in Indiana, while a foreman gets 50 per cent. more in Pennsylvania than in New York, and a painter nearly 70 per cent. more in Pennsylvania than in Maine. In the boot and shoe industry a buffer gets $2.50 in Pennsylvania and only $1.40 in New York, which would clearly dispose of the Presidential boom of our late esteemed colleague [Mr. HISCOCK], did we not find that a button-hole maker in Pennsylvania, if a woman, gets 78 cents, while New York pays $1.04. When it comes to heelers, New York gives $2.56 and Massachusetts only $1.72. But there is still hope for my friends from Massachusetts [Mr. LONG, Mr. LODGE and Mr. ALLEN] for the Presidential nomination, for Massachusetts pays her packers $1.95 while New York neglects hers with a cold $1.08.

Mr. FARQUHAR. I suggest to the gentleman that "heelers" are always high in the State of New York.

Mr. WILSON, of West Virginia. So when we come to the table of cotton goods we find that Great Britain pays mule-spinners $1.57, Massachusetts $1.25, and Vermont only $1.20, and that the average rate of wages paid in the cotton industry in Great Britain is $1.17 per day, while in Vermont it is only $1.15; so that, when Senator MORRILL became so alarmed for fear that his fellow-citizens were going to be reduced to the level of the pauper wages in England, it meant simply that they were going to be kicked upstairs from $1.15 to $1.17, the average wages in the cotton industry in England.

Mr. DAVIS, of Massachusetts. Will the gentleman from West Virginia allow me to interrupt him for a moment?

Mr. WILSON, of West Virginia. I think I have already taken up as much time as I ought to, and I wish to get through.

Mr. DAVIS, of Massachusetts. If I heard the gentleman correctly, I understand him to say that the wages of mule-spinners in Massachusetts were a dollar and a quarter a day. Am I wrong?

Mr. WILSON, of West Virginia. Yes, I find it stated here at $1.25 a day.

Mr. DAVIS, of Massachusetts. I state it as a fact that they are $11 a week, on an average, throughout Massachusetts.

Mr. BRECKINRIDGE, of Kentucky. Ask him to state his authority.

Mr. DAVIS, of Massachusetts. Why, of my own knowledge.

Mr. WILSON, of West Virginia. I take the statement from the report for 1885 of our Commissioner of Labor, a gentleman who has investigated the subject in the industrial establishments in Massachusetts and is supposed to be particularly a high authority in that State.

Mr. TOWNSHEND. He is a Massachusetts man himself.

Mr. DAVIS, of Massachusetts. What is the gentleman reading from?

Mr. WILSON, of West Virginia. I am reading from his annual report of 1885.

Mr. DAVIS, of Massachusetts. I speak of the wages of to-day.

Mr. TOWNSHEND. Mr. Carroll D. Wright was the Massachusetts statistician of labor. He held that place in the State of Massachusetts.

Mr. WILSON, of West Virginia. Mr. Chairman, my venerable colleague from Pennsylvania [Mr. KELLEY], whom I am sorry not to see in his seat, was one of the conference committee in the Forty-seventh Congress which constructed the present tariff. In that committee they put up the duty on iron ore from 50 cents a ton, at which it had been fixed by the Tariff Commission, by the House in open session, and by the Senate in open session, to 75 cents a ton, and all of course in the interest of and for the benefit of the American laboring man.

Now, I have here Pennsylvania Legislative Documents for 1884–'85, volume 2, in which I find the twelfth annual report of the bureau of industrial statistics, by Joel C. McCamant. Speaking of the wages of the iron-ore miners, he says:

> The mining of iron ore does not afford constant employment, the average amounting to but thirty-six weeks per annum. This allows scarcely sufficient wages per week, for the run of the year, to maintain a single individual; how those wage-workers having families to maintain can accomplish that difficult task is a problem in social economics that can be solved only by those who have been in similar circumstances. Many miners wear belts instead of suspenders to support the weight of their pantaloons; and one of these, in reply to the question asked him relative to his ability to buy food, replied: "Lord bless you, we do not always eat when we are hungry, we just tighten our belts."

[Laughter and applause.]

Now, what has become of the 75 cents a ton which was secured for the American miner of iron ore in that conference? Why, up to that date, May 1, 1885, more than two years afterward, had it not reached him? Is it lost, strayed, or stolen? [Laughter and applause.]

Mr. TOWNSHEND. Stolen.

Mr. WILSON, of West Virginia. I suspect it has found its way into the literary bureau of the American Iron and Steel Association, and has been expended in the publication of tracts to prove to the miner what a good thing a protective tariff is for him. [Laughter and applause.] I would say to that philanthropic association, give your miners less tracts and better food under their belts. [Applause.]

Mr. CANNON. How much do you reduce iron in your bill?

Mr. WILSON, of West Virginia. We do not disturb iron ore.

Mr. CANNON. Why not?

Mr. WILSON, of West Virginia. How could we, my friend, with such a picture before us?

But, Mr. Chairman, I must hasten on. I fear I am already speaking beyond all reason. There is one great element in this question of wages that is carefully kept out of view. Gentlemen compare the wages and the condition of the American workman with those of his foreign competitor as if they stood upon an equality in other respects. They ignore the fact that in the labor market, as elsewhere, the law of demand and supply is the great regulator of prices. Where labor has many opportunities for employment wages are high; as these opportunities diminish wages are lessened. Now, contrast the position of the laborer in these United States with his position in the other countries of the world. Sir, the sixty million of people that now inhabit this country are but the vanguard of that mighty host which is destined to find homes, comfort, and prosperity here.

Not until the sixty millions become six hundred millions, not until the six hundred millions grow into a thousand millions will men crowd each other here in the fierce struggle for existence and wealth as they do in Great Britain to-day. [Applause.] And, sir, small as Great Britain is, one-fifth part of her soil belongs to her House of Lords. Not

one foot of land can her laborer hope to acquire as his own. He is to a large extent a dependent on his employer. When discharged from her factories and mills he may well exclaim, "Me miserable! which way shall I fly," for a home of his own he can seldom hope to acquire. But the vast territorial extent of our country, the cheap and accessible lands, the free homestead, these are the charter of freedom of our laborers against any dependence on any employer. You can not compel the American workingman to toil for starvation wages as long as these avenues of escape are open to him—and if I were framing an indictment against the party on the other side of this House, I would say that the greatest crime against American labor that could be perpetrated was its taking from the workingman his heritage and the heritage of his children, the homestead offered by the laws of his country, and bestowing it upon railroad corporations. [Applause on the Democratic side.]

Sir, the countries with which gentlemen compare us are those of the Old World, crowded with population, burdened with debt, devoured by standing armies, and stratified by social distinctions wrought into their laws or into unyielding customs. Centuries of class government have massed into privileged hands most of their wealth, of their lands, of their honors. Employment is in most cases a boon to the laborer, which he is expected to receive with due humility and thankfulness. Ours is a new country of free men under equal laws. Ours is a country in the making, where enterprise is always alert to achieve wealth and employ labor, where railroads are building—12,000 miles in a single year—cities are springing up; where there are mines to explore, rivers to bridge, mountains to tunnel, forests to fell, and lands to subdue. Everywhere we behold the energy and activity that belong to such an era in the life of a people, with all the demand and opportunity for labor that accompany it, and above all with that genuine respect for labor that is born of equal citizenship.

No other people enjoy the same variety of climate and production, the same freedom of exchange and of movement over a great area. Sir, it is unfair, it is unpardonable, it is scarcely less than criminal for the beneficiaries under our tariff system to seek to intimidate the laboring men of this country into a support of their bounties, by telling them that they owe their superior condition not to these natural and moral advantages of their country, but to the protection of the tariff.

But, sir, there is one class of our laboring men as to whom these advocates of protection clearly see the difficulty and weakness of their position, and that is the American farmer. Where does the farmer get any benefit from protection? He is the patient beast of burden upon whose broad shoulders you have shifted down the chief burdens of supporting a Government of sixty millions of people. [Applause on Democratic side.]

Where is the benefit to him under the tariff? My colleague from Michigan [Mr. BURROWS] meets the question with the bold reply:

The farmer is not hurt. The consumer does not pay these taxes.

And warming up with indignation because the President had advanced a contrary idea in his message, declared with much emphasis and iteration that it was not true. Why, Mr. Chairman, the mere child who stands behind a store box and sells candy for pins knows that if he does not get as much as it cost him he is in a losing business and will quickly give it up.

The duty that is paid on a foreign article to get it into this country is as much a part of its original cost to the American consumer as the cost of its manufacture or of its ocean freight. No matter who the importer be, foreigner or fellow-citizen, if he does not get that duty back in its sale he is in a losing business, as much as if he failed to get back any other element of cost. Trade stops at once if it brings no profit. Moreover, the amount thus added to its cost by the duty saves the home producer of a like article from having to compete with it at the cost it bore before the duty was added. Sir, I commend to the gentlemen on the other side the utterances of some of their party leaders on this point.

Senator SHERMAN is an active candidate for the Presidency to-day, and I am glad to know that he has a higher idea of the intelligence of the farmer than my friend from Michigan, for he has said in this House:

I said it, and I stand by it, that as a general rule the duties paid upon imports operate as a tax upon the consumer.

Senator EDMUNDS, of Vermont, in the February number of Harper's Magazine, in replying to Mr. Watterson, argued at length that the larger portion of import duties is borne by the foreign producer; but Senator EDMUNDS, speaking on the tariff question, January 4, 1883, made a much more correct statement when he said:

In the main all these taxes come out of the consumer, particularly internal-revenue taxes, perhaps all of them substantially.

And I particularly commend to his colleagues on this floor the emphatic language of Senator PLUMB, of Kansas, on the 11th January, 1883, spoken with a directness and earnestness that showed an impatience of any contrary suggestion:

Who pays these taxes? When the manufacturer of iron comes to the Senate and says "I can live, or I can make a profit, if a certain duty is imposed," what is he saying? He is simply saying "If you give me a certain duty you put it in my power to charge over that duty as an additional tax on the farmers of the United States."

Sir, the mere statement of this question, it seems to me, is its conclusive argument, and I should not further refer to it but that the gentleman from Michigan so sharply criticised the President for expressing views like those of Mr. SHERMAN, Mr. EDMUNDS, and Mr. PLUMB, and in one of his most eloquent periods and with the applause of his party associates exclaimed that the very insensate pen with which the President wrote this folly should have said: "I am cheaper by one-half than before the duty was imposed." And, Mr. Chairman, the very midnight oil of which the speech of the gentleman was so redolent might have responded: "I am a thousand per cent. cheaper than I was twenty years ago;" and has a protective tariff done that?

Mr. BAYNE. Oh!

Mr. WILSON, of West Virginia. My friend says "Oh!" I can cite the gentleman here to the very paragraph in the New York Tribune where it says coal-oil has come down from 70 cents to 7 cents a gallon.

Mr. BAYNE. How could it be even a hundred per cent. cheaper if it sold for anything at all?

Mr. WILSON, of West Virginia. Well, I am beginning at the other end. [Laughter.]

Now, Mr. Chairman, I wish to read a specimen of a protectionist's argument. Senator FRYE, in this speech, which the Home Market Club is spending so much money to circulate, says:

We have some wonderful advantages in this country of ours in this matter of manufacturing over any I saw; I believe over any in the wide world. In the first place, we can feed a billion more men on our land than we do to-day, and suffer no harm either.

Then again, we have an enormous seacoast and rivers and lakes which the Almighty planted just exactly right for us to use for our purposes to make cheap freights all over the country. Then again, we have more railroads than all the rest of the world combined, and to-day our freights are cheaper in the United States of America than in any other country on this earth. On our through lines the rates are not one-half what they are on the through lines in England. That is a great advantage. Again, we raise our own cotton and a part of England's. We can raise all the cotton the world needs if we please. Texas alone can produce every pound of cotton you use to-day and England purchases from us, and yet not be exhausted at all. Again, we can raise all the wool we need in this country without the slightest difficulty, unless the free-traders get it on the free-list. [Laughter.]

Again, we have iron in twenty-four States and Territories, piled up in mountains now and then, like those in Missouri, with 500,000,000 tons in their bosoms, accessible, more accessible than the iron of any other country.

Again, we have inexhaustible coal fields accessible, too. Again, we have—for I have seen it—mountains of salt; I saw one in Louisiana where with a pick you could pick the salt out in blocks. Mountains of sulphur, granite, sandstone, marble, lime-rock, slate, supplies of borax, gold, silver, copper.

Every conceivable thing that we need to make us a great manufacturing nation is spread out here for our use, ninety one-hundredths of it to-day lying as untouched as when planted there in the earth by the finger of the Almighty. Again—and this meeting here to-night illustrates this—we have the most active, earnest, vigorous business men that are to be found on the earth. Why, abroad they will go to sleep while a man in America is making a fortune [laughter]; open their stores at ten o'clock, close them at four; idle behind the counter, seeking no trade. Again, we have the most ambitious, hopeful, reasonable, intelligent laboring people that are to be found.

We all know that this is substantially true, that it is scarcely an overdrawn picture of the natural and other advantages which the American manufacturer enjoys over those of other countries, and would you not suppose, Mr. Chairman, that when he had reached this point in his speech, for very shame he would turn to the millionaires around that banquet table and say, "Gentlemen, for generations you who possess all these advantages have prevailed on the Government to tax the farmer for your benefit and building up. From his scanty earnings you have been drawing an unearned dividend to insure your prosperity and pile up your wealth. It is time now, under these favorable conditions over your competitors, so much greater than he enjoys, for you to renounce your bounties wrung from his toil, and, thanking him for his long endurance, step down and fight your own battles in the industrial ranks beside him."

But, sir, he does nothing of the kind. Like the stag in the fable that was so enamored with the beauty of his horns, but at the first sound of the hunter's bugle fled ingloriously away, so Senator FRYE, after all these swelling words and this boasting of the advantages possessed by the members of the Home Market Club, at the first suggestion of a diminution of their bounties, scuds away on cowardly legs and never rests until the "embattled farmers," three ranks deep, stand between him and English competition. [Laughter on the Democratic side.]

But, my friends, if this protective tariff is such a good thing for the American farmer, why is he to-day the least prosperous of all American citizens? Why is it that land is going down in all the older States? Why is it that the American farmer with the best facilities at his command, with all his energy, thrift, and sobriety is fighting a hard and ofttimes a losing battle?

My friend from Missouri [Mr. BLAND] excited some criticism on the other side of the House by his statements as to the mortgages on the farms in this country. I do not wish to make any statement that is not sustained by the facts, and so I have obtained the last report of the labor bureau of the State of Michigan, which covers an investigation into the mortgages upon Michigan farms, and which presents some striking figures. I stand here to-day and say that I have not the slightest doubt that the Michigan farmer is as industrious, as hard working, as intelligent as the farmer in any other section of the country, and yet this official volume shows that 47.4 of the farm lands in Michigan are covered by mort-

gages, and that the mortgages are 46.8 per cent. of the assessed valuation of the farms mortgaged. Compare the condition of the unprotected Michigan farmer with the condition of the protected owner of copper mines in Michigan, the one piling up dividend upon dividend, million upon million, out of the privilege granted him by Congress to tax the people of this country, and the other working early and delving late and piling up mortgage after mortgage upon his estate. [Applause on the Democratic side.]

Mr. ALLEN, of Michigan. Will the gentleman from West Virginia yield for a question.

Mr. WILSON, of West Virginia. I will yield for one question, and no more.

Mr. ALLEN, of Michigan. Will the gentleman from West Virginia tell the House whether there is a petition in his committee-room, signed by a farmer of the State of Michigan, asking for the passage of the Mills bill; and on the other hand, will he not find hundreds of petitions (if he will open them) signed by Michigan farmers asking that the Mills bill be not passed? We know enough in which to take care of ourselves and to pay our debts.

Mr. WILSON, of West Virginia. Mr. Chairman, the farmers have neither the time nor the money to come here and besiege Congress about these matters. They are chained to the plow, to their daily labor. They can not come here to look after their own interest; but the owners of the copper mines, and the other industries that are protected and subsidized, are here at all times in your lobbies urging measures for their own benefit. [Applause on the Democratic side.]

Now, if protection is such a good thing for the American farmer, why, I ask again, is the value of American farmlands depreciating? Why is it that in the magnificent Shenandoah Valley, situated between the beautiful Blue Mountains, and so faithfully represented here by my friend before me [Mr. O'FERRALL]—why is it that that valley, with as noble a population as can be found anywhere under the sun, with natural advantages unsurpassed by any section of the country—why is it the people of that valley are fighting a hard and cheerless fight to-day? Why is it, as Mr. David A. Wells tells us in the last number of the Popular Science Monthly, that in New England—

Agricultural lands not remote from large centers of population can often be bought for a smaller price than fifty years ago would have been regarded as a fair appraisal, and even less than the cost of the buildings and walls at present upon them?

Mr. BOUTELLE. This would be a good place for the gentleman to state the average rate of farm wages in West Virginia.

Mr. WILSON, of West Virginia. Farm wages in West Virginia are quite as good as in Maine, and a little better, I have no doubt.

Mr. BOUTELLE. Will the gentleman let me read the figures?

Mr. WILSON, of West Virginia. Mr. Chairman, if protection is such a good thing for the American farmer, why is it, I repeat, that land in the most populous and prosperous States of this country is depreciating in value? Why is it that since the last decennial census lands in the State of Ohio, with probably better diversified industries than any other State of the Union, have gone down from 25 to 50 per cent.?

Mr. McCULLOGH. Will the gentleman allow a question?

Mr. WILSON, of West Virginia. I can not. If I continue to yield I shall never get through.

The CHAIRMAN. The gentleman declines to yield.

Mr. WILSON, of West Virginia. Mr. Chairman, I do not make this statement on my own authority——

Mr. McCULLOGH. If the statement just made by the gentleman is true, will he tell me why farming lands in England have depreciated to a greater extent?

Mr. WILSON, of West Virginia. I deny that they have depreciated to a greater extent. There is at present a depreciation in England, as there is in Germany, protected Germany, as there is in France, protected France. But Germany, England, and France have stationary populations, while this country is filling up, not only by natural increase, but by heavy immigration, so that the farm values with us ought to be going up.

Mr. KERR rose.

Mr. WILSON, of West Virginia. Now, Mr. Chairman, I can not yield any further.

Mr. ALLEN, of Michigan. I rise to a parliamentary inquiry.

The CHAIRMAN. The gentleman from West Virginia declines to yield.

Mr. ALLEN, of Michigan. I desire to put to the Chair this parliamentary inquiry: When the time of a gentleman has been extended indefinitely, so that he may occupy a week if he sees fit, is not the extension granted with the tacit understanding that he shall yield long enough to allow questions to be put and answered? [Laughter.]

Mr. WILSON, of West Virginia. I appeal to the candor of my friends on the other side whether I have not been more than liberal in submitting to interruptions. I have been led far away from the line of my argument time and again. I can not abuse the courtesy of the House and must hasten on.

The statement I have made as to the farm lands of Ohio was not made upon my own responsibility. I have here, to support me, the exact words of Governor Foraker. In his inaugural address, January 1, 1887, he said since the last decennial assessment of real estate in 1880:

There has been a heavy decline. Farm property is from 25 to 50 per cent. cheaper to-day than it then was.

That is good authority for our friends on the other side.

Now, Mr. Chairman, we have heard on this floor time and again the "old, old story" of the "home market." I have here the great speech made by Mr. Clay in 1832, when he was urging upon the farmers of the country what the opponents of this bill would denounce as free trade, but what he supposed to be a protective tariff. He says, in substance: "I rest the whole case on two grounds." One of these was that the protective system would build up a home demand for the products of the farm, and thus maintain or advance the price of those products.

Mr. Chairman, whatever force may have been in that argument when used by Mr. Clay is entirely dissipated to-day. Mr. Clay spoke to a country without railroads, without telegraphs. There were no steamships traversing the ocean, no cables under the ocean. He spoke to a country whose farmers, with the exception of those adjacent to its Eastern rivers and seaboard, sought a market for their produce in the nearest town, to which they hauled it in their own wagons; when the value of a bushel of wheat was exhausted by a haul of 300 miles, and that of a bushel of corn by a haul of 100 miles. It was a day when "manufacture" meant something very different from what it means to-day. As late as eight years afterward Mr. Webster described American manufactures as "a little capital mixed with manual labor." At that time the neighboring village or town, with its woolen mill, its hat factory, its shoemakers, its varied industries, was flesh and blood to consume the farmer's products and wear the clothing made from his wool and cotton.

The world has been created anew since Mr. Clay made that speech. To-day we have a railroad system of 150,000 miles, extending into every corner of this country where population or product invites it. To-day we have instantaneous communication with every section of the country, with every portion of the world. You can order a cargo of tea from China and it will be loaded on the ship before night. An order for wheat from Liverpool to San Francisco will outstrip the lagging sun and get there hours before him. You can transfer millions of dollars in the twinkling of an eye from the money market of Calcutta to that of London or New York. The whole world with the construction of railroads, with the building of steam-ships, with the laying of cables has been drawn into one family. The price of the farmer's products is no longer decided in the market of the neighboring village, but in the great market of the world. The price of the farmer's cotton, his wheat, his meat, and dairy products is no longer decided even in his own country, but by the free, untrammeled competition of the markets of all the world.

During all that time the progress of invention has been displacing human labor by machinery. To-day one man in a factory, and frequently a child, tending some great mechanical invention, produces what in Henry Clay's day would have taken the labor of ten or even twenty men.

In the first annual report of the Bureau of Labor we have some striking illustrations of this displacement of labor by machinery. In a manufactory of agricultural implements 600 hands do the work that formerly required 2,145. In the manufacture of boots and shoes one hand does the work of five, and will produce enough shoes in a year to supply a thousand men. In the manufacture of carpets one hand with the improvements in machinery does the work that required from ten to twenty; in spinning, the work of from seventy-five to one hundred. In the manufacture of some kinds of hats one man is equal to nine. In a large establishment in New Hampshire improved machinery, even in the past ten years, has dispensed with 50 per cent. of human labor in the making of cotton goods. By the use of improvements and inventions in the past ten or fifteen years, in hammers used in the manufacture of steel, there has been a displacement of employés in the proportion of nearly 10 to 1. In the manufacture of paper, a new machine for drying and cutting, run by four men and six women, will do the work of one hundred persons. In the manufacture of wall-paper the displacement has been 100 to 1. Equally striking facts as to the woolen and other industries might be given, but I will call special attention to this general statement. The mechanical industries of the United States carried on by steam and water represent the labor of 21,000,000 men. On our railroads to-day 250,000 men do the work which when Mr. Clay spoke would have required 13,500,000 men and 54,000,000 horses.

To do the work now done by power and power machinery in our mechanical industries and upon our railroads would require men representing a population of 172,500,000 in addition to the present population of 55,000,000.

And it is just in the protected industries of the country, employing altogether, according to the estimate of the late Secretary Manning, not more than 5 per cent. of the labor of the country, that the chief displacement of human labor by machinery has occurred; and yet, Mr. Chairman, we all know that while Mr. Clay was willing to compro-

mise on a tariff of 20 per cent. to protect flesh and blood, the demand to-day is for 47 per cent. to protect machinery! [Applause.]

To-day American manufactures no longer mean as they did to Daniel Webster, manual labor mixed with a little capital. They mean great capital mixed with a little manual labor. Moreover, as our transportation system has been perfected, we have witnessed the gradual disappearance of local manufactures and their massing in immense industrial establishments at particular points. They are to-day sufficient and more than sufficient to supply all the demands of our home consumption, and yet the farmer has to look abroad for purchasers of his surplus products.

Two-thirds of our cotton, nearly one-third of our wheat, immense quantities of other farm products must be sold to foreigners for lack of home consumers, and yet the argument is daily addressed to the farmer, "Tax yourself still longer to diversify industry and build up purchasers for your products." Why, Mr. Chairman, our surplus wheat crop last year would feed thirty millions of people. Is there any device of taxation by which the farmer could build up a home demand for that? You say to the Minnesota farmer, complaining that he gets but 60 cents a bushel for his wheat, "Continue to uphold the tariff; it will start up other industries in your State to buy your wheat." But the farmer, if he is intelligent, knows that there is a cry of overproduction from our manufacturers to-day; that we already have more than we can find a market for; and as long as there is free trade among the States of this country there is no taxation to which he can submit that will necessarily bring these industries to Minnesota aside from such natural advantages as would bring them there without such taxation.

But suppose you give him a rolling-mill capable of supplying all the steel rails needed for the railroads of his State, a sugar-refinery capable of supplying all the sugar consumed in his State, and a boot and shoe factory sufficient for the demands of the entire population of Minnesota, there will not be human labor enough in any one of them to consume the wheat crop of a single large farm. With all the families dependent upon them they would add not one mill to the price of his wheat, and little, if any, to the price of his other products.

So much, Mr. Chairman, for the home-market idea. It is but a snare and a delusion to the American farmer. His surplus products sent abroad determine the prices of those he sells at home. Without such foreign market they would sell still lower at home. But to the gentlemen of the Home Market Club of New England the home-market idea is a most solid and profitable reality. It means for them a population of 60,000,000 shut in by a benevolent Government and forced to buy of them at prices which the Government is seeking to stimulate 47 per cent. higher than they would be if subjected to the same competition under which the farmer sells his staple products.

But one further remark, Mr. Chairman, and I will relieve the patience of the committee. The other argument used by Mr. Clay was that industries, once established by protection, would gradually by their free competition among themselves, give to the farmer their products as cheaply as he could buy them elsewhere. Mr. Clay dwelt with much force and variety of illustration on the "beneficent principle of competition," which was to bring the consumer his reward for any temporary sacrifices he was subjected to. He said:

> Of all human powers operating on the affairs of mankind none is greater than that of competition. It is action and reaction. It operates between individuals of the same nation and between different nations. It resembles the meeting of the mountain torrent, grooving by its precipitous motion its own channel, and ocean's tide. Unopposed, it sweeps everything before it; but counterpoised, the waters become calm, safe, and regular.

Statesman as Mr. Clay was, he could not look far enough into the future to see that a time might come when the mountain torrent and the ocean tide, instead of opposing their great forces so as to produce this safe and calm counterpoise, would deliberately unite them to sweep all obstructions from their path.

He never dreamed that the great industrial establishments, fostered and built up under a protective system on the implied condition that they would honestly compete among themselves so as to give the cheapest products to those whose bounties had built them up, would combine into the modern trust to despoil and pillage their benefactors. He did not see what George Stephenson early saw, that where combination is possible competition is impossible. All this he did not look forward to, but we are seeing it with our own eyes and suffering it in our own experience. I know that gentlemen on the other side are quite sensitive on this point. I know they are ready to exclaim: "Why, surely you do not mean to argue that these industrial monsters which are springing up on every hand, so full of portent to the welfare of the people and the purity of our Government, are born of our tariff." But, sir, that is exactly what I do maintain.

What is a trust, Mr. Chairman? It is a combination, more or less secret and confidential, as its name implies, to form a monopoly for controlling the production or the sale of some article of necessary or general consumption.

There may be a natural monopoly where the supply or production of an article is confined to local limits, as the anthracite coal fields to Pennsylvania, as the oil fields of this country, in which cases the owners may unite to control supply and regulate prices. There is also an artificial monopoly where the law steps in and confers special privileges on certain parties, whereby they may wholly or largely dictate their own terms to consumers; and this is exactly what our present tariff does.

The Government says to the protected industries, "I will add 47 per cent. to the value of all articles made abroad and thus shield you against competition from without;" and the protected industries are now saying, "Let us combine to shield ourselves against all competition from within. The Government will permit us to sell our products to the people at anything less than the price of like foreign products with 47 per cent. added. Let us see that we come as little below that limit as possible."

Sir, I had intended, but for the diversions from my line of remarks, to develop this subject in some detail. I will point to a single specimen, and that a mere infant, a Hercules in the cradle, the great sugar rust, as uncovered by the Committee on Manufactures. Sixteen of our large sugar refineries, furnishing the bulk of all the sugar consumed in this country, joined in a trust a few months ago, with a capital of $50,000,000. Almost simultaneously with their combination five of these refineries shut down and cease to produce. One is sold for a city park; another, one of the largest, is dismantled. Almost immediately the margin between the price of raw and refined sugars begins to widen. At one time it had reached a cent a pound! When the testimony was taken before the committee it was five-sixteenths of a cent! We consume three thousand million pounds of sugar in this country yearly. One cent a pound above ordinary profits would mean $30,000,000; five-sixteenths of a cent would mean nearly $10,000,000.

Sir, similar trusts are springing up constantly in the articles protected by your tariff and beneath its favoring shelter.

I have quite a list here which a friend has gathered from the columns of a single great paper, the New York Times, but I have no time to read them to-day.

Need I dwell upon the effects of such combinations? To the producers of their raw material they dictate prices, for there is but one purchaser. To the consumers of what they sell they dictate prices, for there is but one seller.

They limit and lessen the demand for labor, for they lessen the supply of their products in order to force up the price in the markets. With the North River refinery in New York turned into a park, and the Oxnard refinery in Brooklyn dismantled, labor is thrown permanently out of employment. Sir, it was the misery of banishment from Rome that Rome was the whole world. It is the misery of labor turned out of any one of these refineries that one is all and all is one. If the labor organizations of the country have found it hard to contend with the great corporations standing alone, what will their prospects be when these corporations melt into one? Mr. Chairman, can we shut our eyes to the influence of such organizations on public morals? Will our legislatures, our judiciary, our ballot-box escape defilement when corporate power and corporate wealth thus grasped by a single and often a hidden hand come to demand special privileges under the law?

Sir, I acknowledge the courtesy of the House in extending my time and listening so patiently to my somewhat disconnected remarks. This is a momentous question. None could be more so unless it involved the existence of the nation. It does not take many weeks' service for even the humblest member of the Committee on Ways and Means like myself to get new and sobering ideas as to the greatness of this conflict. When the eyes of the prophet's servant were unsealed he saw camped around the prophet mighty hosts and chariots of fire, invisible to other eyes. So when the servant of the people comes to deal with the tariff question he sees, with a clearness of vision not granted to others, those mighty hosts, the powers of wealth and combination, of monopoly in all its odious and defiant forms, great corporations and monster trusts, all formed in linked phalanx around the protective system. [Applause on the Democratic side.] If he is awed by the greatness of the struggle, he is also nerved by the greatness of the stake. Sir, this fight will go on. There will be no industrial peace in this country until our tax laws are fixed upon a basis that is just to all. [Applause.] We will keep the country rocking from ocean to ocean until we have secured just and equal rights before the law for all its citizens.

You may strike down that tribune of the people at the other end of the avenue, who, putting behind him all counsels of prudence, spoke out that ringing summons that rallied the people as nothing else ever did. You may strike down the leaders in this fight as you struck them down in the last Congress and the previous Congress. Those who hold the standard may fall, but other hands will take it up and move forward. The spirit of our intelligence is behind us. The spirit of liberty is behind us. All we can hope for the future greatness of this country hangs upon the issue; and in the sentiment and somewhat in the words of Mr. Speaker, whoever may falter and whoever may fail, the people of the country mean that its glorious destinies shall be preserved; that they shall be transmitted unimpaired to posterity; that the country shall not belong to monopolists on the one hand or to communists on the other, but shall be as it was designed to be, a Government of the people, by the people, and for the people. [Great applause, and cries of "Vote! Vote!"]

The Tariff.

The taxing power of the Government is essential to its existence, but when used for purposes, otherwise than its economical support, it is the most dangerous.

SPEECH

OF

HON. L. W. MOORE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 5, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. MOORE said:

Mr. CHAIRMAN: The two great political parties of the country are preparing to join issue upon a great economic question, the Republican party affirming that our tariff should be so constructed that in addition to levying taxes for the support of the Government it should be sufficiently excessive to secure protection to all our industries against competition from other countries. The Democratic party insisting that such taxes should be levied solely for the support of an economical administration of the Government, but so apportioned in its rates as not to embarrass or injure any of our industries. The former are pleased to style their system "tariff for protection;" the latter, "tariff for revenue only."

The issue thus presented is sharp and incisive. There is no mistaking it.

Yet, Mr. Chairman, how unequal the contest. There are 4,000 interests embraced in the present tariff schedule. For twenty-five years they have used the great power of the Government in the levying of taxes for their own private gain, associating some of the greater industries with powerful forms of capital engaged in transportation, and yet other great syndicates and trusts, that now, united by the cohesive power of public plunder, they view any attempt to force them to relax their grasp upon the public Treasury as an invasion of their prerogatives, and treat with derision and scorn the other industries and interests of our country not embraced in their pool.

Themselves thoroughly organized and united, supported and maintained by great combinations of capital and trusts, they but too well understand that the great masses of our citizens affected injuriously by such unparalleled exactions, disunited and disorganized, may not dislodge them. It is the unorganized, undisciplined militia engaged with regulars entrenched in their strong works.

Sir, the great common masses of our citizens view this contest with great solicitude; never before have they manifested such interest in this discussion as now. With a faith that knows no doubting, a courage without faltering, and a public conscience and integrity that yield to no bribes, we believe there will be a public verdict that will command a reduction of taxes and reform of our tariff.

TARIFF FOR PROTECTION.

Framed as it was to meet the expenses of our late civil war, it still stands after twenty-three years of peace, yielding, in connection with the internal revenue and some other sources, comparatively small, for the present fiscal year $150,000,000 in excess of all expenditures of the Government.

Every trade, every enterprise, every industry, every laborer feels this injury of withdrawing so much of their earnings from them. Slowly and steadily do we behold this circle of fire drawing nearer and nearer to our people! It is but a temporary relief to invest this surplus in the purchase of the bonds of the Government. Periodically it does and will recur. We must stop this inflow of money into the Treasury. Diminish the taxes is the only solution.

This surplus invites all sorts of schemes of peculation, encourages extravagance and waste of the public moneys, corrupts and pollutes our public service.

A protective tariff that protects all our industries and increases the wages of our laborers in uniform proportions, in fact, would protect none. Its exact and equal benefits would be its destruction and exemplify its own folly. It would be likened to an effort to make all equally rich, whose only effect would be to make all poor, for the weight of such a costly structure would break it down by the constant collection of taxes from all for its support. The only defense of such a system as we have now is that it protects certain special interests of manufacturing and mining which are of such general and public importance as that a corresponding benefit accrues to all other interests. How false this claim is will be seen when we think of the extent of our country to which such a principle is sought to be applied.

It is as vast in its extent almost as the whole of Europe—reaching from the Atlantic to the Gulf of Mexico and thence to the Pacific—embracing a continent by latitude and longitude. All the arts, sciences, industries, trades, occupations, and professions have their mighty development here. All the climates, seasons, soils, and productions are here. What would be protection to one industry would be injurious to another. What would be protection to the industries upon the Eastern seaboard could but injure those in the great West and upon the Gulf.

So we can not avoid the conclusion we have a system whose only merit is it fosters, builds up, and makes profitable the business of the few to the great injury of the many.

OUR COMMERCE.

We can not fail to see the effect of protection upon our commerce. In 1860 our imports in American vessels were $228,164,855, while in 1887 they are but $121,365,493. Our exports in American vessels in 1860 were $279,082,733, while in 1887 they are only $72,991,253. American ships in 1860 carried 66.9 per cent. of our trade, while in 1887 they carry but 13.80 per cent. To-day no foreign-built ship can carry our flag. You are not allowed to purchase one, and such as you build each and all its parts must pay a high protective duty.

Here is protection that no man can misunderstand. Forty years ago we disputed supremacy of our merchant marine upon all the seas with all nations. Our white flags were seen carrying our imports and our exports upon these highways and in all ports. Protection and our illiberal navigation laws have driven them from the seas.

What would the great Webster, whose eminent services were more illustrious in pleading for our commerce than in any other public service he rendered, say if he were to witness this decay in our commerce? If we look at our tonnage the decay is no less remarkable. In 1860 our tonnage engaged in foreign trade was 2,399,396 tons; in 1887 it was 989,412 tons.

Mr. Chairman, I have shown this decay in our American shipping only to indicate more clearly the effect upon its handmaid, agriculture. For without commerce what would become of the boast of our mighty productions of soil?

AGRICULTURE.

We come now, Mr. Chairman, to inquire into the magnitude of agriculture and the effect of our tariff upon it.

It is to agriculture that must be attributed our great and phenomenal progress as a nation. It has brought more peace, comfort, health, and wealth to our homes than all other causes combined. The value of our farms, 1887, was $10,197,096,776; value of cereals produced, $2,700,000,000; cotton, $325,000,000. Strike these down, our manufactories would disappear, our commerce perish. The protectionists to deceive us praise our home markets. What are the painful facts upon which this pretense and fraud are based? Our farmers indeed have such a market as our protectionists offer for purchasing their manufactures at such prices as they dictate, without any competition, but they offer no market for their agricultural products. You can buy from us, but you can not sell to us, they say. There is produced of all agricultural products $600,000,000 surplus. This must be sold in foreign countries in competition with the labor product of the poorest paid labor in the world. The product thus sold forms 74 per cent. of all our exports, while the single item of cotton forms $202,000,000. Two-thirds of all our cotton must be shipped to foreign countries to find a market.

I have some knowledge of the cultivation of this crop, its labor and its expense. No other production of our soil requires so much of continuous labor and length of time for its production. It takes all the days of the twelve months, and I but give voice and tongue to the experience of all the men engaged in it: Handicapped by the extra cost of this tariff upon all the lumber they use, all the iron, the plows, the wagons, the chains, salt, clothing, and articles of necessity without number, adding in the aggregate an average of 47 per cent. to their cost—they can not bear these burdens. The Egyptian was not less merciless when he commanded the Israelites to make bricks without straw. Our crops are discounted before they are planted. We appeal to this Congress to relieve us of this great war tariff and strike down this industrial slavery imposed upon our agriculture.

Let me give you this practical illustration: A laborer produces five bales of cotton. He ships it to Liverpool, the real and only market for this product. It is then sold, and sufficient of its proceeds invested in such necessaries as will enable him to be clothed and furnish him with such supplies as he needs upon his farm for the purpose of his labor. It arrives at Galveston, and there a custom-house officer says pay me 47 per cent. to be added to the invoice price thereof. For what? To support the Government? No; to protect the manufacturers in this country against competition, and to enable them to pay the enhanced price of labor here.

This man answers: "Am I not a laborer?" And there comes an answer from 7,000,000 of agricultural laborers saying: "Are we not all laborers? Why should we be taxed 47 per cent. upon our necessaries of life to support and maintain others?"

TARIFF AS AFFECTING LABOR.

It is claimed by protectionists and those who are now resisting a reduction of our tariff, that by reason thereof the wages of the laborer have been increased and his condition improved. If this be so, then the matter commands the most serious attention; for, Mr. Chairman, if

I thought by any system of taxation the wages and profits of the laborer could thus be increased, his burdens lightened, and his condition improved, I would give my heart and head to the reform. It should have my voice and my vote; for all just reforms and relief should begin with the humble and the poor. They are the mudsills of this social fabric; our house is builded upon them. If they are contented, frugal, prosperous, and happy, then, indeed, will this house of ours, this temple of liberty stand; our country will yet become greater, happier, and freer.

But we can not afford to speak in deception and hypocrisy upon this great labor question.

In the midst of these protected interests, yea, the very laborers engaged in them, are constantly disturbed. They are not contented; they do not believe they are receiving their just share of the profits of production. When they are not striking the mills are shutting down. You have been teaching that this tariff was to enable the manufactories and mining interests to pay larger wages.

But have they been paid? No. Their wages, it is true, are higher than in England; but their consumption or cost of living is higher, and they earn for the manufacturers for the same money 30 to 40 per cent. more than any foreign labor.

What is poverty? Why are there so many healthy, strong, intelligent, sober, industrious, and economical men with their wives and children poor? It is because the ratio of their expense to their wages is too great. You increase his wages, but increase by the same ratio his expense; you have not relieved him.

Consumption is a terrible term; as applied to disease it means death; as applied to the laborer's wages it means poverty, and if projected a little further it means pauperism, and herein is found the worst wrong of this present tariff. It is but a tax on consumption. It is not a tax on property, as is usual and right. The more you use or consume the greater your tax. A rich man is not a consumer in proportion to his property. A tax upon his consumption as to some things is not more than a poor man's, and upon others it is even less.

The very poorest laborer with a large and dependent family may pay, and does often pay, a heavier tariff duty than the richest man, for he may consume more of the articles embraced in the schedule and which are necessaries. Suppose instead of an indirect bonus to our manufactories we pay them a direct bonus, proportionate in each case to the amount of their products, for the purpose of compensating them for the higher wages paid the laborer. Would he receive one cent; could he, upon any business principle? Would not other laborers rush in for this extra bonus? And finally their wage would be the bonus, less the regular wage; and if this bonus was equal to the average wage this would be all he could receive. The Government then and not the employer would be paying his wages. In other words, the employer would thus receive the entire benefit of this bonus. This is what he is doing now.

If this protective tariff has, indeed, beneficently raised the wages of labor, then tell me why the same labor employed in the same protected industries, in the different States contiguous to each other, are so unequal? This occurs to me is a full and complete denial that tariff regulations and taxes increase the wages of labor, and certainly it demonstrates that its benefits are without uniformity.

But upon what principle can it be contended that a protective tariff benefits other industries and the labor engaged in them? It appears from the census of 1880 that there were 17,000,000 people engaged in gainful pursuits in the United States. Not more than one-twentieth of our people are engaged in the protected industries; 7,670,402 are engaged in farming, or nearly one-half of all engaged in gainful pursuits.

Are these and those engaged in other labor and industries to be taxed for the benefit of the few? Such a doctrine is un-American. It builds up wealth, power, and splendor of the few at the expense of the many. Relieved of the humane and wise provision of God's great law of competition, it speaks in the several protected industries as one man; governed by the sole power of greed, it lays tribute upon others. It closes furnaces, determines their output, fixes the amount of their product, and even the price of fuel to protect us from cold. It shuts down the mills, measures out to the American people our quantity of clothing, and determines its price. It fosters and encourages trusts in that it accumulates vast wealth in the hands of the few, and thus dictates to the American people the price of all the articles of necessity.

Protesting against the competition of their products with that produced in foreign countries, it enters all foreign marts to employ its labor, and turns out of employment the American laborer to be substituted with foreign; so that to-day a large part of such labor is foreign.

I do not pretend that the present bill for the reduction of tariff taxes is what I would wish. I would reduce further the tariff on the manufactures of iron, wool, and cotton. I would give the people to whom these things are a necessity cheaper prices. I would make free the farming implements, tools, and machinery with which the tillers of the soil are feeding and clothing the world. [Applause.]

Mr. Chairman, chattel slavery has forever perished in this land; its manicles are stricken off. Now strike down this industrial slavery, and then will we be free.

National Control of State Railroads.

SPEECH
OF
HON. JOHN A. ANDERSON,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, May 14, 1888,

On the bill (H. R. 9600) to declare the duties, enforce the obligations, and regulate the service of railroad companies as carriers of interstate commerce, and for other purposes.

Mr. ANDERSON, of Kansas, said:

Mr. SPEAKER: As preliminary to legislation upon the railroad question, and because the tariff will for many weeks exclude all other business, I desire in this way to call the attention of gentlemen to H. R. 9600, chiefly for the reason that it proposes a different plan of action from any before considered. At present I shall only discuss the legal questions involved. The bill seeks "to declare the duties, enforce the obligations, and regulate the service of railroad companies as carriers of interstate commerce." It differs from the law regulating interstate commerce enacted last year, first, as to the ground respectively covered by the two measures, and, second, as to the fundamental power upon which they rest.

The design of that law is simply to prevent railroad companies when carrying interstate traffic from doing certain things. The design of the bill is to compel them, so long as they engage in that business, to perform all their duties as carriers faithfully and regularly. The law only covers specific evil practices of the roads, and is silent as to their obligations. Under its provisions a company may, with total impunity, suffer its tracks to become dangerous, its bridges to rot, and its trains to be handled by incompetent men. It may keep its employés on continuous and sleepless duty for days, and as a necessary result slaughter passengers by an alleged "accident." Or it may, for effect upon stock speculations, or to exhibit the heroic pride of an arrogant management squandering other person's money, force employés to strike, and thus for months suspend train service, in utter disregard of its charter obligations and of the public welfare. Against these and countless other evils the people have no protection except the uncertain rulings and slow processes of the common law as distinguished from statutory law.

The design of the bill, on the other hand, is by statute to declare the duties and enforce the obligations of railways, and to provide vigilant protection to the public by a swift enforcement thereof in every emergency. It practically says to the company: "The railroad you operate is a public highway built for the public benefit; and so long as you possess a monopoly of its use you shall keep it in proper condition, shall regularly run all necessary trains, shall faithfully perform all the other obligations of your charter, and shall be punished whenever you fail therein." And it charges the Interstate Commerce Commission with the duty of enforcement. So that the bill covers wholly different ground from that embraced by the act of 1887.

The two measures also differ as to the fundamental power on which they rest. The act is exclusively based upon that clause of the Constitution which vests in Congress the authority "to regulate commerce among the several States." The scope of this act can not be greater than the scope of that authority. But it happens that a State also has authority over commerce within its territory, and that doubts as to exact jurisdiction often arise. Just where the authority of Congress and that of a State may begin or end as to certain freight, is a more troublesome question in practice than it is in the courts. And just what power Congress can exercise over a corporation chartered by a State and operating a road wholly within that State, is a perplexing question both in practice and in law.

As a case in point, take the recent Reading lockout. That company was chartered by Pennsylvania, and its main line is within that State. Besides being a carrier of coal to New York and Boston, which is interstate commerce, it is also the owner and worker of the larger part of the Schuylkill coal region. Suppose that, as a carrier, it had been ready every day to haul and deliver the usual supply of coal to these cities, which was not the fact; but that, as a mine-owner, for the exact purpose of reducing miners' wages and also of raising the price of coal, it forced its miners into a "strike," practically locked them out, and thus stopped the supply of coal for its trains. Query: While Congress undoubtedly has jurisdiction over the Reading as a carrier of interstate traffic, has it any jurisdiction, derived from the commerce clause, over the Reading as an owner of mines in Pennsylvania?

It is easy to see that by a combination, which at times has certainly existed, between the Reading and the few other coal roads, which are also chief owners of the remaining anthracite fields, these carriers would be able to force a coal famine that might, if continued, sacrifice more lives than were lost in any American battle. One would think that Congress must have some power, somewhere and somehow, to prevent such an absolute destruction of interstate commerce; but the question

is whether it actually has power, under the commerce clause, over the Reading as a private owner of mines, and not as a carrier of interstate freight?

For the sake of brevity, I shall designate as a "State" company or road one which is chartered by a State and which operates a railway wholly within that State, as distinguished from a company chartered by Congress, or from one which has a road in two or more States, and shall sometimes use the word "national" in lieu of "interstate" as applied to commerce, and "road" in place of "company."

All commerce originates in some State, and it remains State commerce until a carrier, either by contracting to deliver it in a different State or by hauling it into another State, makes it interstate traffic. Clearly, then, it is virtually in the power of the State roads to prevent much, and on one theory all, traffic from becoming interstate commerce by simply refusing to accept it as anything more than purely State freight. Under an interpretation of the commerce clause that is frequently accepted, so long as the traffic remains State freight the roads would be solely responsible to their State governments and outside the jurisdiction of Congress.

But it is also evident that the great bulk of interstate commerce is handled by State roads. Its four greatest carriers are the New York Central, Erie, Pennsylvania, and Baltimore and Ohio, each of them a State road. Suppose that all State companies, by a subtle and intangible understanding, should each for itself refuse to accept any but State freight; and if the practice were universal no one road would be at a disadvantage with its competitors. They would thus be in position to do one of two things, either to subject the public to the expense of reshipment at every State line, or else place an embargo upon the commerce of the United States vastly more rigid and disastrous than any that the combined nations of Europe could enforce by war. So that either Congress must obtain and exercise an effective control over the State roads, or else it will be found sooner or later to have but little if any actual power over interstate commerce, or any real ability to protect the people against the piracy of the railways.

The great puzzle in the railway problem has always been the one created by the double or divided jurisdiction of the nation and of the States, and by this ability of State roads to refuse to convert State traffic into interstate commerce. It is the jurisdictional puzzle—one which all men must concede as a potent and perplexing factor in practical legislation. When so grave a difficulty really exists, and one as to which the best men may honestly and fairly differ, it is quite certain that the railway corporations, with their exhaustless wealth and brains, and through their lawyers, writers, and secret agents, will intensify the trouble and exert every effort to prevent the enactment of laws that would subordinate them to a controlling power.

The bill proposes a solution of this jurisdictional difficulty. It is based upon these propositions:

That a State can not authorize a railroad company to carry interstate commerce.

That Congress alone can grant this authority.

That in making such a grant to a State company Congress may require, as a condition precedent, that the company shall agree to waive all rights as against the jurisdiction of the United States which it might otherwise possess, and to concede and accept the plenary power of Congress over it as a carrier of interstate commerce during its public engagement to so carry.

And that, by such agreement upon the part of a State company, Congress may acquire and exercise over State roads whatever control it shall deem necessary or expedient for the general welfare.

It will be observed that the foundation of the bill, so far as it relates to State companies, is simply that of an ordinary contract between two parties. The constitutional power of Congress to regulate commerce has nothing to do with this contract one way or another, except in so far as it compels the company to obtain from Congress the legal authority to carry. The transaction is merely the grant of a privilege for a consideration, exactly as is a grant of money for the building of a ship. It only comes within those rules that apply to ordinary contracts between individuals, and is not in the least affected by the character or degree of the power of Congress over commerce; not a bit more than is a contract to erect a public building; and in this respect the basis of the bill differs from that of the act of 1887.

Whatever difference of opinion there may be as to the expediency of acquiring jurisdiction over State roads by this method, there will be none as to the legal correctness of the above propositions.

That a State has no power whatever to authorize a railroad to carry interstate commerce would be true even if the Constitution had not assigned this power to Congress. Take the broadest view of a State's sovereignty, and concede its power over commerce within its borders to be plenary and absolute, still the scope of that power is bounded by the lines of its territory. Assume that Kansas had supreme authority over all freight upon its soil, evidently Missouri and Colorado would possess equal sovereignty in their territory. Undoubtedly Kansas may charter a company to built a road from Wallace to Kansas City, but it can not authorize it to built one in Missouri, having no jurisdiction in that State. Missouri may charter a company to build from St. Louis to Kansas City, and the rails might be only a tenth of an inch from those of the Kansas road, still neither State possesses the ability to cross the line between them. Each can go to it, but neither can go beyond it. The whole power of a State, be its sovereignty what it may, is cut off squarely and completely by this line.

Hence it can not have any power over persons or property beyond the line, because these are subject to another State. Suppose that the Constitution did not exist, and that the States held the same relation to each other that great nations hold. In that event could Kansas, by its own right, cross into Missouri and take persons and property out of it, or put other persons and property into it? By its own right could it possibly have any legal relation to or any control whatever over commerce in Missouri? The most that Kansas might do, either then or now, would be to permit the entrance of Missouri commerce, but it could not itself cross the line and transfer such commerce. Its ability as an independent sovereignty must terminate with its territory. Hence if it possesses any other ability, as one of the United States, such ability must be conferred by the Constitution. But it expressly vests in Congress plenary power over interstate commerce, and by so doing prohibits it to the States; so that neither as a natural sovereign nor as a member of the nation can a State possess any power over such commerce.

And what a State can not itself perform it can not authorize another to perform. It can not give a thing which it does not possess. It can not empower a company to cross the line or to handle interstate traffic. The ability of a road chartered by a State stops and ceases with the jurisdiction of the State. So that, as a legal truth, no State road can or does obtain by its charter the power, the *vires*, either to carry into another State or to receive commerce therefrom. Nor does any State charter in fact contain a grant of that authority. Yet the whole ability possessed by a corporation is precisely such and such only as the charter gives. That charter is the full measure of its powers. In Thomas *vs.* Railroad Company, 101 United States, 81, Justice Miller held that—

> The powers of a corporation organized under a legislative charter are only such as the statute confers; and the enumeration of them implies the exclusion sion of all others.

He said:

> We take the general doctrine to be in this country, though there may be exceptional cases and some authorities to the contrary, that the powers of corporations organized under legislative statutes are such and such only as those statutes confer. Conceding the rule applicable to all statutes, that what is fairly implied is as much granted as what is expressed, it remains that the charter of a corporation is the measure of its powers, and that the enumeration of these powers implies the exclusion of all others.

Therefore a Kansas company must either obtain the legal ability to cross a State line elsewhere than from its charter or remain utterly devoid of such ability. Adjacent States can not grant it, for their ability is no greater than that of Kansas. They may, as an act of comity, authorize the company to transact business in their territory after it gets there. But from whom is it to obtain the ability to get there?

Just here the Constitution steps in. By its provisions a State line, though purely an imaginary one, is yet as real and masterful as is the sovereignty of the nation. Like the flag, it represents the authority of the United States as distinguished from that of a State. It represents "commerce among the several States" over which Congress is given plenary control, as distinct from that commerce in Kansas or Missouri over which its legislature has jurisdiction.

It is as a hidden wire intensely charged with the electric power of a mighty nation, across which nothing can pass without being flashed out of the sovereignty of a State and up into the exclusive sovereignty of the United States. The very act of passing freight over it, or of an agreement to pass freight over it, changes the traffic from State into interstate commerce. So that from Congress alone can a State road obtain, not merely the permission to cross the line, but, what is far more, the very strength itself by which alone the company becomes legally able either to cross or to carry interstate commerce. For this service, until Congress has breathed into the road the spirit of national life, the nation's *vires*, it is as dead and powerless as were the dry bones in Ezekiel's vision. In the recent case of Hamilton *vs.* Dillon, —— U. S. ——, Justice Bradley said:

> It is conceded that in many cases the power to make rules and regulations on a particular subject is a limited power, having respect to mode and form, and time and circumstances, and not to substance. But it also must be conceded that in other cases the power is much more extensive and substantial. Thus in the Constitution, the several powers "to regulate commerce," "to establish a uniform rule of naturalization," "to make all needful rules and regulations respecting the territory or other property belonging to the United States," are understood to give plenary control over those subjects. The power to regulate commerce has been held to include the power to suspend it (1 Kent, 432), and the power to make rules and regulations respecting the territory of the United States has been held to include the power to legislate for and govern such territory, and establish governments therein. (4 Wheat., 423; Story Con., 1, 328.) The extensive effect given to these clauses is undoubtedly largely due to the character of the instrument and that of the donee of the powers, to wit, the legislature of the United States, to whom the grant of power means the grant of a branch of sovereignty. It shows, however, that the rule of construction depends, at least in some sort, upon the nature of the subject-matter. In the case before us the power of the Government to open and regulate commercial intercourse with the enemy was intended to be conferred upon the President and the Secretary of the Treasury. The power of regulation in such a case is to be taken in the broadest sense, and, in our judgment, includes the power to impose such conditions as the President and Secretary should see fit.

The proposition will not be disputed that, if Congress sees fit to make any grant to a State corporation of this ability to carry, it may pre-

scribe the conditions upon which alone so valuable a privilege shall be enjoyed. As the guardian of the public welfare and the trustee of the nation's power, Congress, being charged with the duty as well as the authority to regulate commerce, is under no conceivable obligation to impart to a few grasping adventurers, holding a charter from a State, the ability to fleece the whole people by carrying national traffic when they please, how they please, and upon such rates as they shall extort. It might confer this privilege upon certain roads, and refuse it to others, as it does a mail contract. It might demand heavy bonds and impose criminal penalties, or charge a royalty, or fix the rates, or prohibit discriminations of every sort, or require competition between all such carriers. I am not discussing the expediency of certain conditions, but the power of Congress to affix any condition at all. It clearly has this authority; because the ability to make a grant is also the ability to refuse to make it, or to make it in whole or in part, or with or without conditions.

And in this case the privilege to be granted is one of incalculable value to the roads and interest to the people. Its possession by a single corporation would speedily enable it to control every road on the continent and to acquire a fortune the greatness of which is beyond finite comprehension. To say that the people's trustee must bestow such a privilege—a very Aladdin's lamp—upon a few individuals, without conditions, without safeguards, without requirement for the performance of duties, is to be guilty of an impertinence so lofty and an arrogance so sublime that only a corporation attorney can attain thereunto.

The authority to prescribe any condition makes Congress the sole judge as to the object, character, or expediency of the terms upon which it will make the grant.

It may have as an object the raising of national revenues, regularity of service, cheapening of rates, or the removal of all legal doubts as to its jurisdiction; and it certainly may adapt the conditions to accomplish the object. So that by this method it may properly and fully obtain a control over the deeds of State companies, which, under the commerce clause alone, it might not so clearly exercise, if at all. Thus it could prevent the gross evil of an ultimate ownership of all anthracite coal mines by a few State roads, by saying to the Reading and all other companies, "It is immaterial whether our commerce power extends so far as to warrant us in prohibiting you from mining coal in Pennsylvania. But we alone can authorize you to carry national commerce, a business worth millions of dollars annually. You can only have this authority upon the condition that you will neither directly nor indirectly engage in any business except the strict and legitimate business of a railroad company as such."

There would be neither hardship nor duress in the case, because the Reading has no possible claim upon Congress for a grant of the privilege. It is one which Congress may make or refuse at will, and one which the Reading may freely accept or reject. The question of profit between the interstate traffic without mining, and mining without that traffic, would solely determine its action and be the consideration. The question of protecting labor in the mine, and protecting the pockets of those who use anthracite would be the consideration to Congress. Each party has something which the other wants, and they trade or not at will. The transaction would be as free, fair, and proper as any business dealing between individuals can possibly be.

In 1866, by the act "to facilitate communication among the States," Congress granted, without conditions, the authority to all railroad companies to carry interstate traffic; and under it they have ever since derived and exercised their legal ability so to do. The State roads are therefore barred, by a practice of almost a quarter century, from now disputing either the authority of the United States to make the grant, or the equity of exercising the authority. It provided that "Congress may, at any time, alter, amend, or repeal this act." So that whatever rights or benefits the roads have acquired under it, they took and hold with full notice of modification or withdrawal "at any time." Hence they neither have nor can have any "vested" rights in or under the act, or any just ground for complaint, if Congress, in order to protect the public, shall now amend it by prescribing conditions. The words of the late Chief-Justice Waite are exactly to the point. In the celebrated Granger case, 94 United States, 124, he said:

> But a mere common-law regulation of trade or business may be changed by statute. A person has no property, no vested interest in any rule of common law. That is only one of the forms of municipal law, and is no more sacred than any other. Rights of property which have been created by the common law can not be taken away without due process; but the law itself, as a rule of conduct, may be changed at the will or even at the whim of the legislature, unless prevented by constitutional limitations. Indeed, the great office of statutes is to remedy defects in the common law as they are developed and to adapt it to the changes of time and circumstances. To limit the rate of charge for services rendered in a public employment or for the use of property in which the public has an interest is only changing a regulation which existed before. It establishes no new principle in the law, but only gives a new effect to the old one.

The bill modifies the grant by prescribing certain conditions, and so amends the act of 1866 as to restrict its privileges to those companies alone which accept the conditions.

It is not my present purpose to discuss these conditions either as to their character, necessity, or advantage to the public, except as legal propositions. Suffice it to say that they have been vigorously denounced by corporation papers as demagogical, as grossly unjust to the roads, and generally unrighteous! To the best of my belief, and as the author of the bill, I aver that every one of its material propositions is to-day either the common law of England and America, or else a fair application of its established principles; and as such has been judiciously affirmed by our highest courts, and is so declared by the standard legal text-books. From this statement I of course except provisions that are amendatory, or that relate to machinery of execution and matters of that sort. There can not be a wider difference than that which exists between American railway law as it really is and the practice of American railways, and those who deduce their opinions as to the former from the latter will be sadly deceived.

The bill is simply a statement of the substance of railway law in the United States to-day. And before Wall-street editors can show its injustice they must first show the injustice of that common law under which alone the roads were built and have always been operated, and also of those great principles of righteousness which have been accepted by all civilized nations since the days of Moses. It will puzzle them to do it. Righteousness is not their specialty. And they can not do it at all by simply making faces and spluttering. Illustrating by the words last quoted respecting the "office of statutes," the aim of the bill is not "to remedy the defects" in the common law, but rather to condense and embody its leading principles in a single statute, with such specific application as is fairly required "by the change of circumstances" during half a century.

The great and important difference between the bill and the common law is that it provides a surer remedy and a speedier mode of enforcement, through the Interstate Commission and by summary action of the courts, than is possible under existing law. This fact is the strong argument in its favor, and the imperative necessity for its enactment. At present no officer of the United States or of any State, I think, is charged with the duty of setting in motion the legal machinery that compels a performance of duty by the roads or punishes a violation of obligation. When train-service is suspended, though for months, what officer or agent of the United States is required to start the law? Even Congress can only "investigate" through committees practically without power to compel testimony. What is nobody's especial business is never done.

Private citizens, particularly if engaged in business, can not afford the expense or consequences of litigation with rich and revengeful corporations. And, as a fact, the common law is never enforced against the roads, except when one fights another. Practically there is no law governing them, because there is no enforcement of law. A dead statute is no statute. So that those provisions of the bill which empower and require the commission to enforce the law and which prescribe penalties, really make just the difference between actual law and no law at all for American railways. And it is exactly this fact which so "harrows up" the corporation soul and causes their paid shriekers to howl. All criminals oppose the execution of law.

Will any one show why the railroads should virtually be free from law or practically above law? Is their business, conduct, or temptation of such character and relation to the people as to warrant the absence of legal restraint? The question provokes a smile, but it is not ironical.

In 1830 there were but 23 miles of railway in the United States. To-day there are 150,000 miles. The companies have an alleged investment of $8,000,000,000, of which probably one-third is a bookkeeper's juggle and another third is certainly a weeping and watery lie. They collect from the people about $900,000,000 annually, or a sum almost equal to the public debt, and they kill or wound an average of five persons a day. Their net earnings are about $300,000,000, or a greater sum than the annual appropriation bills passed by Congress.

They are the dominant, corrupting, and fateful power in American business circles, politics, legislation, and courts. They respect nothing but superior strength, are governed by nothing but self-will, and are as dead as Shylock to the simplest notions of humanity and of the public welfare. What is a soul in man is in them a griping ache of greed, a convulsive spasm of avarice, and their god is gold! They habitually violate both national and State laws and pitilessly trample upon justice; but Wall street alone takes public notice of their crimes, which year after year remain unpunished and unprevented.

In view of their opportunities, power, and rapacity, is it not a little singular, perhaps mysterious, that while we have in twenty-five great volumes national statutes providing minutely for the government of almost everybody else and thing, yet there is not a single United States statute for the government of railways, except the negative and partially prohibitory one of last year? Probably this bill is the first affirmative proposition to define their duties or to enforce their obligations. Only in recent years have the States begun to legislate upon parts of the general subject, and then but in a negative way with an air-brake attachment controlled by a commission.

For these mighty and combined corporations, for this enormous commerce that springs out of every village and moves as broadly and ceaselessly across the continent as do the clouds, you have nothing but the common-law rulings and processes that governed wagoners and stages in England centuries ago!

The mere statement of the fact is startling. Everybody realizes the

necessity of statutory and enforced law over the roads, and the wonder arises whether it can now be enacted against their influence. Is it too late?

A potent reason for the adoption of the bill also exists in the fact that American railway law has been made by the courts, and in some instances by corporation judges, rather than by Congress or a Legislature. Sixty years ago there was no occasion for such law, because no railways. When these came they simply took the place of country roads, turnpikes, and canals as public highways for the transportation of travel and traffic. Necessarily they were built and operated under the common law relating to highways and carriers.

Being an agency distinctively different from any before known, new and doubtful questions arose that often required prompt action. Naturally the parties resorted to the courts. So that these questions, instead of receiving settlement by the Legislature, were determined by the courts, which extended or applied the established principles of common law, as the peculiarities of the new agency or the rights of the public required. Hence our railway law to-day is substantially a growth and bundle of judicial decisions, and not at all a legislative enactment. It is common as distinct from statutory law.

This very fact challenges attention, because it is a gross neglect or abnegation by Congress of its constitutional duty. The power to make laws is prohibited to the courts by being expressly vested in Congress. That the courts, in the absence of statutes, should enforce common law is eminently proper and vital; but this does not relieve Congress. And that it, during a half century teeming and bristling with developments, should suffer the courts to really make the specific law now governing a system so immense and a service so fateful to the Republic as is that of our railways, was simply a gross dereliction of duty. There was no excuse for it and certainly is none for its continuance. If nothing more be done, surely it is high time that the essence of the widespread and cumbersome mass of varying judicial decisions be at least embodied in a precise statute, and that specific penalties be imposed.

And in determining what that statute shall be Congress is no more to be bound by these decisions, made in the absence of statutes and under common law, than it is by those of England two hundred years ago. Circumstances have changed. Competition is giving way to unified combination, and equity to rapacity. Forces more cyclonic and dangers more vengeful than any known to American history sweep up and spread as a black cloud in the heavens. Upon Congress rests the responsibility and duty of making the law what it ought to be, irrespective of any opinion which a corporation judge may have twisted out of vague common law for the protection in a particular case of a master behind the bench. It might well happen that a statute enacted by the agents of the people and for the protection of the people, should be quite different from a web of decisions virtually spun by the corporations acting through judicial weavers. That the great majority of our judges are pure, upright, and free from corporation influence I have no possible doubt, and gladly say so. Their decisions amply prove both personal integrity and learning. But that others were under this baneful influence I have equally no doubt; the decisions justify it. And I now say so for the purpose of emphasizing the necessity that when taking current railway law as a standard of judgment we should ever remember how it was formed, and the interest of the corporations in its formation, should be always on guard against a judicial exercise of their power and be swift to strike its effects from existing law. The true question for Congress to decide is not what the courts have held in the absence of statutes, nor what a particular decision may have been, nor what *obiter dicta* may have been injected, but is, what do the necessities of to-day and of the future, the welfare of the people, and the safety of the Republic demand that American railway law ought to be? That is the point.

The question may fairly be asked: Since the jurisdiction of the bill depends upon a voluntary acceptance by the State companies of the amended act of 1866, and since the conditions embodied might be distasteful to them, why would they not refuse their consent; and if they did, what would be the situation?

They would not decline, for three controlling reasons: First, they would have everything to gain by accepting, and second, everything to lose by rejecting the amended law; and third, its enactment would have so changed the present posture of affairs that they dare not decline.

First. Prior to acceptance they could not carry a dollars' worth of interstate travel or traffic, the penalties being amply sufficient to prevent them. They would see that the bill only required a regular performance of their charter duties and a faithful execution of existing obligations. Also, that the profits of their business wholly depend upon exactly the same things. It is their true financial and corporate interest to do daily precisely what it says they shall do. Their own pockets demand everything that it demands. Suppose that the Erie accepted and the Pennsylvania declined? The former would increase its business and profits, say, to the extent that the latter lost national traffic. It would enlarge its territory, multiply the value of tonnage, rapidly increase its wealth, and expand its power; while the latter would contract, sicken, and soon be captured by the former. Or suppose a combination of all trunk lines should be mooted, but that one of them, being heartily willing as well as able to perform all its duties regularly, should realize the advantage of carrying the whole national traffic; would it join the "combine," or accept the act? It would take the traffic! But an acceptance by one would compel an acceptance by all.

Second. Suppose, however, that a perfect combination of all the railroads in the United States were effected, then what would be the situation? The State roads would be amenable to their own Legislature, and so far as the bill is concerned might continue to haul State freight. Those chartered by the United States, as were the Pacifics, would be directly responsible to Congress under statutory law. Those operating a road in more than one State would be subject to the constitutional power of the United States, and to prosecution by it both under that authority and under common law. Hence all of them, except for the present the State roads, would face a legal conflict with a government able to bear the expense, and to enforce the decrees of its courts, as to the nature of which decrees no lawyer could entertain a doubt. In addition, they would face the certainty of national legislation compelling their service as interstate carriers.

Section 7 of the act of 1887 prohibits combinations to prevent the continuous carriage of freight from place of shipment to place of destination, under penalty; and all roads are subject to the act. Say that a car from Chicago to New York reached the Pittsburgh depot. If the Pennsylvania, as a State road, declined to receive it, the commission would secure summary action by United States courts enforcing the act of 1887 and backed by a nation. At the same time the company would be on trial by the State court, as a common carrier, for refusing Pennsylvania freight destined to another State, and would be before the Legislature to save its charter from forfeiture for abuser or non-user. Every railroad in America would jeopardize its charter by refusing interstate freight.

The alternatives, then, that would present themselves to all the companies would be these: On the right, steady business, regular profits, peace, and a clear conscience, as a reward for the performance of charter obligation; on the left, loss of business, shrinkage of profits, shriveling of stocks, bonds, and property, legal and legislative war with the United States, forfeiture of charters by the State, and the deserved fate and remorse of a criminal. And in the event of forfeiture, as was long ago decided by the supreme court of Pennsylvania, the road would remain just where, what, and as it always was—a public highway; and the franchise of operating it would either be directly exercised by the State through a receiver, or indirectly by another corporation, to whom the Legislature would grant that franchise by the same power that the original grant was made.

Perhaps this eminent court in 1856 was as disinterested and learned in the law as is the average railroad attorney of to-day; and perhaps Judge Jeremiah Black, as a writer of English, forging great truths into terse sentences, like an intellectual trip-hammer, might at least equal a Wall-street editor. A sample is appended, which contains the essence of corporation law on the matter of forfeiture. So that having everything to gain by consenting, and everything to lose by rejecting, the roads would accept the amended act of 1866. But neither their wishes nor course should be in the least regarded by Congress in prescribing the conditions embodied. The design of law is not to please offenders, but to restrain them, and by so doing to protect the public.

Third. The enactment of the bill would thus squarely have raised the issue between the power of the United States to enforce law and the ability of the railways to evade law. On the one side would be the National and State Legislatures and courts, vigorously upheld by an intent and resolute people; on the other a handful of directors and salaried officials, dependent upon the will of stockholders whose capital was tottering on the brink of a precipice. And the sole issue at controversy would be whether the roads should submit to executed law. The corporations would then vividly realize what now they forget in the pride of their leaping power, namely, that everything they have, enjoy, or can do, hangs like a plummet to its cord, upon law alone; and that law derives its strength solely from the will and obedience of a great people. They would then realize what they ought to realize now, that not a rail, car, stock, bond, or charter has any security whatever save from the public will as expressed in law, and chiefly from that tender homage and reverence which radiates from the glowing hearts of our liberty-loving millions as does the light from the sun.

These men, too, have rights—a right to business, to profits, to property and power; and necessarily their individual interests differ and clash. Yet each man yields to the law as being the standard and embodiment of the public good, and *en masse* they uphold and enforce the law. And when the issue was squarely made as to whether the corporations should obey the law, every musket in America would of itself jump into serried and countless ranks were there need. The cowardice of the corporations is only equaled by their arrogance. They are brave in spending other people's money in hiring detectives to hound a brakeman or miner—he is poor and defenseless. But let their presidents face a criminal trial leading to a felon's cell, and a rabbit before a pointer would not be a comparison. There is not a corporation in America that would dare to reject the amended act.

It is strange that the capitalists who control roads and especially the men who manage them do not see the inevitable result of their

present methods, and that ultimate security can only be afforded by the enactment of such a law as this bill. They are their own worst enemies and as blind to their surroundings as is an oyster to the ocean. By their habitual violations of law; by respecting it only where they can use it as a cat's paw in snatching a chestnut from the fire; by doing through their own rifles in the hands of Pinkerton under their pay, that which the State alone through its officers or militia has the right to do in enforcing law; by corrruptly influencing elections and Legislatures, State and national, for the express purpose of preventing the enactment of laws restraining their own license; by malignant efforts to bull-doze men whose duty it is to make or enforce law, but who neither shield corporation rotteness nor fear their power; by prostituting the press when they can; by gagging with threats of vengeance merchants and shippers; by wrenching out of the traffic all that it will bear, in pitiless disregard of the right of the farmer and mechanic to the profit of his labor; by weary years, each more crowded than its predecessor with their evasions, trangressions, and contempt for law, the corporations are not only destroying law, but what is far worse, that respect and homage of the masses which are the very strength and life of law.

They are chafing the cord on which alone hang their franchises, profits, and existence. By greed and grind they are arousing and enraging, not merely a few employés in the grip of their power, but the millions of a continent, whose power is that of a cyclone. No other people are so patient, so long-suffering, so slow to avenge; but when they do strike it is as swiftly and surely as the lightning from God's clouds.

If Wall street wants a whole year of Black Fridays and the silence of a tomb it can be accommodated. Colossal rascalities are not the pride of the American masses; nor is a plea of the statute of limitations in bar of a fair trial the jewel of American honor. Corporations have power—terrible power—but it is only as a dew drop to an ocean compared with that of the whole people. This bill is simply a proposition to exert that power in a salutary and constitutional way over the corporations. It is reasonable, fair, just, and imperatively demanded by the public welfare. It raises the square issue between railways without or above law, and railways controlled by law. They can pass it, perhaps they can defeat it; but some day they will be curbed and subjected, as are all other persons, by the public will. It may be through a statute simply embodying existing common law, or it may be through the lightning's flash and the cyclone's sweep—but it will be.

[Supreme Court of Pennsylvania. Erie and Northeast Railroad Company vs. Casey, 26 Pennsylvania State Report, 307.]

Black, J. Contracts between the State and corporate bodies can not be implied from anything but plain words; and those words must be spoken by the General Assembly, and enrolled in solemn form among its acts. * * *

The charter was repealed at the last session of the Legislature, and the governor was authorized to appoint some qualified person to take charge of the road which the company had built, and keep it in good running order and repair for the use of the public.

The authority given by the act of October, 1855, to the defendant to take possession of the railroad is asserted by the plaintiffs to be an act of confiscation—a taking of private property for public use without compensation. If this be true, the injunction ought to be awarded; for no legislature can do such a thing under our constitution. When a corporation is dissolved by a repeal of its charter, the Legislature may appoint, or authorize the governor to appoint a person to take charge of its assets for the use of the creditors and stockholders; and this is not confiscation, any more than it is confiscation to appoint an administrator to a dead man, or a committee for a lunatic. But money or goods or lands, which are or were the private property of a defunct corporation, can not be arbitrarily seized for the use of the State without compensation paid or provided for.

This act, however, takes nothing but the road. Is that private property? Certainly not. It is a public highway, solemnly devoted by law to the public use. When the lands were taken to build on they were taken for the public use; otherwise they could not have been taken at all. It is true the plaintiffs had a right to take tolls from all who traveled or carried freight on it, according to certain rates fixed in its charter, but that was a mere franchise, a privilege derived entirely from the charter, and it was gone when the charter was repealed.

The State may grant to a corporation, or to an individual, the franchise of taking tolls on any highway, opened or to be opened, whether it be a railroad or river, canal or bridge, turnpike or common road. When the franchise ceases by its own limitation, by forfeiture, or by repeal, the highway is thrown back on the hands of the State, and it becomes her duty, as the sovereign guardian of the public right and interest, to take care of it. She may renew the franchise, give it to some other person, exercise it herself, or declare the highway open and free to all the people.

If the railway itself were the private property of the stockholders, then it remains theirs, and they may use it without a charter as other people use their own, run it on their own account, charge what toll they please, close it or open it when they think proper, disregard every interest except their own. The repeal of charters on such terms would be courted by every railroad company in the State, for it would have no effect but to emancipate them from the control of law and convert their limited privileges into broad, unbounded license. On this principle a corporation might be rewarded but never punished for misconduct. Repeal of its charter instead of bringing it to a shameful end would put "length of days in its right hand and in its left hand riches and honor."

But it is not so. Railroads made by the authority of the commonweaith upon land taken under her right of eminent domain, and established by her laws as thoroughfares for the commerce that passes through her borders, are her highways. No corporation has any property in them, though corporations may have franchises annexed to and exercisable within them.

Such a franchise the plaintiffs had, but they have it no longer. The right to take toll on a road is an incorporeal hereditament, which may be granted to a corporation or to an individual, and the grantee has an estate in the franchise. But what estate? The estate endures forever if the charter be perpetual; for years if it be given for a limited period, and at will if it be repealable at the pleasure of the Legislature. This corporation, after its privileges were abused, had an estate at will, and the Commonwealth chose to demand repossession. That terminated the estate as completely as an estate for years would be terminated after the expiration of the term. The grant was exhausted, the corporation lived its time out. Its lease of life was expressly limited, at the day of its creation, to the period when the Legislature should dissolve it for misconduct. When the legislative will was spoken its hour had come.

Having no right to keep the franchises any longer, it would be absurd to claim compensation for taking them away. To say that the stockholders have a right to compensation for the franchises because they are wrongfully taken, and that they were wrongfully taken because they have a right to compensation, would be reasoning in a very vicious circle. If the stockholders had a right to retain the franchises the charter could not be repealed at all, with or without compensation. If they had no right to retain them, they have no claim to compensation.

The Tariff.

SPEECH

OF

HON. WM. H. MARTIN,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 8, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. MARTIN said:

Mr. CHAIRMAN: It is with great diffidence that I rise to address the House this evening, but this is an occasion fraught with interest, coupled with the seriousness of the question now under consideration—a question which involves the welfare of the people and the prosperity of the Government. The question of a revision of our tariff system is one that necessarily requires close and careful study.

It is a broad and important question, which I approach with hesitation. I trust I may be pardoned for trespassing upon the time and patience of the House in attempting to speak on a subject where so many interests are involved.

This is the first time I have had the honor of addressing this body. I am free to confess I am not sufficiently equipped with information to discuss before this House the great tariff question, which has been the subject for consideration by some of the most learned and able men of this generation. This is a new place and a new situation for me. I am not schooled in the arts of oratory, and have had limited experience in the halls of legislation. Strange as these surroundings may be to me, I have the same right as others whose faces are familiar to these walls, made so by years of service in this Chamber. I owe it to myself and to my constituents who have honored me with a seat upon this floor to give my voice and vote in support of this bill, which in my humble opinion is for the benefit of the people whom I represent.

I am a member of that party which has always advocated the principles of reform, and to relieve the oppressed and overtaxed millions of laboring men and women of this grand and growing Republic. My allegiance to the party under whose banner I am proud to march tells me I must do what I can to bring about that reform in the tariff system to which the Democratic party stands pledged to the sixty millions of American people. I am for the passage of the bill under discussion, commonly known as the Mills bill, because it is Democratic, and I believe it to be right! [Applause.] I have no apology to make for the position I take upon this matter. I do it from a conviction of duty and right, and no matter who may say so, my vote for this bill is not a vote to cripple any of the "infant industries" of this country. [Applause.]

An industry that can not prosper with as high a rate of duty as is authorized by this bill ought to be abandoned. In his message to Congress President Cleveland struck the key-note of future prosperity and sounded the death-knell of a robber protective tariff, by which the manufacturer is made richer and the grand army of laboring people reduced year by year to poverty and almost starvation.

Who does protection protect? Not the farmer; nor the man or woman in the factory; not the plow-boy nor the bricklayer; not the man at the forge nor the woman at the loom. I will tell you, Mr. Chairman, who it protects. It protects the rich; it protects the manufacturer, whose millions are made by the sweat and muscle of the laboring people, who bear the burden of taxation and to whom we must all look for the further perpetuity of this Union. The man who earns his bread by the sweat of his brow is, in my opinion, the grandest work of God. He is honest, he is fearless, and he is brave.

Who is it that has been here for months swarming about the halls and corridors of this Chamber asking for protection, asking that the robber tariff be continued as one of the perpetual institutions of this Government? Has it been the farmer with his plow-shoes hammered full of hobnails, dignified by the virgin soil upon his hands, whose tread we have heard upon the marble floors of this Capitol? Has it been the artisan from the workshops and manufactories, with oil and grease upon his clothing, deep furrows upon his brow, bearing the sign of years of labor, weighted down by the tax of protective tariff on almost everything he consumes? I ask my Republican friends if they have seen any of this class attempting to batter down the doors of Congress that protection may live. May I ask the gentlemen upon the other side of the House if they would know this class if they chance to meet them?

From the manner in which their interests are neglected and trampled under foot by the other side of this House I doubt exceedingly if a delegation of these honest and toiling people were to be met in the middle of Pennsylvania avenue by the entire Republican membership of this body, with brass bands in the front and banners in the rear, there would not be one of you who would know, without inquiring from this side of the House, who and what this strange body of people were and from whence they came. [Applause.]

No, we have seen none of this class here. Their voices were heard in the great battle fought in November, 1886, when they sent their representatives to this floor instructed by the voice of their toiling millions to reduce taxation on all the necessaries of life. In the battle to be waged this year there will come a charge from the great body of working people which will be made on the second Tuesday of next November, and so terrific will it be in its force that you protectionists will fall before it like grass before the scythe.

The day of the protectionist is fast drawing to a close. We are entering upon a new epoch in the history of our country.

Mr. Chairman, I will tell my Republican friends who have been from the day Congress convened until the present hour asking for the continuance of the protective tariff system. You all know him well, you have smoked his three for a dollar cigars and drank his sparkling champagne. You have felt the touch of his soft, velvety hand and seen him drive from one end of the avenue to the other in his satin-lined carriages and English dog-carts drawn by bang-tailed horses, driven by swell young men who for style, pomp, and glory rival the choicest selection of modern dude. This is the class of men we bump up against and fall over from day to day in and about the corridors of this building. Men who have grown rich by protection, who think this Government was established for their particular benefit. This is the manufacturer who says "Give us protection or down goes your infant industries."

A system of protection which protects the few at the expense of the many is a species of class legislation which is a blot upon the fair name of American liberty. It is a fraud and a farce, and has served to encourage and build up an aristocracy more dangerous than that which has so long disgraced the history of the Old World.

From the official report I find the revenue for the fiscal year ending June 30, 1887—

amounted to $371,403,277.66, while our expenditures for the same time, including interest and sinking fund for the public debt, amounted to $315,835,428.12; leaving a surplus of $55,567,849.54 over and above all requirements for current expenditure. The receipts for the current year up to March 1 amounted to $253,905,890, and the estimates for the remaining four months are $136,094,110; making total receipts for the year $390,000,000. The expenditures for the current year to March 1 amount to $180,594,915, and the estimates of expenditure for the remaining four months amount to $129,405,085, making a total of expenditures of $309,000,000; leaving a surplus of $81,000,000.

The bill now under discussion reduces in general the rates of taxation. It reduces the amount of tariff on articles upon which the tariff is assessed. The law upon which the Republican party is standing embraces in its schedule 2,000 articles. Among those 2,000 articles there are between 175 and 200 which pay a higher tax than the remaining 1,800; but these 1,800 articles, bearing a lighter measure of taxation, are those consumed by the wealthy. Among those other articles upon which the heavier taxation falls there are embraced many necessaries of life which must be purchased for the purpose of consumption by the humbler and harder-working classes of the country.

The bill reported by the Ways and Means Committee places most of these articles of necessity upon the free-list. This is done in the interest of labor, for the protection of the poor. While many of these articles are by this bill placed upon the free-list, most of the articles are reduced as to the amount of tariff imposed. Why is this? It is for the purpose of meeting the exigencies of the times. Had I the power I would apply the ax to the root of the tree. I would permit each State to arrange its own commerce and its own taxes. But I am not in the forum where it would be proper to advocate a policy of that character.

But, sir, under our system protection creates different classes among the people. We live in a free and enlightened land, where classes and distinctions are by such systems of taxation encouraged.

The total amount of the surplus in the Treasury on the 1st of next July will, it is estimated, exceed the sum of $150,000,000. These are immense sums of money to be drawn from the people in the shape of taxes, and of which the farmers of this country pay a very large percentage.

Day by day, week by week, month by month, and year by year the circulating medium of the country through this system of excessive taxation is being drawn from the people—from the channels of trade—until there is not enough money in circulation with which to carry on the legitimate business of the country. The doors of the Treasury are fairly bulging out and breaking from their hinges, so great has become the surplus—the money of the people drawn from their pockets through this infernal system of taxation known as "protection." A Government like ours should tax its people for the purpose of raising revenue sufficient to carry on the expenses of the Government, but no more. What right has the Government to take from its people the circulating medium, which is the property of the people, and lock it up in the vaults of the Treasury, where it remains idle, and neither the people nor the Government is made the beneficiary?

What is the result of this? A stagnation in business resulting in failure after failure, to be followed with bankruptcy, ruin, and general demoralized condition of commercial affairs. This is what our system of protection is doing. There is no longer any use of disguising the fact that a financial crisis is staring us in the face, and I predict now that unless the burden of unjust taxation is lifted from the people it will come only too soon.

The passage of the Mills bill will do much to avert the coming danger, unless the crisis is so nearly arrived that there is no escape. As I have already stated, the bill under discussion reduces the whole tariff schedule, and at the same time provides sufficient revenue for an economical administration of public affairs. No calamity can follow its adoption. All classes will be treated alike and every avenue of trade will be fairly dealt with. There will be no injury to commerce and no injustice done to any citizen in any part of this great Republic.

I am opposed to the protection policy of our Government. It is an enemy of the people who toil. It takes from them what is justly theirs and places it in the pockets of the rich and favored few, who flourish in splendor because the laboring people, who constitute the great majority of consumers, must by the system of protection pay tribute to the aristocratic manufacturer.

The policy of protection as advocated by the Republican party is a menace to the progress and prosperity of the millions of farmers and other laborers from one end of the country to the other.

I come from one of the richest agricultural districts in the great State of Texas. I know, as all must know who are the least familiar with the customs and hardships of those who dig from the soil the products of the country, that they are unjustly taxed. I am myself a farmer and know whereof I speak.

Who of all the people in this Republic are more industrious than the farmer? Who contributes more to the support of the Government? And yet who derives less benefit from its national council? They work both early and late. It is true their ways may be simple and their wants few, yet the necessary articles for their consumption are precisely the same as those who are blessed with the smiles of fortune and live in affluence and luxury.

There are few articles of necessary consumption which the people of my district are compelled to have and do have that are not subject to taxation under the present system of protective tariff. There is little if any quality of clothing which is not taxed. The cost of almost every article which goes to make up the various pieces of machinery and implements with which to cultivate and carry on the farm, is increased because of protective-tariff taxation.

Every mowing-machine, plow, wheat-drill, cultivator, wagon, buggy, trace-chain, harrow, ax, ax-handle, hoe, hoe-handle, and hundreds of other necessary articles are found stamped thereon the mark of protection. Is there any wonder why the great majority of people are complaining and threaten to rise in just indignation while laboring under the burden of the protective-tariff policy? The people are looking to you and to me as members of this Congress to furnish them the necessary relief, and if we do not give it to them they will send Representatives here who will.

The farmer is confronted with innumerable obstacles which make his path the harder to travel. There is hardly a State in the Union, and particularly in the West and South, where farm lands have not depreciated from 30 to 50 per cent. within the last ten years.

It matters little how much improvement may be placed upon the lands by the farmer, the land year by year depreciates in value. As the land depreciates taxes increase. It is said there are but two things in this world of which we are absolutely certain. One is death and the other is taxation, and taxation seems to be more certain than death, at least it comes more often. [Applause.]

Almost every article consumed by the farmer is taxed, while that which he produces is not taxed.

The heaviest of protection is imposed upon the poor man. It is not the poor man of Germany, it is not the poor man of England, it is not the poor man of Denmark, it is not the poor man of France, but it is the poor man in your own midst upon whom you set the heaviest weight for the purpose of your protection. [Applause.]

While the lands of the farmer are depreciating in value, as is also his hogs, his cattle, and his sheep, taxation grows higher and higher until it takes about all he produces with which to pay taxes and keep out of the clutches of the sheriff, whose duty it is to sell him out when he becomes delinquent in the payment of his taxes.

What is the condition of the landed interests? I mean the small farms of the poor man. Go to Iowa, to Kansas, to Michigan—in fact, to any of the States of the West and South. Money is scarce; farmers scarcely able to run their farms without assistance. Does the assistance come from the enormous surplus in the Treasury? No; it comes from the banker who lends money well secured for as high a rate of interest as he can get.

The farmer gets his assistance, but how often is it but temporary, to be swallowed up finally by the banker, who has become his creditor, and in a little while all is gone.

Take, for instance, a man who owns a small farm which, according to

the last assessment, was valued at $1,000. The farmer has gotten in debt, and there are thousands of ways by which this may happen without any fault of the frugal farmer. He has a wife and two or three children. Perhaps sickness, followed by death of one of the dear little children, has visited the quiet little home of the industrious farmer. The family physician, who has been daily in attendance upon the sick one from the day that disease became apparent until death laid its icy hand upon the sufferer, is soon at the door of the humble farmer asking that he be paid for his services. Later comes the undertaker, who too must be paid promptly. The doctor's bill and funeral expenses are paid, and upon every dose of medicine given to the sick child there is a protective-tariff taxation. On the plain little coffin in which is incased the remains of the pure and innocent child there is your protective-tariff taxation, every inch of it is plastered over with protection, and over one-half of the price paid for this unwilling purchase is chargeable to the cause of protection.

The system of protective-tariff taxation is about the first thing which greets the child on the day of its birth, and divides honors with the mother in its attention from the cradle to the grave. With these afflictions coming upon the farmer, the doctor's bill, the funeral expenses, the result is indebtedness which he can not clear himself from. He seeks assistance from the banker. With his heart full of woe, grief upon his face, and financial disaster threatening his ruin, he goes to the dignified and oftentimes haughty banker and humbly asks for assistance, with which he hopes to tide himself over the threatening storm. "I want to borrow some money," says the farmer.

"What security have you to offer?" replies the banker.

"I own a small farm which the assessor has valued at $1,000."

"Your farm is perhaps worth that much money, but you know it is not the custom of banks to lend money for any length of time; we prefer to lend it for sixty or ninety days. I do not want to buy your farm, but if you will show me the title, and if it is as you represent it, I think perhaps I can let you have four or five hundred dollars to be secured by a first mortgage."

The farmer, who needs money at once, sees no other way by which he can extricate himself from his financial difficulties.

"Yes," says the farmer, "I will 'pawn' my thousand-dollar home for $500, and agree to pay you all the interest you demand, and upon any terms you may indicate. I am in debt, and I must have money."

The title is examined, the mortgage executed, and the farm "pawned" for one year. The farmer goes to his home and pays the bills of the doctor and the undertaker, and thinks of his dead child who sleeps forever in the little country graveyard over the hill.

It is the spring-time; the plow of last year is worn out. He must have a new one. He goes to the nearest agricultural store and buys a new plow. It is just from the factory, and the steel of the share and mold-board glisten like bayonets in the sunlight. It is ironed from the tip of the beam to the gorgeously painted handles. There is not a spot in the entire structure that is not covered by protective-tariff taxation.

The wife and children want new clothes. They are taken to the country store and fitted out with clothing for the summer. Every article which is purchased to clothe their bodies from the crown of their heads to the soles of their feet bears the imprint of protective-tariff taxation. The crop is about to be harvested; the old mowing-machine, which ought to have been in the scrap pile years ago, will not hold together any longer. A new one is necessary. Upon this, too, are the weights of protective-tariff taxation almost as heavy as the machine itself. The crop is harvested, the autumn is passed, and the blasts of winter wrap the little house and farm in the mantle of whiteness. The family must again be clothed with winter garments. Off to the merchant they are again taken and fitted out with shoes, hats, coats, shawls, and, in fact, everything necessary for wearing apparel, and upon these also is standing out in a most conspicuous place protective-tariff taxation.

Weighted down by these burdens the farmer goes through the dreary days of winter, and just when the flowers begin to bloom and the birds rattle their music to the rising sun, when all nature is jubilant, there comes driving up the road in a handsome carriage, drawn by thoroughbred horses, the banker, who halts at the gate leading to the little cottage, over which is entwined the vines of sadness and sorrow; for just one year ago there was borne away to the little "city of the dead" the precious form of a dead loved one. As the farmer sees the banker walking up from the road the past rises before him like a dream.

"You have not paid my interest," says the banker, "and I have been compelled to leave my business in the city and come out here for it."

"I know," replies the farmer, "that the interest has not been paid; but the truth is I have been unable to pay it. I have had so many things to purchase with which to carry on my farm, clothe my family, and keep the wolf from the door that I have not made the interest money. If you will let it run until I raise my crop I will pay you out of the first money I receive."

"I will consent to that," replies the banker, "providing you pay me a higher rate of interest; otherwise I will have to foreclose the mortgage."

"As I do not want to lose my little home, I will pay any rate of interest you may name."

The bargain is made, the usury exacted, and the banker drives proudly back to his city home, where luxury and splendor reign supreme.

The farmer harvests his crop, which, for illustration, is his wheat crop, which is drilled with a protective-tariff drill, reaped with a protective-tariff reaper, thrashed with a protective-tariff thrasher, measured with a protective-tariff half-bushel, placed in protective-tariff bagging, carried to market in a protective-tariff wagon, weighed on protective-tariff scales, carted into the mill on a protective-tariff truck, emptied into protective-tariff machinery, ground upon protective-tariff rollers, bolted upon protective-tariff cloths, packed by a protective-tariff packer into protective-tariff barrels, and last, but not least, the crop sold to a protective-tariff manufacturer. [Applause.]

It is doubtful if the amount received from the entire crop will be in excess of the amount the farmer has paid to protective-tariff taxation upon the machinery he was compelled to use in raising, harvesting, and taking the crop to market.

The interest, however, is paid upon the mortgage note, though the little family had to make the clothing of the year before do them the second season.

The second interest year comes around and the farmer is again delinquent. The rate of interest is again raised and he is given another year in which to meet the mortgage payment. The third year comes; the interest has been compounded until it almost equals the amount of the principal. It runs a fourth year, and all this time he has paid in protective-tariff taxation for his necessaries of life twice or three times the amount of the interest on the mortgage note. Weighted as he is under the tariff for protection, he sacrifices his little farm, the mortgage is foreclosed, the sale is made by the sheriff, and the little homestead that was loved so well passes into the hands of the banker.

The husband takes the wife and children, leads them from under the roof which has protected them from the storms of winter and heat of summer, out into the road—the public highway—when the wife and mother, with tears in her eyes, looking back through the vines and trees, taking the last farewell from the scenes of her happiest days, where love and devotion were kissed by every flower and blossom; with her heart almost breaking, looking up into the eyes of her brave and honest husband, exclaims, "What is this?"

"This, my dear," answers the husband, "is protection." [Prolonged applause.]

There are thousands of farmers all over this country who are situated as I have described. By virtue of our excessive protective tariff taxation the farmers and laboring people in general are ground to the very earth with so much taxation that they are not able to meet their obligations and supply themselves with the absolute necessities of life. This is especially true as applied to the cotton-planter, for he is dependent upon one crop only every year, and it is not infrequent that for two or three years consecutively his crops are failures.

The conductor, fireman, engineer, and brakemen on our great railroad systems, though they own no land, are alike sufferers from protective tariff taxation. In fact, the entire laboring population of this country are situated the same as the farmer—all victims of a vicious system with which to support, as is said, the Government, that out of justice to this class should be forever wiped from our statute-books.

Gentlemen upon the other side of this House may speak with such force of eloquence that the decorative glass covering this Chamber may be lifted from its resting place regarding the beauties of protection afforded labor under our present tariff system, but let me say to those who eulogize with such grace the beauties of protection that labor has no protection whatever under our present system of tariff taxation.

Look back, if you will, for two or three years just passed and see to what means the laboring people have been compelled to resort against a system of taxation which compels them to pay almost double for their absolute necessities of life.

Was there ever a time in the history in this Government when labor was more unsettled?

The manly fight the laboring people have made against corporations, which by the protective tariff system have been granted the greater portion of benefits, and I might say all the profits, of their labor, has commanded my most earnest admiration.

These uprisings of the people—poor and helpless laboring people—have been, I believe, beneficial, though it is, indeed, a sad commentary upon our system of government to contemplate such a condition of affairs, when, in order that the laboring people may enjoy the rights justly due them, they are compelled to resort to the extreme measures which it seems have been a necessity.

It has been wisely said "that labor has no share in the wealth it creates." Neither has it that protection against the power of the employer to reduce wages. People tell us that with a less rate of tariff the country will be thrown into a great financial revolution. According to my opinion we are threatened with this unless the present Congress adopts a lower rate of tariff.

When we had the highest tariff rates ever known in this country we had the most disastrous panic, a panic which sent to the wall thousands and thousands of the richest and most enterprising business firms and industries that the world ever saw.

There has been a greater number of strikes and lockouts during the three years just passed than was ever before known in five times the same period of years.

When the people of this country are fully aware of the enormous percentages they are paying in the shape of protective-tariff taxation upon the necessaries of life, I can not imagine they will ask that the system be continued.

How many farmers and other laboring people of this country do you suppose buy from year to year the worst kind of shoddy goods, and at the same time pay the required protective tariff taxation? Take, for instance, blankets, which contain as much and perhaps more hair than wool, and boots and shoes, the soles of which are made from pasteboard.

It matters little how great the fraud is in trade, protective-tariff taxation is never lessened. These are but few of the many impositions inflicted upon the poor man by the manufacturer, and at the same time the toiling consumer pays for the privilege of this "beautiful protection" which our Republican friends would make believe is the corner-stone of our Government. [Applause.]

Mr. Chairman, I can not better illustrate the condition of the farmer and the burdens he is forced to bear under our present protective-tariff system, and the amount of taxes he pays annually to the support of protection and to his own ruin than by quoting from a speech delivered in this House a few days ago by Mr. STEWART, of Georgia:

Schedule under act of 1883—present law.

I insist that the farmers of this country, although in numbers the largest, are not benefited by a high tariff, but, on the contrary, are shamefully discriminated against, and it is not so strange that their farms are heavily mortgaged when we come to understand how the tariff affects them.

Under the present law let us see what an ordinary family on a farm has to contribute to the Government. I submit a schedule of articles mostly used by a family as an illustration, and the duty on them, and also showing the reduction proposed under the Mills bill.

	Value.	Duty.	Gain.
		Per cent.	
One cook-stove	$35.00	47= $16.45	
By Mills bill		31= 10.85	$5.60
One set crockery	12.00	55= 6.60	
By Mills bill		35= 4.20	2.40
One set cheap glassware	4.00	56= 2.24	
By Mills bill		41= 1.64	.60
One set cheap cutlery	2.00	50= 1.00	
By Mills bill		35= .70	.30
Two carpets, $12 and $15	27.00	47= 12.00	
By Mills bill		30= 8.00	4.00
Sugar	20.00	60= 12.00	
By Mills bill		50= 10.00	2.00
Molasses	10.00	47= 4.70	
By Mills bill		35= 3.50	1.20
Salt	3.00	40= 1.20	
By Mills bill		Free-list.	1.20
Two suits each for father and two sons, six suits, $14	84.00	54= 45.36	
By Mills bill		45= 37.80	7.56
Two suits each for mother and two daughters, six suits, $14	84.00	82= 68.88	
By Mills bill		40= 33.60	35.28
Twelve pairs shoes, $2.50 each	30.00	30= 9.00	
By Mills bill		15= 4.50	4.50
Six wool hats, $1 each	6.00	73= 4.38	
By Mills bill		40= 2.40	1.98
Six fur hats, $2.50 each	15.00	52= 7.80	
By Mills bill		40= 6.20	1.60
Six ladies' hats, $3 each	18.00	70= 12.60	
By Mills bill		40= 7.20	5.40
Six bonnets for ladies, $3 each	18.00	70= 12.60	
By Mills bill		40= 7.20	5.40
Farming tools, including plows, gear, hand-saw, ax, draw-knife, chains, etc	60.00	47= 28.20	
By Mills bill		34= 13.60	14.60
Medicines	20.00	*48= 9.80	
By Mills bill		30= 6.00	3.80
Thread, needles, thimbles, scissors, etc	12.00	35= 4 20	
By Mills bill		20= 2.40	1.80
Four pairs blankets, $3 each	12.00	70= 8.40	
By Mills bill		40= 4.80	3.60
Two umbrellas, $2.50 each	5.00	40= 2.00	
By Mills bill		30= 1.50	.50
Cotton hosiery, undershirts, etc	8.00	45= 3.60	
By Mills bill		30= 2.40	1.20
Window-glass	2.00	60= 1.20	
By Mills bill		43= .86	.34
Starch	4.00	94= 3.70	
By Mills bill		47= 1.88	1.82
Rice	$10.00	*Per cent.* 113= $11.30	
By Mills bill		100= 10.00	$1.30
Total cost under present tariff	501.00	189.27	
Under Mills bill		104.98	84.29

*Average.

From the foregoing calculation it will be seen that the entire amount of goods purchased at the prices named amounts to $501, that the present duty on these articles amounts to $189.27, and the duty as proposed by the Mills bill would amount to $104.99, which deducted from the rate of duty under the present law would be a net gain of $84.29.

A farmer or any other laboring man has but to read the above statement to show him in the most convincing manner how himself and family are being robbed from year to year by our protective-tariff system.

At this rate, as will be seen, there is a saving under the Mills bill of $84.29 a year, which in five years at the same rate would amount to $421.45, which would go a great ways with a poor family toward buying a piece of ground or building a little home.

This is a country of the people; they are its rulers, and they are always awake to what they believe to be the best interests for themselves and for the Government. There does not a day pass that I am not in receipt of numerous petitions from the various granges and farmers' alliances in my State asking that Congress do something to prevent the accumulation of the surplns which contracts the currency, which increases the value of money, but decreases the value of land and labor. The people see it and the people feel more than we imagine the hardships of this contraction of currency, which they say to us should be so disbursed as to increase the circulating medium and stimulate a healthy state of trade throughout the whole country.

In the same petition comes the earnest plea that taxation be equalized, and that all existing laws which tend to favor any class to the detriment of the whole people be repealed. These people know what they are talking about, and they know what is to their interest. Their petitions are just and fair; they are not unreasonable, and we, as the representatives of the people, should listen to the voice of those of whom we are the servants. I say, Mr. Chairman, it is idle to go to the statistics of foreign nations upon the subject of labor and consumption while we have statistics for the country in which we live.

How idle it is for statesmen to throw away time in discussing European statistics when this country is teaching you lessons that never can be forgotten. But the depreciation of value in land, in horses, in cattle, and in labor does not appear in the statistics of the census of 1880. The suffering and the toil and the trials of the people of this country do not appear there. Nor are they enumerated among the foreign statistics. Then, why are you wasting the time of Congress quoting those statistics in the discussion of a question like this for the benefit of the people that live in this great and glorious Government? I say such a course of proceeding is idle and foolish. [Applause.]

I have before me, Mr. Chairman, an article that appeared in the St. Louis Globe-Democrat some time ago. It contains the statistics collected by the grange lodges of the great West and of the southern portion of this nation, especially the granges of Missouri and Kansas.

Mr. BLAND. Those appeared in the St. Louis Republican, not the Globe.

Mr. MARTIN. They are very good statistics. In all those great States the depreciation of value and the burden of government are most felt. It is there where the people have to be carried through by banks if they need assistance; and if they get assistance it is by mortgaging their property. Now, what is the amount of mortgages in those States?

The following I take from the St. Louis Republican, regarding the mortgage question, which I have referred to:

WHO OWNS THE WEST?

All the advocates of high protective tariff have one refrain to their songs, speeches, magazine essays, and sermons—the vast wealth of the country. "We are the richest country on the globe," they assert, "and the protective tariff has made us so;" and then they present us with a bewildering array of figures towering up into the billions to show how prosperous the land has been under the protective policy of the last twenty-six years. In 1862 we had only 32,000 miles of railroad; now we have 150,000. In 1860 we had only $200,000,000 deposits in savings banks; now we have $1,100,000,000. In 1860 we had 2,044,000 farms; in 1880 the number had increased to 4,008,000, and at the present time it can not be less than 5,000,000. All this they tell us has been brought about by the protective policy—as if the industry, enterprise, and patient hard work of the people had nothing to do with the matter.

It may be admitted that the country is rich, and growing more rapidly in wealth than any other country on the globe. But the people have made it so, not the tariff. It has thrived in spite of protection. That policy has drawn enormous wealth from the twenty-nine agricultural States and concentrated it in the nine favored industrial States; and it is in the latter the affluence that excites the admiration of the high-tariff advocates is most conspicuously illustrated.

But they tell us the agricultural States have grown rich, too. They also have prospered under protection. See how farms have multiplied in the West and Northwest, and see how railroads have been built in Illinois, Michigan, and Wisconsin, and the States and Territories west of the Mississippi, even to the Pacific, and how this vast region has been subdued to settlement.

All true. But who owns these farms and railroads in the Western States? In one word, who owns the West? The people of the West, it might be answered. But the answer would not be true, as few indisputable figures will sufficiently prove.

First, as to farms. In 1880 there were 138,500 farms in Kansas, 256,000 in Illinois, 194,000 in Indiana, 247,000 in Ohio, 185,300 in Iowa, 154,000 in Michigan, and 131,300 in Wisconsin, making a total of 1,309,100 in the seven States named. Recent statistics collected by granger associations and printed in farm journals make the following exhibit of farm mortgages in these same States:

Kansas	$235,000,000
Illinois	1,000,000,000
Indiana	635,000,000
Ohio	1,227,000,000
Iowa	567,000,000
Michigan	500,000,000
Wisconsin	357,000,000
Total	4,521,000,000

These figures are so startling in their enormity as to seem incredible. We do not vouch for their accuracy. They present the 1,309,100 farms in seven Western States as encumbered with an aggregate of four and a half billion mortgage indebtedness, or an average of over $3,400 for each. The assessed valuation of property in these States in 1885 was as follows:

Kansas	$275,500,000
Illinois	797,000,000
Indiana	793,000,000
Iowa	625,000,000
Michigan	850,000,000
Wisconsin	496,000,000
Ohio	1,671,000,000
Total	5,507,500,000

It will be seen that the reported mortgage debts cover about four-fifths the assessed value of the farms; and the bulk of these mortgages are held in the Eastern industrial States.

Next, as to railroads. In the seven Western States named there were, in 1885, 37,000 miles of railroad with a stock and bond account and net earnings as follows:

States.	Stocks and bonds.	Net earnings.
Kansas	$195,700,000	$9,440,000
Illinois	740,000,000	16,000,000
Indiana	320,000,000	5,700,000
Iowa	105,000,000	2,180,000
Michigan	214,000,000	5,000,000
Wisconsin	236,000,000	6,900,000
Ohio	767,000,000	12,300,000
Total	2,537,700,000	57,520,000

These 37,000 miles of railroads, having a nominal value of $2,537,000,000 (over two and a half billion dollars) and yielding annual net earnings of $57,520,000, are put down in the statistics of the day as part of the property of the States in which they lie. But it is a notorious fact that only a very small fraction of their values are owned in these States. The last report of the Iowa railroad commissioners states that only one out of forty stockholders in Iowa roads lives in the State, and only one-seventieth of the capital stock is held in the State. In Illinois a similar condition of things prevails. The official report of the railroad commissioners does not state what proportion of the aggregate capital stock of the Illinois roads is held in Illinois, but the location of the capital stock of the leading roads will assist us in forming an estimate. The Illinois Central has $29,000,000 capital stock, only $685,000, or less than 3 per cent., of which is owned in Illinois. Of the Chicago, Rock Island and Pacific, about 5 per cent. of the capital stock is owned in Illinois; of the Ohio and Mississippi stock, only one-half of 1 per cent.; of the St. Louis, Alton and Terre Haute, less than one-half of 1 per cent. Taking these figures as a guide we may safely estimate that of the 19,000 miles of railway in Illinois, valued in stock and bonds at $740,000,000, the people of Illinois own 5 per cent.; the other 95 per cent. is owned in the rich industrial States of the East.

As Illinois is called the most prosperous and one of the richest agricultural States of the West, it may be inferred that the other States are in no better condition than it in the matter of railroad ownership, and therefore it may be broadly asserted that practically all the railroads in the seven States named, valued at $2,537,700,000 (two and a half billion dollars and over), are owned in the industrial States. The industrial States are therefore drawing a pretty round sum of money for one thing and another from the seven Western States named every year. The items may be stated as follows:

In protective taxes	$150,000,000
In interest on mortgages	270,000,000
In railroad net earnings	57,000,000
Total	477,000,000

The Western States are, in fact, being bled to death. Western farmers are actually becoming poorer and poorer every year. As a body they do not make a living, and the convincing proof of this fact is that their farms are fast passing under mortgage to the money-lending manufacturing States of the East.

Twenty-five years ago these mortgages were few in number and small in amount; now they number millions and cover an aggregate value of thousands of millions, and all bear 6 to 8 per cent. interest.

The West does not own itself. It is owned by the industrial States. Twenty-six years of the malign, sectional, and oppressive policy of high tariff has done the work and done it effectually. The industrial States of the East, enriched beyond estimate by the annual tribute of $600,000,000 exacted for a quarter of a century from the other States under the false pretense of building up home manufactures, own all Western railroads, telegraph lines, and bridges, and hold mortgages on nearly all farms, their cities, and towns.

So it goes all along the line of States where property is mortgaged. The men in those States and Territories own lands which are under mortgage, and soon they will have to leave their homes and carry their families with them by force of the mortgage when it matures, and the husband, wife, and children are driven out doors. It is so in the Southern and Southwestern States. And it is protection, Mr. Chairman, that does this.

What are we drifting to? [Laughter.] I discuss the question, gentlemen, as I see it, and I want to present it to you in a plain light. I repeat, What are we drifting to? While the manufacturer lives in his lordly castle in pomp and splendor, I see the men who are at the loom, at the spindle, in the forges, and in the workshops are merely the tenants—not a single one of them owning a foot of land. This is a protection for the manufacturing establishments. These men who have become rich by protection are the men who own the lands—the princes that live in splendor, while the serfs that are under them are without home and without shelter.

The great railroad interests through this country have absorbed a very large portion of the public lands. Yes, all the public domain between this and the Pacific coast nearly is taken up by men who are princely in their fortunes and have gotten rich under protection. These men establish their banks in the West and in the South and are becoming the owners of all the land that is now being held and occupied by the citizen.

If the Republican party votes against this bill it votes to build up a monster which is an enemy of the people, which will continue to increase the already large surplus in the Treasury. This bill is a step in the right direction, and one that should have been taken before this. The Republican party can not afford to vote against this bill, and those of you who do cast your votes against it will be the chief mourners at you own political funerals. [Applause.]

But, Mr. Chairman, we have a glorious epoch opening and dawning upon us. We have a campaign that is to be conducted for the right and for the people by the great Democratic party. That campaign will be conducted upon the principles of tariff reduction and a vigorous fight against protection. [Applause.]

We will hoist at our masthead the name of the glorious Cleveland, and in fighting the battle for the Presidency we will go to the great States of Ohio, Indiana, Michigan, Illinois, California, Kansas, Minnesota, and the other Western States, which we will carry against protection and in favor of the reduction of tariff. [Applause.]

The people of those States see the fallacy of the protective-tariff system, and they are wise in asking its discontinuance, especially under the present high schedule.

On the plains, on the prairies, in the valleys and the gorges of the Rocky Mountains, and everywhere through the great West and South you will find men, Democrats and Republicans, who have their little homes, many of which are mortgaged, asking that Congress relieve them of oppressive taxation which results from protection.

Go to California, for instance. She has her industries which she would like to have protected; but, upon the altar of a common Democracy, her people will make an offering for their special local interests and ask that this bill be passed. [Applause.]

Yes, Mr. Chairman, and upon that platform we will carry the great nation for Grover Cleveland, the next President of the United States. [Applause.]

It is he who had the wisdom to recommend to this body that tariff taxation be reduced. He forced the issue upon the Republican side of this House and the people of this country are with him. They will be with him on the second Tuesday of next November also.

Upon the banners of the Democratic party there will be inscribed in the largest kind of letters, that all may read:

Reduction of taxation, equality and justice to the poor man, and better times for all.

And on the 4th day of next March Grover Cleveland will be reinstalled as President of this Republic for another four years. [Prolonged applause.]

The Tariff.

Why should wool be free and sugar taxed? Is it because sugar votes the Democratic ticket and wool does not? Why protect rice and destroy salt? Is it because one grows on Northern soil and the other in the Southern swamp? Why strike down the products of the North and enhance the value of those of the South? Is it because the "solid South" is the friend of the Democratic party?

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 30, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the revenue—

Mr. GROSVENOR said:

Mr. CHAIRMAN: I recognize the embarrassment that I must suffer in attempting to address the House of Representatives, and indirectly the country, upon the great questions involved in this measure, after the addresses to which we have listened from so many distinguished gentlemen on both sides of the House; and I am not unconscious of the fact that others are to follow me much more competent to present the issues involved than I am. I hope the House will pardon me if I deviate from the established usage here, and if I commit blunders in matters of detail and statistics, from the fact that

I have not committed my speech, or any part of it, to writing, I hope I may be allowed the liberty of revision to the end that I may stand right before the country. It is not always safe to rely upon figures taken at second-hand from others.

In the first place I wish to refer to the statement so often heard in this debate that this is an attempt of the Democratic majority of this House, stimulated thereto by the message of the President of the United States, to repeal and get rid of war taxes. We hear on every hand that the protective tariff system of this country is a system born of the war for the suppression of the rebellion. It is constantly being said that at this long distance from the war period it is proper to repeal the measures which the exigencies of war forced upon the country, and to come back again to principles of taxation applicable to a time of peace.

Now, my argument will tend to show that we have no war taxes left upon our statute-books save and except the system of internal-revenue taxation, which was, in this country, what it has been in many other countries, a resort to which the country was driven by the exigencies of war for the suppression of a great rebellion; and which ought to have been the first monument of war taxation to be stricken down and removed. But, strangely enough, the Democratic party everywhere, on the stump and in Congress, inveighs against war taxation, and yet holds on to the internal-revenue system and refuses to repeal it. After a little I shall try to show why it is that Representatives here, representing certain constituencies, turn to this tariff taxation with a sort of intuitive horror and opposition and denounce it as "war taxation."

For the present let us consider the attitude in which the Southern and dominating wing of the Democratic party and its Northern superserviceable allies stands toward a system of taxation it in years gone by denounced as outrageous and oppressive.

It is surprising to me that the Democratic party has so solidly arrayed itself under the leadership of its amateur statesman, the President of the United States, in defense of the internal-revenue system. It seems strange to me that suddenly the Democratic party has become the especial champion of such a system. For twenty years the gentlemen representing the Southern States of the Union in Congress, and speaking for those outside, have not only denounced the general system of internal-revenue taxation, but have denounced all the efforts of the Government to enforce the law, and so thoroughly had they educated the masses of the people in many sections of the South into the idea that the internal-revenue system was oppressive and tyrannous, that they had brought the people of the South to endeavor to destroy the internal-revenue system by fraud, violence, murder, and bloodshed. They had brought them to assert the right of revolution against the so-called tyrannous enactments that were being enforced by the Government against the people of the South. It was a conspicuous argument all over the South why Mr. Cleveland should be elected, to the end that the internal-revenue laws should be repealed, or if not, then not enforced.

And so it came about that the moonshiners of North Carolina, Georgia, Tennessee, West Virginia, and other States looked upon themselves as discharging a duty to the great principle of self-protection and human liberty when they invoked the spirit of revolution in justification of the wrongs and violations which they committed against the internal-revenue laws. And, Mr. Chairman, it was only in the last Congress that gentlemen representing some of those Southern constituencies undertook to cripple the internal-revenue department by eliminating from an appropriation bill the money which was intended to carry into force and execution those laws enacted to prevent frauds upon the internal-revenue system. But now we find the Democratic party, inspired and directed by the message of the President, suddenly ordaining that the most sacred monument, the most sacred feature, of the laws of this country is now, and must be in the future, the internal-revenue system of taxation.

My friend on this side, the wandering, if not the lost sheep of the Republican "House of Israel," from Minnesota [Mr. NELSON], heads his very eloquent speech, as published, with the statement that he proposes to put up free wool, free lumber, and free salt against free whisky and free tobacco. The gentleman, when he undertakes to put the Republicans on this side who favor the repeal of the internal-revenue laws and the wiping out of all those specifically war taxes into the category of favoring free whisky, makes an egregious mistake.

The proposition, as I understand it, involved in the repeal of the internal-revenue tax upon whisky and tobacco is to remit to the States the right to tax not only the liquor traffic (as many of them are doing now), but, ultimately, the manufacture and wholesale dealing in liquor, and to permit the States of the Union, in that respect, to take the place of the General Government, and to deal exclusively and exhaustively with the whole subject, either by taxation, restriction, or prohibition, as the people of the several States may decide.

But, Mr. Chairman, I was proceeding to show that this system of tariff legislation of which we are now charged with being the promoters was not, as has been alleged here, a system of war taxation. There ought to be no misunderstanding among the representatives of the people at the end of thirty years about the history of a great sytem of taxation like this. The original Morrill tariff bill, which was the foundation stone upon which the structure of protection was reared, was not a war measure, and I want to call the attention of the younger members of this committee who desire to be right upon the subject of the historic character of this system, to the fact that the original Morrill tariff bill was introduced into Congress and passed by the House of Representatives before Abraham Lincoln was nominated for President of the United States.

And yet, Mr. Chairman, the superstructure that has been builded upon that foundation, and shaped and fashioned upon its plans, is denounced here in the opening paragraph of nearly every speech on the other side of this chamber as a "war measure" which was necessary at one time for the support and protection of the Government, but which ceased to be valuable, or important, or desirable, when the measures, the incidents, the facts that brought it into existence passed away.

The Morrill tariff bill was passed in the House of Representatives on the 11th day of May, 1860, by a vote of 105 yeas to 64 nays. Of the men who voted against that bill there remain in this House, so far as I am able to recall the personality of the Thirty-sixth Congress, but one man, who voted on the passage of the bill. I understand, indeed, that the distinguished gentleman from New York [Mr. COX] was a member of the Thirty-sixth Congress, but I do not find his name recorded among either the yeas or the nays upon the passage of the bill. I do, however, find the able and distinguished gentleman from Indiana [Mr. HOLMAN] recorded as having voted "no" upon the passage of that bill, and, as I have already said, so far as I am able to ascertain with the imperfect *data* at my command, he is the only member who voted against that bill and who is now a member of this Congress.

Mr. COX. Mr. Chairman, I did not hear distinctly the allusion which my friend from Ohio made to me.

Mr. GROSVENOR. I said, Mr. Chairman, that of the present members of the House of Representatives I identified but two who were members of the Thirty-sixth Congress—Mr. COX, of New York, and Mr. HOLMAN, of Indiana—and that I did not find the name of Mr. COX recorded as voting either yea or nay upon the passage of the Morrill tariff bill at that time.

Mr. COX. I will say to my friend that the most elaborate tariff speech I ever made in my life was against that bill.

Mr. GROSVENOR. I have no doubt of that, and that is saying a great deal for that speech.

Mr. COX. And I think it could be reproduced to-day to some advantage. I happened to be on the committee of conference that was appointed, I think, by Mr. Speaker Blaine.

Mr. GROSVENOR. Mr. Blaine had not entered Congress at that time.

Mr. COX. The Morrill tariff bill was passed during the war.

Mr. GROSVENOR. I beg the gentleman's pardon; I am talking about a Morrill tariff bill which was passed by the House on the 11th day of May, 1860; and upon the principles of which our whole protective system has been since builded.

Mr. COX. That was before the war.

Mr. GROSVENOR. Certainly it was; and I am trying to show that this system of taxation, this Morrill tariff bill, was not, as is alleged so often here, a war measure, but was a political measure which came about in a way which I shall presently try to trace.

Mr. COX. We never called it *moral* in those days. [Laughter.]

Mr. GROSVENOR. And right here, Mr. Chairman, let me say, that if the speech which the gentleman made at that time in opposition to the bill was, as he thinks it was, the best speech he ever made in his life, I hope it will not be repeated, at this late hour, to the discomfort of gentlemen on this side of the House. [Laughter.] I beg that we be spared that.

That Morrill tariff bill went from the House to the Senate, and there it was defeated by a process of parliamentary opposition led by the representatives in the Senate of the States which soon afterward went into rebellion.

No vote was taken on the bill until a point of time which I will indicate, and it is a very interesting fact in the history of the times that the men who defeated that Morrill tariff bill in 1860, and whose absence from Congress in 1861 made it possible to pass the tariff bill, represented the same States that are represented by the gentlemen who, a week or two ago, for nine long days, in direct violation of the spirit of the Constitution, in direct revolution against the powers and principle of government by the majority, stood in the way of and defeated the passage of a measure for the equitable re-adjustment of one of the financial questions that followed and grew out of the war. The Morrill tariff bill was finally taken up for passage in the Senate on the 20th of February, 1861, and it was passed by a vote of yeas 25, nays 14.

And, Mr. Chairman, at this point I want to call the attention of the country to a fact which rendered its passage possible at that time. That fact was that certain gentlemen had vacated their seats in Congress, although war had not yet begun. This "war measure" was signed by President James Buchanan. This measure of tariff taxation that established the principle of "robbery," as it is said, in this country, as we hear it denominated on the other side—this measure, which laid the foundation upon which the mighty structure of American prosperity and American glory has been builded, was

signed by James Buchanan, of Pennsylvania, on the 2d day of March, 1861.

The men who voted for it were Anthony of Rhode Island, Baker of Oregon, Bigler of Pennsylvania, Bingham of Michigan, Cameron of Pennsylvania, Chandler of Michigan, Clark of New Hampshire, Doolittle of Wisconsin, Durkee of Wisconsin, Fessenden of Maine, Foot of Vermont, Foster of Connecticut, Grimes of Iowa, Hale of New Hampshire, Harlan of Iowa, King of New York, Morrill of Maine, Stewart of New York, Simmons of Rhode Island, Sumner of Massachusetts, Ten Eyck of New Jersey, Trumbull of Illinois, Wade of Ohio, Wilkinson of Minnesota, and Wilson of Massachusetts—25.

It became possible to pass that bill, Mr. Chairman, because when the roll was called, South Carolina, Georgia, Texas, Mississippi, Louisiana, Arkansas (with a single exception), Virginia, and North Carolina, with the exception of one Senator, failed to answer to their names. I again call attention, Mr. Chairman, to the singular historical circumstance that the representatives of those States vacated their seats in that day in violation of their constitutional obligation, and in furtherance of a treasonable conspiracy to destroy the Union and break up the Government, while the representatives of the same States in the present Congress have resorted to a species of revolution, made possible by the rules of this House, but as offensive and as obnoxious to constitutional government by the majority as was that action of their predecessors in the Senate of the United States.

The bill was finally passed on the 27th of February, 1861, and three days later it received the signature of the President of the United States and became the law of the land, became the foundation of the "robber" tariff that is now so bitterly assailed on this floor. The gentleman who presided in the Senate when the bill was passed and who affixed his signature to the bill, the Vice-President of the United States, who within the next ensuing five days was a beneficiary under that enactment, crossed the Ohio River once, and then again, and then recrossed it no more until, as a defeated lieutenant-general of the Confederate army, he came back to his State, which had never seceded, to join the loyal men of Kentucky in the discharge of some sort of duty that he supposed he owed to the Government which he had not been able to destroy.

The Morrill tariff bill was signed by John C. Breckinridge, as Vice-President of the United States, four days before he laid down his office, and it is the very irony of historical fate that to-day one of the men who inveighs against it most strongly and who denounces it in the most eloquent language, is the accomplished son of that gentleman, who, as I have said, was a beneficiary of the act, at least as to the $10,000,000 which the bill provided that the Government might borrow in advance of the receipts under the law to pay the salaries of the officers and defray the current expenses of this country. So much for the history of this tariff legislation.

Now, Mr. Chairman, I have no time to discuss the great questions of principle involved here. I want to say, however, as I go along, that I have no anxiety about the surplus in the Treasury. The uneasiness that is manifested on that subject is born of a political nightmare; it is a mirage that has grown up on the political desert, and which has attracted and held the attention of our friends on the other side and misled them in regard to the present condition of the country. Take every dollar of the alleged permanent surplus, and, if the United States would to-day pay its honest debts, there would not be a dollar of it left. The custodian of $30,000,000 in a single item which the Government received more than eighty years ago, and which still remains in the Treasury, held on to by the same process by which the robber holds on to his victim's purse, stands in no position to be complaining about the plethora in the Treasury of the United States. And yet to-day, sir, when the claimants for French spoliations, who have a claim against this Government just as honest as though they had loaned their money to the Government and taken its promissory notes for repayment, when they come here and ask for their rights, they are baffled session after session and year after year, while the Democratic party keeps up the cry about the enormous surplus in the Treasury.

There are $17,000,000 of surplus in the Treasury, paid into it by the loyal States of this Union under a war measure assessing a special tax, and there are $3,000,000 which should be there, represented by the unpaid taxes of the States that went out of the Union. There are obligations to officers and soldiers who have been defrauded by the unjust rulings of the Department out of their back pay, and there are claims innumerable against the Government which ought to be paid, and the gentleman from Illinois [Mr. CANNON] told the simple truth when he said in the last Congress that if any business man in the country should be found guilty of such dishonorable practices as the United States Government was constantly guilty of "he would be consigned either to infamy or the penitentiary." So, when you take out of the Treasury the amount of money which the Government honestly owes to its creditors, you will find that there is no such surplus as we hear talked about upon this floor, no surplus that need give anybody any uneasiness. With fifteen thousand men who fought to save the Union and make this wealth possible in the almshouses of the country and their families in the charity institutions, or growing up in rags and ignorance, it is no time to talk of a surplus; with the dark cloud of ignorance resting like a pall upon many sections of the Union, there is room for the use of all the surplus. And there are more uses for it than I have named in considering how taxation may be reduced.

But, Mr. Chairman, we are met by the road forking here on the question of the principle upon which the reduction of revenue is to be made. Speaking not now about the present surplus in the Treasury, but looking forward to the future, we are all of us in favor of reducing the aggregate of taxation in this country and limiting taxation to the necessities of the Government, economically administered.

The gentleman from South Carolina [Mr. HEMPHILL] the other day brought to the attention of the House the foundation stone upon which the true and thoroughly honest supporters of this bill stand. That gentleman, in the very opening of his speech, spoke of the great constitutional question of levying taxation for the purpose of building up one industry in this country at the expense of another. As I understood him, he raised the question of its constitutionality. I doubt not he was inspired by, and was merely reiterating in substance and effect, the very principle which was placed in the constitution of the Confederate States, the language of which the gentleman from Kansas [Mr. PERKINS] quoted in his former speech.

I do not mean to say the gentleman from South Carolina, in the speech which he was making, was aware he was saying anything like that or that he had any respect for this enactment, which is no longer a constitution, if it ever was at all; but he did say something on that subject which was clearly in hostility to the Constitution of his own country, and which seems to be consistent only with a heresy which had been taught more than forty years before by the great expounder of free trade in South Carolina, himself a protectionist converted to free trade. He has merely raised the constitutional question which the distinguished and eloquent representative from the same State raised for the first time at the period I have indicated, and which nearly caused revolution then, and which brought from Andrew Jackson his immortal declaration that he would hang a certain leading nullifier of South Carolina as high as Haman if he did not cease his nullification.

Mr. HEMPHILL. I am glad to know that my argument in reference to the Constitution of the United States is strictly in accord with the opinion of the Supreme Court of the United States as delivered by Justice Miller, who is recognized, I believe, as the leading jurist in this country, and whose Republicanism is not questioned by anybody so far as I know. [Applause.]

Mr. GROSVENOR. When referring to a crisis of tariff legislation, drawn from the modern history of this country, I was struck with the fact that the gentleman was merely stating the same things which the great expounder of his doctrine of free trade uttered as far back as 1832. I was referring to the gentleman's speech only to emphasize the fact that a little later on he has merely reproduced some of the famous utterances of the famous expounder of free trade and secession in South Carolina. [Applause.]

Mr. HEMPHILL. It is some satisfaction to know that a man as eminent as Justice Miller agrees with South Carolina forty years ago.

Mr. GROSVENOR. I can not turn aside to discuss the question of the constitutionality of tariff taxation. If your law is unconstitutional and there is anything in the waiver of the rights of the people, the people who have been paying taxation under it since 1861 ought not to have a standing in court to-day. To show the law is constitutional I leave to gentlemen who are to follow me to analyze the decision of Justice Miller on that question. But I wish to put into my speech on this point, as marking the line of demarcation, just two things. In the first place, I will ask the Clerk to read section 8, paragraph 1, of the constitution of the Confederate States.

The Clerk read as follows:

SEC. 8. The Congress shall have power—

1. To lay and collect taxes, duties, imposts, and excises, for revenue necessary to pay the debts, provide for the common defense, and carry on the government of the Confederate States; but no bounties shall be granted from the treasury; nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry; and all duties, imposts, and excises shall be uniform throughout the Confederate States.

Mr. GROSVENOR. And the next thing I wish to ask the Clerk to read is a paragraph from the Republican platform of 1860, upon which Abraham Lincoln was elected to the Presidency, and under whose administration the Morrill tariff went into effect and amendments were placed upon the statute-book.

I do this to show that the protective policy was declared by the Republican party at its advent to power, and that it met a counter-declaration, not only from the Democratic party of that day but from the so-called Confederate States in the constitution of that treasonable conspiracy.

The Clerk read from the Republican platform of 1860:

SEC. 12. That, while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imposts as to encourage the development of the industrial interest of the whole country; and we commend that policy of national exchanges which secures to the workingmen liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the nation commercial prosperity and independence.

Mr. GROSVENOR. These two paragraphs, one from the utterance

of a political party and the other from the utterance of an alleged constitutional convention, illustrate the difference of opinion to-day that exists in connection with this tariff question; and, Mr. Chairman, the gentleman from South Carolina needs no commendation from me. He commends himself to this House when he stands up here and makes an argument that, carried to its legitimate and necessary consequences, would abolish every custom-house in the country, repeal every tariff law, and remit the country to the same source of revenue that for so many years the statesmen of South Carolina demanded that we should look to for governmental revenue, that is, direct taxation.

For, Mr. Chairman, if the present tariff law of this country is "robbery," how can you change the quality of it by reducing the amount of money to be drawn under it? You denounce the quality without looking to the character of the enactment; but the question of its constitutionality, the question of its propriety in every direction must rest simply and alone upon the ground that in your judgment it is excessive; and that being so, I claim that the ordinary, logical, and legitimate results of your argument require that it should be repealed altogether. If the "robber" seizes me (and I am using the language now current on the other side of the House)—if the "robber" seizes me, takes me by the throat, and takes from my pocket $50, all that I may have, it is robbery. If he takes but $10 and leaves me $40, is the character of the act changed? The quality of the act is the same. The sum taken does not change the quality.

Mr. HEMPHILL. If the gentleman will allow me I will state that I said distinctly in the opening of my remarks that I did not contend that the raising of revenue by the custom-house system, so far as it was necessary for the legitimate expenses of the Government, was robbery or unconstitutional; and the word "robbery" I got from the decision of the Supreme Court of the United States, in a decision on this very question.

Mr. GROSVENOR. I am using it in the same intelligent manner that the gentleman from South Carolina used it.

Mr. HEMPHILL. Yes, but my position is that all that is collected over and above the actual necessities of the Government is robbery.

Mr. KERR. Do you know anybody else who does not hold the same position?

Mr. HEMPHILL. I know a good many who do not act upon it.

Mr. KERR. You are mistaken in that.

Mr. GROSVENOR. Let us see, then, how the gentleman comes out according to his own theory. If he votes to repeal the internal-revenue laws by which we receive annually $120,000,000 into the Treasury, and then can point out customs taxes that are excessive and beyond the wants of the Government, he will stand in a position to say that it is robbery, but not until then.

While the law draws from one source $120,000,000 of revenue the gentleman is estopped from saying that there is an excessive draft in the other direction beyond that which is necessary for the maintenance of the Government. If the quality of the customs taxation is to be gauged by the necessities of the Government, then that which the gentleman calls "robbery," with the internal-revenue taxation going on, will be made legitimate by its repeal. One system is a war tax; the other is a system combining revenue and protection. If one must go, I for one favor the repeal of war taxes.

But while on this point, and I hope the gentleman from South Carolina will not feel that I am giving him any annoyance in this manner, I look upon his speech as the thoroughly logical and inevitable position of a friend of this bill. But when he talked about the burden we are heaping upon labor here, and made an elaborate illustration, I venture to say he did not himself even appreciate the grand force of the argument he used; and I could not help, on hearing that argument, being carried back again to the ancient history of the question. When he admitted—and I want to refer to the force of his argument—he said that we were very anxious, in the interest of the laboring men, to so adjust the tariff that the operators of the country could pay high wages to their operatives, and called upon us to say why it was that we were constantly legislating against the accumulation of money in the treasuries of the great railroad corporations by which they could become enabled to pay high wages to their employés. That is the strongest argument made on the floor of Congress against the position which demagogery demogy has sought to carry out with reference to these corporations of the country. I look upon the men as short-sighted statesmen who stand upon the floor of Congress and with one hand legislate to put money into the pockets of manufacturing corporations, on the plea that it is to enable them to pay high wages to their operatives, and at the same time strikes at the railroad corporations with the other hand. And the gentleman's argument is a strong one against them. But it falls harmless at my feet. I am not guilty.

But in that connection the gentleman made an admission which recalled to my mind the ancient days of the Democratic party. He said he was in favor of the great idea that we should buy where we could buy cheapest and sell where we could sell highest. And there upon, when the question was asked him whether that rule would not apply also to the employer of labor, he candidly admitted that it would.

That admission from one of the best exponents of the true principles of the Democratic party suggests its history for half a hundred years. The suggestion again brings to the front all that is left of the old idea of slavery and the ownership of men. And thereupon, Mr. Chairman, I remembered that it was from the same State of South Carolina in days gone by, when, as the voice of one crying in the wilderness in 1856, we heard that the laboring men of the North were simply "small-fisted farmers and greasy mechanics" and "mudsills of society"; and that voice of Hammond, as it were, crying out of his grave is heard again with tenfold elegance and eloquence from the eminent young Representative from South Carolina, in this day enunciating the same doctrine that free trade in commodities brings its inevitable and logical sequence: Free trade in the labor of men. It comes as the outspoken, even if latent at times, sentiment of a great party in a great section of the Union.

Mr. HEMPHILL. Will the gentlemen permit an interruption?

Mr. GROSVENOR. Yes, sir.

Mr. HEMPHILL. I do not desire to be misrepresented, and I do not presume the gentleman desires to misrepresent me. I did not hold certainly the position that any man in this country owned his employés. I have as much respect for the laboring man, the honest operative, no matter what his station in life may be, as any other man, and it is immaterial to me how he makes his living, so it is done honestly. Therefore I do not desire to be put in that position which the gentleman would seem to wish to put me in.

While I am on my feet I may say too that there is in my mind quite a distinction between the hiring of labor at a cheap price and that which you can get by the introduction of people into this country who are simply laborers and without the qualifications of good citizens. I have always maintained in my own State and here that when you introduce people into this country who are laborers, who make their living with their hands, there are other things to be considered besides the cheapness of their labor.

Mr. GROSVENOR. The gentlemen has lived under a Republican Administration for twenty-four years in this country, and one of the greatest achievements the Republican party boasts of is the education and enlightenment of the people of the South; and it is to the great credit of the people of the South that they select their most intelligent men to come here to represent them to-day. So much for this question.

The logic of the gentleman's argument is not relieved by the disclaimer of the gentleman himself. The logic is the inevitable result of his position. The disclaimer is born of the heart and is better than the cold logic of his position. I should like to know why, if the rule is that it is the function of statesmanship to make it possible to sell where you can sell dearest and buy where you can buy cheapest, I would like to know at what point of time legislation has the right to interfere and say that the producer shall not hire his labor at as low a price as others are hiring it. I condemn without qualification the doctrine which the gentlemen has announced. It is heterodox in the political church I belong to. I do not believe that it is the true mission of statesmanship in America to buy where we can buy cheapest and sell where we can sell dearest. I do not believe in that doctrine, because conditions that surround the laboring classes in this country are widely different from the conditions that surround the laboring men of other nations; and we should be false to the position we have taken if we did not draw a line of distinction between the men of other countries and the men of this country. The laboring men of America, whether farmers, miners, mechanics, or operators, are not to be judged by any standard of comparison brought across the water.

The wisdom of statesmanship at this day should be directed not so much in the direction of making money. I admit when gentlemen on the other side, as one of them did the other day—I can not do him the justice to cite him now—claim that we were piling up enormous wealth in the pockets of the manufacturers of the country—I admit if that were true and there was no proper distribution of that wealth going on our position would not be tenable. But I am relieved of much of my anxiety by the declaration of the gentleman from Indiana [Mr. BYNUM], a member of the Ways and Means Committee, that legislation in the way of high tariffs is breaking up the manufactures of the country. He pointed to the number of spindles that were standing still and the great number of chimney stacks out of which no beacon lights were flashing. I leave the two gentlemen on the other side to reconcile their positions; one that we are creating monopolies of wealth in the hands of Pennsylvania and New England manufacturers, and the other that we are breaking up manufacturrs in this country.

Mr. STEWART, of Vermont. How about the savings-banks?

Mr. GROSVENOR. The savings-banks of New England contain the savings of her industrial classes, and the sums of money deposited in them show how absurd the statement is that New England does not pay her labor.

In this conneetion, Mr. Chairman, I desire to say that the general idea that the laboring men of the United States are illy paid and are poor, and are suffering and are oppressed, and all that sort of thing, which we hear daily, is born of the mistaken notions of men. It is the same sort of talk as that which annoyed us here so fear-

fully during the delivery of the series of fifteen and twenty minute speeches by the distinguished gentleman from Missouri [Mr. BLAND]. These speeches were ostensibly in opposition to the passage of public building bills and an appeal to Congress to reduce the tariff to save the farmers of his district from bankruptcy.

Upon this labor question, Mr. Chairman, I believe that the true mission of statesmanship in this country is to see to it that the laboring men shall have higher wages than the laboring men of other countries—a great deal higher wages than the laboring men of other countries; and there are many reasons that justify the proposition, many of which I can not enumerate now, but one is the fact that the laboring man of this country is a part of the Government, an integral part of the Government itself. He is charged with the duty of maintaining and upholding the Government. In Ireland, in Germany, and in Italy it is not so to any important extent.

Every laboring man in this country should educate himself, and for the manifest reason which I have given. The Russian laborer delving in the mines or working in the forests of that country, governed by a despotism, is not charged with any duty except to make a living; he is not called upon to aid in the legislation or policy of the imperial government of the Czar. The Italian laborer who has to struggle with his 10 cents a day to keep his body and soul together does not occupy the position towards the Government of Italy that the laborer in America does.

Free Italy has done something in the direction of habilitating the Italian workingman with the qualities of citizenship, but they are far behind the people of the United States. For not only does the laboring man in this country take a direct, prominent, and active part in the politics of the country, but the men who work with their hands are rearing a generation which, in a short time, will be a majority of the people of this country and will control its destinies.

The laboring men of this country understand this whole question, so far as it operates upon them, better than we. Here is what a mammoth convention of laboring men in New York has said of this bill:

Whereas the so-called Mills tariff bill, now under discussion in the House of Representatives, by placing on the free list many articles that come into competition with the products of American labor, and by sweeping reductions in the duties upon others, menaces the ruin of many of our industries, and would, if enacted into a law, entail great loss of employment and widespread suffering among working people; and

Whereas the workingmen of this country have been contemptuously denied a hearing by the majority of the Ways and Means Committee, which framed the bill; and

Whereas it is now apparent to every workingman that the prevailing agitation of the tariff question and the proposed reduction of duties are destroying confidence in business, reducing wages in some occupations, and stopping altogether the wages in others:

Therefore we, the workingmen of the city of New York, in mass meeting assembled, earnestly protesting against the passage of the Mills tariff bill and against any and all measures of a similar character which threaten the labor and industry of our country and propose to lower the American standard of wages, do hereby declare and proclaim the following resolutions:

Resolved, That we demand of the Representatives in Congress from this city that they do not only vote against this most recent attack on the prosperity of American labor, but that they use their utmost endeavors to secure its defeat.

Resolved, That we protest against a bill which puts raw material on the free list when that so-called raw material is the product of American labor.

Resolved, That we protest against a bill which would break down the barrier which defends American labor from competition with the pauper labor of Europe and Asia, and aims to reduce our families to the foreign level of cheapness and poverty.

Resolved, That we demand that the internal-revenue war taxes be repealed, and that protection to American labor be maintained and made more effective.

Resolved, That we call upon our fellow-workingmen in all parts of the land to rise up and denounce the Mills tariff bill as a menace to our welfare and to our rights as citizens, which threatens to deprive us of the opportunities of education afforded by the American system of high wages, and we denounce as a fraud the free trade argument that the cost of living in this country is increased in proportion to the rates of duty on imports—except as we choose and are able to live better here than our unfortunate rivals in foreign countries.

Resolved, That copies of these resolutions be sent to the President and to every member of Congress.

This is a good answer to the speeches we have heard here. Hence, we must so legislate as to make it possible that he shall have higher wages and better wages than the laborers of other countries. In order to do that we must secure a market for the commodities which the laboring man produces. Now, Mr. Chairman, I want to put into the RECORD some contrasts between the situation of the farmer of to-day and the condition of the farmers in days gone by. During the first two months of this session I heard so much said about the distresses of the American farmer that I began to be afraid that it was just possible that, although I had been reared on a farm and knew more about it than any other industrial pursuit, I might have overlooked my suffering agricultural constituents. I came to have that feeling under the influence of the constant wail of the gentleman from Missouri [Mr. BLAND], who has wailed here on that subject with the regularity and persistency of a hired wailer.

Mr. LONG. Mourner.

Mr. GROSVENOR. No, I don't say a mourner. That is putting it too moderately. I want it a wailer—one of those persons about Jerusalem who used to go out and put their heads against the wall and wail. [Laughter.] I have looked into this subject somewhat and I have some personal knowledge of it, and I want to speak of it now with reference to some of the minor matters connected with the work of the farmers of this country. My first knowledge of farming was under a Democratic administration. It was on the soil of Ohio, a State which has to-day more comparatively wealthy farmers than any other State in the Union.

Mr. ALLEN, of Michigan. Except Michigan.

Mr. GROSVENOR. And fewer poor farmers, poor in any sense of the word. I want to call attention, first, to how we used to do things on the farm in those good old Democratic times when nobody was protected. We raised wheat, among other things, for a living, and we sold it at Democratic prices under a Democratic free-trade, or substantially free-trade, administration. We sold it at from 30 to 35 and 40 cents a bushel, but we did not sell it for cash, because there was not cash enough in the country to justify the purchase of any considerable amount of wheat at that price. The farmers of Ohio and of all that western country sold their surplus products by way of barter. A man who had a little more of one thing than he wanted to consume found another who had a little more of something else than he wanted to consume, and they traded with each other—swapped. We exchanged our wheat at from 30 to 40 cents a bushel and took our pay, one-third of it, in salt at $2 a barrel. The same salt can now be bought in the same market for 75 cents a barrel.

Mr. BUCHANAN. Can't you buy better salt now for that price?

Mr. GROSVENOR. Yes; a great deal better salt, made under a greatly improved process. We traded our wheat for calico at 15 and 20 cents a yard, and for muslin at 30 to 40 cents a yard. That is the way the farmers did in those times. And for everything a farmer bought—everything he could not raise—we paid more than double, and in very many instances more than three times, the present prices for like commodities. Our products brought less by about an equal ratio, and yet we find people crying out that the farmers are suffering. I do not believe they would suffer if we had no Mills bill hanging over us.

And, Mr. Chairman, whenever I think about the changes that have taken place in this country I always think of the production of wheat in the old times in Ohio. There is nobody here, except myself and a few others, old enough to remember the exact details of the manner in which it was produced for market. We thrashed it out with a flail, a machine made of two pieces of wood fastened together by a piece of leather; the operator swung the flail over his head and it was as dangerous to his own head as it was to the heads of wheat that he was aiming it at. [Laughter.] We separated the wheat from the chaff by an artificial agitation of the atmosphere, produced by a bag, or something of that kind, held by two men, one at one end and the other at the other, with a third pouring out the wheat at the top.

Not very long ago I stood on the shore of the Pacific Ocean away down south of San Francisco and there I saw a machine propelled by the power of steam running in a field of many thousands of acres of wheat. On the side of that machine was branded the legend "Ohio," and on examination I discovered that it had come from the town from which comes William McKinley, jr., the able advocate of protection from Ohio. That machine ran right along by the side of the standing wheat and gathered it, and thrashed it, and separated it, and dropped it off in rear of the machine in bags. As I stood there and looked at the operation I thought of the old flail process in Ohio, and I said to myself, those two machines mark the difference between the Republican and the Democratic parties of my country. [Laughter.] There goes the type of the development that is the result of Republican legislation in this country, the development which that legislation has made possible, and away back there in Ohio in I can see, in my mind's eye, the swinging of the old Democratic flail. [Laughter.]

Mr. Chairman, in those days many of the small products of the farm were for any purpose of cash payment wholly worthless. In those days eggs sold for 2 cents a dozen, chickens about 10 cents a pair, and butter in the same ratio, all in exchange for high-priced goods. When I come to compare the present condition of the American farmer with his condition then, I find that the poultry, the butter, the eggs, the cheese, and the milk of this country yielded in 1887 $590,000,000. I undertake to say, sir, that never under a Democratic administration did all the farmers of this country sell for cash $1,000,000 worth of those articles; but in 1887 the farmers produced and sold—this is a record not of what the farmer consumed but of what he sold—$590,000,000 worth of those products. That is more than the wheat crop of 1880, which produced but $314,000,000. It is more than double the cotton crop.

You gentlemen on the other side used to talk about cotton being king, but the farmers of the North and of the West sell eggs, butter, cheese, and chickens to-day for cash to the amount of more than twice the value of the whole cotton crop of the country. The hay crop was only $353,000,000. All the grist-mills in the United States produced only $505,000,000. The iron and steel industries, that we are so tenacious about here, produced a little over one-half of the amount of these small farming products which have become cash articles, salable at remunerative prices under the Republican administration, which has brought the farmers of the country to the position which they occupy to-day. I here give a letter received by me from the statistician of the United States Agricultural Department, from which most of the foregoing facts have been drawn. No estimate is made in this letter of milk sold by the producers.

UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C., March 26, 1888.

SIR: I am in receipt of two letters from the Hon. C. H. GROSVENOR, dated March 20, and addressed to the Chief of the Bureau of Statistics of the Treasury Department, and through you referred to me. I answer his queries as far as possible in the order asked.

1st. The census of 1880, in its returns of poultry products, gives only the number of fowls on hand June 1, with the product of eggs during the previous year. The figures given are: poultry 125,507,322, and dozens of eggs 456,910,916. This is very incomplete, not even including the spring hatching of fowls of 1880. After a careful study of all available data I estimate the total value of the poultry products of the United States as follows:

1860	$75,000,000
1880	180,000,000
1887	190,000,000

As a result of the same investigation, I estimate the value of the butter and cheese product for the same years as follows:

Year.	Butter.	Cheese.
1860	$80,000,000	$12,350,000
1880	189,000,000	28,500,000
1887	200,000,000	33,000,000

2d. The census first returned the number of farms in 1860, and in 1870 gave the estimated value of all farm productions, including betterments and additions to stock. This statement as far as available is as follows:

	Number of farms.	Value of products.
1860	2,044,077	.....
1870	2,659,985	$2,447,538,658
1880	4,008,907	2,212,540,927

The values for 1880, as given above, represent only the total of the items enumerated in the census and is not the aggregate value of all farm productions. It included the total of most of the arable crops and does not include meats of all kinds, most of the fruits, and many other minor products. After an examination of all available data of production and values I have estimated the total net value of all agricultural productions for 1860, 1880, and 1887, as follows:

1860	$1,676,000,000
1880	3,726,000,000
1887	3,871,000,000

3d. The following statement will show the gross value of manufactured products in 1860 and 1880 and the net value of the same products after deducting the value of materials used. This net value would thus represent labor and profit:

	Gross value.	Net value.
1860	$1,185,861,676	$854,256,584
1880	5,369,579,191	1,972,755,642

4th. The census returns have never included any statistics of numbers or amounts of farm mortgages or any records of private indebtedness. I send herewith a copy of the March report of this Bureau, which contains (page 78) the results of a necessarily superficial and incomplete investigation into the question of farm mortgages, and the results are not given as infallible or the results of a census.

5th. The estimated value of corn, wheat, hay, and cotton for 1886 is thus shown:

Corn	$610,311,000
Wheat	314,226,020
Hay	353,437,699
Cotton	256,295,326

Very respectfully,

J. R. DODGE,
Statistician.

Hon. NORMAN J. COLMAN,
Commissioner.

I may add that the sawed and planed lumber product was only $270,000,000—only a little over one-half the product of these small items which the farmer sells, and the manufactures of wool, about which we are constantly talking and about which our friends on the other side are so anxious, were only $267,000,000, against the $590,000,000 worth of the small farm products which I have enumerated.

Now, Mr. Chairman, in reply to the gentleman from Missouri [Mr. BLAND], who tells us that the farmers of the country are all breaking up, I send to the Clerk's desk, to be read as part of my speech, a report made to the Manufacturers' Record, of Baltimore, only last week, showing the situation in many of the States of the South and of the country at large.

The Clerk read as follows:

BALTIMORE, April 25.—Nearly five pages of this week's Manufacturers' Record will be filled with several letters from the governors and agricultural commissioners of the Southern States, upon the financial condition of the farming interests of the South and the general progress of that section. In every case the farmers are said to be more prosperous than for many years, and proof of this is given in the great decrease in the number and amount of mortgages and crop liens. Farmers are less in debt than at any time since the war, and are buying more liberally of improved labor-saving agricultural implements.

In Alabama Governor Seay and Mr. R. F. Kolb, commissioner of agriculture, unite in reporting a decreased indebtedness on the part of farmers and a steady improvement in their condition all over the State, with very marked improvements in buildings, fences, etc. In Arkansas, Florida, and the Carolinas the same report of increasing prosperity is made. Hon. S. A. Jonas, writing of Mississippi, which is a fair sample, says:

"There has never been a time since the war when Mississippi farmers were as nearly out of debt as at present. There is not to-day one farm mortgage where there were twenty ten years ago, and in fact it may be confidently asserted that the small farmers are in many parts of the State entirely free from debt. The crop of 1887 paid tens of thousands of our farmers out of debt and left them in splendid condition to enter upon the new year."

The growth of the South in other lines is shown by an increase from 1880 to 1887 of $977,000,000 in the assessed value of property, notwithstanding the fact that an immense amount of property, including railroads, new factories, etc., is exempt from taxes and hence is not included in these figures. During the same time there was an increase of 17,305 miles of railroad, a gain of 89 per cent., while the increase in the rest of the country was 69 per cent. The value of the South's agricultural products in 1887 was $171,000,000 greater than in 1879; the increase in the value of live stock during the same time was $182,283,000. The yield of grain was 626,305,000 bushels against 431,074,000 bushels in 1879. In 1887 the output of coal was 16,476,785 tons against 6,049,471 tons in 1880. The production of pig-iron was 929,436 tons against 397,301 tons in 1880.

And I send to the Clerk's desk to be read as a part of my remarks an extract from the Chicago Inter-Ocean of recent day, and put these statements up against the assertion, so often made in this debate, that our farming interests are suffering from the tariff:

WORDS OF WISDOM—TO WHICH THE FREE TRADERS WOULD DO WELL TO LISTEN—SOME INTERESTING STATEMENTS ABOUT THE EFFECT OF A REDUCTION OF THE TARIFF ON THE FARMERS OF THE COUNTRY AND THEIR INTERESTS.

[Chicago Inter-Ocean.]

"Who will speak for the farmers?" Having asked this opinion, the Cobden Club's Chicago Tribune proceeds to mourn the absence of any spokesman for the farmers in the discussion of the tariff question. Let the Dearborn street Jeremiah cease from his lamentation. The farmers can speak for themselves; and some very effective facts can they produce. They can say that when the Tribune was an American newspaper, advocating protection to American industry, working for the growth of American factories and the development of American mines, which are followed by the growth of American towns and cities, and, therefore, by an increased home market for American products, it published a weekly edition to which thousands of farmers subscribed, and they can say that when it became a British newspaper, published in Chicago, and devoted to the advocacy of a policy which would make farmers dependent upon a foreign market for the sale of their grain and for the purchase of their clothes, the farmers ceased to subscribe for it, and it perished for lack of circulation.

They can say that they are not half as ill-informed as the Cobden Club's Tribune thinks them to be; they can say that they know that, despite of the ever-increasing production of grain, meat, and other farm products, the increase of population in trading and manufacturing centers has more than kept pace with the increase of their productions. They can say, too, that nine-tenths of all things which they have to sell are consumed in this country.

They can say that they know that a very few years of free-trade folly would reverse this condition and make it so that nine-tenths of what they produce would have to be consumed abroad. They can say that they partly know, and partly can imagine, the fall in prices that would follow if they were absolutely dependent on Liverpool as an arbiter of value. They can say that they would be ruined by enforced competition with the pauper ryots who grow grain in India, and with the cheaply produced mutton and beef, wool and hides of Australia and the Argentine Republic. They can say that if grain and meat and wool were reduced in value by one-half they would be benefited by a 10 per cent. reduction in the price of clothing and blankets. And they can say that a 10 per cent. reduction is the very utmost they could expect in cloth and blankets from a free-trade policy; for they can say that they are now able to buy for $5.25 per pair exactly the same quality of American-made blankets as are sold in England, and of English make, at $4.45, wholesale. They can say that they have sense enough to know that retailers' profit, plus cost of transportation, plus insurance and risk, would make the English blankets reach very near to the present American price. They can say they are now able to buy as good a suit of clothing for $10 or $15 in any American store as can be bought in any English one for $9.25 or $14. They can say that free trade or "even radical reduction" in tariff duties would make common woolen goods very little cheaper than they now are, and would greatly lessen prchasing power.

They can say that they understand and thoroughly despise the motive of the Cobden Club's Tribune when it asks concerning the Western Republicans in Congress, "Do these gentlemen propose to discuss the tariff question solely from the standpoint of Eastern manufacturing interests?" They can say that were it as true as it is false that "Eastern manufacturing interests" are hostile to Western manufacturing interests, it yet would be well to fix the limit of the East at the Atlantic coast of the United States. Manufactures must be purchased from some source, and if from an Eastern one, better from no farther east than Massachusetts than from as far east as England, which suggests that the free traders are the champions of "Eastern interests." They go far east of our coasts to find their love and, it may be, their lucre. But the farmers can also say that they are aware that manufacturing interests are no longer exclusively "Eastern." Every State of the West is filling up with towns and cities, each of which has its factories, forges, and foundries. They can say that they buy their mowers and reapers and thrashing-machines more cheaply than they can be bought in France or England.

Above all, they can say that while farming lands are increasing in value in protected America, they are decreasing in free-trade England.

They can say that while capital is eager to be loaned to men who want to buy new or improve old farms in America, it shuns investment in English farm mortgages. It can say that so great is the inducement which farming enterprises offer in America that our National and many of our State governments have found it needful to pass laws prohibiting the ownership of land to all but citizens of this United States. After reading this it may occur to the Cobden Club's Tribune that there is a great deal to be said for the farmers, and also that they are capable of saying it themselves.

And I add a statement which is the result of a condensation of the facts given in several thousand letters from farmers in all sections of the Union. The great majority of these letters express the conviction that the tariff, notwithstanding defects and omissions, has contributed powerfully to the growth and welfare of agriculture. Few are hostile or indifferent. An overwhelming majority of the writers realize that the protective system, by building up other industries, has enormously enlarged the demand for agricultural products. While increasing the demand, it has greatly diminished the number of those who would otherwise have been forced, for lack of other employment, to crowd into agriculture and compete with each other in supplying that demand. It has helped to bring to this country nine million immigrants since its adoption, and during the past fifteen years not one in twelve of them have been farmers, farm labor-

ers, or shepherds; out of six million, more than five million five hundred thousand have been of other occupations. It has especially aided the development of manufactures and mining near the farms, so that the safest and most profitable of all markets for farm products has been enlarged.

Thus in the ten great farming States of the West, the increase in acres of improved land in farms from 1860 to 1880 was 160 per cent. A growth so remarkable could not have occurred without disaster to farmers; indeed, it would have been utterly impossible, if there had not been a far more rapid growth of other branches of industry. For during the same years, and in the same great farming States, the hands employed in manufactures increased 251 per cent., the wages paid to them increased 303 per cent., and the material used in manufactures, bought mainly from farms, increased 389 per cent. The wages which manufacturing hands in these States had to spend, mainly in buying farm products, averaged $1.10 for each improved acre in 1860, and had risen to $1.71 for each improved acre in 1880. The value of materials purchased for manufacture in these States, mainly from farms, averaged $4.02 for each improved acre in farms of those States in 1860, but had risen to $7.58 for each improved acre in farms in 1880. The following tables, prepared from census reports, verify these statements:

States.	Farms—acres improved land.		Manufactures—hands employed.	
	1880.	1860.	1880.	1860.
Ohio	18,081,091	12,625,394	183,609	75,602
Indiana	13,933,738	8,242,183	69,508	21,295
Michigan	8,296,862	8,476,296	77,591	23,190
Illinois	26,115,154	13,096,374	144,727	22,968
Wisconsin	9,162,528	3,746,167	57,169	15,414
Iowa	19,864,541	4,792,792	28,372	6,307
Minnesota	7,246,693	556,250	21,247	2,123
Nebraska	5,504,702	118,780	4,793	336
Kansas	10,736,566	405,468	12,062	1,735
Missouri	16,745,031	6,246,871	63,995	19,681
Total	135,691,906	52,306,584	663,013	188,651
Increase	160 per cent.		251 per cent.	

States.	Manufactures—wages paid.		Manufactures—value of materials used.	
	1880.	1860.	1880.	1860.
Ohio	$62,103,800	$22,302,989	$215,334,256	$69,800,270
Indiana	21,960,888	6,318,335	100,262,917	27,142,597
Michigan	23,313,682	6,735,047	92,900,269	17,635,611
Illinois	57,429,085	7,637,921	289,843,907	35,558,782
Wisconsin	18,814,917	4,268,708	85,795,178	17,137,334
Iowa	9,725,962	1,922,417	48,704,311	8,612,259
Minnesota	8,613,094	712,214	55,660,681	1,904,070
Nebraska	1,742,311	105,332	8,208,478	237,215
Kansas	3,995,010	880,346	21,453,141	8,612,259
Missouri	24,309,716	6,069,916	110,798,392	23,849,941
Total	232,008,465	57,553,225	1,028,962,530	210,490,328
Increase	303 per cent.		389 per cent.	

The farmers see that the rapid increase of agricultural production here, which has been the wonder of the world, could not have occurred without ruining farm-owners and degrading farm labor, had not the still more rapid and more wonderful development of other industries been encouraged by protection. But the letters urge with great unanimity that farm as well as other labor needs direct defense, and for the same reason. For all American labor has in common the responsibilities and burdens of citizenship to bear. There is no justice in forcing it to compete at any point with the labor of serfs or slaves, crofters or coolies. The American worker rightly claims, with his position as a self-governing citizen, a measure of independence in his industry, of comfort in his home, of respectability in his circumstances, of education for his children, of time for acquiring information. These are rights. Their denial tends to undermine intelligent and self-respecting citizenship, and threatens the safety of the nation. The defense of every home against the conflagration which may destroy a neighbor's dwelling is not more clearly a duty than the defense of the nation's industry as a whole, against the industrial and commercial conflagrations which in modern times threaten the welfare of many nations at once. As voters we cannot insure the wisdom of government in England or Germany; therefore as workers we are not bound to share calamities which mistakes made there produce. Recognition of this first duty of a nation to its labor has caused protective tariffs to be multiplied and strengthened, until nearly all civilized nations strive to guard their producers against external calamities, and even British colonies protect themselves against Great Britain. It would be strange indeed if this policy, which the splendid growth of this country has won other nations to imitate, the United States should now abandon. But the farm-workers, since they are nearly as numerous as all other classes of workers together in this country, know that no loss or degradation can come to them without affecting all other labor as well.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. HOLMAN. I ask unanimous consent that the time of the gentleman be extended.

The CHAIRMAN. How much additional time does the gentleman from Ohio require?

Mr. HOLMAN. I hope there will be no limit fixed.

Mr. GROSVENOR. Not to exceed thirty minutes.

There was no objection, and it was ordered accordingly.

Mr. GROSVENOR. Mr. Chairman, one of the propositions which has been made here, and which has been reiterated so frequently that it seems to require some reply, is that the arms of the Western country are burdened by mortgages to such an extent as to indicate that the prosperity of the farmers is not real. The answer to that is that the farmers of the country are intelligent enough to know when they are prospering and when they are not prospering, and I undertake to say now that there have been ninety-five farmers' names sent to this House in opposition to the Mills tariff bill for every five that have been sent here in favor of its passage.

The aggregate number and amount of the mortgages resting upon the farms of the Western States, which have been so absurdly exaggerated by the gentleman from Missouri [Mr. BLAND], do not indicate that the farmers of that region have been growing poorer. People who are connected with the loaning of money to the farmers of the Northwest and the West will state very promptly to any gentlemen who inquires of them that 90 per cent. of the money which they loan is loaned either for the purpose of improving property already owned by the borrower, or for the purpose of buying out his neighbor, who has decided to go west and settle in some of the great Territories west of the Missouri River. A man in Ohio, owning 80 acres of land with every foot of it paid for, is suddenly taken with a fever—not a very wise one in my judgment—that he ought to go to Oregon or to Washington Territory or to Montana, or he may be attracted away down over the mountains into Southern California, that country from which every mail brings to the people of Ohio and of all the older States such glowing reports of the fortunes that have been made there in real estate and in other ways.

Mr. HERMANN. It is a very wise move to go to Oregon. [Laughter.]

Mr. GROSVENOR. The Ohio farmer taken with this fever decides to sell his farm and does sell it. Now, who buys that farm? I undertake to say that of the farms sold under such circumstances in the great agricultural States of this country during the last ten years 98 per cent. have been bought by other farmers, either adjoining or in the immediate neighborhood, and in order to pay the money "cash down," so that the emigrant can have it on hand to speculate or to buy a home with when he reaches his destination, the purchaser borrows the money and places a mortgage upon both farms, and pays it off at his leisure.

The gentleman from Missouri [Mr. BLAND] is no doubt thoroughly imbued with the idea that the farmers of his district are in a suffering condition, that his whole section of country is bankrupt, that it is a place where nobody ought to go to, that it is a place where everybody ought to go away from, but I should like to have that gentleman, who undertook to give us so much information on this subject, bring in one additional item of statistical information. Let him tell us how many farms have been sold under foreclosure of the mortgages which he complains of. That will furnish a vastly better criterion to an intelligent man than all this talk about the amount of the mortgages on the farms of the West.

I shall avail myself of the liberal order of the House to put into my speech a statement of the growth and development of the farms of the great agricultural States west of the Ohio River, which shows that not only have the farms increased in number, but that the farm improvements have quadrupled in value, and that the present value of the farming plant of the country is better by all odds than it ever was before, but for one single fact, which I wish to put on record now. A given amount of the farm products of this country in 1887 was worth less in the market than the same amount was worth in 1884, as appears from the reports of the Bureau of Statistics, by the enormous extent of $238,000,000; showing that under a Democratic administration, with the constant threat of free trade, the constant menace here of the "Morrison bill" and the "Mills bill," we reached a point in 1887 where the same quantity of surplus farm products had fallen in value in the short space of three years to the amount of $238,000,000. Why was that? Simply because the market had decreased in certain localities.

The gentleman from Indiana [Mr. BYNUM] talked about the closing up of the industrial interests of the country. He can not show where any of them have closed up, except for one of two reasons, either mismanagement, defalcation, something that depended upon the management of the institution, or else the influence of the fear that hangs to-day like a mighty pall over the industries of this country, resulting from the presence in this House of a Democratic majority and the presence of a Democrat in the chair of the President of the United States.

The business interests of the whole country are standing in dread of this infatuation embodied in the bill. The doubt, the uncertainty which envelops the future makes capital timid and enterprise hesitate. But for this our industries would thrive, and all this is due to the presence here of a Democratic majority in this House.

You talk about the industries of this country having grown grea in spite of the protective tariff. Why did not they grow great in the period between 1840 and 1860? I have a table in the letter from Mr. Dodge, which has been read, showing the increase in farms, the increase of products between the great periods of the country under Democratic administration, from 1840 to 1860, and then from 1860 to 1880, and the ratio of growth has been as if based on a new system of commercial prosperity.

And sir, it went on. It never was checked until the Morrison bill

menaced the industries of the country, and that check, that disaster, is being quadrupled now by the presence in Congress of the bill which is now under consideration. There is not a member of Congress, believed to be fair minded toward the varied and innumerable interests of the country, who has not received protest after protest from all those industries, insisting that the passage of the Mills bill will destroy the industries to which the writer belongs.

Not only that, sir; but, in addition, the fear of ultimate destruction to these great interests is sending into bankruptcy, at this time, many of these industries. For men will not invest their money in raw material to carry on a business which next year may be turned over to the competition of the cheap labor of Europe. Men will not mine ore to-day which next year may be made worthless by a free-trade bill passed by Congress.

So then, Mr. Chairman, this great injury has come to the industries of my country by the presence of this Mills bill in the House of Representatives, and I hold the Democratic party and its Administration responsible for the degree of evil which we have.

Now, I have not time to discuss the subject of comparative wages in this country and in Europe. It has been done exhaustively on this as well as on the other side of the House, and I append a table of comparative wages in this country and in England which I copy from the speech of Hon. BENJAMIN BUTTERWORTH, delivered at Boston, and which is vouched for as correct. The statement shows the rate of wages paid weekly, unless it is otherwise stated. It is as follows:

Occupation.	England.	United States.
Book-binders	$6.00	$15.00 to $18.00
Brush-makers	6.00	15.00 to 20.00
Boiler-makers	7.75	16.50
Brick-makers	3.54	11.86
Brick-layers	8.00	21.00
Blacksmiths	6.00	13.30
Butchers	6.00	12.00
Bakers	6.25	12.75
Blast-furnace keepers	10.00	18.00
Blast-furnace filers	7.50	14.00
Bolt-makers	6.50	16.50
Bolt-cutters	3.00	10.00
Coal-miners	5.88	13.00
Cotton-mill hands	4.60	6.72
Carpenters	7.50	15.00
Coopers	6.00	13.25
Carriage-makers	6.75	13.00 to 25.00
Cutlery	6.00	12.00 to 20.00
Chemicals	4.00 to 6.00	13.00 to 16.00
Clock-makers	7.00	18.00
Cabinet-makers	7.00	18.00
Farm hands	3.00	7.50 to 9.00
Glass-blowers	6.00 to 9.00	25.00 to 30.00
Glass (partly skilled)	6.00 to 7.00	12.00 to 15.00
Glass (unskilled)	2.00 to 4.00	7.00 to 10.00
Glove-makers (girls)	2.00	6.00 to 9.00
Glove-makers (men)	4.50	10.00 to 30.00

Mr. Mulhall, whose statistics are regarded as authority by some free-traders, furnishes a table of average wages paid in various countries, together with the relation between wages and cost of food.

From this table I obtain the following comparative statement for the United States and Great Britain:

Country.	Average per week.			Ratio.		
	Wages.	Food.	Surplus.	Wages.	Food.	Surplus.
United States	$11.66	$3.88	$7.78	100	33	67
Great Britain	7.53	3.40	4.13	100	45	55

It will be seen that while the American workingman pays more for his food he gets far better wages than his brother across the sea, and at the end of the day comes out ahead, not only with a much larger surplus than the Englishman, but with 22 per cent. more of his own higher wages saved than the other has of his lower wages.

I should like to ask some gentleman to tell me why it is the wages of common laborers in the South bear about the same difference as between the wages of the North and the wages of labor in Europe.

Somebody has put on my desk an interrogatory I would like to put, not knowing the exact answer, and not knowing exactly as to whether the fact stated is so or not; but the one who propounds this interrogatory wants to know why $7.50 is the maximum wages given for the same class of labor in South Carolina, while the Northern laborer receives $26 a month? I think I could give an answer to that question if the facts would bear me out.

Mr. HEMPHILL. Will the gentleman permit me to ask him a question?

Mr. GROSVENOR. Certainly.

Mr. HEMPHILL. In the first place, I do not think that is true, and in the next place I would like the gentleman to answer this question: We are told the operations of the tariff system are the same all over the country. Now why, if that be true, does not the tariff keep up wages in the South as well as in the North? There is but one answer to it so far as I know, and that has been that the money has been taken from the South and brought to the North.

Mr. GROSVENOR. I can make an answer to that question, but it would be an unpleasant one for gentlemen of the South to hear. It would be unpleasant and I have no disposition to make it.

Mr. HEMPHILL. What is it.

Mr. GROSVENOR. I say that I can make an answer that would be satisfactory to myself, but as it would be unpleasant to others I have no disposition to make it.

Mr. PERKINS. They have not availed themselves of the opportunity by establishing diversified industries, of employing their laboring man, and for that reason the wages are lower than they are in the North.

Mr. HEMPHILL. On the contrary the statistics show there has been more advancement in industrial enterprises there and that more capital has been invested.

Mr. PERKINS. But where does it come from?

Mr. HEMPHILL. It comes from the North, a great deal of it.

Mr. GROSVENOR. May I propound a question to the gentleman from South Carolina?

Mr. HEMPHILL. Certainly.

Mr. WARNER. Is it not true that the laborers on farms in South Carolina receive, as wages, $8 per month, one bushel of meal, and a gallon of molasses?

Mr. HEMPHILL. I do not remember now the exact wages; but I will say this, that you can not tell what the laboring men on farms get in the South, for the reason that they do not all work for wages; a great many of them work on shares; and in other instances they have their rations, they have their house rent free, and they have their firewood, their garden patches, as they are called, and other allowances which in the North laboring men do not get as a part of their wages.

Mr. GROSVENOR. Allow me now to ask the gentleman from South Carolina a question.

Mr. HEMPHILL. One moment, if you will permit me.

I would like to say right here, *just in* that connection, that the great staple, as we all know, of the South is cotton, and the wages paid there is as much as they can possibly pay according to what we get out of it, and what we have to pay for the articles consumed on the plantations to produce it.

Mr. GROSVENOR. Now, may I ask the gentleman a question?

Mr. HEMPHILL. Certainly.

Mr. GROSVENOR. How much of the labor of the South is engaged in manufacturing establishments throughout the South—engaged in the production of lumber, coal, iron, and all of the other manufacturing industries of the South?

Mr. HEMPHILL. I am not in a position to give the gentleman the figures.

Mr. GROSVENOR. Then answer this question: Is there not a large proportion of the labor of that section engaged in these pursuits?

Mr. HEMPHILL. No doubt there is; but by far the largest proportion, in my judgment, is engaged in agriculture.

Mr. GROSVENOR. But there would be a reduction in wages of agricultural labor if there was no employment in these other branches of business?

Mr. HEMPHILL. Well, there might be some reduction of wages; but if the laborer even with less wages can buy twice as much for his wages as he gets now, I think he would be bettered by it.

Mr. GROSVENOR. Does the gentleman believe that you would have had any of the material increased in the industrial resources and development and enterprises of the South, such as we have seen in the last few years, had it not been for the protective system?

Mr. HEMPHILL. There can be no question about that. If the people of the North can not make money out of their manufacturing enterprises without protection, let them carry their mills down to the Southern States, and they will find that they can make them profitable without the need of such aid. The mills in South Carolina, of which I have some personal knowledge, have made in the last few years percentages ranging from 18 to 23 per cent., and yet they have paid the heavy price of 40 per cent., I believe, in order to get their machinery. Now they sell their products to Japan and China and other foreign markets, which shows very conclusively that we do not get that advance in our manufactured products which the tariff is believed to give.

Mr. GROSVENOR. How many hours per day is labor worked there?

Mr. HEMPHILL. I do not know.

Mr. GROSVENOR. And you say they pay 40 per cent. on their machinery; what do you mean by that?

Mr. HEMPHILL. Well, I mean the tariff upon the machinery that they use.

Mr. McMILLIN. It is about 40 per cent.

Mr. GROSVENOR. Can not you buy your machinery in the United States to-day cheaper than you can buy it in England, less the transportation on it?

Mr. HEMPHILL. Well, if that be true, 40 per cent. too much is being paid in this country on what we must consume.

Mr. GROSVENOR. It is not a question of 40 per cent., but whether you can not buy it here as cheap as you can on the other side without any reference to 40 per cent.

Mr. HEMPHILL. Why, your own side have been arguing that the sole effect of the tariff is to depress prices.

Mr. GROSVENOR. That is not my idea.

Mr. HEMPHILL. That was clearly set forth in the argument of the gentleman from Indiana (Mr. BROWNE), and was argued also by a distinguished Senator from Connecticut, who tried to show why my constituents should be taxed for the benefit of his. As he showed, the people of the North who had their moneys invested in this character of business were not making the ordinary percentage for which money could be loaned. Now, I do not see any great benefit to these people or the country in inducing them to invest their money where they know, and politicians and statesmen tell them, in fact, they can not make even the ordinary interest upon the investment. What benefit is there, then, in the tariff if it depresses everything; gives less than the usual interest on money?

Mr. GROSVENOR. That which I have been trying to say for some minutes is that you in the South, as appears from the statement of the gentleman from South Carolina, make heavy profits because you pay only less than half the wages to your laborers that is paid in the North. This can not endure. You must level up, or we shall find your cheap labor invading us and leveling down.

The gentleman asks a question which I answer as follows:

That is the rock upon which my friend and all of his friends have always wrecked their vessel.

Proceeding with my argument, for I think this is a good point to go on from a little, the tariff is beneficial to the industries of the country because it makes it possible for them to establish themselves and grow and prosper and develop the industries and enterprises of the American people in the production of these commodities on this side of the water; and it keeps away from them the power that has been exercised more than once to crowd the industries of this country first and then advance prices until it becomes an outrageous oppression. Break down our high-labor establishments, sink the capital and bankrupt the owners, and then the cheap-labor manufacturer sees his way to extortion and high prices. Thus it has been. Thus it ever will be.

Mr. HEMPHILL. I have no apprehension on that score. But let me ask the gentleman if competition here is a good thing, why is not competition good with all the rest of the world?

Mr. GROSVENOR. Answer me this question: How did it happen before the late war, before the tariff began to have its effect, we all admit that you did not have such industries in the South?

Mr. HEMPHILL. Because the South was built upon an entirely different system. They did not have the same way of doing business that you had up North. That, I think, had a great deal to do with it.

Mr. GROSVENOR. Yes, and I believe that is the truth. It is probably the best answer that the subject is capable of.

Mr. HEMPHILL. But do not you claim credit for the prosperity there as being due in any sense to the tariff; because, according to our faith, and statistics show it, it is not due to it but is in spite of it.

Mr. GROSVENOR. I will put in my speech here the comparative growth of the cotton-producing industries in this country, and with that before him the intelligent reader will see at once that there is no stronger argument than that which is worked out through the statement and admissions made by the gentleman from South Carolina himself. And going a little further and answering him more fully, I do not think foreign competition a good thing, and I am amazed that any one should. Foreign competition cuts down the price of labor first, then that of commodities; then the laboring man must live cheaper, and drift back toward the condition of the European laborers. Competition at home will not be pushed to an extent so baneful in its effects upon labor; and the lowest possible price at which things can be made here, and yet yield fair returns to labor and capital, is what we want.

Wholly unimportant, apparently, is the question of the presence in the South of the manufacturing industries so far as the money that is made out of them is concerned. But it appears by the figures here that the production of cotton has grown up steadily from a point away back in 1877, when there were less than 3,000,000 bales produced, until it has reached the enormous development of almost 7,000,000 bales. And my argument is it is because the cotton is in demand. It is exactly the illustration I undertook to make about the small farm produce. There are a number of people in South Carolina and all over the United States engaged in producing cotton. And that is so because there is a demand for it.

Mr. HEMPHILL. There are two reasons for making a big crop. If it sells well and we get a good price it is all right, and we make a large crop from the profit. But if it does not sell well, we have to make twice as much in order to get even a living. So it is necessary, in order to prove the prosperity of the South, to show, not that they make a big crop, but that they make money out of it; and before you claim credit for protection you must show that our cotton finds a market in this country, while statistics show that 77 per cent. is sent abroad.

Mr. GROSVENOR. I will make a suggestion which I think is perhaps as valuable here as at any other point in my speech. The gentleman says that 77 per cent. finds a market abroad. He means the markets of the world. So it turns out that 77 per cent. of the cotton of South Carolina, being an unprotected raw material, has found the markets of the world. That is not true of the products of New England. For some reason or other you have some better way of finding the markets of the world than our New England friends.

Mr. HEMPHILL. If it be a good thing to sell at home why not protect cotton? And I will ask the gentleman to answer another question.

Mr. GROSVENOR. Let me give you a question: If free raw material will aid the American manufacturer to find the markets of the world, how is it that only 8 per cent. finds a market and about the same amount of the raw material of woolen manufactures; cotton being free while wool is protected? I want the gentleman to answer that question squarely.

Mr. HEMPHILL. I will endeavor to do so. I never have pretended that when you get the markets of the world you are to sell the whole of your product there. You sell it wherever you get the most for it. If wool will sell for more there, all right; and if cotton will sell for more there, all right.

Mr. GROSVENOR. If the manufacturer and farmer of my country can sell all their products at a fair price, and thereby can afford to pay a fair price for labor, I am content with the situation without hazarding the substance of their prosperity by grasping after the shadow of the markets of the world.

But to proceed. A citizen of the United Kingdom wears $3 worth of woolen goods in a year; a citizen of the United States expends $6 a year in woolen goods. We find the manufacturers of this country with free cotton, unprotected from competition with the spindles of Europe and at the same time in competition with protected wool; and the markets of the world absorb our product in the same proportion, not to exceed 10 per cent. in the case of either one of the commodities. That is the solution of the whole question. We pay higher wages than they do in Europe. When the manufacturer here is able to run his machinery at the same cost as the manufacturer of Europe there will be no trouble about free raw material.

Mr. HEMPHILL. Do I understand the gentleman to say that we sell 77 per cent. of our wool abroad?

Mr. GROSVENOR. No, sir; I said we sold 10 per cent. of our woolen manufactures abroad.

Mr. HEMPHILL. That is a different thing from the sale of 77 per cent. of our cotton abroad. I ask the gentleman this question: Why should you pay a man who raises sheep an extra amount of money and refuse it to a man who hoes and plows and raises cotton? According to some statements made here, the laborer in the South gets $8 a month. Why not give him something more? Why give the higher wages to a man who is engaged in raising sheep and refuse it to a man who is engaged in cultivating cotton? Why tax the man who raises cotton to add to the profits of the man who raises sheep?

Mr. GROSVENOR. If you put a tariff on imported cotton goods I have no objection.

Mr. HEMPHILL. I do not believe in that; but you do. And if you believe in it, why do you not do something for the laboring man of the South?

Mr. GROSVENOR.. You told us that because of your monopoly of the cotton you are making enormous profits.

Mr. HEMPHILL. On the manufacture of cotton we are making profits, but not on the growing of it. I never have seen a manufacturer, North or South, who distributed his money when he could hold on to it. I think the very fact of the enormous number of strikes and lock-outs you have in the northern country, compared with what are in the South, is a good showing in favor of the contentment of the Southern employé in the factories.

Mr. FARQUHAR. Will the gentleman permit me to ask him a question?

The CHAIRMAN. The gentleman from Ohio has one minute of his time remaining.

Mr. BRECKINRIDGE, of Kentucky. I ask for such extension of the gentleman's time as will correspond to the time that has been occupied in the colloquies.

The CHAIRMAN. The gentleman's time has been already extended.

Mr. BRECKINRIDGE, of Kentucky. I ask that it be extended for five minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. GROSVENOR. This is the sort of an argument which is, at least with the exception of one speech made here, a novelty; I think I shall be entitled to the credit of having drawn the fire of the other side of the House. But I do not object to this. Fair discussion is what we seek and what we tender to others. The people will discriminate, and judge and decide.

Mr. Chairman, there are certain special matters in this bill about which I want to speak.

I want to show that this bill is sectional in its proposed operation, and that it discriminates for and against certain articles of American production, and I want, moreover, to point out some wrongs in existng law. And first I will discuss

THE TARIFF ON SUGAR.

Mr. Chairman, no more glaring exhibition or demonstration of the sectional and unjust character of this bill can be found than in the schedule which gives to sugar 80 per cent. at least of its present unwarranted protection. There is no principle of protection that justifies this tariff, this tax, or any other tax upon sugar. Mr. Chairman, what is the ground-work upon which we rest our claim of right to protect these industries? We say to the world we have here in the United States the soil or the crude material, as the case may be, the natural capacity to produce this commodity, and the labor, and the skill, and the money, and the enterprise to produce it. Therefore, we say, protect this labor, this skill, this capital, this enterprise from the cheaper labor, cheaper skill, cheaper capital, and cheaper enterprise of the old countries, and we will produce of this commodity all that the people of this country want, and when once protected, domestic competition will relieve the consumer of extortion in the matter of prices. Thus it is that we have been enabled to show that of all the protected industries of this country their products have been cheapened.

I shall not encumber my speech with needless exhibits of figures, but I want to show in good round numbers that there is not one article that enters into the daily life of a family that we produce in this country in sufficient quantities for the demands of our people that has not been cheapened by the direct influence of protected industries and stimulated enterprise and competition. Let the farmer of to-day take his dollar and set down and figure what he can buy with it, the things he wants and must have, and then let him take a table of prices under a good old Democratic administration, and he will discover what I have long ago discovered, that there is not one article that has not been cheapened. But, Mr. Chairman, how does this logic and argument apply to the duty on sugar? We tax the people of the United States about $60,000,000 a year for the tariff tax on sugar; that is one dollar a head for every man, woman, and child, black and white, bond and free, great and small—the average tax upon each is a dollar. And now for what it is a tax, Mr. Chairman, for revenue only, or to be absolutely accurate about it, nine-tenths of the money thus received is a tax for revenue only and has no protective quality about it whatever. It is not justified; no man can justify it. We have stimulated the production of steel rails in this country by a protective duty and are able to show to the world to-day that we can make the steel rails for every railroad in America and export them, if need be, to the Old World.

We ask for protection on wool, and demonstrate to the world that America can produce all the wool that America can manufacture and have a surplus of the raw material to export. This is justifiable taxation. This is taxation within the scope and principle of the policy of protection. But what about sugar?

I append a table showing the quantities of sugar and molasses produced in the State of Louisiana during the years named below, and which I undertake to guaranty to be as accurate as statistics of this kind can be made, and it appears that in 1861 the products of sugar in the United States amounted to 459,419 hogsheads; that of molasses in the same year, 34,216,000 gallons. In the years 1886–'87 the production of sugar had fallen to 145,986 hogsheads; and at no time since the war did it reach 250,000, and the ratio has been downward, right downward.

The table is as follows:

Statement showing the quantities of sugar and molasses produced in the State of Louisiana during the years named below.

[From data furnished by A. Bouchereau, esq.]

Years.	Sugar.	Molasses.	Years.	Sugar.	Molasses.
	Hhds.	*Gallons.*		*Hhds.*	*Gallons.*

1854–'55	346,635	23,113,620			

NOTE.—No data for years left blank.

But I append another table, with equal assurance of its correctness, which shows the amount of sugar and molasses produced in the United States during the years from 1852 to 1886, inclusive; and this shows a gross production in 1861 of 528,321,500 pounds of sugar in Louisiana, and 11,509,000 pounds in all the other Southern States; with 34,216,000 gallons of molasses in Louisiana, and 3,502,000 gallons in all the other Southern States. And in 1885–'86 the production of sugar in Louisiana was 286,626,486 pounds, and in all the other Southern States 16,128,000 pounds. And in the same years the production of molasses was 17,863,732 gallons, and in all the other Southern States 3,645,000 gallons, while away back in 1853 Louisiana produced 31,000,000 gallons of molasses, almost double her product of 1885–'86.

Statement showing the quantities of sugar and molasses produced in the United States during the years from 1852 to 1886, inclusive.

Year.	Sugar.		Molasses.	
	Louisiana.	Other Southern States.	Louisiana.	Other Southern States.
	Pounds.	*Pounds.*	*Gallons.*	*Gallons.*
1852–'53	368,129,000	18,173,000	25,700,000	1,260,000
1853–'54	495,156,000	29,998,000	31,000,000	1,956,000
1854–'55	385,227,000	29,498,000	23,113,620	1,406,000

NOTE.—The data as to the production of Louisiana are from the Louisiana Sugar Reports, by A. Bouchereau, and the data of the products of other Southern States were furnished by Mr. A. Noel Blakeman, manager of the New York Shipping and Commercial List.

Now, Mr. Chairman, we hear the advocates of the special interests of personal friends occasionally telling us that the sugar production in the South is going to improve and increase, and that the product of sugar is the great staple product of Louisiana.

I here append a little table, taken from the official figures, which shows the agricultural condition of Louisiana for the year ending December, 1887, and by that it will be seen that the cotton of Louisiana was worth $21,115,150, while the sugar was worth but $14,831,936; or, in other words, the sugar crop was worth only two-thirds in round numbers of the cotton crop of Louisiana, while the corn crop was worth nearly $11,000,000. It appears, therefore, Mr. Chairman, that Louisiana is abandoning the production of sugar as an important factor in her prosperity. The acreage in sugar-cane is growing annually less, while the acreage in corn and cotton and the other cereals of that splendid agricultural region is growing annually, indicating that the people in Louisiana understand perfectly well that the sugar industry has had its day and is going out. The following is the table:

During the past agricultural year, ending with December, 1887, Louisiana produced the following crops, which bear evidence to the inexhaustible fertility of its soil:

Products.	Acreage.	Yield.	Value.
Cotton.....bales..	1,025,300	468,802	$21,115,150
Sugar.....barrels..	177,044	1,059,424	14,831,936
Molasses.....gallons..		16,243,490	4,548,577
Rice.....pounds..	72,686	61,930,831	3,046,888
Corn.....bushels..	973,142	19,927,323	10,963,364
Oats.....do....	36,861	498,600	263,940
Potatoes, sweet.....do....	19,462	1,895,622	812,297
Potatoes, Irish.....do....	6,710	257,168	307,402
Hay.....tons..	28,200	71,200	1,078,000
Fruits.....	8,000	.....	360,000
Other agricultural products, forage, etc....	10,000	.....	3,775,000
Total.....	2,357,414	.....	61,102,584

Now, Mr. Chairman, while these figures are true as to the production, they are equally true as to the consumption.

I here append a table showing the amount of sugar consumed in the United States from 1877 to 1886, inclusive:

Statement showing the quantity (in tons of 2,240 pounds) of sugar consumed in the United States during each year from 1877 to 1886, inclusive.

[Data mainly derived from the New York Shipping and Commercial List.]

Calendar year.	Imported cane sugar. *a*	Domestic product.						Total.	Consumption per cap. ita of population.
		Manufactured from imported molasses. *b*	Of cane in Louisiana.	Of cane in other Southern States.	Of maple.	Of beet root. *c*	Of sorghum and other.		
	Tons.	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Tons.*	*Lbs.*
1877..	603,750	35,500	85,121	3,879	12,000	446	1,554	745,250	36.0
1878..	649,872	40,000	65,670	5,330	11,000	223	1,377	773,472	36.2
1879..	664,196	44,900	106,910	5,000	10,000	357	1,443	831,896	38.1
1880..	765,370	50,617	88,822	.....	10,000	357	1,943	917,109	40.9
1881..	832,616	39,949	121,867	5,500	9,000	629	.....	1,009,561	43.9
1882..	917,120	64,456	71,372	5,000	20,000	446	.....	1,078,394	45.7
1883..	962,871	40,722	135,297	7,000	18,500	536	.....	1,164,926	48.2
1884..	1,053,790	50,000	121,443	7,000	25,000	737	313	1,265,283	51.0
1885..	1,069,539	47,259	94,376	6,500	25,900	600	1,400	1,245,274	48.8
1886..	1,162,609	72,613	127,958	7,200	18,000	754	.....	1,389,125	53.3

a Includes such amounts of beet sugar as may have been imported.

b Leading refiners state that little or no sugar is manufactured from domestic molasses.

c Now manufactured in California only.

While the production has been going steadily but rapidly downhill, the consumption has been going steadily and rapidly up-hill. By the combination of these figures it will be seen that the largest amount produced in the United States in one year was from 1861 to 1862 when it aggregated nearly 540,000,000 pounds, while in 1885 the total product exceeded but a trifle 300,000,000 pounds. But in 1886 we consumed 3,111,640,000 pounds of sugar, being more than ten times the quantity produced in this country. Therefore nine-tenths of that product on which we collect $60,000,000 is the same kind of a tax in quality and essence as would be a like tax levied upon tea and coffee.

There was in 1886 seven hundred fewer establishments than there were in 1861, and yet our population is rapidly increasing and the individual consumption of sugar also. In 1877 we consumed 36 pounds of sugar per annum per capita. In 1884 it reached 53.3 pounds, and last year it is estimated at 55 pounds to every human being. The duties paid in 1886 amounted to $50,265,538, and last year to $56,507,495.

So, Mr. Chairman, this sugar duty can not be maintained. It is a tax for the benefit of a few to the injury of the many. The tax is levied upon the same principle as was the war taxes upon sugar and coffee. The Republican party made haste over the opposition of the Democratic party to give to the people of this country, the rich and poor alike, free coffee and free tea. Its mission will not be ended in this direction until it has made it possible to sweeten the coffee and the tea with untaxed sugar. The movement is on foot, the cry has gone up; with an over-burdened treasury there is no reason why this tax should stand, and he who gets in the way of this car of progress will find himself crushed under the indignation of a free people. "And whosoever shall fall upon this stone shall be broken; but on whomsover it shall fall, it will grind him to powder."

THE RICE TAX.

How about rice? Was there ever a greater outrage than the tax of 132 per cent. on rice? In 1840, 1841, and 1842 rice was admitted free, and I may say here, Mr. Chairman, that it illy becomes our Democratic opponents on this floor to talk about dear food, high-priced living, while they are putting a tariff of 132 per cent. on a prime article that enters into the consumption of millions of families in the United States. It is the food of the poor colored man in his little cabin at the rice swamps in the Carolinas and Georgia, and the little pickaninnies rely upon it as their substantial subsistence. It enters into the food of the rich man in the North, and the common laborer of the North depends upon it as a staple article of family consumption.

In 1840 the rice product of the country was 63,000,000 pounds and the price was from 2¾ to 4 cents. But I append a table giving the rice crop before the war and since the war, and the various tariffs and prices; and I do it to show that it is a product overprotected, unreasonably and irrationally protected, and to point out the sectional character of this bill I class it with sugar as one of the overprotected industries of the country and which marks the sectional character of this bill. It comes from the sunny South, it comes alike with sugar from the sunny South, from the States that produce not only cotton and sugar and rice, but which quadrennially produce 153 uncontested, uncontaminated Simon Pure Democratic electoral votes.

Why should wool be free and sugar taxed? Is it because sugar votes the Democratic ticket and wool does not? Why protect rice and destroy salt? Is it because one grows on Northern soil and the other in the Southern swamp? Why strike down the products of the North and enhance the value of those of the South? Is it because the "solid South" is the friend of the Democratic party?

Why should the product that comes out of the same earth that God has given to us all, and which rears its head towards the stars in an atmosphere all redolent with the perfume of Southern flowers and amid the atmosphere of Southern spring-time and bursting summer, be protected by an unreasonable tax, while the product that struggles for growth in the severe atmosphere of northern farms and fields go unprotected?

The following table shows the rice crop of the United States before and since the war:

Rice Crop.

Years.	Pounds.	Price per pound.
1840	63,948,000	2¾–4
1845	71,492,400	2⅝–4½
1850	112,237,800	2½–3⅝
1855	70,872,000	2½–5½
1860	119,344,800	3 –4½
1865	5,000,000	9½–14
1870	52,892,400	5½–9½
1875	85,000,000	6½–8½
1880	122,000,000	5½–8
1885	150,000,000	3½–5½
To-day		4½–6½

TARIFFS.

1840. Free.
1841. Free.
1842. Free.
1846. 20 per cent. ad valorem (average ⅝ cent per pound).
1857. 15 per cent ad valorem (average ½ cent per pound).
1861. Cleaned, 1½ per cent.; uncleaned, 1 per cent.
1864. Cleaned, 2½ per cent.; uncleaned, 1 per cent.; rough, 1½ per cent.
1883. Cleaned, 2½ per cent.; uncleaned, 1½ per cent.; rough, 1½ per cent.
Duty at present: cleaned, ad valorem (2½ cents equal) 90 per cent.; uncleaned, ad valorem (1½ cents equal), 75 per cent.
Duty as proposed: cleaned, ad valorem (2 cents equal), 80 per cent.; uncleaned, ad valorem (1½ cents equal), 97 per cent.
Duty, 1861 to 1864,* cleaned, ad valorem (1½ cent equal), 45 per cent.; uncleaned, ad valorem (1 cent equal), 33 per cent.
Duty before the war (highest 20 per cent).

Yearly consumption per head, England (1866), ten and three-quarters (10.76) pounds. Yearly consumption per head, United States (1866), four (4.02) pounds.

Rice at three (3) cents per pound, cleaned in New Orleans, nets planter on plantations as follows: 44 bushels (10 barrels clean) per acre, low yield, $22; 60 bushels (16 barrels clean) per acre, average yield, $36; 80 bushels (20 barrels clean) per acre, not unusual yield, $48.

I add to my comments upon the rice tariff a letter which I have received from one of the most prominent rice dealers of the country, a gentleman who would be at once known and recognized were I to publish his name; and, inasmuch as he has not authorized me to do so, I merely give his letter.

It is as follows:

HON. CHARLES H. GROSVENOR, M. C., *Washington, D. C.:*

DEAR SIR: I beg respectfully to call attention to the inclosed, which sets forth rice as it was and is. In seeking to reduce the revenues, it is presumed that the true legislator considers those articles which can best stand any disturbance of existing conditions. Pre-eminently rice is among that number. I think this assertion is warranted by the facts set forth. The prices of rice before the war were lower than to-day, and yet the crop steadily increased year by year; from which one would naturally argue that the crop must have yielded a satisfactory remuneration to the planter.

Since the war, even when there have been sudden enlargements of crop, prices have never fallen as low as the lowest before the war. During such mentioned years, while there was some complaint in the Atlantic coast States, there was none heard in Louisiana, where the larger amount of crop is now produced. In fact it occurs to me as I write that, when speaking of the unusually low prices of those years, I was assured by residents, who were planters as well as capitalists, that rice could be profitably raised and sold, cleaned, at 3 cents per pound, and pay fair intermediary charges, *i. e.*, to commission merchant and miller. I have no reason to doubt the assertion, for Louisiana rice can be raised as cheaply as any other cereal and the average yield per acre is an item larger than wheat.

Another reason why I can but think the margin must have been reasonably satisfactory is, that other crops are discontinued and the culture of rice steadily extended. This is true in a lesser degree of the Carolinas, but doubly true of Louisiana.

Prior to the war the culture in Louisiana was but a few thousand barrels of Creole or red rice. But in 1885 and 1886 it produced over 400,000 barrels, equal to 90,000,000 pounds of rice, that vied with Carolina for excellence. I do not wish to be understood as striking at any needed barrier, but if the duty on rice is not required for protection, or by the Government for revenue, then I would like to see it abolished or reduced to some point approximating to that which prevailed before the war.

As will appear by the card the duty on rice six years prior to 1861 was 15 per cent. ad valorem, equal to less than one-half cent per pound. Rice is a cheap food product and more largely used in all other countries of the same climate than in our own, and undoubtedly would be used to the same extent were not its prices so far above those of other cereals, of which number it actually is.

In closing I venture to suggest for your consideration a duty on cleaned rice of one-half cent per pound, or 15 per cent., or 20 per cent. ad valorem; and that "rough rice" and "uncleaned rice," being a "raw and unmanufactured article," be placed upon the "free list."

From this, Mr. Chairman, it will be seen that there never was a greater or more systematic scheme of hypocrisy than this pretense of aiding the people of this country by cheaper living. Rice is taxed beyond all reason, sugar is taxed without any justification, cotton is protected, and whisky is the one sacred element in this country that the Democratic Committee of Ways and Means dare not disturb. But they strike at salt.

THE ATTEMPT TO DESTROY THE INDUSTRY OF SALT-MAKING.

Now, Mr. Chairman, there is another matter intimately connected with my own Congressional district, and to which I desire to call the attention of the committee. The salt industry in the United States is assailed in this bill. The manifest purpose of the framers of this bill—a remarkable document—is to destroy the business of manufacturing salt. They can have no other purpose. They shall not screen themselves behind the pretense that they are seeking either to cut down the revenue or cheapen the production of salt. Salt is an article which goes into the consumption of every family in the land; that I agree to. It is a commodity without which no table is properly equipped for the health and comfort of mankind. It is an indispensable necessity for the rich and the poor alike. For however different in degrees the human palate and the human taste may be or become, there is no human taste or human palate that ignores or disregards the necessity of salt. Is that attack upon salt anything less than that which I have stated? And there is no better article to illustrate the fallacy of the whole argument of these free-trade people than this very item of salt.

In January, 1888, the salt manufaturers of New York appointed a committee to prepare a statement concerning the salt industry of the country, and especially of their own section of the country, and I desire to place in this connection a table, showing the rise and progress, growth, and development of the salt industry of the United States, beginning back of the tariff and coming on down to the present day. The gentlemen who prepared the table state the arguments in favor of free salt are as follows:

The principal arguments that have been offered in favor of the removal of the duty on salt may be briefly summarized:

1. It is asserted that, owing to the protective duty, the price paid for salt by the American consumer is too high.

2. It is asserted that American dairy salt is not so good for butter-making as the English salt, and that to produce the best grades of butter it is necessary to use the latter.

3. It is asserted that it is requisite to use foreign salts for the packing of meat, as American salt will not keep the meat as well as the other.

4. It is asserted that the salt-makers of this country have organized a monopoly or trust for the control of prices, and that the same are thereby maintained at an artificially high standard.

These assertions we take the liberty of replying to, seriatim.

1. Until about twenty-five years ago, America possesed but a limited salt industry, chiefly confined to the environs of the city of Syracuse, in the State of New York, the salt fields there located being the property of the State and not of individuals. At that time the country depended almost entirely on the products of this field, together with a pretty large quantity of the imported article, and the price, owing to the limited domestic competition, was high. About the year 1860 the manufacture of salt was commenced in the State of Michigan, and in a few years developed with surprising rapidity, so that by 1866 the price of salt had fallen from a very high figure to the then low price of $1.80 per barrel for "common fine" salt, this grade constituting the main bulk of American salt. As these fields became further developed and competition more active, the price of salt fell during succeeding years, the average price being, for—

1867	$1.77	1877	$0.85
1868	1.85	1878	.85
1869	1.58	1879	1.02
1870	1.32	1880	.75
1871	1.46	1881	.85
1872	1.46	1882	.75
1873	1.37	1883	.81
1874	1.19	1884	.73
1875	1.10	1885	.70
1876	1.05	1886	.61

About the year 1883 the discovery of salt in Western New York, distant about 125 miles from the Syracuse field, led to an extensive development of this industry in that region, and with the result that standard common fine salt was freely offered during 1886 and 1887 as low as 55 cents per barrel (barrels worth 25 cents included), being equivalent to 6 cents a bushel for the net salt.

Domestic competition has been the chief factor in reducing the price of salt, and we believe that the figures just given should be sufficient refutation of the assertion that the price of salt is artificially high, and that the remedy lies in the removal of the present duty.

2. In reference to the claim that American dairy salt is not equal to the English, and that fine grades of butter can not be made with it, we will simply state that the organization known as the National Butter and Cheese Association, representing the whole country, appoints judges to examine and pass upon the exhibits of butter and cheese made at its annual meetings. At the meeting held at Manchester, Iowa, in November, 1887, fifteen premiums were awarded on butter, of which thirteen were taken by butter salted with American salt. At the annual meeting of the association held in Chicago in 1886, the majority of prizes for butter and cheese were taken by users of American salt. The most noted producer of creamery butter in the world, the Elgin Butter Company, uses American dairy salt exclusively. As their butter commands the highest market price, they would certainly employ English salt if it were in reality of better quality than American. We conceive that assertion No. 2 needs no further refutation.

3. The assertion that meats preserved in brine made with American salt will not keep so well as those in which foreign salt is used, is met by the fact that the principal packing houses of this country, situated at Cincinnati, Chicago, Saint Louis, and Kansas City, rely almost exclusively on American salt.

Here, then, is a statement which shows that, beginning way back in 1867, salt had begun to fall under the operation of a protective tariff and American competition, so that from $2.50 a barrel before the war it reached $1.77 in 1867, and while the Republican party has continued this "robber tariff," about which these gentlemen prate so loudly, in 1886 we find the price of salt 61 cents a barrel in the New York market, and in 1877 it was being produced and sold as low as 55 cents a barrel, packed in a barrel worth 25 cents, or the salt was being sold at an equivalent of 6 cents a bushel for the net salt; and yet these people propose to strike a deadly and fatal blow at the salt interest.

The same committee makes the following statement in regard to the practical effect of the removal of the duty on salt, assuming, as they do, for the purposes of their argument, that the removal of the duty would reduce the cost of the salt in this country at a corresponding ratio.

The following is their statement:

Fine salt for dairying purposes comes from England in sacks holding 224 pounds and pays a duty of 12 cents per hundred pounds, equal to about 27 cents per sack. The best quality of this salt sells in New York for about $2.25 per sack, or say 1 cent a pound. One pound of salt is usually added to 16 pounds of butter, so the salt in each pound of butter costs in this market $\frac{1}{16}$ of a cent. If, now, the duty of 27 cents a sack be removed and the market price correspondingly fall, there will be a saving to the butter maker of about one-eighth of the present cost, equal to about $\frac{1}{128}$ of a cent for each pound of butter made. In other words, removal of the 12-cent tariff on dairy salt will save the creamery and dairymen 1 cent for every 128 pounds of butter made.

Is this saving to the butter maker or the consumer of butter worth the sacrifice of the dairy salt-making interest of the United States?

But this statement and this suggestion have no force in the light of events. I undertake to say, and I say it with a full knowledge of the exact condition of the salt business in the United States, that the removal of the duty on salt would have just two effects: First, to close, or substantially close, all the salt manufactories of the United States. It would obliterate the capital now invested therein. It would drive the persons employed to seek other employment, and crowd the other occupations, and cheapen the reward to be given. Thereupon, the industry being destroyed, this country, with its sixty-odd millions of people, every one of whom uses salt, would be at the mercy of the foreign producer and importer. Then we should have salt again where it stood prior to the war; we would then be back to the good old *ante bellum* Democratic times, and in case of war be helpless.

There are no "trusts" in the manufacture of salt, no combination, except to cheapen the outlay of the manufacturer in putting his salt into the market. It is an article of American production, and while it yields but a trifling revenue to the Government, it affords remunerative employment to a large number of people. As to whether or not the removal of the duty would destroy the industry, I subjoin a further statement from the salt manufacturers of New York.

It is as follows:

Salt imported for packers' use and commonly known as "Liverpool ground," usually comes in bulk and pays a duty of 8 cents per hundred pounds, equal to $1.60 per ton of 2,000 pounds. If the market price of salt in the United States should be reduced to the extent indicated by these figures, it is clear that the domestic manufacturer would receive but 65 cents a ton for the salt that he makes.

*Foreign rice much higher than now, hence specific duty was less per cent. on value.

As fuel required for making a ton of salt costs a little over $1, the salt manufactories of this region, and in fact of all the salt-making regions of the United States, must inevitably close. With the salt-works of this country closed and the plants dismantled, the market would be in the hands of English manufacturers and prices would probably reach, if not surpass, those of twenty-five years ago. We trust that such a condition of affairs may be averted.

It is true now, and I admit it, that the blow would fall heavier at first upon the New York manufacturers than upon the manufacturers of Michigan or my own district; but it would be equally finally fatal to the manufacturers of salt everywhere. I adopt and make a part of my speech the following letter from one of the most intelligent men of my district, so far as the knowledge of the salt industry is concerned, a gentleman who has been with and of the salt industry or the Ohio and Kanawha Valleys to my certain knowledge for more than twenty-five years; has grown with its growth, participated in the struggles of that industry, was with it when it was a magnificent enterprise, stood by it in its zenith of prosperity, and has struggled to uphold it when, under the pressure of domestic competition and assailed by foreign competition, it has grown to be a smaller and less lucrative enterprise—Col. George McQuigg, general agent of the Ohio River Salt Company, the headquarters of which is located at Pomeroy, in my district. He gives an intelligent statement of the inevitable effect of the removal of the remaining duty on salt.

OFFICE OF OHIO RIVER SALT COMPANY.
Pomeroy, Ohio, February 3, 1888.

DEAR GENERAL: Yours was received some days ago, but I have been sick with cold, which is the reason of delay in answering. You understand the situation here, and I can only refresh your memory with few of the arguments.

The consumption of salt now is about 60,000,000 bushels, or an equivalent of 1 bushel for each inhabitant; one-third of the supply is foreign salt and the balance domestic production. It is sold at about 12 cents per bushel so that the *great oppression* upon the people amounts to about 12 cents annually. Domestic salt is sold here at substantially the same price that Liverpool salt is sold at Liverpool. Foreign salt supplies almost the entire seaboard from Galveston, Tex., to Bangor, Me., and inland on line from Galveston to Little Rock, Ark., thence to Nashville, Tenn., and thence to Bangor; and it supplies that territory for the reason that they have cheaper freights into all that territory than can be had for the domestic salt, even after paying the 4 cents per bushel duty, and free salt will give to the foreign importer just that much more territory to supply that the $1.60 per ton duty off will carry it from the line where it is now met further inland.

We have made no money for ten years in the manufacture here. Immediately after the war, when the entire Southern country was bare of such by reason of the blockade of the Southern ports, we, unfortunately for us, made some money on salt, and the war tariff still being on to help meet the necessities of the Government, the industry then paying a heavy internal tax, induced a large amount of capital to go into the manufacture, but so soon as the tariff was reduced our industry languished, and plants that cost $100,000 have been sold for what the wreck would bring, in one instance $2,500 for furnace that cost over $100,000. We have in this country now, including Michigan, New York, Ohio, and West Virginia, capacity to make all the salt that the demand in the whole country requires.

As already shown, we only supply two-thirds of the required demand now, with free salt the English importers would soon be masters of the situation, and then, with the domestic industry crushed out, they can name their own price, and, further, in case of any future troubles, so that the supply would be cut off, we are left in as bad condition for the whole country as the South was during the war. The whole industry is the result of labor, except small royalty for the coal consumed in its manufacture, and also small royalty for the timber in the forest, of which the package is made, and the money expended in the industry will, when we are paralyzed by free salt, go into the pockets of English makers instead of being distributed here.

Yours, truly,

GEO. McQUIGG.

I need add no more, Mr. Chairman. I have seen the growth and development and decline of this industry myself. I have seen the encroachment of domestic competition coming legitimately from Michigan and circumscribing the territory in which our own salt was sold. That was the result of legitimate enterprises by American citizens, and against it no word of clamor was raised. But now that this industry is narrowed down to the *minimum* of profit, when it is being operated for the laboring man more than for the capitalist, I want to raise my voice, without hesitation, in solemn protest against the removal of the only barrier that stands between the absolute destruction of this industry and its present scarcely remunerative condition.

There are in my district quite a large number of laboring men who depend upon this industry for their support. Their wives and children look to it for their daily bread, clothing, and education. These hardy men erected their homes and raised their roof-trees in the Ohio and Kanawha Valleys in view of the profit to them of employment in this industry. They have by their sturdy attention to business and their honest industry cheapened the American production of salt in the ratio which I have already mentioned. Now, without any reason but the cold-blooded hostility of the southern free-trader to northern labor and northern laboring men, they see impending over them the sword of destruction. I appeal on their behalf that this blow shall not fall; I demand that my people shall be protected from this outrage. Standing here in my place, as their representative, I protest on their behalf that this wrong be not done.

BUT WHAT OF WOOL?

If I believed that Mr. Cleveland, in his message to the people of the United States, was not actuated by any feeling of resentment toward the people of the North, who never did, and, thank God, never will vote for him for President, I could discuss his position on the wool question with a greater degree of equanimity, and I suppose that I am bound by that Christian charity which ought to actuate us all to give to Mr. Cleveland the benefit of the doubt as to his actual feelings and motives.

It seems passing strange, however, that he should attack the industries of a section of the country that did not vote for him, and yet pass over without assault a line of industries standing upon the same footing by every consideration of justice and policy. If any man can tell me upon what different basis for the purposes now under consideration the wool of Ohio stands from the rice of South Carolina, I would like him to do it. If any man can point out to me wherein the salt product of the struggling little industry of my district differs in essence and quality for this purpose from the sugar product of Louisiana I would like to have him do it, and when he has done it successfully, I confess, Mr. Chairman, that my mind will be relieved of a grave and most unpleasant suspicion.

The attitude of the President towards these industries is shaped and molded by the election returns of 1884 and the prospective election returns of 1888. And in this connection, while I am wonderfully glad that coal and iron ore are not on the free-list in terms, although I fear they are there by indirection, I would be glad if some gentleman would show me the difference in quality for this purpose between iron ore and coal, and salt and lumber and wool. The distinguished gentleman from Tennessee [Mr. MCMILLIN] in his opening speech, when interrupted about the principle upon which the Ways and Means Committee had framed this bill in this respect, and when driven to answer why they did not put coal and iron ore on the free-list, he said:

"Some things you can do and some things you can't do."

Ah! Mr. Chairman, the men of Ohio and Michigan and Illinois and Iowa were not permitted to go before that committee and demand the protection of their staple products, but the States of Alabama and Georgia were heard to threaten the Democratic solid column if they dared with ruthless hands to strike a blow against the magnificent development going on to-day in Alabama and Georgia in the development of iron and coal; and I thank God for that. The men of my district, of my State, and of my section are greatly interested in these two staple products of the country, and I was glad when I learned that these men dared not strike at these commodities. They will wish they had been more cowardly; they will wish that the element of cowardice had entered more largely into their consideration and judgment; they will wish that when they turned and fled from the threats of the coal men and the iron men of Virginia and Georgia and Alabama and other southern constituencies they had also fled from the wrath of the wool men and the salt men and the lumber men and the flax men and the pottery men, and the tens of thousands of other men of the industries of the country whose rights they have trampled in the dust.

But, Mr. Chairman, I was speaking of wool. The gentleman from Indiana [Mr. BYNUM], candid man that he is, brave man as he is too to fight the industries of his State, destroy the best products of her magnificent growth in order that he may keep step with the reactionary Democracy, fell into the same mistake that so many have fallen in regard to the effect that the changes of the tariff have had upon the wool production of the country. And, Mr. Chairman, I append here a statement which exactly illustrates the difficulty into which my friend fell. I give the table and will comment upon it:

FACT AND FICTION ABOUT WOOL.

The following tables are from the Pittsburgh Post, and are intended to show that sheep-raising in the States named has declined after twenty years of high tariff:

1860—Low tariff:	
Sheep in Pennsylvania	1,631,540
Sheep in Ohio	3,546,767
Sheep in New York	2,617,855
Prices—fine	56 to 60 cents.
Prices—medium	45 to 50 cents.
Prices—coarse	40 to 42 cents.
1887—High tariff:	
Sheep in Pennsylvania	1,094,323
Sheep in Ohio	4,562,913
Sheep in New York	1,579,866
Prices—fine	33 to 34 cents.
Prices—medium	37 to 38 cents.
Prices—coarse	33 to 35 cents.
Some of the results:	
Decrease of sheep in three States after twenty years high prices	559,060
Decrease in prices—fine wool	23 to 26 cents.
Medium wool	8 to 12 cents.
Coarse wool	7 cents.

Now the facts are exactly the reverse, if the cunning arithmetician of the paper had put them in their proper place, as follows:

	Low tariff, 1860.	High tariff, 1883.	Low tariff, 1888.
Sheep in Pennsylvania	1,631,540	1,803,336	984,891
Sheep in Ohio	3,456,767	5,050,541	4,106,622
Sheep in New York	2,617,855	1,732,332	1,564,067
	7,706,162	8,586,209	6,655,580

In 1883 the tariff was reduced so as to allow the yarn and goods (viz, worsted), which require the wool of these particular States for their production, to come in at a lower figure than we can make them at home.

SOME OF THE RESULTS.

Increase of sheep in three States after twenty years of high protection. 880,047
Decrease of sheep in three States after four years reduced tariff..... 1,050,582

If worsted yarns and wools were restored to their position under the law of 1867, their importation would stop, our home mills get to work, and the wools of these three States be again in demand, at such prices as would make sheep-raising profitable and result in a very great increase of their flocks.

The decreased price was caused by the decreased demand. The reduction from 1860 to 1883 was a natural result of increased production under a high tariff, and sheep growers were satisfied with the prices, or they would not have added to their flocks. As a result of the tariff of 1883, however, the price declined to the ruinous figures which caused the decrease in the clip, and to that reduction only is the decrease due, and not to twenty years of high tariff, as claimed in the article quoted.

He avails himself of the figures which show the number of sheep in 1860 in certain of the sheep-growing States. Then he takes the figures of 1887 and gives prices, etc., but he forgot to divide this scope of time from 1860 to 1887 into three periods, and thereby hangs an absolute demonstration of the fact that figures will lie. It appears that under the low tariff the total number of sheep in Pennsylvania, Ohio, and New York was 7,706,162, and that under the high tariff up to 1883 they had increased to 8,586,209. Then, following the reduction of 1883, which was the first blow delivered upon the sheep-growing interest of this country by the Democratic party, the sheep fell down to 6,655,580. This straightens out my friend's figures and relieves him from the singular position that he got himself into. I append here the prices of wool under three classifications as given by George W. Bond & Co., of Boston, under the tariff of 1868 to 1883 and then from 1884 to 1886, inclusive:

Average prices under the free tariff.

Year.	Fine.	Medium.	Coarse.	Average.
	Cents.	*Cents.*	*Cents.*	*Cents.*
1868	37	36	35	36
1869	37	35	30	34
1870	36	35	33	35
1871	43	42	41	42
1872	64	62	58	61
1873	64	56	52	57
1874	49	47	41	46
1875	48	48	41	46
1876	42	43	37	41
1877	40	37	30	36
1878	45	48	31	43
1879	34	35	31	33
1880	47	47	43	46
1881	45	46	38	33
1882	42	45	35	41
1883	42	44	35	40

Average prices under the reduced tariff.

1884	37	34	30	33
1885	34	32	28	33
1886	34	35	35	35

These figures tell the whole story, and demonstrate the fact that figures, while they may be made to lie, nevertheless very often spoil the force of the most impetuous argument. The wool-growers of this country are intelligent people, and they are not petitioning Congress at this time to restore the tax of 1867 without knowing what it is they are talking about. The effect of the reduction of 1883 upon the wool industry is better shown in the table which I now append, which shows the number of sheep in each group of States from 1880 to 1887 and the rise and fall of the industry. The States are grouped, first, reading downward, the whole United States, then the Western States, then the Southern States, then the Pacific coast, then the Territories and the Middle States, then the New England States. And this table, Mr. Chairman, exhibits in language more eloquent than I can use the effect that the tariff of 1867 had in stimulating the wool industry and the reduction of 1883 had in prostrating it.

Table showing the number of sheep in each group of States, 1880–1887.

	1880.	1881.	1882.	1883.
Total United States	40, 765, 900	43, 569, 899	45, 016, 224	49, 237, 291
Western States	12, 212, 600	12, 728, 939	13, 845, 938	15, 638, 829
Southern States	9, 922, 200	10, 872, 938	11, 916, 911	12, 973, 860
Pacific coast	8, 911, 900	8, 670, 297	8, 685, 506	9, 067, 837
Territories	4, 019, 600	5, 426, 460	5, 351, 247	6, 320, 000
Middle States	4, 174, 000	4, 292, 203	3, 830, 976	3, 848, 513
New England States	1, 525, 600	1, 579, 062	1, 385, 646	1, 388, 252

	1884.	1885.	1886.	1887.
Total United States	50, 626, 626	50, 360, 243	48, 322, 331	44, 759, 314
Western States	15, 630, 760	15, 244, 052	15, 131, 912	14, 332, 538
Southern States	12, 950, 761	12, 468, 301	11, 534, 652	9, 241, 449
Pacific coast	9, 616, 092	9, 370, 617	9, 745, 058	9, 892, 652
Territories	7, 245, 450	8, 495 039	7, 577, 787	7, 087, 558
Middle States	3, 792, 675	3, 498, 425	3, 083, 594	2, 968, 032
New England States	1, 384, 888	1, 283, 809	1, 249, 328	1, 237, 085

The rate of increase, as shown by this exhibit, from 1878 to 1888 was 7 per cent. per annum. Projecting that ratio of increase through the years 1883 to 1887, we should have had for 1884 52,300,000; for 1885, 56,000,000; for 1886, 59,900,000; for 1887, 64,000,000; while, in fact, Mr. Chairman, the total number of sheep in 1887 was but, in round numbers, 44,000,000; a loss, as compared with the undoubted situation had the change not taken place, of 20,000,000 of sheep. Thus the small reduction of the tariff revenue has depleted the wool industry to the extent of 20,000,000 of sheep. And if that be true, what will be the effect of putting wool on the free-list?

There are 700,000 flock-owners in the United States. In 1850 we had but 21,000,000 of sheep in the United States. In 1860, after ten years of Democratic administration, we had but 22,000,000 of sheep. In 1870 we had 29,000,000; in 1880, in round numbers, 44,000,000; in 1883, 50,000,000, or more than double what we had in 1860. This industry furnished employment for 1,200,000 men. It employed more than $500,000,000 of capital, and was producing a product of about 3 per cent. net. Strike down this industry, and you destroy $500,000,000 of the wealth of the country only in so far as the carcasses of the sheep reduces the grand aggregate of destruction.

Mr. Chairman, under a Democratic administration, with wool on the free-list, substantially, I have seen in my own district thousands and tens of thousands of sheep slaughtered in the fall of the year for their hams and pelts. They were worth but a little over 50 cents a head, and there was but little profit on them at that price. I have seen this industry spring up as though touched by the lamp of Aladdin; I have seen intelligent farmers of my district search the world for improved breeds of sheep, and I have seen the flocks dotting the hillsides, grazing in the valleys, thriving and prospering everywhere. There was music in the friendly appeal of the sheep as it came "dumb before her shearers" and deposited in the treasury of the farm her fleecy contribution to the general prosperity of the country. I have seen this tide of industrial prosperity checked; it rose no higher; it stood still; it began to ebb, but it reached a point where if it could be let alone the farmer could live; the farmer could do something with it. But I have seen the ruthless Democratic party, instigated thereto, as I am compelled to believe, by a spirit of envy and hostility to the section where the sheep industry has grown and prospered, lift its vandal hand and hold over the industry a sword more threatening than the fabled sword of Damocles. I have seen these flocks growing smaller and smaller, in many instances fading away; I have seen the farmer with blanched cheeks read of the assaults upon his industry by the Chief Magistrate of this nation, who was under an oath to God to administer his mighty office in the fear of the Almighty and for the benefit of the people of the whole country, and as I speak to-day, Mr. Chairman, the representatives of millions of dollars of this kind of property stand with their ear, figuratively, at the telegraph, as in the olden days when listening to ascertain how far north the flood of rebellion was coming, how near to Nashville the army of Hood had made its bloody track, how near to Cincinnati and Louisville the columns of Bragg and Kirby Smith had proceeded, how far into Pennsylvania the great army of Lee had come. So stand these farmers listening, listening, and their question is, How near to the farms of Ohio has the free-trade column of destruction advanced? Where is Mills, with his spirit of destruction? How near is this vandal horde, with their weapons of inevitable disaster to the flocks in the fields of the wool-growers of the country?

Business is paralyzed, nobody will buy wool, nobody will raise sheep, nobody will trust in the hands of the Democratic party an industry so delicate, so grand, so intimately connected with the best interests of the agriculturists of this country as this. But pass this bill, Mr. Chairman, and I will tell you what they will do. The spirit of 1861 is not dead north of the Ohio River, and they will accept your assault upon that industry as a declaration that, with the Democratic party permanently in power, the people of the North are to be hewers of wood and drawers of water for the benefit of the people of the South; that the old cry to which I adverted in the early part of my speech, that our people are "small-fisted farmers and greasy mechanics," the "mud-sills of society," is again the dominating voice of the Democratic party. They have a weapon in their hands, and they know how to use it. That weapon in the hands of the freeman comes down—

> "As snow-flakes fall upon the sod,
> But execute the freeman's will as lightnings do the will of God."

They will drive from power this Democratic party, and they will reestablish the old Republican party that, through its benign legislation, built up these industries and made this land blossom like the rose.

RAW MATERIALS.

Mr. Chairman, the advocates of the Mills bill have placed themselves in the most humiliating position by the course they have taken upon the subject of what the theorist in this country is pleased to call "raw material." The first assault upon the protective system of the country was based upon the specious and attractive claim that all raw materials used in the manufactures in this country ought to come into the country free of tariff taxes; and the unintelligent statements of the President have made this same idea the watchword and the rallying cry of the free-traders of the country. No greater misuse of words, no greater confusion of ideas ever emanated from man than just what has grown out of this argument. What is free raw material? The people of my State do not produce it. We have no free raw material in any just or proper sense. If there is such a thing as free raw material produced in this country, it strikes me, and I think it must strike everybody else, that iron-ore is about the best type of free raw material. It is the original product that enters

into all the manufactures of iron and steel—think of it—trace the iron product backward or trace it forward, as you like, see the wonderful journey over which it travels.

But, Mr. Chairman, is iron ore raw material? How came it there by the mountain side, piled up, stacked up ready for shipment, and rusting? The royalty upon a ton of it, as it lay buried in its raw condition in the mountain side, was only a trifle per ton. But labor attacked the mountain side, and under the blows of labor the mountains travailed forthwith and produced the offspring, iron-ore. It is cheap, it is coarse. You do not have to put a guard over it as it lays there. No man can steal enough of it to be profitable. You need not shelter it from the rains and storms, for it cannot be injured. But follow it as labor takes hold of it, transports it to the blast furnace, the rolling-mill; and follow it along the shining pathway that it travels until it makes its appearance in the hands of the watch-maker in the form of the main-spring of the watch—a substance so refined, so beautiful, so wonderful that it is worth more per penny-weight than the finest gold—and yet the magnificent transformation of the crude ore at the mountain side is but the result of the combination of labor and capital—twin coursers, harmonious allies—and the transformation spoken of in the fable of Aladdin's lamps was not more wonderful than has been this transformation. The iron ore was the finished product of the miner. It was not raw material to him. The pig-iron was the finished product of the furnaceman; so it is every step of the way until it reaches the watch-maker in the form of the finished product of the steel-spring maker.

Take wool. The farmer clears the land, pays the taxes on it, earns the money by the sweat of his face for that purpose, pastures his sheep, raises the corn and the hay for their food during the winter, erects the sheds and sheep-cots for their protection from the storm and inclemency of the season, herds and cares for the sheep, nurses and rears the lambs, shears the wool, prepares it for market, and carries it to the purchaser; his money is in it in the form of interest on his investment; his labor is in it; the product of his farm is in it, and when he disposes of it, it is his perfected, completed, forever finished product. What right has the manufacturer to call the wool of the farmer raw material in this great sense for the purposes of this inquiry, in a degree greater than the farmer has the right to call the product of the loom raw material, because it is not yet made into clothing? The policy of protection extends to all the labor of the country; it recognizes no such thing as raw material, if that material is produced in America, and is the product of the labor and capital, and the genius and enterprise of the American producer.
